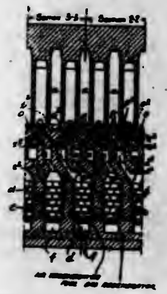
In an apparatus for preparing sulphur dioxide substantially free from sulphur trioxide, a reaction chamber, means for feeding liquid sulphur to the reaction chamber, means for discharging gas into the liquid sulphur in the form of fine bubbles, said means consisting of a porous element of resistant material.

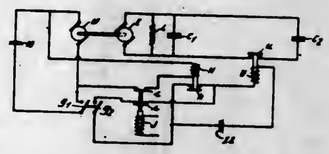
1,904,514. PROTECTION FOR ARMATURE WINDINGS. ALFRED OLDENBURG, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed May 1, 1931, Serial No. 534,174, and in Germany May 17, 1930. 4 Claims. (Cl. 172—36.)

1. In an electric motor in combination with a magnetic armature carrier having a winding protruding at the carrier ends and a cap of suitable insulating material at each carrier end completely surrounding the protruding winding ends, of a layer of elastic material disposed between each cap and the pertaining carrier end and being joined firmly to the carrier and the cap for the purpose set forth.



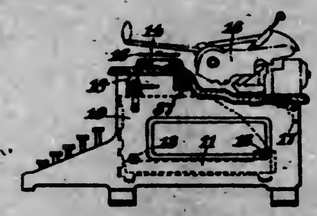
1,904,515. WORD COUNTING REGISTER FOR TYPEWRITERS. ALFRED E. OSWALD, Hackensack, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 30, 1929. Serial No. 351,213. 18 Claims. (Cl. 235—102.)

1. In a counter for adding the number of key-strokes of an alphabetical keyboard machine, the combination of a series of indicating dials arranged in a decimal series including a units-dial, all rotatably mounted in denominational order, a series of driving devices to rotate said dials, means including electromagnets, one for each dial to control said devices to rotate the dials to indicate the number of key-strokes, circuits for the electromagnets, and a device, interpolated in the circuit of the electromagnet for the units-dial including means to delay the operation of said units electromagnet until after a predetermined number of key-strokes of the keyboard.



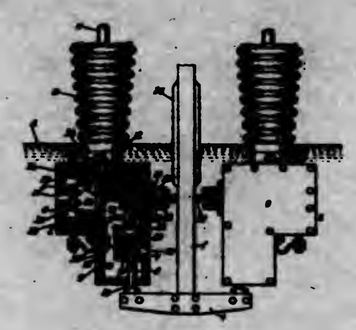
15. A counter comprising denominational annuli and a flywheel annulus, means for continuously operating the flywheel annulus, said flywheel annulus being in frictional relation with the units annulus of the counter to constantly urge the rotation of the same and means to periodically release and then arrest the units annulus.

1,904,516. REGENERATIVE COKE OVEN. CARL OTTO, Essen-Ruhr, Germany. Filed Dec. 10, 1927, Serial No. 239,046, and in Germany Dec. 17, 1926. 5 Claims. (Cl. 202—142.)



1. A coke oven battery comprising a series of alternate horizontally elongated coking chambers and heating walls therefor arranged side by side in a row, each of said heating walls comprising a row of vertical combustion flues, two parallel rows of cross-regenerators arranged below said chambers, each of said rows of regenerators being adapted to operate alternately for inflow and outflow, some regenerators of each row being adapted to preheat fuel gas and the other regenerators of each row being adapted to preheat air, when operating for inflow, horizontal distributing channels above and parallel with the regenerators, ducts communicably connecting each regenerator with one of said channels, and ducts communicably connecting one of said channels with some of the flues in one of the heating walls and another of said channels with the remaining flues in the same heating wall, each channel communicably connected with a regenerator adapted to preheat fuel gas being arranged between a pair of channels, the latter being each communicably connected with a regenerator adapted to preheat air, the distributing channels communicably connected to one of the rows of regenerators being communicably connected to alternate flues in the heating walls and the distributing channels communicably connected to the other row of regenerators being communicably connected to the intermediate flues in the heating walls.

1,904,517. DUPLEX SYSTEM OF TELEPHONY. HANS PAESLER, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Feb. 8, 1927, Serial No. 166,671, and in Germany Feb. 26, 1926. 4 Claims. (Cl. 179—15.)



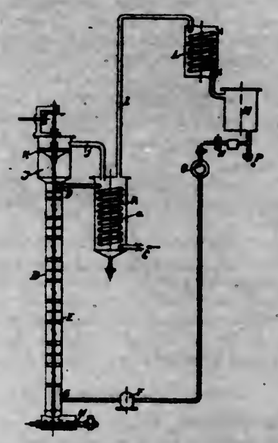
1. In radio frequency communication systems including an oscillation generator having a frequency determining circuit and means for changing the tune of said circuit, switching means for putting said oscillation generator into operation, means associated with said switching means and with the frequency determining means in the circuit of said oscillation generator for insuring that the change in the tune of said circuit is completed before said generator develops oscillations in said circuit of appreciable amplitude, and means for preventing change in said frequency determining circuit from being made when said generator is stopped until said generator stops producing oscillations in said circuit.

1,904,518. TYPEWRITER. ARTHUR PATERSON, Leicester, England, assignor to Imperial Typewriter Company Limited, Leicester, England, a British Company. Filed May 17, 1932, Serial No. 611,894, and in Great Britain Sept. 18, 1931. 1 Claim. (Cl. 197—186.)

In a typewriter the combination of a framework, bearing members within said framework, type mechanism removably mounted within said framework and supported on said bearing members, a top member at least partially covering said type mechanism, a hinge connection between said top member and said framework, locking means for retaining the top member in the closed position and bearing members on said top member and engaging the type mechanism in the closed position of the top member to retain the type mechanism firmly in place.

1,904,519. ELECTRIC CIRCUIT INTERRUPTER. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 24, 1931. Serial No. 564,889. 10 Claims. (Cl. 200—150.)

1. A circuit interrupter of the fluid-break type comprising a pair of contacts separable in an arc extinguishing liquid to form a pressure generating break connected in series with a pair of independent and separately movable current interrupting contacts, and means for directing pressure generated by arcing at said break so as to cause separation of said independent current interrupting contacts and force a blast of insulating liquid between the same extinguishing arcing.



1,904,520. STOKER. FRANK C. PICKARD, Erie, Pa., assignor to The Standard Stoker Company, Incorporated, a Corporation of Delaware. Filed July 23, 1929. Serial No. 380,433. 7 Claims. (Cl. 110—101.)

6. As an article of manufacture, a distributor head for stokers comprising a body portion, said body portion including a front wall, a rear wall and side walls connecting said front and rear walls, and a plurality of passages in said body portion for receiving a pressure fluid, the front wall being provided with jet openings in communication with said passages, each of said passages at an end remote

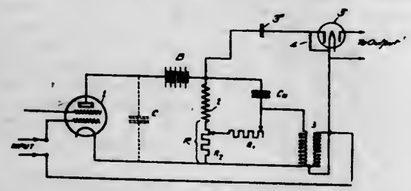
from said jet openings, having an admission opening, said admission openings all being directed toward the same side wall of said head.

1,904,521. SEPARATION OF OILS FROM SOLID RESIDUES. MATHIAS PIER, Heidelberg, and KARL WINKLER, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to Standard-I. G. Company, Linden, N. J., a Corporation of Delaware. Filed Sept. 15, 1928, Serial No. 306,277, and in Germany Oct. 27, 1927. 9 Claims. (Cl. 196—13.)

1. An apparatus for continuously separating oils from solid residues, comprising a tall cylindrical extraction vessel fitted with means for imparting a continuous rotary movement to the material under treatment, means for introducing the solvent into the said vessel and for passing it in a countercurrent to said material, means for continuously removing the extracted residue, an extension at the top of said tall cylindrical vessel in the form of a vertical cylinder of a larger diameter than said extraction vessel, means for continuously removing the extraction product arranged at the top of said extension and a filter arranged in said extension.

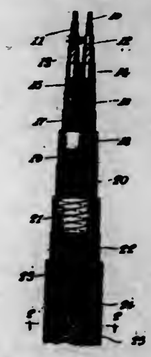
2. In the treatment of the entire residue obtained by the destructive hydrogenation of solid carbonaceous materials to separate the oils from the solids insoluble in said oils and contained in said residue, by extraction with an organic solvent containing at least some aromatic constituents, the step of continuously introducing the solvent and the mixture to be separated to and continuously removing the extraction product and the extracted residue from the vessel in which the treatment is carried out.

1,904,522. APPARATUS FOR DRILLING WELLS. HASKEL A. PIPPIN, Okmulgee, Okla. Filed Nov. 11, 1931. Serial No. 574,417. 13 Claims. (Cl. 255—4.)



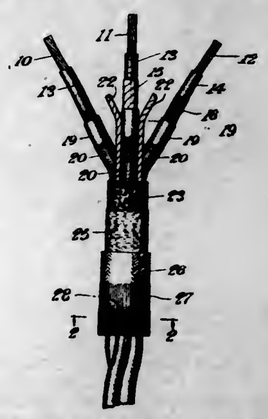
1. A well drilling apparatus comprising a casing, two axially alined motors within the casing having armatures rotatable in opposite directions, shafts connected to said armatures respectively, and located in the axis of the casing, a pair of drilling elements, means for supporting said elements from the lower end of the casing for rotation on a common axis transversely of said shafts, and connections between the shafts and the drilling elements for effecting rotation of the latter in opposite directions.

1,904,523. METHOD OF FINE GRINDING OF CEMENT MATERIAL. CARL PONTOPPIDAN, Holte, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Mar. 13, 1930, Serial No. 435,653, and in Great Britain Mar. 21, 1929. 2 Claims. (Cl. 83—94.)



1. The improvement in the method of fine grinding of dry cement material with grinding bodies which consists in adding to the material a carbonaceous substance whereby the electrical potential of the grinding bodies is altered and the attraction of the particles of material to the grinding bodies is diminished and the coating of the grinding bodies with such particles is prevented.

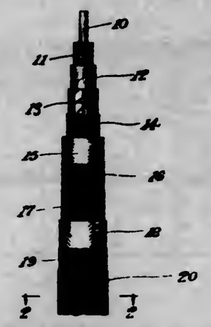
1,904,524. AMPLIFIER. KLAAS POSTHUMUS, Eindhoven, Netherlands, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 18, 1931, Serial No. 516,573, and in the Netherlands Mar. 26, 1930. 4 Claims. (Cl. 179—171.)



1. In combination, in an amplifier, an electron discharge tube provided with an input and output circuit, a succeeding tube, a coupling path between the output circuit of the first tube and the input circuit of the second tube, said path including an impedance in series with a resistor, a second path in shunt with said impedance and including a condenser in series with a second resistor, and means for transmitting the drop of potential across a predetermined portion of said first resistor to the input circuit of the first tube.

1,904,525. CABLE. FRANK M. POTTER, Rome, N. Y., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 4, 1928. Serial No. 251,765. 30 Claims. (Cl. 178—264.)

29. An article of manufacture comprising in combination an insulated metallic electrical conductor, and a protective covering therefor, said covering including a sheath of non-wicking fibrous material, and a protective layer of an oxidation- and moisture-resistant plastic compound adjacent to and impregnating said sheath, said compound tending to seal automatically such openings as may occur in said covering.



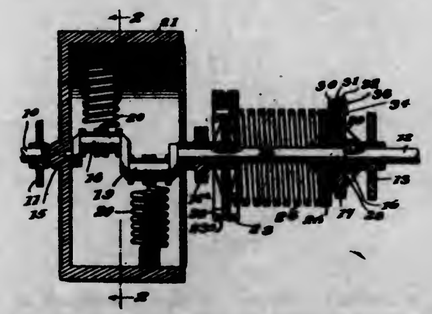
1,904,526. CABLE. FRANK M. POTTER, Rome, N. Y., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 4, 1928. Serial No. 251,766. 22 Claims. (Cl. 178—264.)

22. An article of manufacture comprising in combination, an insulated metallic conductor, a self-healing oxidation and moisture-resistant plastic compound around said conductor, a fibrous jacket over said compound, and a metallic oxide paint over said jacket.

1,904,527. CABLE. FRANK M. POTTER, Rome, N. Y., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 4, 1928. Serial No. 251,767. 5 Claims. (Cl. 178—264.)

2. An article of manufacture comprising, in combination, a metallic conductor, and a covering therefor including a fabric jacket, different wax substances applied to said fabric jacket, an outer fabric jacket, a soft wax substance

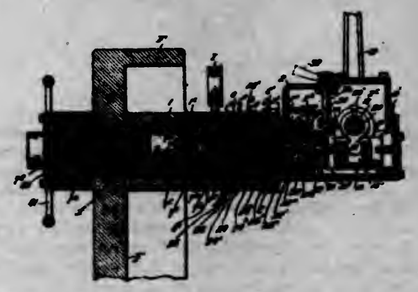
applied to said outer jacket, and a tough waterproofing paint over the whole.



1,904,528. LACQUERS, FILMS, ARTIFICIAL MASSES, AND THE LIKE. WILHELM PUNGS and KARL EISENMANN, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 19, 1928, Serial No. 271,401, and in Germany May 21, 1927. 6 Claims. (Cl. 134—26.)

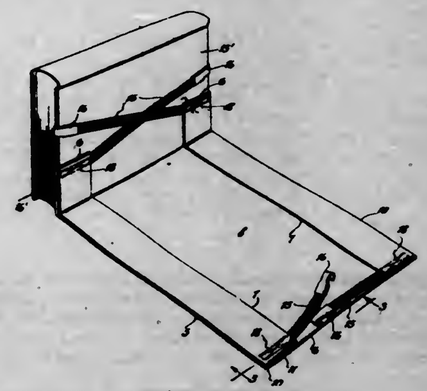
1. As new compositions artificial masses comprising nitro-cellulose, a condensation product of urea and formaldehyde, and castor oil which has been pretreated with an oxidising gas at an elevated temperature.

1,904,529. MANUFACTURE OF ARTIFICIAL MASSES. WILHELM PUNGS and KARL EISENMANN, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Feb. 14, 1929, Serial No. 340,014, and in Germany Feb. 14, 1928. 5 Claims. (Cl. 134—26.)



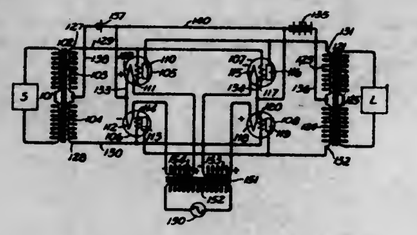
1. A composition comprising nitrocellulose, a condensation product of urea-formaldehyde, an animal oil selected from the class consisting of cod oil, shark oil, whale oil, seal oil and sardine oil which has been pretreated with an oxidising gas at an elevated temperature, and an organic solvent for the ingredients including a substance selected from the class consisting of lower aliphatic alcohols and the acetic esters thereof.

1,904,530. POWER TRANSMISSION. SHERRILL S. RATHBUN, Rockville Center, N. Y. Filed Apr. 3, 1930. Serial No. 441,271. 10 Claims. (Cl. 74—14.)



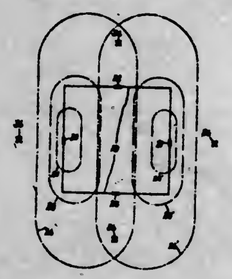
1. Power transmission comprising a driving shaft having a fly wheel, a driven shaft, an intermediate shaft, an intermittently operable connection carried within said fly wheel and secured to said intermediate shaft, an intermittently operable reversing ratchet means for the intermediate shaft and an intermittently operable resilient connection between the intermediate shaft and the driven shaft.

1,904,531. HYDRAULIC DEVICE FOR OPENING AND CLOSING FILTER PRESSES AND OTHER PRESSURE-APPLYING MECHANISMS. THOMAS H. RAYMOND, Zanesville, Ohio, assignor to Simplex Engineering Company, a Corporation of Ohio. Filed July 9, 1927. Serial No. 204,583. 2 Claims. (Cl. 138—17.)



1. Hydraulic devices for closing and opening filter presses and other pressure-applying mechanisms embodying, in combination, a ram and a ram-cylinder, a hydraulic pump including piston mechanism, a dual system of valves, one part of said dual system for causing the projection of the ram, and the other part for exhausting the liquid to retract the ram, said retracting part having a valve which is free to seat in opposite directions during the operation of the projecting system part, and means for restraining said valve to cause it to pass liquid in one direction only and simultaneously restraining valves of the ram-projecting part of the dual system to cause a reverse movement of the liquid by the piston mechanism and a retraction of the ram.

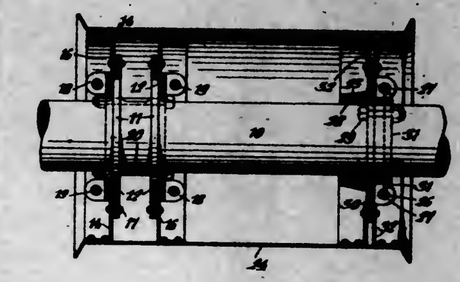
1,904,532. BOOK COVER. MAX REISS, New York, N. Y. Filed June 22, 1932. Serial No. 618,628. 5 Claims. (Cl. 281—34.)



1. A protective cover for books comprising a rectangular sheet of suitable material adapted to be folded to receive the covers of a book, and means carried by each side of said sheet for engagement with a book cover for holding the protective cover in position upon a book.

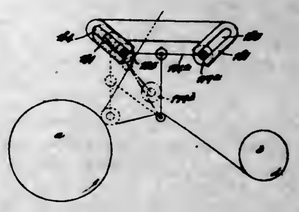
1,904,533. CIRCUIT FOR ELECTRIC DISCHARGE DEVICES. JOHN L. REYNOLDS, Jackson Heights, N. Y., assignor to Electrical Research Products Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1929. Serial No. 417,640. 5 Claims. (Cl. 179—171.)

1. In an electric wave amplifying system comprising divided input and divided output circuits employing a plurality of electron discharge devices, each having an anode, a cathode and a control electrode, the cathode of each of said discharge devices connected in series with the cathode of another of said discharge devices, two of said discharge devices having their control electrodes connected in parallel to one side of said divided input circuit and their anodes connected in parallel to one side of said divided output circuit, two other of said discharge devices having their control electrodes connected in parallel to the other side of said divided input circuit and their anodes connected in parallel to the other side of said divided output circuit, a source of alternating current for heating the cathodes of said devices, and means comprising a transformer having two separate secondary windings between said source and said cathodes, each of said secondary windings being included in the series circuit of the cathodes of two of said discharge devices.



1,904,534. SOUND WAVE SYSTEM. CHESTER W. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 16, 1932. Serial No. 599,162. 14 Claims. (Cl. 116—19.)

1. The method of marking out a landing field to aircraft which includes transmitting sound waves upward into the space above a boundary of said landing field and so directing said waves that a sheet of sound waves is produced in space above and along said boundary.

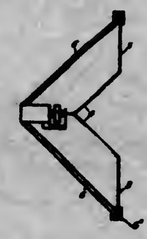


1,904,535. PULLEY AND MOUNTING THEREFOR. WILLARD F. RICHARDS, Depew, N. Y. Filed Apr. 19, 1929. Serial No. 356,343. 3 Claims. (Cl. 287—52.03.)

1. A drive member, comprising a hub-ring, a driving rim, and a web connecting said parts, said hub-ring having an annular groove in one side thereof and an external flange off-set laterally and outwardly relatively to the

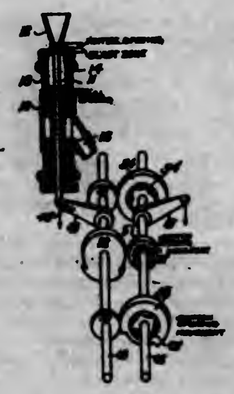
grooved portion of said ring and in the plane of its groove for connecting the inner portion of the web thereto.

1,904,536. WEB SUPPLYING AND CONTROLLING MECHANISM. CHARLES J. RICHTER, Berwyn, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Original application filed Mar. 22, 1928, Serial No. 263,624. Divided and this application filed July 26, 1930. Serial No. 470,820. 6 Claims. (Cl. 242—58.)



1. A web attaching mechanism including in combination means for rotatively supporting a plurality of web rolls, a roller journaled at either side of a running web, a movable support for both said rollers, a movable support for said movable support and additional means for guiding one of said rollers out of contact with the fresh web roll.

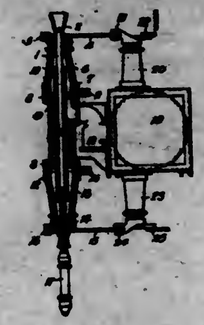
1,904,537. LOUD SPEAKER. HENRY JOSEPH ROUND, Muswell Hill, London, and JOHN GLOVER ROBB, Hendon, London, England, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 19, 1925, Serial No. 69,980, and in Great Britain Nov. 26, 1924. 4 Claims. (Cl. 187—31.)



1. A diaphragm adapted to vibrate composed of an outer coating of paper, an outer coating of silk and an intermediate portion of adhesive material adapted to bind the silk and paper together as a unit.

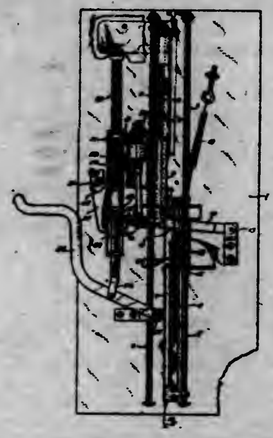
1,904,538. LOUD SPEAKER. HENRY JOSEPH ROUND, Muswell Hill, London, and JOHN GLOVER ROBB, Hendon, London, England, assignors to Radio Corporation of America, a Corporation of Delaware. Original application filed Nov. 19, 1925, Serial No. 69,980, and in Great Britain Nov. 26, 1924. Divided and this application filed Apr. 1, 1930. Serial No. 440,068. 4 Claims. (Cl. 181—32.)

1. A diaphragm comprising a central conical portion, an outer annular portion and a portion having the shape of a frustum of a cone interposed between said conical portion and said annular portion.



1,904,539. METHOD OF AND APPARATUS FOR GAS BLAST CIRCUIT INTERRUPTION. SIGWART RUPPEL, Frankfort-on-the-Main, Germany. Filed Sept. 24, 1929, Serial No. 394,648, and in Germany Oct. 2, 1928. 5 Claims. (Cl. 200—82.)

1. The method of operating a circuit interrupter of the fluid-blast type which comprises effecting opening movement of the circuit interrupter at an initially high rate and reducing the rate of contact separation through the range within which the interrupting action of the blast is most effective.

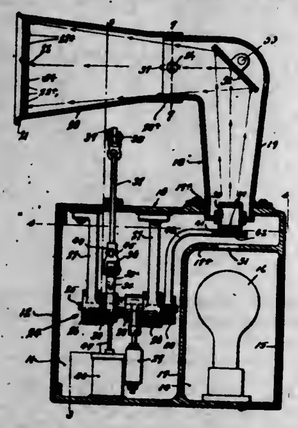


1,904,540. SWITCH. SIGWART RUPPEL, Frankfort-on-the-Main, Germany. Filed Sept. 22, 1930, Serial No. 482,634, and in Germany Sept. 26, 1929. 7 Claims. (Cl. 200—5.)

1. A switching device of the gas-blast type comprising a casing, relatively movable contacts cooperating within said casing, said casing providing a passage for a gas blast between said contacts upon separation thereof, line terminal structure at opposite ends of said casing arranged to connect with said contacts respectively, and

isolating switch members coacting with said terminals and movable into and out of circuit controlling engagement.

1,904,541. ARC LAMP MECHANISM. ALBERT G. SAURWEIN, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Dec. 26, 1929. Serial No. 416,722. 6 Claims. (Cl. 176—55.)



1. In an arc lamp, a pair of vertical electrodes, an upper and lower electrode holder, a rack carried by each electrode holder, a pinion engaging said racks, an arm connected with the upper holder and rack and extending vertically downward therefrom, a clutch engaging said arm adapted to normally hold the electrodes in spaced relation, and manually controlled means operative only to release said clutch for a time sufficient to permit the electrodes to contact and strike an arc whereby short circuiting of the electrodes is prevented.

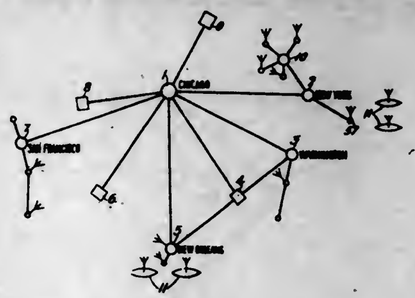
1,904,542. AUTOMATIC WEIGHT INDICATING SCALE. HARRY C. SCHAPPE, Columbus, Ohio, assignor to International Scale Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 28, 1930. Serial No. 477,206. 20 Claims. (Cl. 265—62.)

1. An automatic weight indicating scale comprising in combination a weighing mechanism, a stationary chart provided on its face with a plurality of weight indicia arranged in progressive groups whereby all of said weight indicia are readable directly from said chart, said chart being provided with a plurality of translucent portions arranged adjacent to and coextensive with said groups, an index plate movably mounted and operatively connected

to said weighting mechanism for movement in accordance with the actuation of said weighing mechanism, and projecting means including a source of light for projecting said index plate in an enlarged form onto said translucent portions, said index plate being formed with a plu-

rality of offsets corresponding to the groups of weight indicia whereby the most advanced offset projected onto the corresponding translucent portion points out the weight indicia denoting the weight of the load used to actuate said weighing mechanism.

1,904,543. FINISHING WELT. ROBERT C. SCHEMMEL, Union City, Ind. Filed Oct. 28, 1930. Serial No. 491,771. 1 Claim. (Cl. 155—184.)



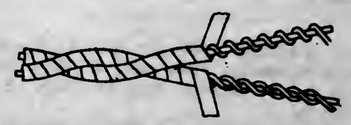
A finishing welt including a flap filler, a strip of wire fabric and a strip of fibrous thread fabric united by a line of stitching to provide at least one ply of the base portion of the welt, said strips extending in opposite directions from the line of stitching, the fibrous thread strip being folded back on itself and secured to the base to form an additional ply thereof, and the wire fabric strip being folded around the flap filler and secured thereto to provide a flap hinged to the base and adapted to be folded down thereupon.

1,904,544. CARRIER WAVE SIGNALING SYSTEM. JAMES W. SCHMIED, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1924. Serial No. 689,627. 26 Claims. (Cl. 250—2.)

1. In a communicating arrangement embodying line carrier systems and one or more radio systems, the method of operating the arrangement which comprises supplying a wave of given frequency, controlling the frequencies of the carrier waves for the line systems and a radio control wave by said wave of given frequency, and controlling the frequencies of the radio carrier waves by said wave of radio control frequency.

25. In combination, a plurality of radio transmitting stations spaced at distances that are independent of the wave length of transmission therefrom, an antenna system at each of said stations, said antenna system being capable of radiating electromagnetic waves with substantially equal effectiveness in many horizontal directions, means for fixing the radiation frequency of all of the stations at the same value at any instant, said means comprising a frequency control station and a control frequency channel linking said frequency control station directly with a plurality of said radio transmitting stations, means for generating a control frequency associated with said control frequency channel, means at each

transmitting station for deriving a radiation frequency from said control frequency, and a modulation control system comprising a signal generating apparatus and means for linking the same wtih each of said radio transmitting stations whereby the waves transmitted therefrom are simultaneously modulated by the same signal.

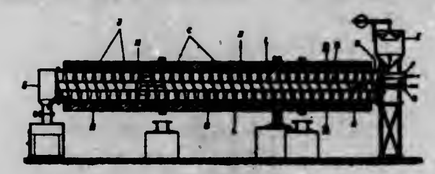


1,904,545. PROCESS FOR PREPARING PURE OPTICALLY INACTIVE MENTHOL. KARL SCHÖLLKOPF, Dusseldorf-Oberkassel, and ARTHUR SMEINI, Dusseldorf-Heerdt, Germany, assignors to Rheinische Kampfer-Fabrik Gesellschaft mit beschränkter Haftung, Dusseldorf-Oberkassel, Germany. Filed Jan. 8, 1930, Serial No. 418,432, and in Germany Jan. 28, 1929. 8 Claims. (Cl. 260—158.)

1. A process for preparing pure optically inactive menthol by subjecting a mixture of inactive menthol with its isomers to a partial i. e. selective esterification by treating such mixture with materials for esterifying in an amount insufficient for complete esterification of the mixture, purifying the resulting menthol esters by recrystallisation and finally saponifying the pure esters.

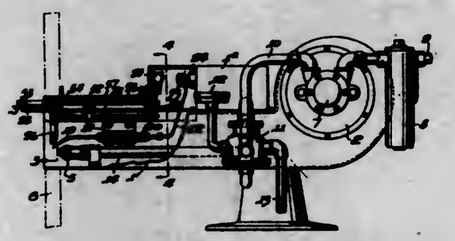
1,904,546. METHOD OF PRODUCING STEARINE. WALTHER SCHRAUTH, Berlin-Dahlem, Germany. Filed Feb. 26, 1931, Serial No. 519,700, and in Germany Feb. 25, 1930. 7 Claims. (Cl. 87—4.)

1. The process of manufacturing technical stearine which comprises melting substantially completely hydrogenated sperm whale oil with twice as large a quantity of solid alkali of the group consisting of caustic soda, caustic potassium and caustic calcium as would be theoretically required to saponify said oil as calculated according to the saponification number and reacting the resulting soaps with mineral acids.



1,904,547. CORES FOR CABLES FOR COMMUNICATION CIRCUITS. KARL SCHUMANN, Potsdam, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Nov. 25, 1930, Serial No. 498,017, and in Germany Nov. 28, 1929. 6 Claims. (Cl. 173—265.)

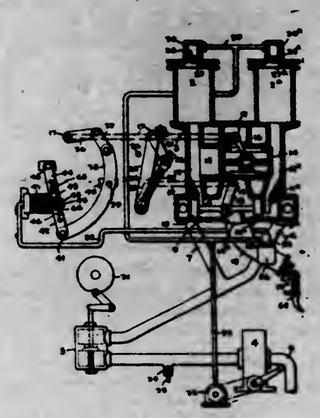
1. A telephone cable having a plurality of insulated strands, each strand consisting of a core conductor, paper



cord wound upon said conductor and paper tape spirally wound over the cord winding, adjacently located cord winding turns of adjacent cable strands having the same winding direction but different total pitch.

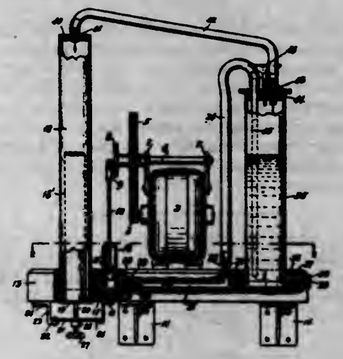
1,904,548. REVOLVING TUBE FURNACE. HERMANN SCHULTZE, Frankfort-on-the-Main-Griesheim, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 13, 1929, Serial No. 370,567, and in Germany May 2, 1927. 1 Claim. (Cl. 23—279.)

In a revolving furnace, in combination, a revolving cylinder, a stationary hollow shaft located in the cylinder and provided with an outer helix attached to the shaft along its total length having a diameter nearly equal to that of the revolving cylinder, an inlet at one end of said shaft for introducing reaction gases into the latter, an outlet for gas in said shaft at a distance from said inlet of more than half the length of said shaft, and an outlet for gas on said revolving cylinder at the same end where the gas inlet is provided on the shaft.



1,904,549. OIL BURNER. SALVATORE SCOGNAMILLO and DAVID SHLAIFER, Bronx, N. Y. Filed Aug. 6, 1931. Serial No. 555,577. 4 Claims. (Cl. 158—28.)

1. In an oil burner having an oil discharge nozzle, ignition electrodes spaced to form an igniting spark gap between them in igniting relation with the nozzle, and electrically operated means for supplying oil to the nozzle and a current of air past the nozzle, a thermostat element located adjacent the gap between said electrodes and adjacent to said electrodes to form secondary spark gaps therewith in the path of said current of air, said thermostat being expansible by the heating thereof by sparking at the secondary gaps between it and said electrodes, and means including an electric switch operative by the expansion of the thermostat element to energize the electrically operated means to supply oil to the nozzle and the current of air past the nozzle and electrodes.

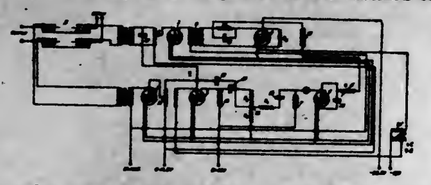


1,904,550. AIR CONTROLLED LOCK FOR DISPENSERS. PAUL S. SHIELD, Cincinnati, Ohio, and WALTER H. HAUPT, Ludlow, Ky., assignors to Augustine Davis, Jr., Cincinnati, Ohio. Filed Jan. 10, 1930. Serial No. 419,802. 20 Claims. (Cl. 221—100.)

1. In a liquid dispenser, the combination with two measuring chambers, means for supplying liquid thereto, a discharge space or conduit, and automatic reversing valve mechanism for causing each chamber in turn to be supplied with liquid while the other is emptying, of a releasable lock outside of the discharge space for preventing

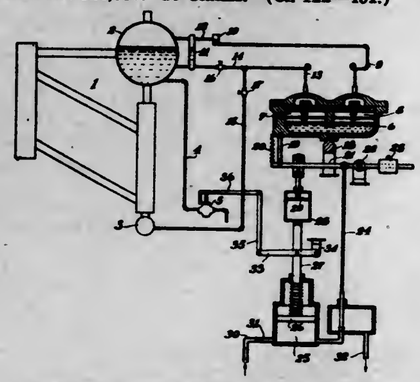
operation of said reversing valve mechanism, and means responsive to a change in the liquid in said discharge conduit for controlling said lock.

1,904,551. APPARATUS FOR DEVELOPING SENSITIZED PAPER. BERNARD P. SMITH, Rahway, N. J., assignor to The Regina Corporation, Rahway, N. J., a Corporation of New Jersey. Filed July 8, 1931. Serial No. 549,389. 3 Claims. (Cl. 95—89.)



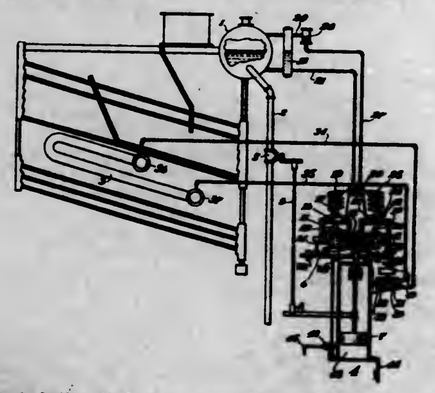
1. In an apparatus for developing sensitised paper, the combination of a motor, a plunger pump, a glass tube for retaining the paper to be developed, a container having therein a liquid charged with a developing medium, and conduits between said glass tube, plunger pump and liquid container for circulating air charged with the developing medium in a continuous path.

1,904,552. AUTOMATIC GAIN CONTROL. THEODORE A. SMITH, Ridgewood, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 29, 1929. Serial No. 403,281. 20 Claims. (Cl. 179—171.)



1. In an amplifying system, an electron discharge tube comprising an anode, a cathode and a control electrode, means to apply alternating current energy variations to said tube, means for rectifying a portion of the alternating

current energy to be amplified by said tube, means including a control tube to vary the effective anode load of said first tube according to the amplitude of the rectified cur-

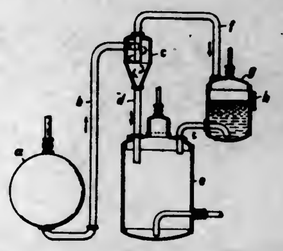


rent, and a common path, including a pair of inductances, for applying a positive potential to the anodes of the first tube and the control tube.

1,904,553. **FEED WATER REGULATOR.** CHARLES H. SMOOT, Maplewood, N. J.; Katherine Smoot executrix of said Charles H. Smoot, deceased. Filed Nov. 2, 1928. Serial No. 316,757. 10 Claims. (Cl. 122—451.)

1. A boiler feed water regulator comprising water level responsive means adapted to control the supply of feed water to maintain a constant water level, means responsive to the circulation of the water through the boiler and adapted to modify the action of said first mentioned means whereby increasingly higher water levels are maintained as the water circulation increases and correspondingly lower water levels are maintained at lower rates of water circulation.

1,904,554. **FEED WATER REGULATOR.** CHARLES H. SMOOT, Maplewood, N. J.; Katherine Smoot executrix of said Charles H. Smoot, deceased. Filed July 24, 1929. Serial No. 380,513. 7 Claims. (Cl. 122—451.)

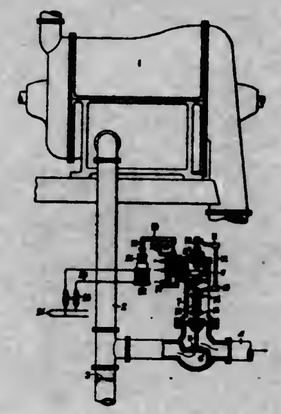


1. A boiler feed water regulator comprising in combination a balancing device, means for acting on said device with a force varying inversely with the water level within the boiler, means for acting on said device with a force varying inversely with the square of the boiler rating, feed water supply means, means for controlling said supply means by said device, and means for removing said last mentioned force from said balance when the boiler rating exceeds a predetermined value.

1,904,555. **RADIATOR.** JOHN D. SOMMER, St. Albans, N. Y., assignor, by mesne assignments, to Metropolitan Engineering Company, a Corporation of New York. Filed Mar. 18, 1930. Serial No. 436,689. 7 Claims. (Cl. 257—149.)

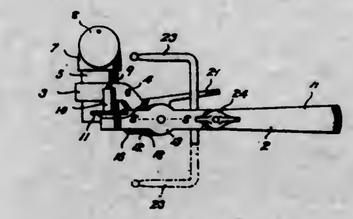
2. A radiator including in combination a heating element and an extended area structure applied thereto comprising pieces of sheet metal at opposite sides embracing the heating element and having edge portions which are recessed to embrace the heating element and are crimped together.

1,904,556. **DECOMPOSITION AND SEPARATION APPARATUS.** AUGUST SOMMERMEYER, Berlin-Rudow, Germany. Filed May 9, 1929, Serial No. 361,749, and in Germany Sept. 24, 1926. Renewed Mar. 31, 1931. 7 Claims. (Cl. 87—4.)



1. Apparatus adapted for the vapor treatment of organic material such as animal carcasses and the like under pressure, comprising, in combination, a decomposition vessel, a separation vessel on substantially the same level as said decomposition vessel, a pipe connecting said vessels for conducting the decomposed material, said pipe communicating with the decomposition vessel adjacent the bottom thereof, an enlarged portion in said pipe, a vapor draw-off pipe extending into said enlarged portion and connected to a vapor collecting vessel.

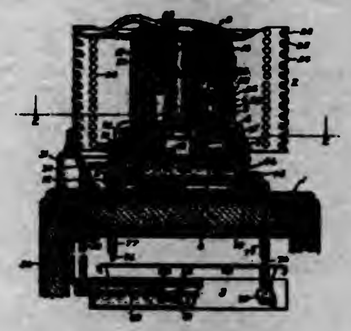
1,904,557. **ELASTIC FLUID TURBINE.** REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1929. Serial No. 389,051. 8 Claims. (Cl. 60—67.)



1. The combination with an elastic fluid turbine, a conduit connected to a stage of the turbine for tapping steam therefrom, a non-return valve in said conduit, and a branch conduit connected to said first-named conduit in advance of said non-return valve, of a combined dumping and pressure relief valve in said branch conduit comprising a valve

casing having a seat, an unbalanced valve adapted to engage the seat, a yieldable spring for holding the valve on its seat, means for adjusting the spring, a movable arm for holding said spring under compression, a fluid actuated

motor to which said arm is connected, a pilot valve for said motor, and means for moving said pilot valve to control the admission of actuating fluid to said motor for modifying the action of the spring adjusting means.

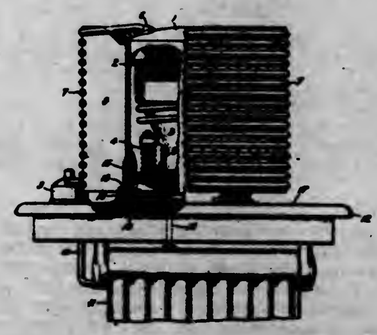


1,904,558. **STRIPING DEVICE.** BENJAMIN S. STARCH, La Crosse, Wis., assignor of one-half to August W. Zerataky, La Crosse, Wis. Filed Feb. 28, 1930. Serial No. 432,151. 12 Claims. (Cl. 91—62.6.)

1. In a striping device, the combination with a handle provided with two relatively movable arms, of a slotted reservoir upon one of said arms, a roller upon the other operating in the slot in the reservoir, a spring acting on said arms in a direction to press said roller into said slot, and a manually operable lever provided with an arm spreading means opposing said spring, and adapted for the regulation of clearance between said roller and said reservoir.

1,904,559. **REFRIGERATING MACHINE.** CHRISTIAN STRENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1926, Serial No. 109,960. Renewed Feb. 6, 1931. 18 Claims. (Cl. 62—115.)

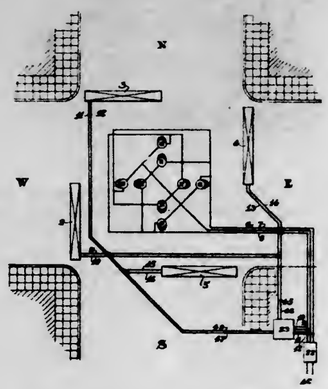
1. A refrigerating machine comprising a casing, a compressor therein, a condenser coil surrounding the casing and connected with the compressor, and a series of heat radiating fins on the casing for supporting the condenser coil.



14. A refrigerating machine having a plate evaporator comprising a casing having partitions therein forming separate chambers containing refrigerant and heat storage liquid, and a cover having a brazed connection with the walls of the casing and with the partitions.

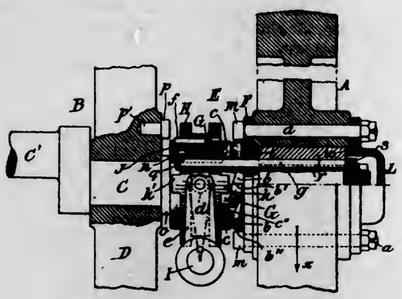
1,904,560. **REFRIGERATOR EVAPORATOR.** CHRISTIAN STRENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1929, Serial No. 389,049. Renewed Aug. 31, 1932. 12 Claims. (Cl. 62—95.)

1. An evaporator for refrigerating machines including a top plate for supporting articles to be frozen, another plate joined to said top plate to form a refrigerant chamber, said top plate having a recess therein to constitute a header for the refrigerant chamber, and a baffle extending between said plates from said header adjacent the opposite edge thereof.



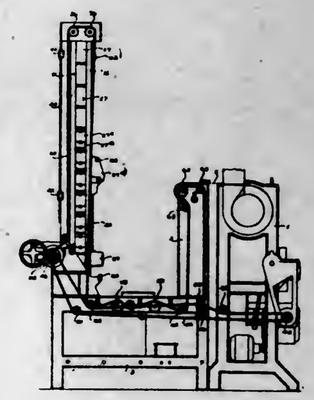
1,904,561. **REFRIGERATING MACHINE.** CHRISTIAN STRENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 10, 1931. Serial No. 543,406. 11 Claims. (Cl. 62—115.)

1. A refrigerating machine including a compressor and an enclosing compression casing, said casing containing a



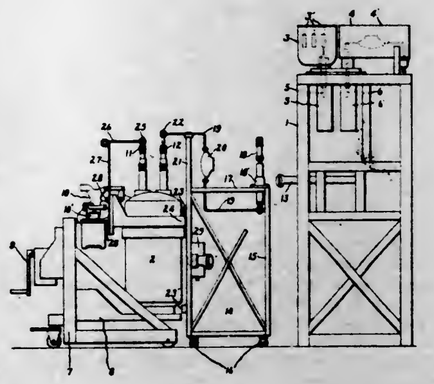
body of lubricant to provide for lubricating the compressor, and means conductively isolated from the portion of said casing containing the body of lubricant for supporting said casing.

1,904,562. RECORDER FOR TRAFFIC SIGNAL SYSTEMS. EUGENE D. STIRLEN, New Haven, Conn., assignor to The Stirlen Engineering & Research Corporation, a Corporation of Connecticut. Filed Aug. 20, 1928. Serial No. 300,935. 5 Claims. (Cl. 234—27.5.)



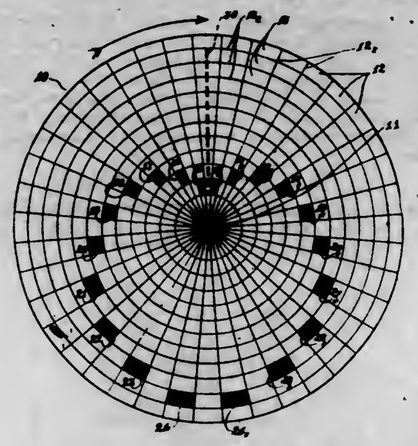
1. In an apparatus of the character described and to be installed at the point of intersection of two vehicle lanes, said apparatus including signalling means, and means for operating said signalling means to accord right of way over said vehicle lanes, recording means connected to said operating means, and means associated with said lanes and responsive to the passage of a vehicle over the same, said last named means being connected to said recording means to operate the latter when said signalling means is in a predetermined condition.

1,904,563. POSITIVE-ACTION CLUTCH. ROBERT W. STROUT, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Nov. 4, 1930. Serial No. 493,253. 7 Claims. (Cl. 192—35.)



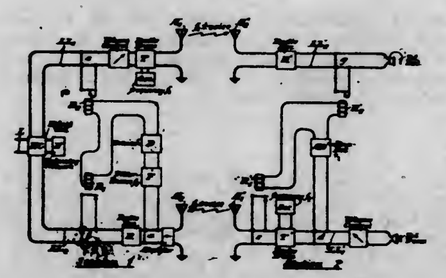
1. A clutch comprising driving and driven members having reciprocally engaging teeth, one of them being movable to engage or disengage said teeth, an operating member having a spiral engagement with the movable clutch member, means for driving the operating member from the driving member for engaging the clutch members, and means for stopping the operating member to disengage the clutch members, the parts being in synchronized relation to bring the clutch teeth into full locking engagement.

1,904,564. PRINT DRIER. HARRY HEWES SULLIVAN, Rochester, N. Y., assignor to Paragon Revolute Corporation, Rochester, N. Y., a Corporation of New York. Filed Dec. 3, 1930. Serial No. 499,788. 7 Claims. (Cl. 34—48.)



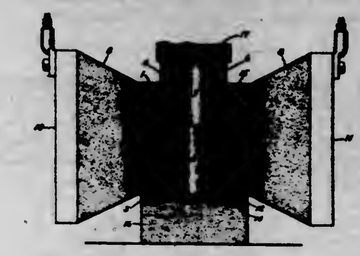
4. A drier for print washers comprising a vertically arranged interior heating chamber, means guiding the sheet material upwardly on one side of the chamber exterior thereof, thence over the chamber and downwardly on the opposite side of the chamber, and a drier chamber on the latter side of the heating chamber open at its bottom and its top so that a draft of air is created to travel upwardly through the drier chamber, the front side of the drier being open to expose the sheet material.

1,904,565. ELECTRICAL APPARATUS. ERNEST G. SWANSON, Upper Darby, Pa., assignor to General Electric Company, a Corporation of New York. Filed Oct. 1, 1930. Serial No. 485,684. 9 Claims. (Cl. 175—183.)



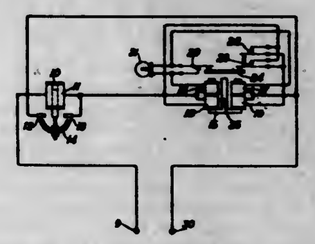
1. Electrical apparatus for metal clad switchgear including a stationary structure upon which buses and feeder connections are mounted and a circuit breaker bodily movable with respect to said stationary structure to connected and disconnected positions, said stationary structure and circuit breaker being provided with coacting disconnecting contacts, comprising a movable testing unit having testing contacts for engagement with said stationary and movable disconnecting contacts respectively, and means for mounting said unit on said circuit breaker for bodily movement.

1,904,566. APPARATUS FOR TREATING LIGHT AND SIMILAR RAYS. ALFRED ORDE TATE, Toronto, Ontario, Canada. Filed Oct. 8, 1928. Serial No. 311,118. 7 Claims. (Cl. 88—1.)



1. In a rotary disc for treating light and similar rays, apertures formed therein and spaced circumferentially of each other by radial sectors and at varying distances from the axis about which said disc rotates, and arranged in series commencing adjacent said axis and proceeding to a point adjacent the periphery of said disc and thence back to a point adjacent to said center axis, said apertures being formed to permit of equal exposure throughout the disc.

1,904,567. TWO-WAY TELEPHONE SYSTEM. EDMUND R. TAYLOR, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 16, 1931. Serial No. 544,890. 8 Claims. (Cl. 250—9.)



1. In a two-way system for the transmission of energy, a first path adapted for transmission in one direction and a second path adapted for transmission in the opposite direction, each of said paths comprising two terminal sections and an intermediate transmission link, the terminal sections of said second path being normally disabled, means near the transmitting end of said first path for applying carrier energy continuously thereto, means near the transmitting end of said second path for removing the disability from the transmitting section thereof and applying control energy thereto, and means responsive substantially only to said control energy for removing the disability from the receiving section of said second path and disabling the transmitting section of said first path.

1,904,568. DISK-LIKE CUTTING TOOL. GEORGE F. TAYLOR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 14, 1929. Serial No. 363,079. 6 Claims. (Cl. 51—279.)

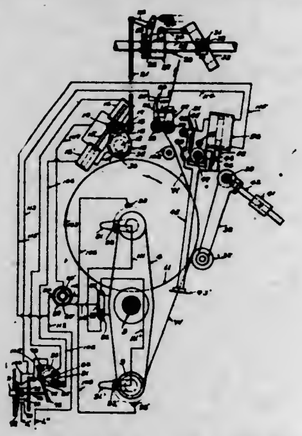
1. An article of manufacture comprising a pair of metal disks and an intermediate sintered disk consisting largely of a hard metal carbide and a binder material therefor, said intermediate disk being welded to said outer disks.

1,904,569. PROTECTIVE DEVICE. JULIAN D. TEBO, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1932. Serial No. 601,443. 10 Claims. (Cl. 171—97.)

10. In a system for preventing electrolysis of metallic structures, means for providing and maintaining a closed path of low resistance for current flowing from said structure to a negative return, means for closing an additional path of lower resistance from said structure to said negative return when the potential of said structure increases to a predetermined value, and to open said path of lower resistance when the potential decreases to a predetermined value, said first means being responsive to current flowing in a reverse direction from said negative return to said structure to open said first path of low resistance and to establish a path of relatively high resistance.

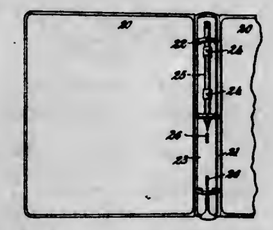
1,904,570. APPARATUS FOR THE VENTILATION OF COOLING PLANTS. ARTHUR LINDSAY THOMSON, Milan, Italy, assignor to Altek Compagnie d'Etude et d'Exploitation d'Appareils Frigorifiques pour le Transport, Antwerp, Belgium, a Belgian Company. Filed Mar. 15, 1929. Serial No. 347,259, and in Belgium Nov. 3, 1928 5 Claims. (Cl. 62—129.)

1. In a cooling plant, the combination of a cold storage room, a compartment in said room, refrigerating pipes



CARNEGIE LIBRARY OF ATLANTA

in said compartment, an air supply conduit adjacent said compartment, a series of passageways between said conduit and said compartment, a series of passageways between

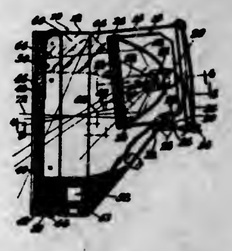


said compartment and said room, means for controlling the passageways of one of said series, and means for blowing air into said supply pipe at a controllable rate.

1,904,571. WEB RENEWING MECHANISM FOR PRINTING MACHINES. JOHN R. TOMLIN, Brooklyn, N. Y., assignor to R. Hoe & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 2, 1931, Serial No. 512,871. Renewed May 3, 1932. 35 Claims. (Cl. 242—58.)

1. The method of replacing a web running to a printing machine, which comprises, rotating a replacement web roll at a peripheral speed substantially equal to the speed of a web being drawn from an exhausting web roll, depositing an adhesive material on the peripheral surface of the replacement roll while it is being rotated, pressing the web running from the exhausting roll against the adhesive material to cause the end of the web of the replacement roll to adhere to the running web, and severing the web of the exhausting roll.

1,904,572. LOOSE LEAF BINDER AND HOLDER FOR WRITING IMPLEMENTS. CLARENCE D. TRUSSELL, Poughkeepsie, N. Y., assignor to Trussell Manufacturing Company, Poughkeepsie, N. Y., a Corporation of New York. Filed Feb. 5, 1931. Serial No. 513,506. 11 Claims. (Cl. 129—24.)



1. The combination, with a loose-leaf binder of which the ring mechanism has a cover-plate provided with an opening, of a holder for a writing implement, having a readily detachable, resilient attaching means adapted to be inserted in said opening and held clipped to the adjacent part of said plate by its elasticity.

1,904,573. VULCANIZATION OF RUBBER. WILLIAM F. TULEY, Nutley, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Dec. 19, 1930, Serial No. 503,521. Renewed June 8, 1932. 26 Claims. (Cl. 8—53.)

1. A process of producing vulcanised rubber which comprises mixing a rubber composition containing sulphur and a metallic oxide with an organic accelerator in the presence of a substantially neutral nitrogenous organic compound devoid of acid material which compound has the ability to decompose at vulcanising temperatures to yield an aliphatic amine or ammonia, and vulcanising the rubber.

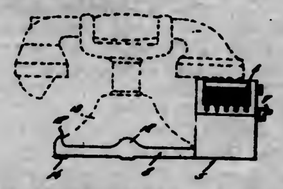
1,904,574. AUTOMOBILE HEADLIGHT. SIMON W. H. TURNER, New York, N. Y. Filed May 29, 1931. Serial No. 540,870. 2 Claims. (Cl. 240—41.3.)

1. In combination, a casing for a headlight having a substantial part of the upper front portion thereof covered by a shield adapted largely to interrupt the passage of light rays, a second casing within the first casing so positioned as to be substantially covered by said shield when viewed from a point horisontally in front of the first casing, a downwardly tilted reflector and a light source in said second casing, and a plate mounted at the front of said second casing a substantial distance in front of said light source provided with prisms adapted to bend a substantial proportion of the light rays from said light source either upwardly or downwardly.

1,904,575. EYELASH CURLER. WILLIAM R. TUTTLE and CHARLES W. STICKEL, Rochester, N. Y., assignors to The Kurlash Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 11, 1932. Serial No. 586,012. 8 Claims. (Cl. 132—32.)

1. In an eyelash curler comprising two relatively and vertically movable jaws curved to fit about an eyelid and to receive eyelashes between them and wherein one of said jaws has an upwardly opening channel along the axis of which the operative edge of the other jaw is parallel, an elastic strip as a projecting facing for said channel and secured therein, the said elastic strip being provided with a central and longitudinal groove on the upper surface thereof for engagement with the operative edge of the abovementioned jaw.

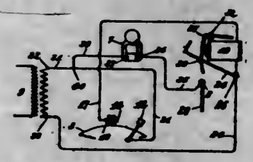
1,904,576. WATERPROOFING COMPOSITION. DOUGLAS FRANK TWISS, Wylde Green, and WALTER GEORGE GORHAM, Erdington, Birmingham, England, assignors to Dunlop Rubber Company, Limited, a British Company. Filed May 19, 1930, Serial No. 453,856, and in Great Britain June 26, 1929. 2 Claims. (Cl. 134—17.)



1. A composition for coating cellulosic or fibrous materials which consists of an aqueous dispersion of rubber material admixed with an aqueous dispersion of wax in substantially equal proportions of wax and rubber.

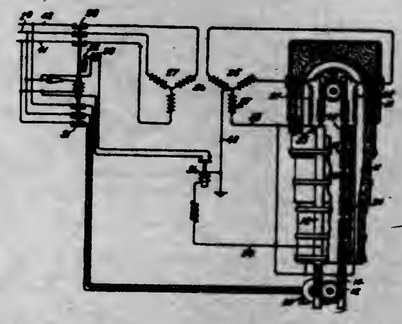
1,904,577. GAS BLAST CIRCUIT INTERRUPTER. WERNER UEBERMUTH, Berlin-Oberschoneweide, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1931, Serial No. 572,177, and in Germany Apr. 3, 1930. 9 Claims. (Cl. 200—148.)

1. A circuit interrupter of the gas-blast type comprising a source of gas pressure, arcing contacts separable to form an arc gap of lighted length through which gas is directed at high velocity from said source, disconnecting switch contacts in series with said arcing contacts, and means opening said disconnecting switch contacts subsequent to opening of said arcing contacts and in response to decrease of the gas blast pressure.



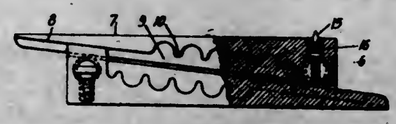
1,904,578. ATTACHMENT FOR TELEPHONES. FRANK EDWARD VANDERHOOF, Greenwich, Conn. Filed May 7, 1931. Serial No. 535,727. 1 Claim. (Cl. 24—10.)

An attaching clamp for telephones of the upwardly tapering base type comprising a transversely split ring, adjustable fastening means between the ends of the ring, whereby the ring can be clamped to the base, said ring being provided at its upper edge portion with inwardly and upwardly extending portions defining projections for engaging against a reduced portion of the said base and at its lower edge with inwardly disposed lugs for engaging the bottom of the base.



1,904,579. CONTINUOUS ALARM CLOCK. PAUL V. VANDEVELDE, New York, N. Y. Filed Oct. 21, 1930. Serial No. 490,304. 2 Claims. (Cl. 58—19.)

1. In a continuous alarm, an electric switch circuit, an electric alarm circuit, a clock provided with an alarm mechanism, said mechanism being connected in series with said switch circuit whereby when said mechanism functions said switch circuit will be closed, a switch in said alarm circuit, said switch including an electro-magnet, a pivotally mounted catch acting as an armature of the magnet, a pivotally mounted arm formed with an aperture through which said catch normally extends, and a swinging stop for said arm, said stop and said arm being in

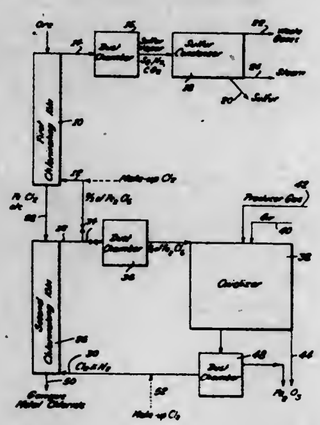


series in said alarm circuit, said stop when engaging said arm acting to close said alarm circuit, an electrically operated bell operatively connected to said alarm circuit, said bell being adapted to function when said alarm circuit is closed, said stop having a swingable plate adapted to move said arm to a position in engagement with said catch whereby said alarm circuit is opened, and means for manually actuating said plate.

1,904,580. PROTECTIVE CIRCUIT FOR ENAMELING FURNACES. ROBERT D. VAN NORDSTRAND, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 24, 1931. Serial No. 553,016. 8 Claims. (Cl. 219—20.)

1. In a protective system for furnaces, the combination of heating means for said furnace, motor driven means for conducting work through said furnace along a restricted path, and means responsive to a predetermined departure of said motor driven means from said restricted path at any point thereof for rendering said heating means ineffective and for stopping said motor driven means.

1,904,581. PRINTER'S QUOIN. CAMILLE JOSEPH VION, Jersey City, N. J. Filed Jan. 15, 1931. Serial No. 508,928. 4 Claims. (Cl. 254—42.)

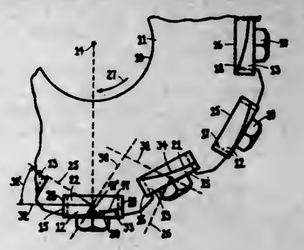


4. A printer's quoin composed of two relatively movable co-operating members, means for locking the same in a

chase, a furniture engaging member in each of said quoin members and means for operating said furniture engaging members into and out of locking engagement with the adjacent furniture in said chase.

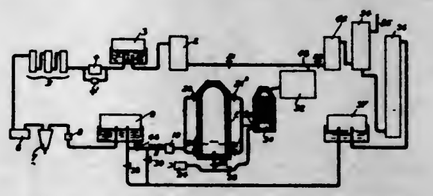
1,904,582. METHOD FOR RECOVERING VALUABLE MATERIALS FROM SPENT CATALYSTS. REBA N. WATTS, Baton Rouge, La., assignor to Standard-I. G. Company. Filed Apr. 11, 1931. Serial No. 529,553. 6 Claims. (Cl. 23—288.)

1. Method for recovering sulfides of metals of the VI group of the periodic system in a catalyticaly active form from spent catalytic material containing these sulfides and the sulfides of metals of the II and IV groups of the periodic system and other hydrochloric acid soluble materials, which comprises digesting the spent catalyst with strong hydrochloric acid, whereby all but the sulfides of the VI group metals are dissolved, separating the undissolved residue from the solution, and washing the residue.



1,904,583. PROCESS OF TREATING IRON ORES. ERNEST W. WESCOTT, Niagara Falls, N. Y., assignor, by mesne assignments, to Sulphide Corporation, a Corporation of Delaware. Filed Oct. 24, 1929. Serial No. 402,010. 6 Claims. (Cl. 23—200.)

1. A cyclic process for treating materials containing iron for the recovery therefrom of contained values which comprises treating such a material in a first step with dilute ferric chlorid vapors to convert the iron to ferrous chlorid, the temperature in said first step being maintained above that temperature at which ferric chlorid will condense from the dilute vapor mixture brought to said step and at the same time sufficient to insure volatilization of any sulfur freed in said first step; voiding the inert gas accompanying the ferric chlorid used in this first step of conversion from the cycle; then treating the ferrous chlorid in a second step of conversion with dilute chlorin to form ferric chlorid vapors, and burning part of the ferric chlorid vapors so formed with air to convert the iron to ferric oxid and to form dilute chlorin for use in such second step while directing the remainder of said vapors to the first step of conversion.

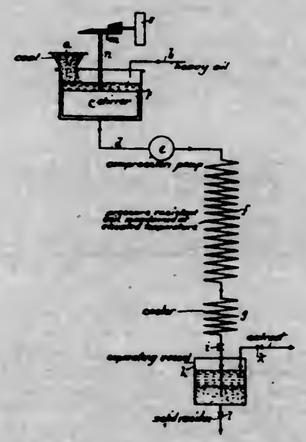


1,904,584. TOOL FOR CUTTING GEARS. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Oct. 28, 1929. Serial No. 402,988. 21 Claims. (Cl. 29—105.)

1. A rotary gear cutting tool, containing a tool body, a cutting portion projecting from said tool body, a cutting face forming a cutting edge on said cutting portion, said cutting edge extending from a lower part of said cutting

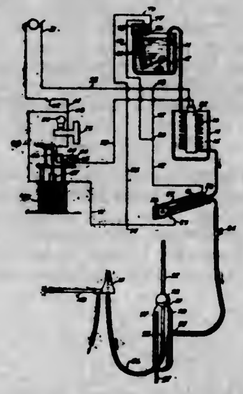
portion upwardly and rearwardly towards the top of said cutting portion, and said cutting face having a general inclination so as to face forwardly and upwardly.

1,904,585. PROCESS FOR THE MANUFACTURE OF CARBON BY DISSOCIATION OF CARBON MONOXIDE STARTING FROM A COMBUSTIBLE TREATED IN A GAS PRODUCER. JACOBUS JOANNES CORNELIUS WILLEKENS, Brussels, Belgium, assignor to The General Carbonalpha Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 26, 1931, Serial No. 525,410, and in France Apr. 1, 1930. 10 Claims. (Cl. 134—60.)



1. Process for the manufacture of carbon by the dissociation of carbon monoxide which, in a combined group of steps consists in making, in a period of reduction, gases rich in carbon monoxide in a gas producer, causing these gases to pass over a catalyzer which decomposes the carbon monoxide with the deposit of carbon and the formation of carbonic acid gas, heating in a blowing period a charge of combustible in the gas producer by blowing air and producing combustion of this combustible, causing the gases impoverished in carbon monoxide and coming from the catalysis, to pass into the charge of combustible thus heated up in order to commence a fresh period of reduction, recuperating, on the other hand, the carbonic acid and gas mixture contained in the air gas made during the blowing period, and introducing this carbonic acid gas as a compensator into the principal gaseous circuit before the gas producer.

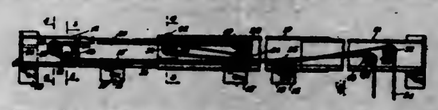
1,904,586. CONVERSION OF CARBONACEOUS SOLIDS INTO VALUABLE LIQUID PRODUCTS. KARL WINKLER and KURT WISSEL, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Dec. 15, 1927, Serial No. 240,333, and in Germany Dec. 22, 1926. 7 Claims. (Cl. 196—56.)



1. The process for recovering valuable liquid products from solid bituminous materials which comprises treating said solid materials, in the absence of substantial amounts of hydrogen, with liquid hydrocarbon materials containing substantially no constituents boiling below 300° C. while operating in a system under a pressure of at least 10 atmospheres and a temperature exceeding 250° C. but below the coking temperature of said liquid hydrocarbon materials by continuously passing at least one of said liquid and solid materials through said system

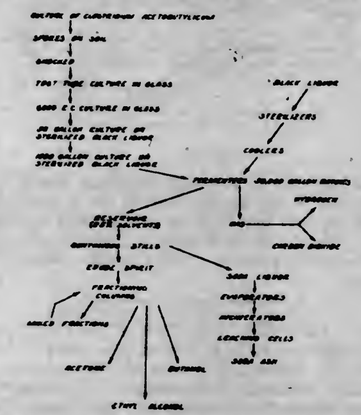
and in contact with the other material, contact being effected between said materials until at least 55% of the weight of said solid materials is extracted, introducing

additional amounts of said solid and liquid materials into said system and continuously withdrawing the extract from said system.



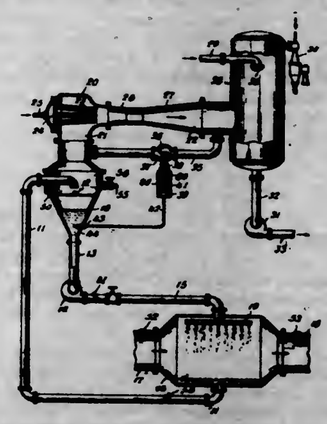
1,904,587. TEMPERATURE CONTROLLING APPARATUS. ERNHOLD H. WAFFLER, Yonkers, N. Y. Filed Aug. 2, 1930. Serial No. 472,738. 5 Claims. (Cl. 128—254.)

1. In an apparatus of the character described, a liquid supply tank, a heating unit, an electric circuit for said unit, a thermostat in said circuit and including a bimetallic temperature-responsive strip, a hollow applicator, a conduit extending from said tank successively to said heating unit, said thermostat, and said applicator, said conduit having a conductive portion mounted on said strip, and an enlarged temperature-leveling chamber in series with said conduit between the thermostat and the applicator, said chamber having an overflow outlet, whereby the liquid may be permitted to flow continuously past the heating unit and thermostat regardless of its flow through the applicator.



1,904,588. CURTAIN ROD. ISIDOR WEINBERG, Brooklyn, N. Y. Filed Nov. 6, 1931. Serial No. 573,476. 9 Claims. (Cl. 156—20.)

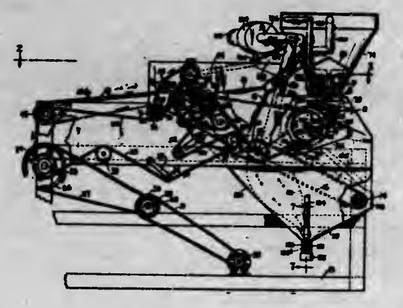
1. A curtain rod, comprising a hollow central member and a pair of hollow end members telescoping endwise into said central member, a sheave mounted at each end within one of said end members, a pair of sheaves mounted at the outer end within the other of said end members, a sheave mounted at one end within said central member,



a pull cord extending through said rod and guided over said sheaves, curtain hanger slides mounted to slide within said rod members, and means for connecting said pull cord to the innermost two slides.

1,904,589. PROCESS OF MANUFACTURING DISTILLABLE SPIRITS BY FERMENTATION. SIDNEY D. WELLS, Port Edwards, Wis. Filed June 17, 1931. Serial No. 545,125. 12 Claims. (Cl. 195—44.)

10. The process of manufacturing alcohol by fermentation which process comprises fermenting a mash comprising the liquor resultant from the cooking of fibrous plant material with a solution of a caustic alkali, and thereby recovering distillable spirits.



1,904,590. REFRIGERATION. MAYER WEXLER, Carteret, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1932. Serial No. 597,161. 21 Claims. (Cl. 62—152.)

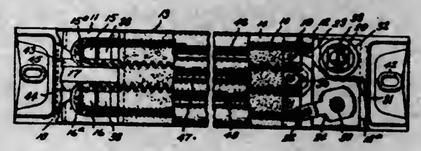
1. The method of refrigeration which comprises introducing liquid into a closed vessel, withdrawing vaporous

fluid from said vessel to maintain a vacuum therein, and reintroducing a portion of said vaporous fluid into said vessel to regulate the degree of vacuum maintained therein.

1,904,591. POWDER DISTRIBUTING MACHINE. LOUIS WILSON, Brooklyn, N. Y., assignor to B. L. Nicholes & Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 21, 1928. Serial No. 320,825. 16 Claims. (Cl. 91—59.)

1. In a machine of the class described, means for applying powder to wet printed matter, and a conveyor having means to grip and advance said printed matter, said gripping means also successively tapping said printed matter during its forward travel to shake surplus powder therefrom.

1,904,592. PROCESS FOR THE MANUFACTURE OF HYDROGEN. PHILIP L. YOUNG, New York, N. Y., and WILLIAM V. HANKS and GEORGE H. FREYERMUTH, Baton Rouge, La., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Aug. 30, 1929. Serial No. 389,340. 17 Claims. (Cl. 23—212.)



1. An improved process for the production of a gas rich in free hydrogen under pressure in excess of atmospheric, which comprises continuously passing a hydrocarbon under pressure in excess of atmospheric pressure with steam through a catalytic zone containing a fixed catalyst incapable of absorbing carbon dioxide maintained at a temperature in excess of about 1000° F. using an increased excess of steam above that required at atmospheric pressure whereby the retarding effect of pressure on the reaction is minimized.

7. An improved process for producing a gas rich in free hydrogen under pressure substantially in excess of atmospheric pressure, comprising passing a hydrocarbon in gaseous phase and admixed with steam in sufficient excess to offset the adverse effect of pressure over a suitable catalyst incapable of absorbing carbon dioxide maintained at a temperature in excess of 1000° F., and at pressure in substantial excess of atmospheric pressure, passing the gas mixture so produced over a second catalyst at a lower temperature, and cooling the gas mixture.

1,904,593. PROCESS FOR THE MANUFACTURE OF GAS RICH IN FREE HYDROGEN. PHILIP L. YOUNG, Elizabeth, N. J., and WILLIAM V. HANKS, Baton Rouge, La., assignors to Standard Oil Development Company. Refiled for application Serial No. 389,742, filed Aug. 31, 1929. This application filed Sept. 17, 1932. Serial No. 633,693. 16 Claims. (Cl. 23—212.)

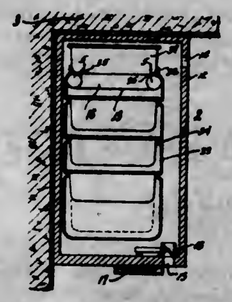
1. An improved process for the production of gas rich in free hydrogen under high pressure, comprising passing a gaseous hydrocarbon through a catalytic zone admixed with steam at temperature in excess of about 1000° F. and at pressure in excess of atmospheric pressure, scrubbing the gas with oil under pressure, removing the hydrogen, then removing the oil and releasing pressure thereon, whereby the absorbed gas is liberated, and returning the absorbed gas to the catalytic zone.

1,904,594. ELECTRIC HEATER. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 15, 1930. Serial No. 452,750. 8 Claims. (Cl. 201—67.)

1. An electric heater comprising an elongated metallic sheath, a pair of insulators in said sheath adjacent the ends thereof, a resistance conductor extending in a plurality of lengths between said insulators, one of said insulators being provided with recesses and the other of said insulators being provided with a protuberance around which the resistance conductor is looped, terminal members seated in said recesses, said terminal members being provided with tapped apertures, connections between said resistance conductor and said members, and threaded terminal pins extending through said sheath into said apertures whereby said members and said terminal pins are clamped securely to said sheath and granular insulating material in said sheath compacted around said resistance conductor.

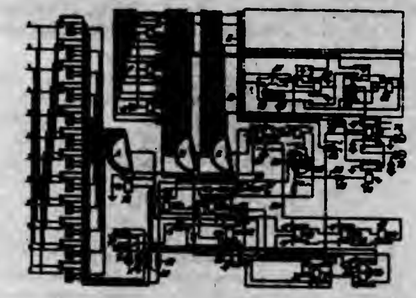
1,904,595. RESINOUS COMPOSITION. LESTER V. ADAMS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 27, 1928. Serial No. 315,591. 8 Claims. (Cl. 260—8.)

1. A resinous composition comprising the composition formed by the simultaneous condensation of glycerine, phthalic anhydride and a terpene containing hydroxyl groups.



1,904,596. ARCH, PARTICULARLY FOR USE IN METALLURGICAL FURNACES. WALTER ALBERTS, Duisburg-Ruhrort, Germany, assignor to the Firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Dec. 7, 1929, Serial No. 412,873, and in Germany July 4, 1929. 3 Claims. (Cl. 110—99.)

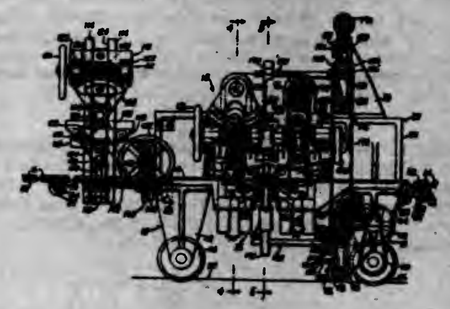
1. In a furnace of the class indicated, an arch which is built up of bricks individually having profiles of a plurality of types of curved configuration on the surface of the arch which is out of contact with the fire and exposed to the air, the bricks being arranged in such manner that the outer surface of the arch presents an undulated surface comprising a series of peaks and depressions while the inner surface of the arch is generally smooth.



1,904,597. REFRIGERATING APPARATUS. EDMUND B. ALLYNE, Lantana, Fla. Filed Mar. 6, 1931. Serial No. 520,536. 10 Claims. (Cl. 62—95.)

1. Refrigerating apparatus, comprising a cabinet having a refrigerating compartment, an vaporator member therein having parallel conduit members in substantially the same horizontal plane, tray supporting means carried by said conduit members and comprising a sheet metal casing having parallel vertical side walls provided with tray supporting means and at their upper portions with laterally extending members removably resting upon

and in thermal contact with said conduit members, whereby said casing is adapted both to support a tray and to conduct heat to said conduit members.

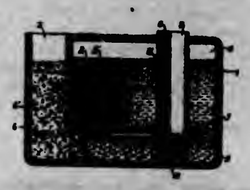


1,904,598. TESTING SYSTEM. FRITHIOF B. ANDERSON, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1929. Serial No. 349,285. 12 Claims. (Cl. 175—183.)

1. The method of testing the insulation of a conductor which comprises charging the conductor to a definite potential, permitting the conductor to discharge for a definite period, determining the potential of said conductor at the end of said period, determining whether the potential at the end of said period is above or below a definite value, and indicating the result of said determination.

1,904,599. METHOD OF WELDING AND APPARATUS THEREFOR. JAMES L. ANDERSON, Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1930. Serial No. 491,868. 19 Claims. (Cl. 113—59.)

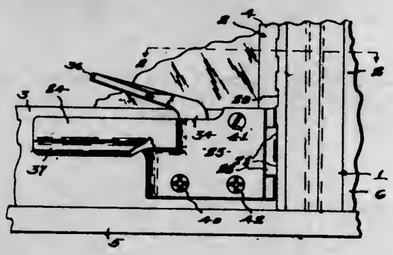
1. Apparatus for welding mechanically which includes: a pair of carriages constructed for feeding thereacross a traveling sheet, one of said carriages being mounted on the other carriage both of said carriages being mounted for movement with said sheet, means on each of said carriages for securing a metallic sheet thereto, mechanism for varying the position of the carriages relative to each other to bring the end edge of one sheet into welding relation with the other sheet, means for clamping the adjusted sheet in position to be welded to the other sheet, and means supported relatively to said carriages for welding together the two sheets to form a continuous member therefrom, said welding means including a torch carriage supporting torches positioned above and below said end edges and arranged for movement across the



positioned sheets, the carriage at the welding position being formed to present air conduits to assist the combustion of gases around said torches.

1,904,600. PROCESS FOR EXPOSURE AND COPYING OF PHOTOGRAPHS AND CINEMATOGRAPHIC RECORDS IN NATURAL COLORS. POUL SMITH RASTRUP ANDERSEN, Copenhagen, Denmark. Filed Sept. 12, 1931, Serial No. 562,508, and in Germany Oct. 17, 1930. 8 Claims. (Cl. 95—2.)

1. The process for producing multi-color photographs which comprises forming a negative plate having an orthochromatic coating on the front face and a panchromatic coating on the back face thereof, exposing said negative to form image values in both of said coatings, developing the exposed negative, applying a film of a transparent fatty substance to the image values of the panchromatic coating, impressing the sensitized face of a positive against said film covered surface of the negative plate so as to transfer the fatty substance to the corresponding parts of the positive, exposing the positive through the negative plate, developing the uncovered area of the positive, and differentially coloring the positive.



1,904,601. CONSTANT LEVEL LUBRICATING DEVICE. KOICHI AOKI, Tokyo, Japan, assignor to General Electric Company, a Corporation of New York. Filed Apr. 8, 1931, Serial No. 528,694, and in Japan May 21, 1930. 1 Claim. (Cl. 308—122.)

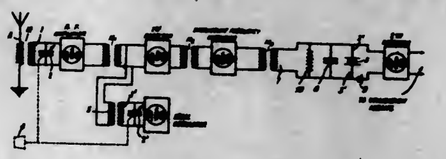
A lubricating device for a bearing comprising a storage reservoir containing oil below atmospheric pressure, a supply chamber disposed beneath said reservoir for feeding oil to said bearing, and a plug-like member mounted within said reservoir and chamber, said member being provided with a longitudinal bore normally communicat-

ing with atmosphere at one end and through communicating passages with both the storage reservoir and the supply chamber at the other end arranged so that said reservoir may be refilled directly through said bore, and, during normal operation oil may feed from said reservoir into said supply chamber, said member likewise being provided with a vent interconnecting said reservoir and supply chamber causing feed of oil into said chamber only in response to predetermined lowering of the oil level therein.

1,904,602. WINDOW SASH HOLDER AND WINDOW CONSTRUCTION. ROY T. AXE, Syracuse, N. Y., assignor, by mesne assignments, to The Syracuse Trust Company, Syracuse, N. Y., a Corporation of New York, trustee. Filed Feb. 26, 1930. Serial No. 431,579. 4 Claims. (Cl. 292—173.)

1. The combination with a window sash and guide therefor, of a sash holder comprising a housing mounted on the rail of the sash and having a hollow lengthwise extension constituting a rigid lift handle, a latch member movable in the housing and having a longthwise stem extending into the hollow lift portion, an operating lever pivoted in the housing and extending to the outside thereof and coacting with the latch member to operate the same and a spring surrounding said stem and thrusting against the latch member, the portion of the latch operating lever located outside of the housing, extending lengthwise of the lift handle and arranged in pinch handle relation thereto.

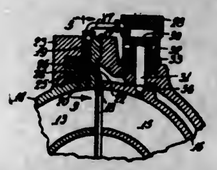
1,904,603. RECOVERY OF SULPHUR. RAYMOND F. BACON, Bronxville, and ISAAC BENCOWITZ, New York, N. Y.; said Bencowitz assignor to said Bacon. Filed Mar. 5, 1930. Serial No. 433,501. 14 Claims. (Cl. 23—226.)



1. In a process for treating pyrites-bearing material to recover sulphur, the improvement which comprises subjecting the pyrites-bearing material to the action of hydrogen chloride in the presence of an agent of the group air, oxygen, carbon dioxide, carbon monoxide, flue gases and the like which reacts with sulphur to form a volatile sulphur compound.

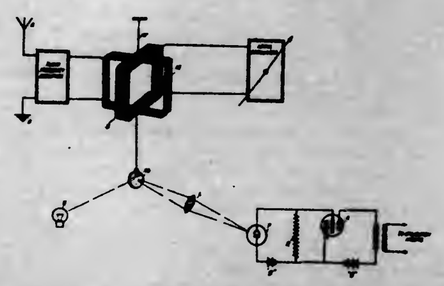
14. The method of recovering sulphur from pyrites-bearing material which comprises subjecting the material at an elevated temperature to the action of hydrogen chloride, air and one or more oxides of carbon to produce hydrogen sulphide, carbonyl sulphide and sulphur dioxide, and passing the sulphur compounds thus produced in contact with water to hydrolyse the carbonyl sulphide and cause a reaction between sulphur dioxide and hydrogen sulphide to produce elemental sulphur.

1,904,604. PROCESS OF PRODUCING AMMONIUM SULPHATE. HANS BAHR, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed July 14, 1930, Serial No. 467,968, and in Germany July 29, 1929. 4 Claims. (Cl. 23—119.)



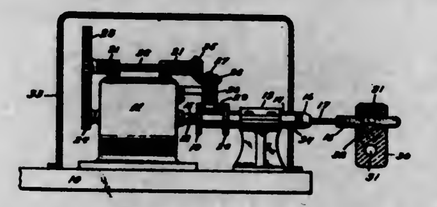
1. The process of producing ammonium sulphate which comprises heating an aqueous solution of ammonium sulphite ranging from weakly acid to alkaline in the absence of substantial amounts of acid ammonium sulphite under pressure.

1,904,605. CRYSTAL REJECTOR CIRCUIT. WILLIAM S. BARDEN, Stapleton, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 10, 1931. Serial No. 507,876. 6 Claims. (Cl. 250—20.)



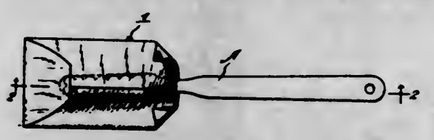
1. In a signal receiving system, means for producing local oscillations, a signal circuit tunable to a desired carrier frequency, means for heterodyning the desired frequency and local oscillations to produce a beat frequency, means for detecting the beat frequency and a piezo-electric rejector path between said heterodyning means and said detecting means resonant to said beat frequency, and means for tuning said signal circuit to an undesired interfering carrier frequency slightly different from the desired carrier frequency when heterodyning occurs between the desired carrier frequency and said undesired carrier frequency.

1,904,606. HYDRAULIC POWER TRANSMITTER. GUSTAV BAUER, Hamburg, and JOHANN NIKOLAUS KIEP, Altona-Hochkamp, Germany. Filed June 18, 1930, Serial No. 461,933, and in Germany Oct. 15, 1928. 10 Claims. (Cl. 60—54.)



2. A hydraulic power transmitter of the Föttinger type including driving and driven rotors, a discharge control ring carried by one of said rotors for permitting or preventing escape of liquid therefrom, a locking member for preventing relative rotation of said rotors, and hydraulic means controlled by said ring for actuating said locking member.

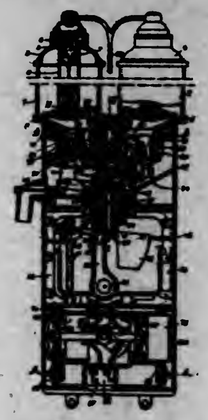
1,904,607. STRAY AND ATMOSPHERICS ELIMINATING SYSTEM. JOSEPH BETHENOD, Paris, France. Filed Apr. 22, 1929, Serial No. 357,037, and in France May 2, 1928. 4 Claims. (Cl. 250—20.)



3. A receiving system comprising an antenna, a radio frequency amplifier coupled thereto, a resonant galvanometer including a pair of coils, one of said coils being movable and connected to the amplifier output, a source of local oscillations connected to the other coil, and means, responsive to relative movement between both coils for producing electrical variations corresponding to variations in the collected signal energy.

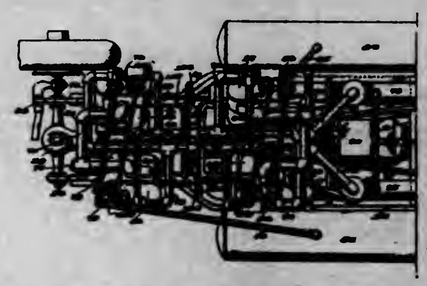
1,904,608. INSULATOR FINISHING BRUSHING MACHINE. DAVID BERTINI, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Dec. 20, 1930. Serial No. 503,849. 2 Claims. (Cl. 15—21.)

1. In an insulator finishing machine, a stationary support, a motor mounted thereon and having a shaft, bearing means on the support, a tubular member slidable and rotatable within the bearing means and having a splined telescopic connection with said shaft, an abrading element carried by said tubular member, means driven by the motor for reciprocating said tubular member simultaneously with rotation thereof, comprising collars carried by said tubular member and an eccentric driven by the motor shaft and located between and cooperating with said collars.



1,904,609. CONTAINER FOR TOOTHBRUSHES. SAMUEL B. BLEADON, San Francisco, Calif. Filed Feb. 18, 1930. Serial No. 429,343. 1 Claim. (Cl. 206—15.1.)

A tooth brush container comprising a normally flat bag-like receptacle of uniform width throughout and open at one end to receive the head of the brush, an envelope-like lining of absorbent material within the receptacle and open at both ends, said lining being formed from a blank of material folded to provide overlapping folds having their corresponding upper corners connected together and free for the remaining portions of their length, and the corners of the open end of the receptacle and the adjacent corners of said lining being folded on one side of the receptacle to snugly close the latter about the handle of the brush.

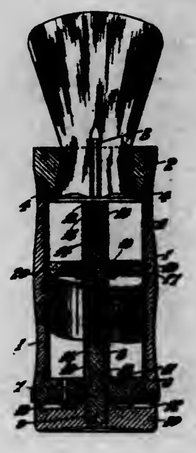


1,904,610. AUTOMATIC LIQUID MEASURING AND DELIVERING APPARATUS. HENRI BOUTILLON, Suresnes, France. Filed Dec. 26, 1929, Serial No. 416,875, and in France July 16, 1929. 3 Claims. (Cl. 221—100.)

1. In a liquid measuring and delivering apparatus of the type described which includes two measuring vessels, each having an outlet and an inlet opening, a liquid supplying conduit, means for forcing liquid into said supplying conduit, a liquid delivering conduit and control means responsive to an increase in the pressure of the supplied liquid arising upon filling up of a vessel to alternately connect the outlet of the filled vessel with the liquid delivering conduit and the inlet of the other vessel with the liquid supplying conduit, control means forming an aggregated unit adapted to be put in place and removed as a whole, securing means for said removable aggregated unit comprising two lever-like members arranged to press said unit in place and a single clamp with a single bolt adapted to

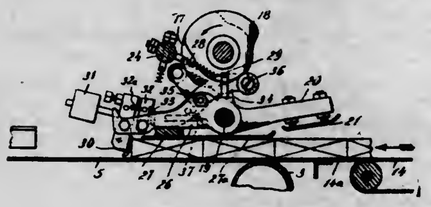
be screwed to a fixed portion of the apparatus to press both levers onto said unit, thereby securing the latter in place.

1,904,611. AUTOMOTIVE VEHICLE. WILLIAM B. BOYETTE, Jacksonville, Fla., assignor to Boyette Air Electric Car, Inc., a Corporation of Florida. Filed Sept. 28, 1932. Serial No. 634,607. 17 Claims. (Cl. 180—54.)



1. In an automotive vehicle, a propelling mechanism therefor, compressed air actuated mechanism for operating the propelling mechanism to provide for the travel of the vehicle, air compressing means, an electric motor for operating the latter, an air compressing means driven from the vehicle on the travel of the latter, each of said air compressing means including high and low compression cylinders, a pair of after coolers, each communicating with the low and high compression cylinders of one of the air compressing means, compressed air storage tanks communicating with each other, means for conducting compressed air from the high compression cylinders of said pair of air compressing means to said tanks, and controllable means common to said tanks for controlling a supply of compressed air to said compressed air actuated mechanism for controlling the operation of said propelling mechanism.

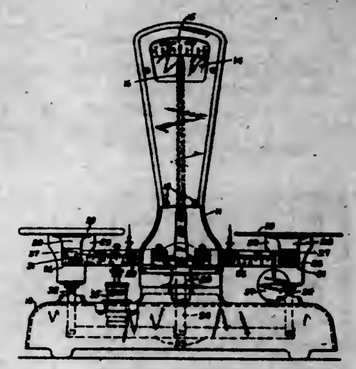
1,904,612. SHAVING BRUSH AND LIKE BRUSH. MOSENS LOUIS BRAMSON, London, England. Filed Oct. 25, 1929, Serial No. 402,237, and in Great Britain Apr. 24, 1929. 2 Claims. (Cl. 15—187.)



1. A reservoir brush comprising a casing, a cartridge containing shaving soap or cream in the casing, a bristle carrying end member secured on one end of the casing, a cream supplying tube extending from the inside of the cas-

ing to the inside of the bristles, an end closing cap operating to clamp the cartridge in the casing, a screw located centrally within the cartridge, means for rotating the screw, a binding disc operated by the screw, and a piston disc the periphery of which bears on the inner surface of

the cartridge, a concave recess being formed by a flange provided on the under side of the piston disc, the inner side of which frictionally engages the edge of the binding disc so that the latter will drive the former in one direction only when the screw is rotated.



1,904,613. ARTICLE COLLECTING MACHINE. CORNELIUS T. BRAREN, Jamaica, N. Y., assignor, by mesne assignments, to Standard-Knapp Corporation, New York. Filed Dec. 11, 1930. Serial No. 501,512. 9 Claims. (Cl. 198—34.)

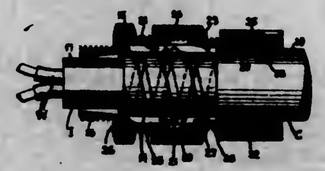
1. In an article collecting machine, the combination of means for advancing a succession of articles, a stop extending into the path of said articles, means controlled by articles and operating when a predetermined number of articles are held by said stop to release said stop and allow the accumulated articles to advance as a group, and a second stop adapted to engage the article following said group until said first mentioned stop is returned to position to intercept the articles.

1,904,614. WEIGHING SCALE. CARROLL E. BERADEN, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Apr. 18, 1930. Serial No. 445,334. 11 Claims. (Cl. 265—59.)

1. A scale comprising a beam, a frame relative to which the beam is pivoted, and a counterbalancing spring connected to the frame and to the beam to extend substantially in the same plane as the pivotal axis of the beam and in a direction substantially longitudinal of the beam,

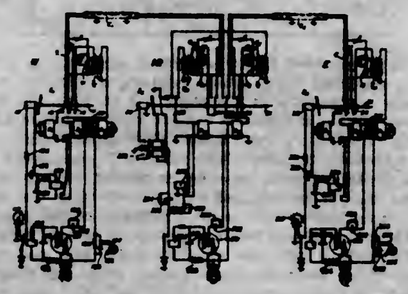
and horisontally movable means for adjusting the connection of the beam and spring longitudinally of the latter.

1,904,615. FITTING FOR MEASURING ELEMENTS. CARLTON W. BRISTOL and ALPHONSO NOBLE, Naugatuck, Conn., assignors to The Bristol Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 1, 1931. Serial No. 566,246. 11 Claims. (Cl. 73—52.)



9. The combination with an anchoring support, of a flexible armor tubing adapted for attachment thereto, a capillary tube passing through the tubing, said capillary tube being helically coiled over a length proximate the attached portion of the tubing, and a tapered sleeve of elastic material fitted over the flexible tubing portion substantially the length of the retained coiled capillary tube portion, with the larger end of the sleeve adapted for fixed attachment to the portion of the flexible armor tubing adapted for attachment to the anchoring support.

1,904,616. METHOD OF SOLDERING. GEORG BRUNNÜNER, Pforzheim, Germany, assignor to Ernst Gideon Bek, Pforzheim, Germany. Filed Jan. 13, 1930, Serial No. 420,696, and in Germany Mar. 17, 1927. 15 Claims. (Cl. 113—112.)

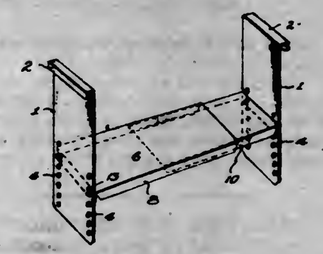


1. The method of soldering the ends of links which consists in applying to the links coated with a liquid solder paste of a character containing finely divided solder producing material of a character to be held in suspension by said liquid, subjecting the links to a rubbing agitation and flexing while in contact with a dry solder material so as to mix said dry solder material with the paste and to reduce the adhesiveness of the latter, whereby any voids in the link gaps left through incomplete filling of the link gaps by the solder paste will be filled by the dry powder material while all the solder material except that in the link gaps will be removed by the agitation and flexion, applying to the chain links a dry non-solder substance acting to protect the solder material from oxidation and the link surfaces from spreading of the solder material, and then subjecting the links to the action of heat to a degree to fuse the solder and to eliminate the suspension liquid without residue.

1,904,617. CABLE CONNECTER. STEPHEN N. BUCHANAN, Elizabeth, N. J. Filed Mar. 18, 1932. Serial No. 599,622. 2 Claims. (Cl. 247—25.)

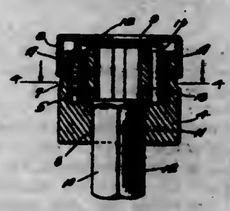
1. A cable connecter comprising a connecter member having a passage therethrough to receive a cable, means carried by the connecter member to anchor the latter in a wall opening, a sleeve having longitudinal slots therein forming flexible arms, the sleeve being carried within the connecter member with the ends of the arms projecting beyond the end thereof, operating means carried upon the exterior of the connector member, the operating means engaging the projecting ends of the flexible arms to contract the same, an extension upon the operating means having a passage therethrough for the cable, and packing means carried by the extension to seal the space between the latter and the cable.

1,904,618. TELEGRAPH SYSTEM. EVERETT T. BURTON, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1931. Serial No. 582,696. 15 Claims. (Cl. 178—69.)



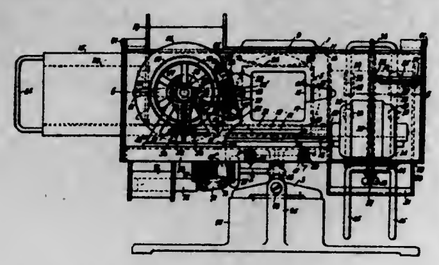
1. A long signaling line, a simplex telegraph station connected to said line and comprising sending and receiving equipments, relay means for alternately conditioning said equipments for operative relation with the line, frequency discriminating means for said relay means to differentiate between impulses of high and low frequencies to change the operative relation of said equipment at the cessation of impulses of one of said frequencies in the line.

1,904,619. ADHESIVE AND PROCESS OF MAKING SAME. GEORGE V. CABSAR, New York, N. Y., assignor to Stein, Hall & Company, Inc., a Corporation of New York. Filed Dec. 21, 1928. Serial No. 329,673. 8 Claims. (Cl. 87—17.)



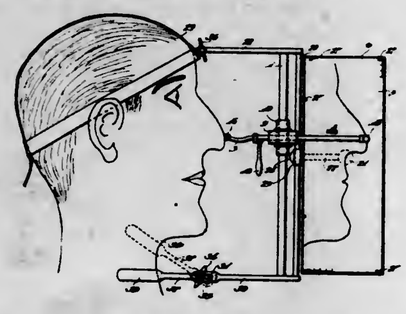
8. A composition for use in making adhesives which comprises 100 parts non-protein poly-saccharide carbohydrate having the characteristics of starch, ¼ to 2% by weight of potassium dichromate, and approximately 1 part of calcium peroxide.

1,904,620. BATTERY SUPPORT. RAYMOND J. KNISINGER, Fort Myers, Fla. Filed Jan. 22, 1932. Serial No. 588,182. 4 Claims. (Cl. 180—68.5.)



1. A battery support comprising two upright end portions having hooks at their upper ends adapted to hook over a portion of a vehicle and a plurality of rows of holes near the vertical edges of the two uprights, an extensible base support for the battery having telescoping meeting ends between the uprights and bolts adjustable in the rows of holes to incline the extensible base at different horizontal angles whereby the extensible base portions may be kept horisontal when the support on the vehicle cooperating with the hooks is inclined.

1,904,621. RATCHET DEVICE. ALBERT J. KOUNOVSKY, Stanton, Nebr. Filed Mar. 29, 1932. Serial No. 601,842. 3 Claims. (Cl. 81—60.)

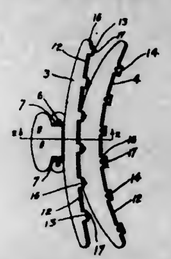


1. A ratchet tool, comprising a body having a circular chamber opening through one wall thereof, a body in the chamber having joined cam surfaces in its sides which face the circular wall of the chamber, said surfaces being farthest from said wall at their points of joinder, a wedge roller lying between said surfaces and said wall, said second body having therein a passage of polygonal cross section coaxial with the chamber, an elongated member formed at one end to removably engage in said polygonal passage, a member positioned against one face of the second body having a pair of fingers extending across said cam surfaces with said roller therebetween, said last member being shiftable to place a selected one of said fingers in a position to limit the movement of the roller in one direction, and means whereby said finger carrying member will be held in either of two adjusted positions by the elongated member when the latter has the said end thereof engaged in said polygonal passage.

1,904,622. STEREOPTICON OPERATING DEVICE. FRED G. KRUSCHE, Norwood, and FRED H. HUDEPOHL, St. Bernard, Ohio. Filed Dec. 16, 1929. Serial No. 414,413. 7 Claims. (Cl. 88—28.)

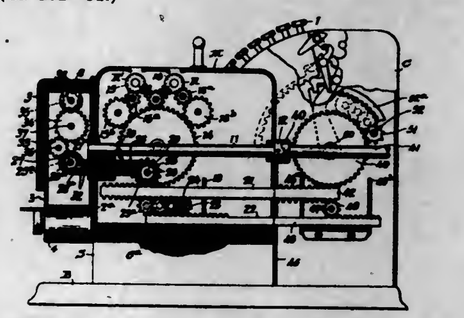
1. In a device of the character described, view-element shifting means comprising a carrier, a crank, a pitman connecting said crank and carrier, a motor-driven shaft, a clutch to connect said shaft with said crank, a lever to retentively engage said crank, and an operative connection from said lever to said clutch whereby said clutch and lever are alternatively engaged with said crank.

1,904,623. APPARATUS FOR REPRODUCING CONTOURS OF SURFACES. JAMES A. MALCOLM, Sheraden, and THOMAS W. WOOTTON, Bellevue, Pa.; said Wootton assignor to said Malcolm. Filed Jan. 9, 1930. Serial No. 419,569. 3 Claims. (Cl. 33—23.)



1. Apparatus comprising a rod, means for supporting the rod in a substantially vertical position adjacent the human face, a carrier member mounted on and movable along the said rod and also movable toward or away from the face, means extending from the said carrier member the end of which latter means is adapted to be drawn horizontally or vertically across the skin surface, a tablet mounted on the means for supporting the said rod, means for maintaining the said tablet in adjusted horizontal or vertical position, and a marking means adjustably mounted on the said carrier member whereby the said marking means may be brought into contact with the said tablet when the latter is in a horizontal or vertical position.

1,904,624. FLIER CONSTRUCTION. MICHAEL J. MCHALM, Scranton, Pa. Original application filed May 31, 1930, Serial No. 458,212. Divided and this application filed Jan. 9, 1931. Serial No. 507,676. 5 Claims. (Cl. 117—23.)



1. A flier including an apertured body portion having an annular wire-receiving groove, a movable spring member in the aperture adapted to grip a spindle, a fixed bushing in the body adapted to support the spring and a mushroom bushing opposite to said first bushing and cooperating therewith.

1,904,625. HAIR WAVER. TOMLINSON I. MOSELEY, San Francisco, Calif. Filed June 17, 1931. Serial No. 544,986. 4 Claims. (Cl. 132—38.)

1. In a hair waving device, a pair of spring-pressed pivotally connected hair-clamping members each having a bottom edge, teeth extending from said edge and having a portion substantially coplanar to the members and a portion substantially at right angles thereto spaced from said edge and extending in the general direction of the opposed member.

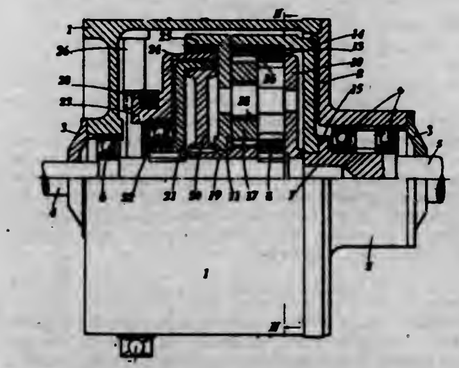
1,904,626. SETTING AND LOCKING MECHANISM FOR PRINTING DEVICES OF POSTAGE METERS. JACOB W. OGDEN, Springdale, and BERTHOLD KNAUER, East Norwalk, Conn., assignors to Pitney-Bowes Postage Meter Co., Stamford, Conn., a Corporation of Delaware. Filed Jan. 20, 1931. Serial No. 510,026. 28 Claims. (Cl. 101—91.)

1. In a machine of the character specified; a rotary drum containing value printing means, a rotatable member and connections in the drum for shifting the value printing means; a rotatable member exterior to the drum, key-controlled means for variably shifting the latter member; a raceway including both said rotary members; and means in the raceway whereby movement of one rotary member may be transmitted to the other when the drum is in normal rest position; the continuity of the raceway being broken when the drum moves out of normal position, thereby locking both the said members, and such continuity being automatically restored when the drum is returned to normal position thereby unlocking said members.

1,904,627. THREADLESS FITTING CONDUIT. ADOLPH OLSEVIN, Bronx, N. Y. Filed Nov. 24, 1931. Serial No. 577,051. 2 Claims. (Cl. 285—169.)

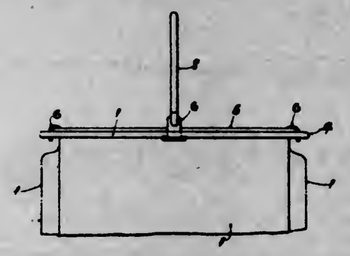
1. A threadless fitting for the conduit of cable connections, as described, comprising a threadless sleeve, a neck part formed with said sleeve having an opening allowing the introduction of a cable, and having a chamber formed therein wider at one end than at the other, a threadless pipe-stem adapted to be entered through the opening in said neck part into said chamber, means in said chamber to snugly engage the end of said pipe stem and when drawn into the narrower part of said chamber

to firmly hold the same in said chamber, a sleeve engaging said neck means for the engagement by tools to disengage said sleeve, means for said neck to disconnect stem and sleeve, and a fluid tight closure at the lower end of said chamber.



1,904,628. INK TRANSFER MEMBER AND METHOD OF MAKING THE SAME. GEORGE B. PELTON, Los Angeles, Calif., assignor to The George B. Pelton Company, a Corporation of Delaware. Filed May 5, 1927. Serial No. 189,180. 39 Claims. (Cl. 197—172.)

16. An inking ribbon comprising a strip of fabric having an absorbent body portion carrying ink, and a coating of a cellulose ester on one face, said coating being fastened to the uninked body portion without the use of any adhesive or liquid cement or other material between said coating and said body portion, said ribbon having the edges impregnated with a cellulose ester impervious to ink.



21. A typewriter ribbon comprising an absorbent combination of silk and cotton and having a face of the fabric coated with a wear resisting material pervious to ink without impairing the ink absorbing capacity of the remainder of the ribbon, and an ink supply absorbed by the fabric.

1,904,629. VARIABLE SPEED GEARING. CHARLES SCOTT PRENDERGAST and RICHARD SAMUEL PRENDERGAST, London, England. Filed Dec. 22, 1931, Serial No. 582,578, and in Great Britain Dec. 24, 1930. 20 Claims. (Cl. 74—34.)

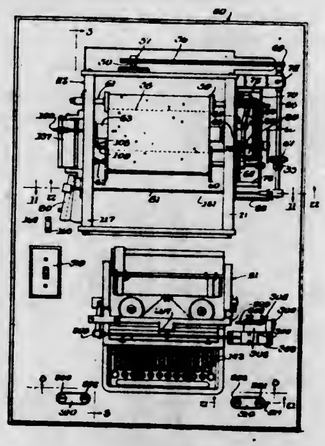
1. A differential epicycle variable speed gear comprising, in combination, coaxial driving and driven members, two epicyclic gear trains of different ratios including two internally toothed rings fixed to one of the said members, two sun wheels mounted on the other of the said members, one at least of the sun wheels being fixed to its member, and planetary cage members supporting planet wheels engaging the said rings and sun wheels, and means for variably and directly interconnecting homologous parts of the said two gear trains to vary the speed of the said driven member relative to the speed of the said driving member.

1,904,630. TINS, IRON KEGS, AND LIKE METAL CONTAINERS. GILBERT ALAN ROBINSON, Hull, England, assignor to F. Robinson and Company, Limited, Hull, England. Filed Jan. 28, 1930, Serial No. 424,012, and in Great Britain Jan. 31, 1929. 2 Claims. (Cl. 220—55.)

1. In combination a container open at the top and having adjacent its upper edge a laterally projecting flange through which are formed a plurality of circumferentially spaced apertures, said flange being of concave shape in radial cross section, a lid the diameter of which is substantially the same as the diameter of the circle in which the circumferentially spaced apertures are located, and fastenings extending through the apertures in said flange and having their upper ends bent over the adjacent edge of the lid and their other ends directly engaging the flange to prevent bodily upward movement through said apertures.

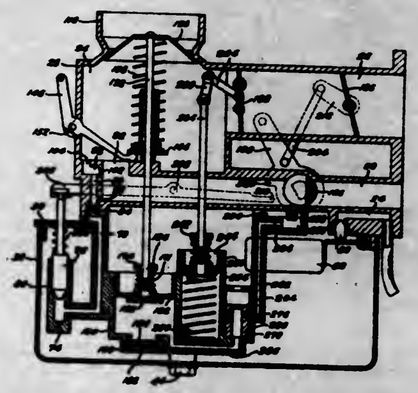
1,904,631. STUFFING BOX. FORREST C. ROYS, Burkburnett, Tex. Filed Nov. 1, 1930. Serial No. 492,839. 1 Claim. (Cl. 286—27.)

A stuffing box for a polish rod comprising a casing, a cylinder connected to the lower end of the casing, a closure member passing through the top of the casing and having its lower face flat, a follower located in the casing with its lower end fitting in the top of the cylinder, said follower tapering upwardly and having a flange at its upper end the periphery of which contacts the inner wall of the casing with the top part of the follower of



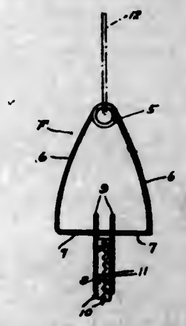
concaved shape, a packing located between the concave face of the follower and the flat lower face of the closure member, a polish rod passing thru the closure member, the follower and through the cylinder, packing means in the cylinder, a spring in the cylinder for pressing the packing means against the lower end of the follower and said follower having ports therein for leading lubricant in the casing to that part of the rod which passes through the follower.

1,904,632. ROTARY CUTTER. LEWIS SKEEL, Meadville, Pa. Filed Sept. 17, 1930. Serial No. 482,568. 14 Claims. (Cl. 29—105.)



1. In a rotary cutter, a carrier having a slot formed in one side wall thereof with a recess, one side of the recess being formed with a cam surface, a blade in said slot, and a wedge of segmental formation adjustable arcuately in said recess between said cam surface and said blade and having the outer edge portion thereof constantly exposed for striking engagement by a tool.

1,904,633. REPRODUCING PNEUMATIC OPERATOR FOR TYPEWRITERS. SELVITOR A. SWANSON, Chicago, Ill. Filed Oct. 26, 1928. Serial No. 315,250. 13 Claims. (Cl. 197—20.)



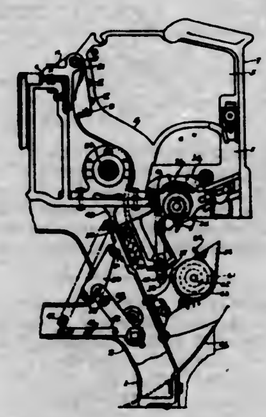
5. In a device of the class described, an automatic operator for typewriters comprising type key actuating means, a stencil sheet for controlling the operation of the key actuating means, a bellows pneumatic operable upon collapse to actuate the line shift and to return the typewriter carriage upon the completion of a line, a pair of vertical rods forming guides for the pneumatic, resilient means operable to gradually extend the pneumatic following its collapse, means operable to stop operation of the type key actuators while the carriage is being returned, and means operable by the carriage upon the completion of its return to again start the operation of the type key actuators.

1,904,634. CHARGE FORMING DEVICE. WILFORD H. TRIPPEL, Dayton, Ohio, assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 27, 1928. Serial No. 288,685. 16 Claims. (Cl. 261—41.)

1. A charge forming device for internal combustion engines comprising a mixing chamber, through which air is adapted to pass at high velocity, a fuel passage, fuel inlet means connecting said fuel passage and the mixing chamber, an air chamber for supplying air to said mixing chamber, and means for making the static suction of the air chamber the dominant factor controlling the flow of fuel into the mixing chamber, comprising a passage connecting the air chamber and fuel passage which is of greater size than said fuel inlet means.

1,904,635. COW TAIL HANGER. IRA A. TROWBRIDGE, Wallace, Idaho. Filed Sept. 22, 1932. Serial No. 634,394. 2 Claims. (Cl. 119—105.)

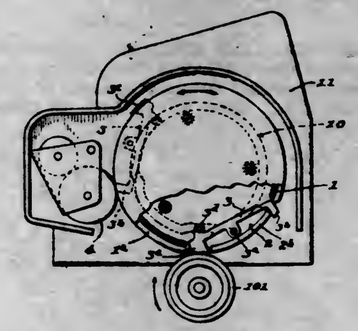
1. A device of the class described comprising a frame formed from a single strand of resilient material bent over upon itself intermediate its ends at its center to provide a coil from which merges arms, the arms being curved and diverging outwardly from each other and terminating in inwardly directed extensions which in turn merge into U-shaped extensions disposed in planes at right angles to the general plane of the frame.



1,904,636. KEY OPERATED WARM AIR REGISTER. WILLIAM THOMAS TRUAX, Battle Creek, Mich., assignor to United States Register Co., Battle Creek, Mich., a Corporation of Michigan. Filed Dec. 31, 1930. Serial No. 505,896. 2 Claims. (Cl. 98—110.)

1. In a register, the combination with a frame having pivoted slats, of a slide, said slats and slide having mutually engaging devices whereby the movement of the slide opens and closes said slats, a movable crank member having a projecting pin, said slide having a projection engaging the pin of the crank, a shaft secured to the crank to operate the same, a ratchet wheel constructed to be

turned by the shaft, a member having teeth engaging the ratchet wheel, said wheel and member being relatively movable one towards the other, a spring arranged to hold said wheel and member yieldingly together, and a stationary support for the shaft.



1,904,637. BREAST LIFT. JEFFREY JOHN WALLACE, Amite, La., assignor to Gullett Gin Company, Amite, La. Original application filed May 6, 1931, Serial No. 535,523. Divided and this application filed May 20, 1932. Serial No. 612,604. 2 Claims. (Cl. 19—55.)

1. In a cotton gin, a frame having a cotton box pivoted thereto and normally held by gravity in operative position, arms projecting downwardly from said box, a cross bar connecting said arms, a shaft rotatable on said frame, a bell crank fixed to said shaft, a link pivoted at one end to an arm of said bell crank and at its other end to said cross bar, said link and arm being provided with cooperating stop elements to limit the swing of said link in one direction around said arm, and a spring connecting the other end of said bell crank to said frame for substantially counterbalancing said box.

1,904,638. MEANS FOR PREVENTING TAKING OF FRAUDULENT IMPRESSIONS FROM POSTAGE METER MACHINES. WALTER H. WHEELER, Jr., and JACOB W. OSBORN, Stamford, Conn., assignors to Pitney-Bowes Postage Meter Co., Stamford, Conn., a Corporation of Delaware. Filed Nov. 6, 1930. Serial No. 493,896. 15 Claims. (Cl. 199—91.)

1. In combination with a rotatable printing die; spaced devices adapted to be alternately projected beyond the printing surface of the die to permit taking a progressive impression from the surface of the die, but preventing the taking of a simultaneous impression from all portions

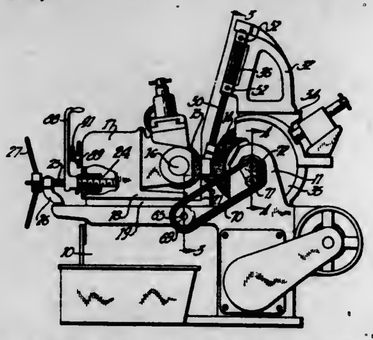
of such surface; and means for retracting one device and simultaneously projecting the other while the die is exposed for printing.

1,904,639. MANUFACTURE OF CEMENT. ROBERT ERWIN WINDECKER, Painesville, Ohio. Filed Sept. 25, 1930. Serial No. 484,469. 3 Claims. (Cl. 106—25.)

1. In the manufacture of hydraulic cement, the improvement comprising clinkering a mixture containing calcium carbonate, alumina, silica, iron and a fluoride flux, and incorporating a chloride selected from the group consisting of calcium and magnesium chlorides in the cement produced by grinding the clinker.

1,904,640. MANUFACTURE OF CEMENT. ROBERT ERWIN WINDECKER, Painesville, Ohio. Filed June 10, 1931. Serial No. 543,883. 8 Claims. (Cl. 106—25.)

1. In the manufacture of high early strength hydraulic cement, the improvement comprising clinkering a cement mixture including a fluoride flux the lime modulus of which exceeds 2.20 and incorporating a water soluble salt selected from the group consisting of sodium sulphate, sodium carbonate and magnesium sulphate in the cement produced by grinding the clinker.



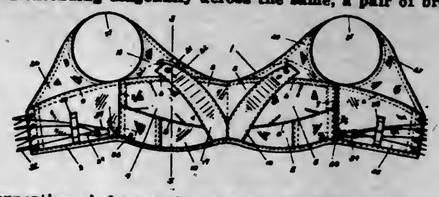
1,904,641. MILLING MACHINE COLLET. WALTER D. ARCHEA, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 26, 1931. Serial No. 539,671. 7 Claims. (Cl. 90—11.)

1. In a spindle structure for a milling machine comprising a rotatable spindle, an annular cutter and standard keys for coupling the cutter to the spindle for rotation thereby, the combination of means for quickly detachably connecting a second cutter to the spindle for rotation thereby comprising an adapter, means to secure the adapter to the end face of the spindle in driving engagement

with said keys and centrally of the annular cutter, and a locking member carried by the adapter having means thereon for inter-engaging similar means on a second cutter upon partial rotation of the member for securing the last named cutter to the spindle.

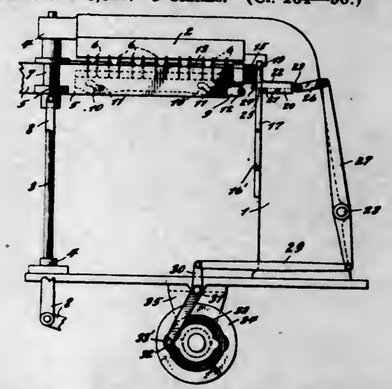
1,904,642. GRINDING MACHINE. CHARLES G. HUNT, Cincinnati, Ohio, assignor to Cincinnati, Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed May 25, 1931. Serial No. 539,667. 13 Claims. (Cl. 51—103.)

1. In a grinding machine the combination of a head, a spindle rotatably journaled and axially shiftable therein, a grinding wheel carried by the spindle, a screw on the end of the spindle adapted to axially shift and shift with the spindle but held against rotation, means operable on the screw for effecting the axial shifting thereof, said means comprising a rotatable nut fixed against axial movement, and means for rotating the nut including a sprocket having trained thereabout a sprocket chain, and means for actuating the sprocket chain.



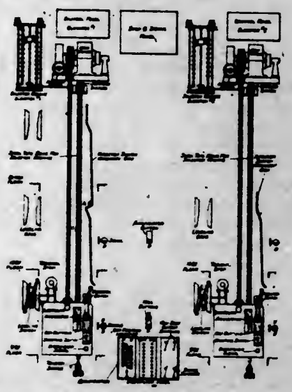
1,904,643. LIGHTING UNIT. RALPH L. HUSE, Boston, Mass., assignor to Albert & J. M. Anderson Manufacturing Company, South Boston, Mass., a Corporation of Massachusetts. Filed June 5, 1930. Serial No. 459,284. 3 Claims. (Cl. 240—73.)

1. A lighting unit comprising a casing having a rearwardly extended portion and a forwardly extended rim and provided with means for anchoring said casing in a recess in a wall, a lamp socket and lamp within said rearwardly extended portion, a face plate within said rim and secured to said casing, a cover member hinged to said face plate and provided with a removable glass member, and means within said rim for securing said cover member in its closed position.



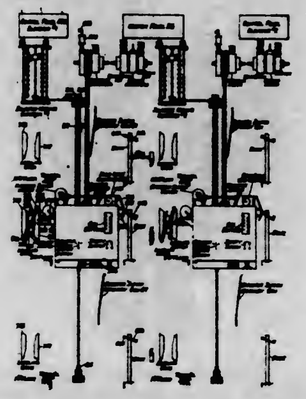
1,904,644. BUST UPLIFT. ARIEL M. LE MAY, Chicago, Ill., assignor, by mesne assignments, to S. H. Camp & Company, Jackson, Mich., a Corporation of Michigan. Filed Jan. 18, 1932. Serial No. 587,822. 5 Claims. (Cl. 2—42.)

1. A bust uplift garment comprising rear portions, shoulder straps, breast covering portions, supporting straps secured to the lower edge of said breast covering portions and extending diagonally across the same, a pair of breast



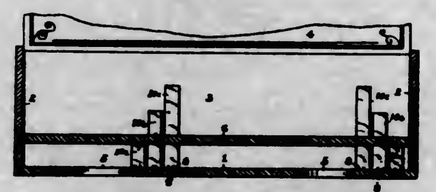
supporting shelves each suspended in said garment, said supporting straps cooperating with said supporting shelves to produce a sling-like breast supporting structure.

1,904,645. BOOKMAKING MACHINE ATTACHMENT. BERNHARD LEVINE, Bronx, N. Y. Filed June 6, 1932. Serial No. 615,521. 6 Claims. (Cl. 164—90.)



1. In a book making machine having a supporting frame and a laterally movable arm supported at one end for book signatures and carrying punches for making holes for needles through the signatures, a support on said frame for the free end of said arm, and means to move said support into position prior to the operation of said punches.

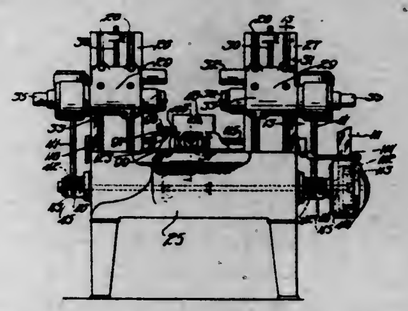
1,904,646. ELEVATOR SYSTEM. DAVID L. LINDQUIST, Hartsdale, N. Y., and EDWARD L. DUNN, East Orange, N. J., and DAVID C. LARSON, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 8, 1925. Serial No. 6,561. 323 Claims. (Cl. 187—29.)



1. A control system for a plurality of elevator cars comprising means for stopping any car at a predetermined point, said means comprising controlling means common to all the cars.

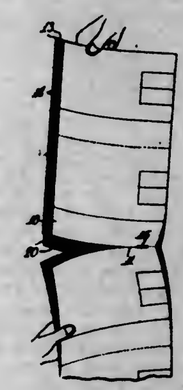
1,904,647. ELEVATOR SYSTEM. DAVID L. LINDQUIST, Hartsdale, N. Y., and EDWARD L. DUNN, East Orange, N. J., and DAVID C. LARSON, Yonkers, N. Y., assignors to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 21, 1925. Serial No. 31,953. 85 Claims. (Cl. 187—29.)

1. A control system for an elevator car comprising, car actuating and stopping mechanism, control means for each of a plurality of floors, means responsive to the operation of any one of the control means for causing the operation of said mechanism to start the car, and means responsive to all the control means operated for causing the operation of said mechanism to stop the car only when it is traveling in a certain direction, at the floors corresponding to the control means operated, in the natural order of floors, regardless of the order in which the control means are operated.



1,904,648. DISPLAY CONTAINER. HARRY MATTHEWS, Tarentum, Pa., distributed by Decree of Court to Alice C. Matthews, widow of said Harry Matthews, deceased. Filed May 12, 1931. Serial No. 536,703. 3 Claims. (Cl. 217—64.)

1. The combination with a cigar box or the like having side walls and a bottom provided with finger holes; of a false bottom in said box substantially filling the space between the side walls and accessible through the finger holes whereby the false bottom may be vertically adjusted by fingers inserted through said holes, and spring metal plates secured against certain of said side walls and each provided with spring fingers of graduated lengths adapted to spring inwardly from the respective wall, said fingers being normally held against the respective wall by an edge of said false bottom.

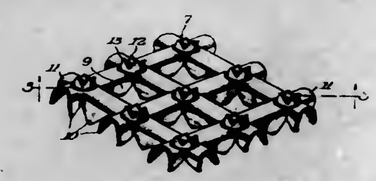


1,904,649. MILLING MACHINERY. LESTER F. NENNINGER, Cincinnati, Ohio, assignor to the Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 4, 1926. Serial No. 139,314. 25 Claims. (Cl. 90—21.)

1. In a machine tool, the combination with a support, of a table movable on the support, power means for imparting movement to the table, including a main drive shaft, a transmission extending from the drive shaft to the table, a supplemental branch transmission, a clutch for selectively coupling the said transmissions with the table

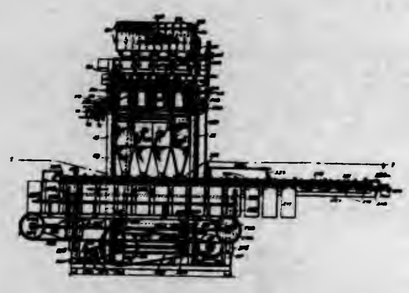
to actuate the latter, a common clutch mechanism for disconnecting all power actuation of the table, and additional gravity actuated mechanism for returning the table when said last mentioned clutch is in inoperative position.

1,904,650. MANIFOLDING MATERIAL. LOUIS M. SNYDER, Brooklyn, N. Y., assignor, by mesne assignments, to James W. Anderson, New York, N. Y. Filed July 16, 1930, Serial No. 468,261. Renewed Mar. 1, 1933. 15 Claims. (Cl. 282—12.)



1. A manifolding packet of the class described, including a pair of runner recordstrips and transfer material interposed between them, the composite web defined by said record strips and said transfer material being zig-zag folded and securing devices passing through the web at the fold lines to secure all of the laminations of the web together, the runner record strips having transverse, weakened tearing lines coincident with the lines of fold, the transfer material being devoid of weakened portions at the fold lines.

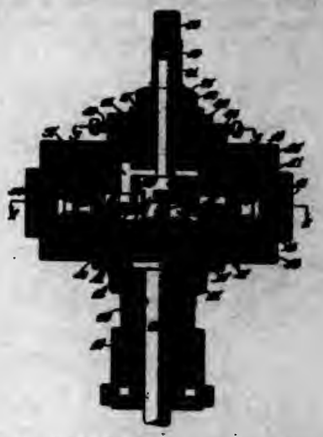
1,904,651. GASKET. JOHN H. VICTOR, Evanston, Ill., assignor to Victor Manufacturing & Gasket Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1930, Serial No. 464,813. Renewed Feb. 27, 1933. 5 Claims. (Cl. 288—1.)



1. A gasket comprising a metal core having perforations punched therein and crossed channel bars smaller than the perforations and separating said perforations and other perforations punched in the intersections of said bars, the metal punched in forming the first-mentioned perfora-

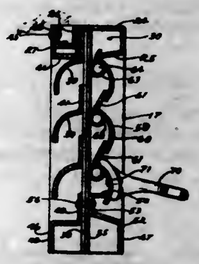
tions forming prongs on one side of the core and extensions of the sides of said channel bars, and the metal punched in forming the perforations in the intersections

of the bars forming prongs on the other side of said core, and gasket material applied to the sides of the core and filling said perforations and embedding said prongs.



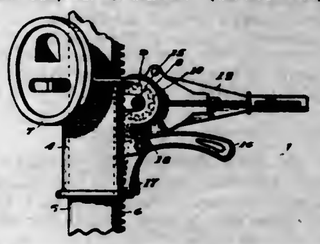
1,904,652. WEIGHING AND FILLING MACHINE. ROBERT N. CUNDALL, East Hamburg, N. Y., assignor to Consolidated Packaging Machinery Corp., Buffalo, N. Y., a Corporation of New York. Filed Aug. 7, 1930. Serial No. 473,535. 38 Claims. (Cl. 249—18.)

1. In an automatic weighing machine, a scale (124), a receptacle (120) on said scale, means (95) for discharging a stream of the material to be weighed into said receptacle, a cut off gate (155) pivotally mounted to cut off said stream of material, a catch pin (158) on said cut off gate, a counterweighted bar (160) pivotally mounted adjacent said cut off gate and having a notch adapted to catch said catch pin and hold said cut off gate in an inoperative position, an abutment (163) operatively connected with said scale and adapted to engage said counterweighted bar and effect a release of said catch pin when a definite weight of powder has flowed into said receptacle whereby said cut off gate is moved to cut off said stream, and means (54) for resetting said cut off gate in its latched inoperative position.



1,904,653. OIL PUMP. EUGENE H. DAVIS and WILLIAM F. JOHNSTON, Philadelphia, Pa., assignors of one-fourth to Noah Walker, Somerton, Pa., and one-fourth to James Harry Thompson, Trenton, N. J. Filed July 9, 1930. Serial No. 466,662. 2 Claims. (Cl. 103—161.)

1. In a device of the character indicated, a shaft axially hollowed at one end and radially bored at circumferentially spaced intervals into the hollow, a plunger in each bore, a pin having an axis parallel to and laterally offset from the shaft axis, transverse inwardly directed abutments on the plungers continuously engaging and rotating the pin, said abutments pressing the plungers outwardly during their discharge strokes, means for retracting the plungers inwardly during the suction strokes, and a stationary casing around the end of the shaft having relatively sealed inlet and outlet connections open into the bores during the inward and outward strokes of the plungers within the respective bores, said casing including a cover plate across the end of the shaft and having a perforation extending radial of the shaft axis, a support for the pin in the perforation and a screw adjustment between the plate and support adapted to adjust the posi-



tion of the pin along the perforation in a direction radial of the said shaft axis and substantially along the line connecting the mid points of said sealing connections.

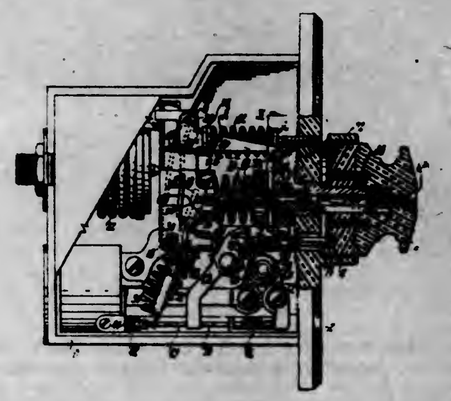
1,904,654. VENTILATOR. EDWARD H. ELLISON, Jamestown, N. Y., assignor to Ellison Bronze Company, Inc., Falconer, N. Y., a Corporation of New York. Filed Sept. 18, 1930. Serial No. 482,764. 5 Claims. (Cl. 98—121.)

1. A ventilator unit of the class described comprising stiles, oppositely disposed fixed and movable louvers mounted between said stiles, axial pins formed integral with the ends of said movable louvers and projecting through said stiles, links fixed to said pins, and a plate connecting said links whereby manipulation of one louver causes all of said movable louvers to be actuated.

1,904,655. MINING DRILL MOUNTING. LOUIS J. FELLAY, Peoria, Ill., assignor to Dooley Bros., Peoria, Ill., a Corporation of Illinois. Filed Sept. 14, 1931. Serial No. 562,631. 2 Claims. (Cl. 255—53.)

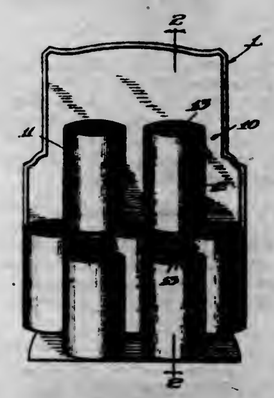
1. In a mining drill mounting the combination of a post, a rack carried thereby, a slide provided with means for mounting drilling mechanism thereon and arranged for adjustable movement lengthwise of the post, a pinion carried by the slide and movable into and out of engagement with the rack, means for rotating the pinion, and releasable holding means carried by the slide and co-operating with the rack whereby to secure the slide in its adjustable position on the post.

1,904,656. MINING DRILL POST. LOUIS J. FELLAY, Peoria, Ill., assignor to Dooley Bros., Peoria, Ill., a Corporation of Illinois. Filed Sept. 14, 1931. Serial No. 562,632. 5 Claims. (Cl. 255—53.)



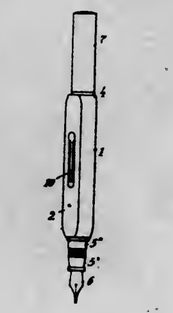
1. In a mining drill post the combination of a post section, an extensible member cooperating with the post section, a dog cooperating between the post section and the extensible member, a lever for moving the dog, a pawl co-operating between the post section and the extensible member for holding the latter in extended position, and a releasing member co-operating between the lever and the dog and pawl for releasing both of the latter to permit retraction of the extensible member.

1,904,657. MINING DRILL. LOUIS J. FELLAY, Peoria, Ill., assignor to Dooley Brothers, Peoria, Ill., a Corporation of Illinois. Filed Feb. 12, 1932. Serial No. 592,472. 1 Claim. (Cl. 255—46.)



In a mining drill, the combination of a housing, a threaded tool operatively arranged in said housing for longitudinal movement in one direction through the housing and for retractible movement in the opposite direction through said housing, a driving means, a train of gearing including clutch means adapted to be actuated by said driving means for imparting rotative and reciprocal movement to said tool, a controllable means for such clutch means, said controllable means including a manually movable member, movable into selective positions whereby the clutch may be alternatively actuated to impart reciprocal movement to said tool when such member is in one position, in another position to retain the tool neutral and rotative and in another position to impart to the tool reciprocal movement in the opposite direction.

1,904,658. DEFROSTER. MALCOLM E. HENNING, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed Oct. 27, 1932. Serial No. 639,908. 15 Claims. (Cl. 62—4.)

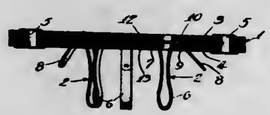


1. A control mechanism for refrigerators comprising means for starting and stopping operation of the refrigerator to obtain normal cycles of operation, means for securing temporary modification of the normal cycles of operation of the refrigerator with the temperature limits between starting and stopping remaining the same, means for obtaining non-normal cycles of operation of the refrigerator with the temperature limits between starting and stopping being changed and common means manually settable for securing either said temporary modification of the normal cycles of operation or said non-normal cycles of operation.

1,904,659. DISPLAY CARD. JULIUS HORWATH, Chicago, Ill., assignor to Arvey Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1930. Serial No. 460,588. 1 Claim. (Cl. 40—126.)

A display card comprising in combination, a flat sheet of relatively stiff fibrous material provided with a plurality of elliptical shaped apertures, a representation of a plurality of cylindrical, metallic cans piled in pyramidal form inscribed upon the front face of said card, the apertures registering with the tops of said inscribed cans, a strip of flat material having a metallic appearance mounted upon the rear face of said sheet immediately behind said apertures, said material being observed through said apertures and simulating the foreshortened tops of said inscribed pile of cans.

1,904,660. FOUNTAIN PEN. ALBERT JAHN, Berlin-Lichterfelde, Germany. Filed Sept. 22, 1928. Serial No. 307,627, and in Germany Apr. 28, 1928. 6 Claims. (Cl. 120—42.)

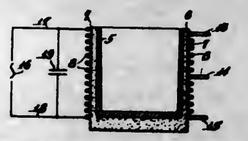


1. In a fountain pen with a body of non-circular cross section, formed by a longitudinal flat face serving as support for the index finger, and by a curved face symmetrically arranged with regard to the longitudinal bore and with extensions of circular cross section at the ends for the accommodation of the nib and cap respectively, the combination of said body with the feeder symmetrically arranged to the nib and positioned in the front tube in such a manner, that the symmetry plane of the feeder divides the handle into two unequal parts.

1,904,661. DEVICE FOR DRYING RAZOR BLADES. WALTER H. LÖWENSTEIN, Cologne-Kalk, Germany. Filed Feb. 12, 1930, Serial No. 427,821, and in Germany Feb. 14, 1929. 5 Claims. (Cl. 206—46.)

1. A device for drying and storing razor blades, comprising a back portion folded over at one end to form a pocket extending over a portion of the entire length of the device and a pack of sheets of absorbent material in said pocket adapted to receive razor blades and to be bent over the front edge of said pocket to always expose the uppermost blade inserted in said pack.

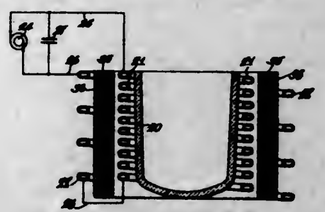
1,904,662. SOCKET FOR VACUUM TUBES. REUBEN B. BENJAMIN, Chicago, Ill., assignor, by mesne assignments, to Hugh H. Eby, Philadelphia, Pa. Filed Nov. 30, 1928. Serial No. 322,687. 4 Claims. (Cl. 173—328.)



1. A tube socket construction comprising an insulating base plate having an aperture therethrough, a second apertured plate and a U-shaped spring contact between the arms of which the contact pin enters, and having its connecting portion at the inner end, said U-shaped spring contact being insertable through the aperture in the base plate from the front side thereof and each arm of said U-shaped spring contact having a securing tip overlying the base plate adjacent said aperture, and clamped between the plates, said base plate having a second aperture adjacent said first aperture and one of the overlying portions of the contact having a wiring terminal extension extending through said second opening to the rear of the base plate, the arms of said U-shaped spring contact being bowed toward each other whereby the intermediate portions of the opposed arms are closer together than the inner and outer portions and thus exert a spring pressure on the inserted contact pin.

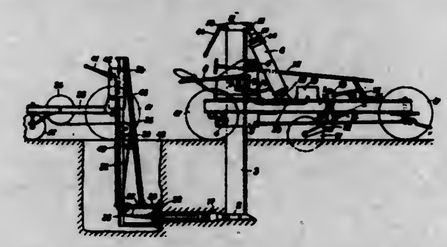
4. In a socket receptacle, two plates of insulation, one having a plurality of apertures for plug passage and for the insertion of contact clips, a plurality of contact clips, one in each aperture, having anchoring parts turned in opposite directions on diametrally opposite sides of the apertures to lie between the plates and be clamped between them, one of them having a projection directed laterally from the plane between the plates to enter one plate and to lock against withdrawal parallel to the plates and the other having a terminal soldering connection extending beyond the clamped portion and through one plate.

1,904,663. IMPROVED ABRASIVE COATED MATERIAL. HERBERT NEWALL MORRIS, Broxbourne, England, assignor to Rucel Limited, London, England, a British Company. Filed July 27, 1929, Serial No. 381,669, and in Great Britain May 30, 1928. 2 Claims. (Cl. 51—280.)



1. An abrasive coated material comprising a backing sheet and a powdered abrasive material secured thereto by a homogeneous film containing rubber and cellulose in intimate association, at the same time attaching the abrasive, and filling and waterproofing the backing sheet.

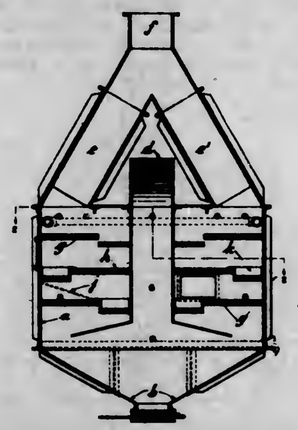
1,904,664. LINING A FURNACE BY FREEZING. HEINRICH NEUHAUSS, Dusseldorf, Germany. Filed Sept. 14, 1929. Serial No. 392,669. 12 Claims. (Cl. 13—26.)



1. The method of forming and maintaining a lining in a pool surrounding induction furnace having a container and a surrounding refractory, while operating the furnace which consists in chilling a molten content against the wall of the furnace and in maintaining it in solid form by continuously artificially cooling the content from the exterior of the furnace through the container while inducing current in a charge within the lining.

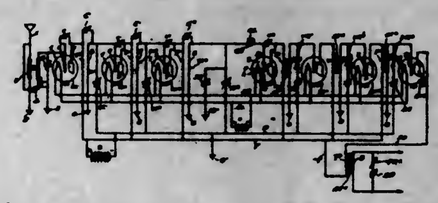
1,904,665. MAGNETIC RETURN CIRCUIT. EDWIN FITCH NORTHRUP, Princeton, N. J., assignor to Ajax Electrothermic Corporation, Ajax Park, N. J., a Corporation of New Jersey. Filed Oct. 22, 1930. Serial No. 490,514. 30 Claims. (Cl. 13—26.)

1. In a stray field eliminator for inductor coils, a compensator coil surrounding the inductor coil and instantaneously carrying current in the opposite direction from that of the current in the inductor coil and finely divided magnetic particles forming a mass between the compensator and inductor coils occupying continuously a considerable circumferential extent about the inductor.



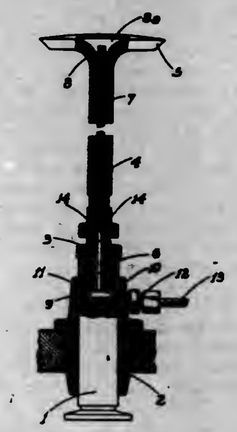
1,904,666. APPARATUS FOR LAYING DRAIN PIPES OR CABLES. HANS SACK, Leipzig, Germany. Filed Nov. 17, 1930, Serial No. 496,223, and in Germany Apr. 9, 1930. 12 Claims. (Cl. 111—5.)

5. A machine for laying pipes comprising a mole plow for cutting a mole passage, means operatively connected to said plow for drawing into said passage a flat strip of flexible material, a chuck adapted to receive the end of said strip, a clutch for connecting said chuck to said plow, and means for throwing out said clutch.



12. A machine for laying pipes comprising a mole plow for cutting a mole passage, means operatively connected to said plow for drawing into said passage a flat strip of flexible material, means arranged at the level of said passage for molding said strip into a pipe, and means for drawing a cable through said pipe.

1,904,667. AIR WASHING AND THE LIKE. WILLIAM ALLEN SMITH, London, England. Filed Nov. 30, 1929, Serial No. 410,852, and in Great Britain Dec. 3, 1928. 3 Claims. (Cl. 261—123.)



1. An improved air washer comprising a closed rectangular tank, a depending inlet, for admitting the air, extending the full width of the tank and to the bottom thereof, a series of overlapping longitudinal baffles on each side of and above the inlet, louvered baffles providing relatively close parallel submerged upwardly directed surfaces, each larger in area than the space between them in a transverse plane at the overlapping edges of the longitudinal baffles, an outlet for the air at the top of the tank and a collecting place and sludge outlet at the bottom of the tank, as set forth.

1,904,668. RADIO APPARATUS. HOMER A. ANDERSON, Brooklyn, N. Y. Filed Mar. 10, 1930. Serial No. 434,649. 10 Claims. (Cl. 250—20.)

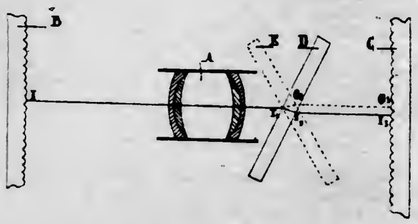
1. A tuned antenna circuit comprising an aerial, an inductive coupling having its primary winding interposed between the input end of the aerial and the ground, a fixed capacitance interposed between the input end of the aerial and the lower side of the secondary winding of the inductive coupling whereby to function in shunted relation with respect to the said primary winding and a ground connection leading from the connected adjacent sides of said condenser and the said secondary winding.

1,904,669. VALVE COOLING DEVICE. WILLIAM BADEN, Stockton, Calif. Filed Sept. 29, 1931. Serial No. 565,721. 5 Claims. (Cl. 123—177.)

1. In combination, a valve having a stem, a valve actuating member engaging the outer end of the stem, said stem being bored from its outer end to adjacent the valve head, a spray nozzle tube secured in said member and projecting into the stem bore in clearance relation thereto, and means to supply a liquid to the member to communicate with the adjacent end of the tube.

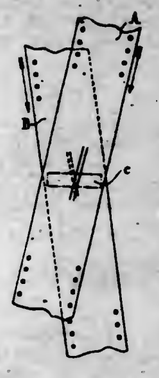
1,904,670. SOCKET FOR TUBES. WILFORD C. MACFADDEN, Fox Chase, Pa., assignor to Hugh H. Eby, Philadelphia, Pa. Original application filed Feb. 21, 1929, Serial No. 341,695. Divided and this application filed Nov. 1, 1930. Serial No. 492,817. 8 Claims. (Cl. 173—328.)

1. In a socket receptacle, a plate of insulation material having a group of passages to receive the prongs of a plug-in device, contact structure for said prongs depending from said plate adjacent said passages extending thru said plate and having fastenings, a second plate of insulation material perforated to correspond with the passages of the first, superimposed, on the first plate on the side opposite the contact terminals and engaging the plurality of said fastenings, a disc of insulation material



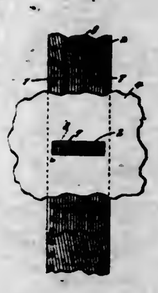
overlying said second plate and a plurality of the fastenings, said disc being centrally disposed with respect to said passages, and means for securing said plates and said disc together in assembled relation.

4. In a socket receptacle, a plurality of clips, a pair of plates of insulation material, one plate having spaced openings for contact devices and the other perforated in line with the openings, contact structure connected with said clips, each comprising a U-shaped contact carrying member extending through one of the openings and having the ends of the U spread away from each other, one inwardly and the other outwardly, one end comprising an intermediate portion of that clip and both ends clamped between the two plates, and a central fastening for the plates bringing substantially equal pressure upon the inwardly directed U-ends about the fastening.



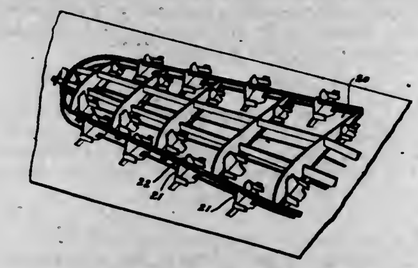
8. In a socket receptacle, a plate of insulation material having a group of passages to receive the prongs of a vacuum tube, contact structure for said prongs depending from said plate, extending through said plate and having metallic fastenings, one set of fastenings having portions extending outwardly outside said group of passages and including intermediate portions and terminal soldering portions, and another set having portions extending inwardly inside said group, a second plate of insulation material superimposed on and secured to said first plate, covering and clamping said outside and inside fastening portions and apertured in line with the passages of the first plate, projections upon the inwardly extending portions each fitting into a space in one of said plates to lock these portions against withdrawal parallel to the planes of the plates, a disc adjoining and supporting the second plate to additionally clamp the inwardly extending fastening portions and means for holding the disc and plates together.

1,904,671. COPYING GOFFERED FILMS. RODOLPHE BERTHON, Neuilly, France, assignor, by mesne assignments, to Kislyn Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 29, 1928, Serial No. 265,667, and in France Apr. 4, 1927. 2 Claims. (Cl. 88—24.)



1. The method of eliminating moire in photographic reproduction from an original film on to a copy film, each of which has thereon a multiplicity of parallel minute lenticular elements, which comprises arranging the films with the elements on one parallel to those on the other, and projecting images from the original film on to the copy film while causing a continuous movement of the projected image transversely of said elements during substantially the entire time of exposure, said movement having an extent of the order of the width of one of said elements.

1,904,672. PROCESS AND DEVICE FOR REPRODUCING GOFFERED FILMS. RODOLPHE BERTHON, Neuilly, France, assignor, by mesne assignments, to Kislyn Corporation, New York, N. Y., a Corporation of Delaware. Filed June 21, 1929, Serial No. 372,715, and in France Apr. 17, 1929. 9 Claims. (Cl. 95—75.)



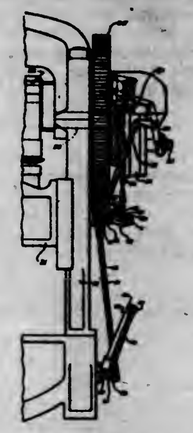
1. The method of photographic reproduction which consists in continuously moving an original film having longitudinally arranged lenticular elements thereon past an exposure aperture and transferring the images on said film to a copy film having similarly arranged elements, by passing said copy film continuously past the same aperture at the same speed as the original, while continuously displacing the elements on the copy film with respect to those on the first film to an extent of the order of the width of one of said elements.

1,904,673. PRINTING OF FILMS FOR COLOR CINEMATOGRAPHY. RODOLPHE BERTHON, Neuilly, France, assignor, by mesne assignments, to Kislyn Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1929, Serial No. 383,160, and in France Aug. 9, 1928. 8 Claims. (Cl. 95—75.)

1. The method of transferring an image from one film to the other, which comprises moving past an exposure aperture an original film having longitudinally arranged cylindrical lenticular elements thereon and at the same time moving past said aperture a copy film having longitudinally arranged cylindrical lenticular elements thereon, the elements on the copy film making an angle with respect to those on the original film of the order of 1° or 2°, but the longitudinal axes of the films being parallel.

1,904,674. COMBINED GRAPHIC OUTLINE AND WORK LOCATING TEMPLATE FOR BUILDING MODELS. ABRAHAM S. BLUMENTHAL, Amityville, N. Y. Filed Feb. 29, 1932. Serial No. 595,840. 11 Claims. (Cl. 29—89.)

1. A device of the class described, comprising a combination of a graphic outline and a work locating template made of a material suitable for permitting work locating and holding tabs completing the template to be cut out of the graphic outline while still forming an integral part of the latter and comprising outlines defining said tabs.

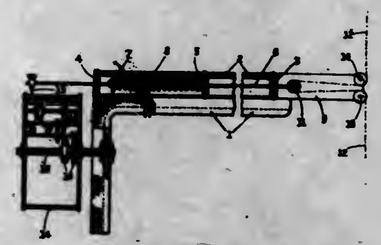


1,904,675. PIPE. EDWIN S. BOYER, Plainfield, N. J., assignor to American Hard Rubber Company, New York, N. Y., a Corporation of New York. Filed Apr. 13, 1931. Serial No. 529,706. 1 Claim. (Cl. 285—75.)

In the art of pipes for use in mining and the like formed of plastic compound and of cylindrical form, each pipe having smooth interior and exterior surfaces, means for repairing a broken pipe comprising a coupling internally spirally grooved for the reception of the pipe ends and a spiral ridge on the outer smooth surface of each pipe extending the full length thereof whereby a coupling may be applied to a pipe at any point over the length thereof.

1,904,676. POWER PRESS CONTROL. ARTHUR A. BERLEIN, Detroit, Mich., assignor to General Machinery Corporation, Hamilton, Ohio, a Corporation of Delaware. Filed Aug. 20, 1930. Serial No. 476,623. 8 Claims. (Cl. 192—139.)

1. In a power press, a slide member mounted for reciprocatory movement therein, a driving member, a driving connection including a clutch means operable when engaged to operatively connect said members and releasable to disengage said members, control means including a control hand lever manually movable to a starting position to cause engagement of said clutch means and consequent operation of the press, means responsive to the operation of the slide member for automatically disengaging said clutch means and returning said hand lever to its initial position, an unlatching lever on said hand lever operable to temporarily disconnect said automatic disengaging means



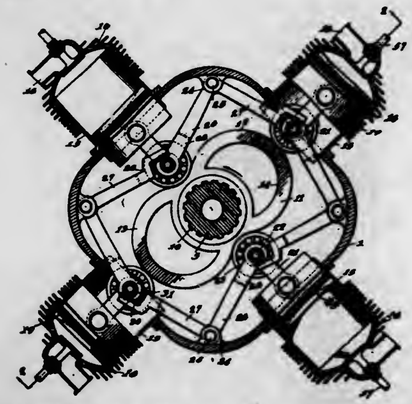
to render it ineffective, the said means which is responsive to the operation of the slide member having provision for disengaging the clutch means at the completion of a cycle of operations of the slide member regardless of the position of the unlatching lever.

1,904,677. PREPARATION OF CHLORHYDRINS. LEON W. COOK, Roselle, N. J., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 25, 1928. Serial No. 308,332. 4 Claims. (Cl. 260—157.)

1. The process of preparing substantially water insoluble chlorhydrins of liquid olefines which comprises alternately contacting the olefines with a weak hypochlorous acid solution of not more than 0.75% strength and regenerating it to about that strength while out of contact with the liquid olefines and the chlorhydrins so produced, whereby substantially complete conversion into chlorhydrins is obtained without the formation of substantial amounts of dichlor hydrocarbons.

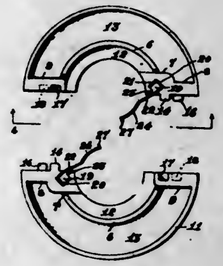
1,904,678. DYNAMOMETER. HENRY EWING and ROBERT PIERCE ROBERTS, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed July 30, 1929, Serial No. 382,115, and in Great Britain Aug. 11, 1928. 1 Claim. (Cl. 265—2.)

A dynamometer for determining the tension at a given time in yarns, threads, fildments and the like running under rapidly fluctuating tension, comprising a portable frame, a spring loaded stylus bar movably mounted on said frame, a pair of fixed pulleys mounted on said frame, a third pulley mounted on said stylus bar, the three pulleys



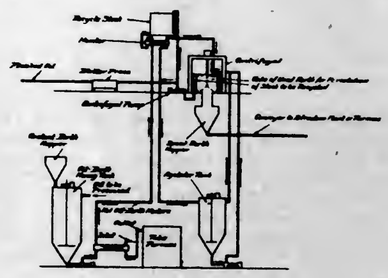
being adapted to engage running yarns, threads, filaments and the like, a clockwork driven drum mounted on said frame, a record sheet mounted on said drum and cooperating with the stylus on said stylus bar to make records of the tension of yarns, threads, filaments and the like engaged by the said pulleys, and an eccentrically loaded governing device associated with said drum and adapted to set up vibrations in the dynamometer so as to decrease the friction between the record sheet and the stylus to ensure that the rapid fluctuations in tension are accurately recorded on the record sheet.

1,904,679. PUSH DRILL. THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bro's M'f'g Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1932. Serial No. 586,654. 2 Claims. (Cl. 145—53.)



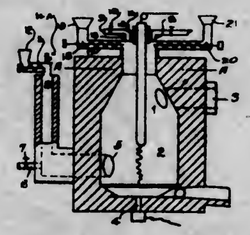
2. The combination in a push drill, of a handle made of heat hardened synthetic resin and having longitudinal pockets therein for drill bits; and a barrel having internal screw threads and having ribs on its outer face and having a cap closing its inner end, the said handle being cast around the barrel.

1,904,680. RADIAL CAM TYPE INTERNAL COMBUSTION ENGINE. WILLIAM JEWELL FERRY, Oakland, Calif., assignor, by direct and mesne assignments, to Ferry's Incorporated, Oakland, Calif., a Corporation of Nevada. Filed Apr. 18, 1930. Serial No. 445,440. 8 Claims. (Cl. 74—14.)



1. An engine comprising a shaft, a cam mounted thereon, a plurality of cylinders, a piston mounted in each, a connecting rod for each piston, a connecting rod pin for each rod, a roller mounted on each pin and contacting with the cam, rigid arms pivotally mounted, each arm having one end connected to a connecting rod pin so as to be moved during both reciprocative movements of the piston, and having its other end bearing against one side of the adjacent pin for holding its associate roller in contact with said cam whereby there will be a continuous linkage of arms entirely surrounding the cam.

1,904,681. SPRING CONNECTION. GROVER C. FRANTZ, Harrisburg, Pa., assignor, by mesne assignments, to J. A. Sexauer Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 6, 1930. Serial No. 486,691. 5 Claims. (Cl. 267—1.)

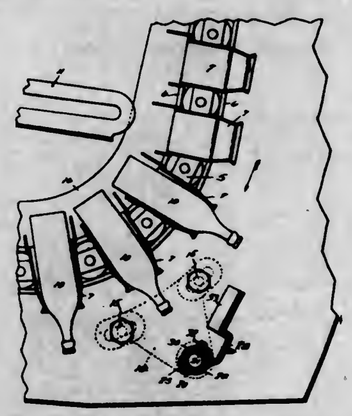


1. The combination of a spring having one end bent to produce an open resilient multi-angular part and a member having a portion with a multi-angular recess therein continued by a relatively narrow slot substantially at one corner thereof, said resilient multi-angular part being adapted to slidably and separably fit into said recess with a portion of said spring extending through said slot.

1,904,682. PROCESS FOR DECOLORIZING OILS. IRA K. FULLER, Olean, N. Y., assignor, by mesne assignments, to Contact Filtration Company, a Corporation of California. Filed Sept. 28, 1929. Serial No. 395,788. 1 Claim. (Cl. 196—147.)

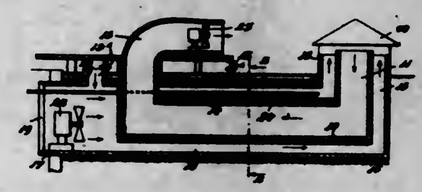
A process for decolorizing oil, which comprises contacting the oil with adsorbent clay, separating the clay from the oil in a bed, while passing the oil through the bed of clay as the said bed forms, thereby progressively decolorizing the oil from dark to substantially lighter color, collecting the said oil in a plurality of superposed layers, progressively darkening in color from the lightest color on the bottom to the darkest on top, and recirculating the said oil through the bed of clay, progressively from the lightest colored oil to the darkest, thereby further decolorizing the oil and producing a uniform product of desired color.

1,904,683. COMBUSTION-ARC PROCESS AND APPARATUS. ALBERT E. GREENE, Medina, Wash. Filed Jan. 7, 1927, Serial No. 159,728, and in Canada. 11 Claims. (Cl. 13—2.)



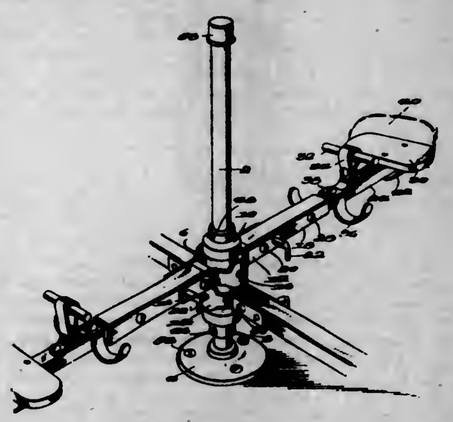
1. In heating by a combustion flame and an electric arc superposed on and extending longitudinally of the flame, the process which consists in establishing the stream of the flame and the arc from independent sources, and in directing the arc to and along the flame stream by a gaseous blast which is passed over the arcing portion of the electrode.

1,904,684. METHOD OF MELTING. ALBERT E. GREENE, Medina, Wash. Filed July 16, 1931. Serial No. 551,179. 7 Claims. (Cl. 13—34.)



1. The method of continuously melting cold metal which consists in providing a relatively large bath of molten metal in a melting chamber heated electrically near its tapping end, charging cold metal at the other end, heating the cold metal on the molten bath by combustion heat and subsequently by electric heat, and, while maintaining a supply of molten metal, tapping metal at a regular rate at the tapping end.

1,904,685. BOTTLE RINSING MECHANISM. JOHN R. GRUETTER, Cleveland, Ohio, assignor to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Jan. 6, 1932. Serial No. 585,082. 22 Claims. (Cl. 141—7.)



1. In bottle rinsing mechanism, the combination of a holder by which a bottle is adapted to be loosely supported, a supply conduit for rinsing liquid disposed in operative relation thereto and extending substantially at right angles to the axis of the holder, the conduit having a liquid emitting opening in its side in alignment with which the bottle is adapted to be disposed, a device pivotally supported on substantially the axis of the conduit and swingable into engagement with a bottle in the holder for aligning the bottle with said opening, and means for actuating said device.

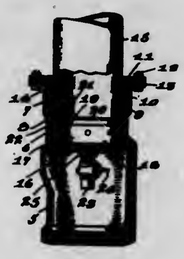
1,904,686. COOLING SYSTEM. HOXIE H. HUMPHREYS, Phoenix, Ariz. Filed Mar. 19, 1928. Serial No. 262,808. 10 Claims. (Cl. 62—89.)

1. A multi-stage refrigerating system comprising the combination with an intake conduit, of a cooling conduit substantially surrounding the intake conduit, and spaced therefrom, a porous absorbent wrapping for the intake conduit, liquid spraying means between the conduits, means in each conduit for circulating air therethrough in counter-currents, means for continuing the intake conduit unbrokenly into each succeeding unit of the system, and means for circulating the refrigerating fluid in a continuous closed cycle through each unit.

1,904,687. COMBINED SEESAW AND MERRY-GO-ROUND. FRANCIS M. JACOB, Columbus, Miss. Filed June 12, 1930. Serial No. 460,709. 9 Claims. (Cl. 272—30.)

1. A device of the character described including an upright column, a revolvable sleeve mounted thereon, laterally extended arms pivotally supported by said sleeve, extensions hingedly supported by said arms, and adjustable arms supported by said extensions.

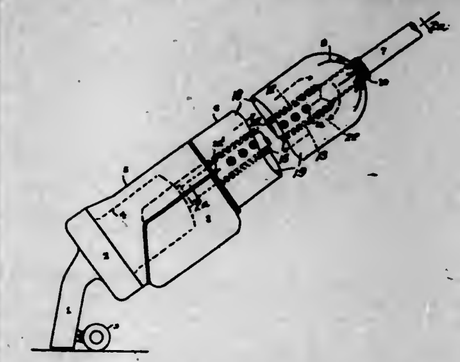
1,904,688. TESTING DEVICE FOR WATER SYSTEMS. EDWARD KENNEDY, New York, N. Y. Filed Sept. 20, 1930. Serial No. 488,362. 1 Claim. (Cl. 137—77.)



In a testing device for water systems, a joint member having an intermediate section of diametrically reduced

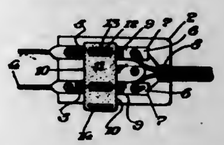
diameter internally threaded at one end, the other end of said joint member being adapted to receive the end of a pipe projecting into the joint member beyond a packing gland between said pipe section and the wall of the joint member, said projecting end of the pipe section being spaced from the wall of said reduced section of the joint member, and a testing device of cup shaped form having

external threads at one of its ends removably engaged with the threads of said reduced section of the joint member, and the unthreaded annular wall of said testing device being spaced from the wall of said reduced section of the joint member and adapted to abut against the end of said pipe section to support the latter during packing of the joint.



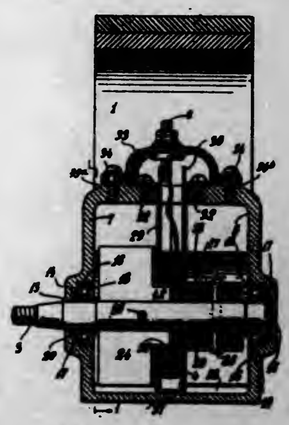
1,904,689. TESTING DEVICE FOR WATER SYSTEMS. EDWARD KENNEDY, New York, N. Y. Filed Sept. 20, 1930. Serial No. 483,363. 2 Claims. (Cl. 137—77.)

1. In combination with a pipe joint member within one end of which a pipe is adapted to be fitted and secured by suitable packing, a hollow testing plug and means for adjustably and removably mounting the same within the joint member, a drain pipe connection to said plug, and said plug adapted to be adjustably positioned within the joint member to support the pipe end therein while the joint is being packed, and a wall of said hollow plug being provided with an opening affording communication in one position of the plug between the interior of the pipe and said drain connection.



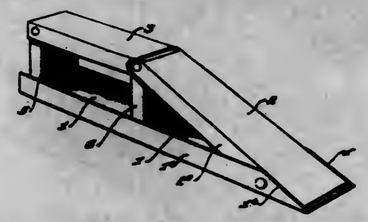
1,904,690. DOUBLE FILTER FOR VACUUM CLEANERS. WARD LEATHERS, Haworth, N. J., assignor to The Quadrex Corporation, a Corporation of Connecticut. Filed Dec. 12, 1930. Serial No. 501,877. 2 Claims. (Cl. 183—51.)

1. In a vacuum-cleaner, in combination, a motor-blower, a handle with no functional air passage therein, said handle surrounded by a filter sleeve, with two porous partitions in said filter sleeve joined to the sides thereof, dividing it into three chambers with the handle passing through the middle chamber, the outer chambers communicating at the top of said filter, air-discharge openings



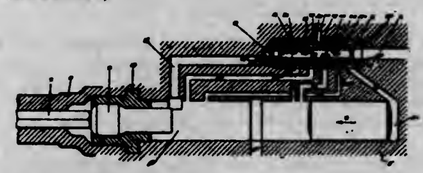
along the side of the middle chamber, and a dirt receptacle in communication with one of the outer chambers at the lower end thereof.

1,904,691. ATTACHMENT PLUG. JAMES B. MAGEE, Nyack, N. Y. Filed Mar. 13, 1930. Serial No. 435,415. 16 Claims. (Cl. 200—115.5.)



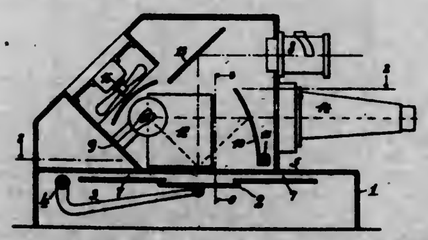
1. An attachment plug having two pairs of spaced terminals and a flat detachable member carrying a pair of fuses for maintaining electric connection between said pairs of terminals.

1,904,692. LIGHTING GENERATOR. JOHN F. MARTIN, Springfield, Mass., assignor to United American Bosch Corporation, Springfield, Mass., a Corporation of New York. Filed Apr. 6, 1932. Serial No. 603,483. 8 Claims. (Cl. 171—209.)



8. A generator comprising a housing, magnets and polepieces supported by the upper portion of the housing, a shaft mounted in the housing, a rotor on the shaft, a coil in the housing surrounding the shaft and a portion of the rotor, the top of said housing having an opening for the leads to the coil, a hollow insulator hood secured to the top of the generator over said opening, and terminals forming binding posts carried by said insulator hood.

1,904,693. VEHICLE LIFTING DEVICE. LA FAYETTE MYERS and CLARENCE S. PRESTON, San Diego, Calif. Filed Aug. 10, 1928. Serial No. 298,676. 2 Claims. (Cl. 254—88.)



1. In a vehicle lifting device, a base member, an incline member pivotally secured near one of its ends to said base member, a vehicle support member hinged to the other end of said incline member and collapsible props for supporting the ends of said vehicle support member without subjecting said inclined member to strain, said incline member and vehicle support member adapted to telescope within said base member.

1,904,694. FLUID PRESSURE TOOL. GUSTAVE M. NELL, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1930. Serial No. 466,929. 24 Claims. (Cl. 121—19.)

1. A motive fluid operated motor having a cylinder, a piston reciprocable therein and forming two cylinder chambers, and two pressure thrown valves each controlling admission of motive fluid to both of said chambers, one of said valves being tubular to provide a motive fluid passage axially therethrough for conducting the main motive fluid supply to one of said chambers.

1,904,695. EPIDIASCOPE. HEINRICH PLIMS, Wetzlar, Germany, assignor to Ernst Leitz Optische Werke, Wetzlar, Thuringia, Germany, a Corporation of Germany. Filed Jan. 18, 1930, Serial No. 421,785, and in Germany Jan. 31, 1929. 1 Claim. (Cl. 88—24.)

In an epidiascope a housing having an exposure opening in the bottom thereof, means for supporting an object to be exposed through said opening from below the same, a lamp mounted above said opening to one side thereof, a plurality of projection devices mounted in said housing opposite said lamp, means for reflecting the light from the lamp to one of said projection devices comprising a concave light reflector mounted on each side of said exposure opening and facing the same, a third pivotally mounted concave light reflector facing said lamp and exposure opening, and a fourth angularly disposed reflector mounted above the said exposure opening for the purposes set forth.

1,904,696. PREPARATION OF STABLE SOLUTIONS OF HALOGENATED ACETYLCHOLIN SALTS. GUSTAVE ROY, Bellevue (Seine et Oise), France. Filed Dec. 2, 1930, Serial No. 499,589, and in Great Britain Jan. 18, 1930. 8 Claims. (Cl. 167—65.)

1. A process for stabilising and preserving halogenated acetylcholin salts without any alteration of their physiological properties, consisting in dissolving the halogenated acetylcholin salts in a polyalcohol incompletely esterified with acetic acid.

1,904,697. SAFETY DRAW-OFF APPARATUS FOR HOT WATER SYSTEMS. EDWARD H. RUPPERT, Brooklyn, N. Y. Filed May 21, 1929. Serial No. 364,716. 1 Claim. (Cl. 137—79.)

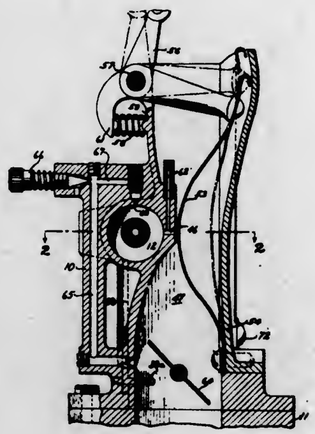
Safety draw-off apparatus for hot water systems comprising in combination with a heater having a water chamber, a storage pressure tank with a cold water inlet and a conduit connecting the heater and tank, of a draw-off valve in the conduit having three passages, two conduit passages and one discharge passage independent of the conduit passages and adapted to discharge water from either the heater or the tank, and means whereby either conduit passage may be closed and closing said conduit passage is dependent upon opening the discharge passage.

1,904,698. METHOD OF MAKING DRAWING DIES. AARON SIMONS, Bronx, N. Y., assignor to Morris Simons, New York, N. Y. Filed Feb. 26, 1931. Serial No. 518,310. 7 Claims. (Cl. 76—107.)

1. The method of forming a drawing die, including the steps of positioning a nib in a hollow plug, disposing said plug in a die holder, and applying compression force to said plug in wire drawing direction to thereby increase the thickness of the wall of the plug and firmly secure the parts together.

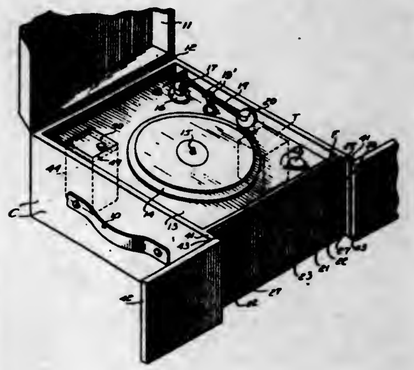
1,904,699. PRODUCTION OF CEMENT. JAMES A. SINGMASTER, Bronxville, N. Y. Filed May 24, 1929. Serial No. 365,787. 11 Claims. (Cl. 106—35.)

1. A process for manufacturing cement comprising, mixing a slurry of pulverised raw cement-materials with sufficient finely divided solid fuel to produce, upon combustion, sintering of the cement mixture, filtering said mixture,



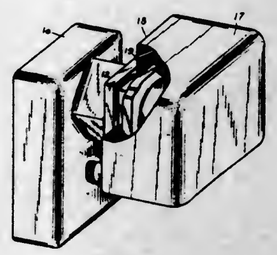
igniting the fuel in the filter-cake, drawing air through the mixture to support and promote the combustion of the fuel, and subjecting the sintered mass to further heat to complete the burning of the cement.

1,904,700. PROTECTOR FOR PLANTS. ZESTON STARKS, Malvern, Ohio. Filed July 20, 1931. Serial No. 552,084. 18 Claims. (Cl. 47—28.)



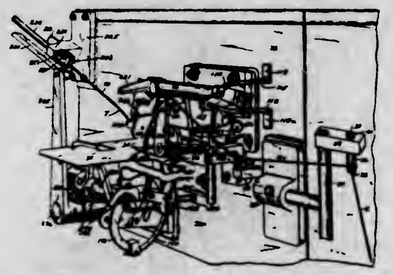
1. In a plant protector the combination of a support, a spring clip carried by said support, a ridge pole removably carried by said clip, and a plant protector covering supported by said support and ridge pole.

1,904,701. CHARGE FORMING DEVICE. NICHOLAS STRAUSSLER, London, England, assignor to Bendix Aviation Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 24, 1930. Serial No. 470,452. 23 Claims. (Cl. 261—69.)



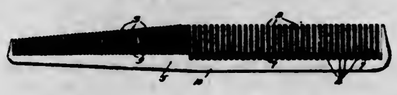
1. In a carburetor, a carburising chamber, a fuel orifice entering said chamber, a flexible member for varying the cross-sectional area of said chamber and having one end thereof secured to the wall of said chamber, and manually operable means secured to the other end of the member for adjusting the position of said member.

1,904,702. SOUND REPRODUCING APPARATUS. ADOLPH A. THOMAS, New York, N. Y. Filed Dec. 16, 1926. Serial No. 155,116. 18 Claims. (Cl. 181—31.)



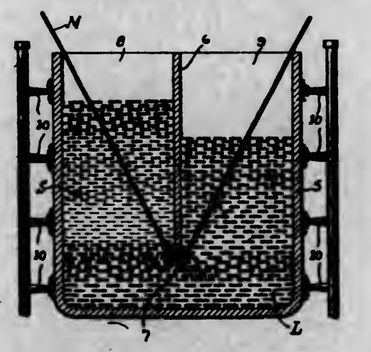
1. In sound-reproducing apparatus, a cabinet having an opening in an outer wall, a loudspeaking diaphragm consisting of a one-piece tensioned elastic sheet of metal stretched across said opening and forming in effect a continuation of said wall and a cover for said opening, said tensioned sheet being substantially flat at the center, and a driving unit in said cabinet for operating said diaphragm.

1,904,703. ELECTRIC LIGHTING FIXTURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed Nov. 7, 1930. Serial No. 493,987. 2 Claims. (Cl. 240—73.)



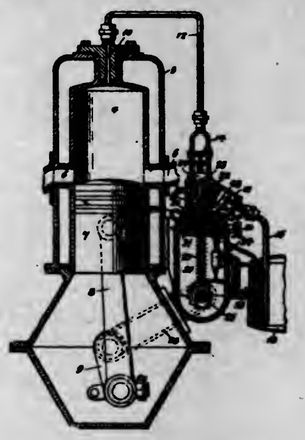
1. A lighting fixture of the character described comprising a wall bracket provided with a forwardly projecting angular neck portion terminating in an upright flanged head, the flanges being spaced from each other about the top and sides of the head to form a groove, and a shade comprising a hollow member having an open bottom and a rectangularly shaped cut out portion in the back wall corresponding approximately in dimensions with those of the bottom of the groove, whereby the latter will accommodate the sides and closed end of the cut out portion to removably support the shade with respect to the bracket.

1,904,704. KNOTTING MECHANISM. MERRITT R. WELLS, Cleveland Heights, and FOSTER F. HILLIX, Lakewood, Ohio, assignors to The Gibson Art Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 8, 1930. Serial No. 441,284. 31 Claims. (Cl. 98—91.)



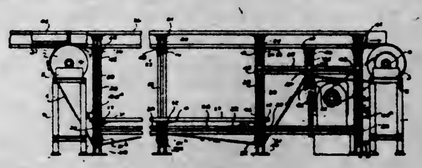
1. The combination with a knotting mechanism of means to feed a cord to such mechanism, and means to feed a second cord to such mechanism, said mechanism being adapted to knot the two cords together.

1,904,705. COMB. EDWIN F. ALLIN, Oklahoma City, Okla., assignor to American Hard Rubber Company, New York, N. Y., a Corporation of New York. Filed July 19, 1932. Serial No. 623,324. 2 Claims. (Cl. 132—11.)



1. A hair comb having a body portion provided with a group of spaced coarse teeth and a group of spaced fine teeth, the parts of the body portion located between the teeth each being in the form of a single flat inclined surface, the inclination of the surfaces between the coarse teeth being opposite to that of the surfaces located between the fine teeth.

1,904,706. PROCESS OF HEAT TREATING METALS. ARTHUR E. BELLIS, Branford, Conn. Filed June 19, 1929. Serial No. 372,075. 3 Claims. (Cl. 148—15.)

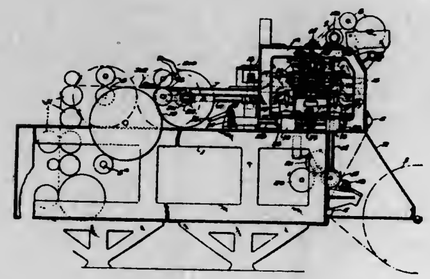


1. A process of heat treating metals which consists in providing a low temperature lead bath, superimposing upon part of said lead bath a fused salt bath of relatively low specific gravity and maintaining said fused salt bath at a comparatively high temperature, and then passing the metal to be treated downwardly through said fused salt bath directly into and upwardly through the lead bath before exposing the metal to the atmosphere.

1,904,707. HYDRAULIC PUMP. FREDERICK GEORGE HERR, Hempstead, N. Y., assignor to Aerol Engine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1930. Serial No. 431,687. 9 Claims. (Cl. 184—27.)

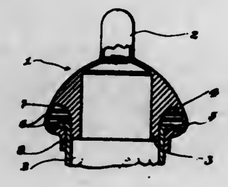
1. In an internal combustion engine, a housing formed with a bearing portion, a fuel pump comprising a reciprocable plunger supported within the bearing portion of said housing, said housing including a circular recess formed in the bearing portion thereof, and a lubricant pump for supplying lubricating material under pressure to said circular recess said pump operating to advance and retract a limited quantity of oil through said recess on each operation thereof.

1,904,708. WORKBENCH. WALTER A. ADAMS, Rochester, N. Y. Filed Apr. 15, 1931. Serial No. 530,240. 28 Claims. (Cl. 198—19.)



1. A work conveyor comprising transversely extending frames having recesses in opposite sides, a conveyor belt guided on said frames above and below said recesses, and a work support arranged between the laps of said belt at the lower sides of the recesses, the recesses permitting unobstructed access to the work support.

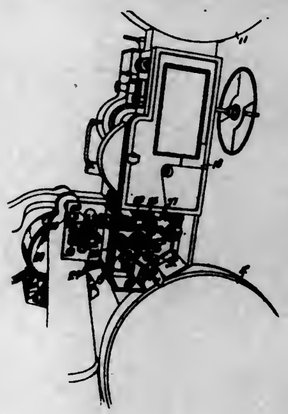
1,904,709. PRINTING ATTACHMENT FOR BAG MAKING MACHINES. THOS M. AVERY, Glens Falls, N. Y., and WILLIAM M. SHEPHERDS, Chicago, Ill., assignors to Union Bag and Paper Corporation, Hudson Falls, N. Y., a Corporation of New Jersey. Filed May 26, 1930. Serial No. 455,919. 12 Claims. (Cl. 101—181.)



1. A printing attachment of the class described comprising a main frame, means for guiding a strip to move longitudinally therein, printing mechanism including ink-

ing means and a cooperative printing roll to operate on said strip, a base plate supporting the inking means and printing roll of said printing mechanism as a unit thereon,

and means contained substantially within the width of the main frame for supporting said base plate to move laterally into and out of said frame.

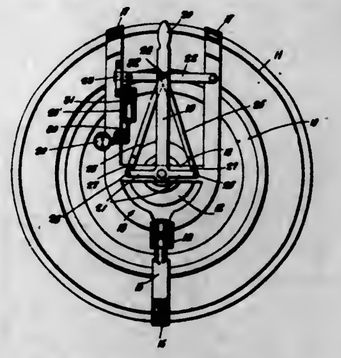


1,904,710. NIPPLE. IRVING BARKAN, Philadelphia, Pa. Filed Aug. 19, 1931. Serial No. 558,125. 1 Claim. (Cl. 128—252.)

In a nipple of the class described, the combination of a body member having a relatively thin upper portion and a thick lower portion divided into an inner stopper portion and a relatively thin outer wall member, a circular chamber between said stopper member and said thin outer wall member, the inside face of said thin outer wall member forming the chamber provided with a plurality of parallel corrugations horizontally disposed dividing said wall member into thin and thick wall sections, each of said corrugated wall sections adapted to take up a portion of the bending strain when the nipple is put on and taken off a bottle, the lower end of said thin outer wall member being sharply restricted forming a shoulder portion which is adapted to abut against the underside of a bottle flange.

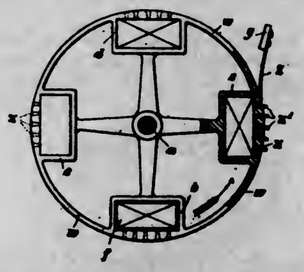
1,904,711. METHOD AND APPARATUS FOR REPRODUCING SOUND. WILLIAM H. BAUCH, Shelbyville, Ind., assignor of one-half to Orval R. Platter, North Vernon, Ind., and one-half to Sono Equipment Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 20, 1929. Serial No. 394,110. 3 Claims. (Cl. 179—100.3.)

3. The combination with a picture projecting machine of a sound reproducing device comprising means for projecting a beam of light through that portion of the film on which sound has been previously recorded in terms of light and shadow, electric pickup instrumentalities for transforming light variations into sound waves, a light sensitive cell for varying electric current passing through it in said instrumentalities, a bracket adapted to receive said cell, a cam on said bracket, a manually operable lever having a cam thereon engageable with the first-named cam, resilient means biased to move said bracket away



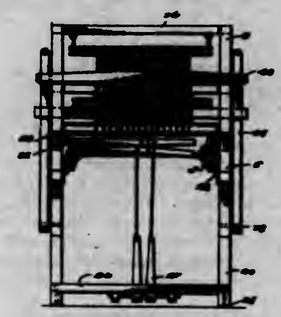
from the path of said film, said manually operable means serving to adjust said cell and secure it in adjusted position with relation to said film, substantially as set forth.

1,904,712. STAIN RESISTING COBALT ALLOY. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Apr. 29, 1930. Serial No. 448,429. 5 Claims. (Cl. 75—1.)



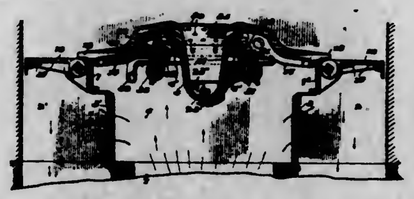
1. A ferrous alloy containing chromium not less than about sixteen per cent nor more than about twenty-two per cent, manganese not less than about six per cent nor more than about sixteen per cent and cobalt not less than about one per cent nor more than about ten per cent, and carbon, the carbon content being, not more than three tenths of one per cent; the remainder being chiefly iron.

1,904,713. BRAKE TESTER. FRANKLIN S. BELKNAP, Kansas City, Mo. Filed Dec. 13, 1929. Serial No. 413,896. 4 Claims. (Cl. 265—1.)



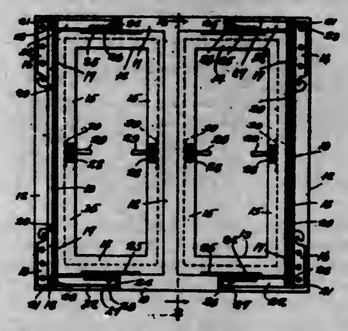
1. A brake testing device comprising a frame adapted to be clamped to a wheel, a gauge mounted on the frame, a lever pivoted on the frame, an arm pivotally carried by the frame, yieldable resisting means operatively connected with said arm and gauge, and links connected with said lever and said arm and separately operable by the lever when the latter is rocked in opposite directions.

1,904,714. BUTTER AND LIKE MOLDING DEVICE. JOHANNES BENZ, Dusseldorf, Germany. Filed Nov. 4, 1931. Serial No. 572,960. 1 Claim. (Cl. 31—42.)



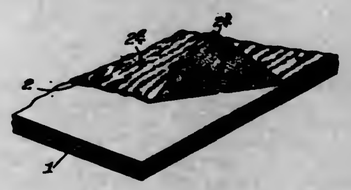
A butter and like molding device comprising a wheel having a smooth rim, and a plurality of open-ended molds arranged within the rim of said wheel, said rim having apertures through which material can be extruded from the molds.

1,904,715. LOOM. JOHN BERGMAN and MARGARET BERGMAN, Poulsbo, Wash. Filed May 21, 1932. Serial No. 612,802. 4 Claims. (Cl. 139—29.)



1. In a loom, a frame having side members, legs horizontally hinged at the upper ends thereof to the lower edges of the frame, treadles having a supporting member detachably secured at the end portions thereof to the legs, said supporting member being provided with means to normally hold the legs in spaced parallel relation.

1,904,716. UNDERFEED STOKER. WILLIAM B. BIGGS, Knoxville, Tenn. Filed Apr. 30, 1928. Serial No. 274,059. 7 Claims. (Cl. 110—47.)

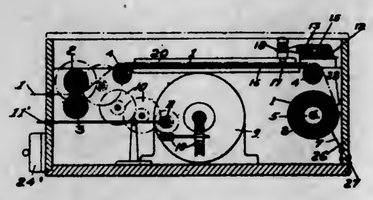


6. In an underfeed stoker, the combination of a retort and plunger means for feeding fuel thereto of two series of grate bars, one on either side of said retort, means restraining the inner or retort ends of said bars from vertical movement, means restraining said bars from movement longitudinally of the retort, and means supporting the outer ends of said bars while leaving said ends free for upward movement.

1,904,717. REVERSIBLE WINDOW HINGE. STANLEY H. BREWER, Dundalk, Md. Filed July 28, 1931. Serial No. 552,608. 1 Claim. (Cl. 16—163.)

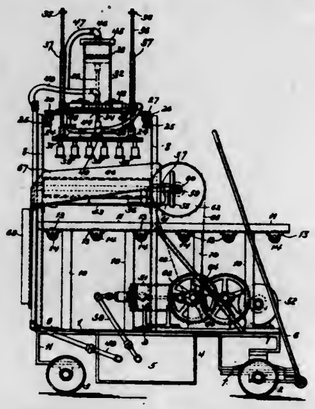
A hinge for use with swinging sashes, comprising upper and lower hinge plates to be secured adjacent to a window opening, a vertical barrel forming a part of each plate, a pintle extending through the barrels, the ends of the pintle being extended beyond the ends of the barrels, a spacer sleeve contacting with the adjacent ends of the barrels, and positioned on the pintle, means for securing the spacer sleeve to the pintle, sash engaging arms, barrels at the inner ends of the arms and fitted over the extended ends of the pintle, means for securing the arms to the pintle and pivoted members at the free ends of the arms for securing the hinge to a window sash.

1,904,718. DECORATED LAMINATED PRODUCT AND METHOD OF PRODUCING SAME. JOHN D. COCHRANE, Jr., Cincinnati, Ohio, assignor to The Formica Insulation Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 18, 1932. Serial No. 599,780. 11 Claims. (Cl. 41—22.)



1. In the manufacture of laminated products having decorative surfaces, the method which comprises: consolidating under heat and pressure body-sheets impregnated with a binder, a surface-sheet of transparent character impregnated with a clear binder and having a printed design on its outer surface, and an opaque pigment-layer between the body-sheets and the surface-sheet and localised color-zones associated therewith, forming a special background for said printed design.

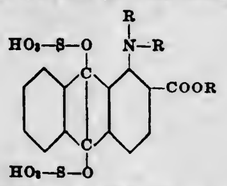
1,904,719. RECORDING APPARATUS. CHARLES DE BEAUMARCHAIS, Paris, France, assignor to Le Materiel Electrique S. W., Paris, France, a Corporation of France. Filed Dec. 11, 1930, Serial No. 501,692, and in France Jan. 15, 1930. 4 Claims. (Cl. 164—87.)



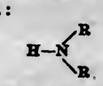
1. In a recording device of the type including a moving chart, a device for perforating said chart comprising a plate rigidly mounted beneath said moving chart, a graduated rule supported by said plate in a position thereabove transverse to the direction of movement of said chart, whereby the chart may pass freely between said rule and said plate, a movable runner slidably mounted with respect to said rule, an elongated channel in said plate

transverse to the direction of motion of said chart, a needle carried by said movable runner and normally positioned above said chart, means enabling depression of

said needle for perforating said chart, the point of said needle entering said channel when in depressed position, and means for returning said needle to its initial position.

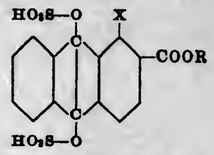


1,904,720. CAN UNLOADER. ROYAL DOUGLASS, South Bellingham, Wash. Filed Dec. 13, 1928. Serial No. 325,804. 3 Claims. (Cl. 214—1.)



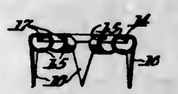
1. Apparatus for the purpose set forth comprising a truck, a container-support on the truck, a conveyer transverse to said support, a chute receiving articles from the conveyer, a reciprocating carriage above the conveyer, suction cups on the carriage adapted to engage articles in a container on the container-support and release them onto the conveyer, a suction pump on the truck connected with the suction cups, a motor on the truck, and connections whereby the motor will operate the pump and the conveyer.

1,904,721. MANUFACTURE OF SULPHURIC ESTERS OF ANTHRAHYDROQUINONES. DAVID ALEXANDER WHYTE FAIRWEATHER, Falkirk, and JOHN THOMAS, Polmont, Scotland, assignors to Imperial Chemical Industries Limited, a Corporation of Great Britain. Filed Mar. 23, 1931, Serial No. 524,763, and in Great Britain Mar. 25, 1930. 17 Claims. (Cl. 260—98.)

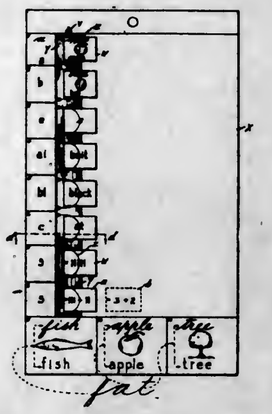


1. In the manufacture of disulphuric esters having in the form of the free acid the probable formula:

wherein R represents hydrogen or an alkyl group, the step which comprises reacting an amino compound having the probable formula:

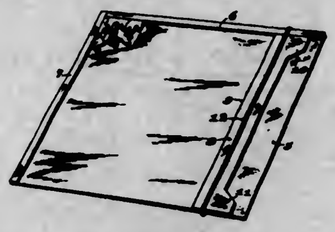


wherein R represents hydrogen or an alkyl group, with a disulphuric ester having in the form of the free acid the probable formula:



wherein X represents a halogen and R represents hydrogen or an alkyl group.

1,904,722. SEPARABLE FASTENER. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 12, 1930. Serial No. 467,569. 2 Claims. (Cl. 24—216.)

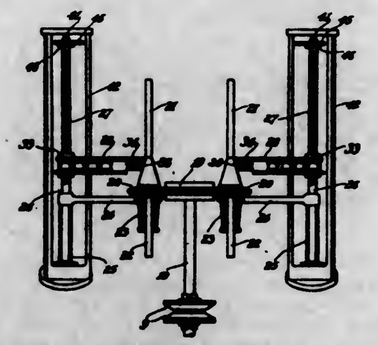


2. A socket member for separable fasteners, including a body provided with an off-standing exterior flange and having an inwardly extending face portion provided with an interior opening for the reception of a stud member, the edge of said flange remote from said face portion being provided with a plurality of wings curled inwardly throughout their entire lengths and arranged substantially radially of said socket member and forming curvilinear radially yieldable resilient stud-engaging members terminating short of the edge surrounding the opening and contacting therewith only when said wings are approaching their elastic limit and thereby preserving their elastic limit.

1,904,723. EDUCATIONAL DEVICE. FRANCES E. FISHER, Twin Falls, Idaho. Filed Dec. 16, 1930. Serial No. 502,836. 3 Claims. (Cl. 35—9.)

1. An educational device comprising a chart body having an indicia column subdivided into sections and provided with indicia in the respective sections, a replaceable strip or bar detachably positioned upon the chart body in parallelism with the indicia column, said strip or bar being provided with a series of spring clips, one for each section of the indicia column, said clips adapted to hold cards bearing indicia having relation to the indicia in the corresponding section of the indicia column of the chart body.

1,904,724. JIG-SAW PUZZLE HOLDER. MICHAEL J. GARTLAND, Washington, D. C. Filed Feb. 10, 1933. Serial No. 656,161. 2 Claims. (Cl. 273—136.)



1. A jig-saw puzzle holder comprising a base-board on which the pieces of the puzzle are assembled, upper and side strips in raised relation to the board, a traveling strip having an upper elongated edge contacting with the edge of the longitudinal strip and guided and stabilised thereby, and an elastic band passing about the board and said traveling strip.

1,904,725. STAND FOR PLATES AND THE LIKE. ALFRED GERHOLD, London, England. Filed Sept. 17, 1930, Serial No. 482,595, and in Great Britain Oct. 17, 1929. 4 Claims. (Cl. 211—41.)

1. A plate holder comprising an arm to form a support having its inner end bent upwardly and outwardly then rebent inwardly, upwardly and downwardly in contact with the rebent portion to form therewith a clamp.

1,904,726. WINDING MACHINE. NICOLAI GRIBOJEDOFF, Putney, London, England. Filed Nov. 18, 1929, Serial No. 408,084, and in Great Britain May 23, 1929. 7 Claims. (Cl. 242—151.)

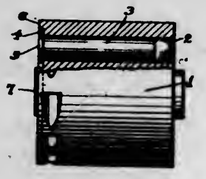
1. A thread winding machine, including a thread tensioning device comprising two pivotally mounted elements, a series of conical rollers disposed on each of said elements, the rollers of one series being disposed in opposition to the rollers of the other series, a roller carried by one of said elements remote from the pivot of the latter, said roller having a peripheral groove through which the thread passes when leaving said device.

1,904,727. KITE. JOHN HAHN, Decatur, Ill., assignor to H & W Kite Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 1, 1931. Serial No. 566,861. 13 Claims. (Cl. 244—22.)

1. A clamp for use with the frame members of a kite of substantially closed configuration, a portion of which presents an undulating contour to prevent slippage of the frame members relative to each other when substantially in assembled positions and allow slippage of the frame members relative to each other when substantially in unassembled positions.

1,904,728. KITE. JOHN HAHN, Decatur, Ill., assignor to H & W Kite Co., Decatur, Ill., a Corporation of Illinois. Filed Oct. 1, 1931. Serial No. 566,862. 14 Claims. (Cl. 244—22.)

1. In a kite, a face, a main frame member, a cross frame member, and a clamp comprising lower loop members and an upper loop member to bind said frame members in assembled position to prevent slippage thereof and to allow the cross frame member to be aligned with the main frame member when dismantled.



1,904,729. ICE DELIVERY BAG. RALPH JAMES HANCOCK, Marietta, and JOHN LEEK LOGAN GARRISON, Atlanta, Ga.; said Garrison assignor to Fulton Bag & Cotton Mills, Atlanta, Ga., a Corporation of Georgia, and said Hancock assignor to Southern Ice Supply Company, Marietta, Ga., a Corporation of Georgia. Filed Dec. 22, 1928. Serial No. 327,964. 3 Claims. (Cl. 224—45.)

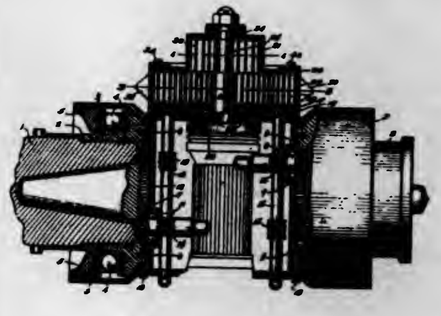
1. A waterproof ice container comprising a bottom, and two sides of equal height, the remaining sides being of greater height than the first mentioned sides, one of said higher sides terminating in an extension flap of uniform width and having an upstanding ridge on its inner surface surrounding its outer edge, said flap when disposed upon a support constituting an auxiliary tray for temporary usage and a strap forming supporting loops above said container on opposite sides and extending beneath and

secured to said bottom, whereby when the container is being carried, the extension flap is adapted to extend over the contents and when the container is in supported position, the extended flap constitutes an auxiliary tray and is adapted for returning its contents to the container upon elevation thereof, the said strap constituting a reinforcing and supporting means.

1,904,730. CYLINDER CONSTRUCTION FOR FIREARMS. JOHN W. HARRINGTON, Worcester, Mass., assignor to Harrington & Richardson Arms Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1932. Serial No. 585,252. 3 Claims. (Cl. 42—59).

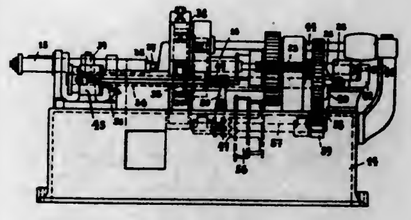
1. In a cylinder for revolvers and the like, said cylinder having a plurality of longitudinal bores therein for the reception of shells, a rearwardly projecting annular flange adjacent the periphery of the cylinder and beyond the bores in said cylinder, said flange being substantially as deep as the thickness of the heads of the shells, to provide, within said flange, a recess for the reception of said heads, whereby said heads shall be substantially flush with the outer end surface of said flange.

1,904,731. GOLF BAG. GEORGE HASTINGS HARRIS, Auckland, New Zealand. Filed Jan. 7, 1931, Serial No. 507,254, and in New Zealand Oct. 24, 1930. 3 Claims. (Cl. 150—1.5.)



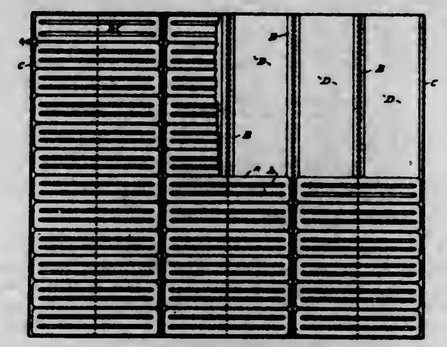
1. A golf bag having therein a guide member, the bag bottom having guide openings therein, a guide rod slidable in the guide member, legs slidable in the guide openings, and a ball and socket joint connecting the legs and rod.

1,904,732. ALLOY PLATED IRON AND STEEL AND PROCESS OF MAKING THE SAME. BATIST R. HAUBIGEN and JAMES C. PATTEN, Indianapolis, Ind.; said Haubigen assignor to said Patten; Margaret Lucile Patten executrix of said James C. Patten, deceased. Filed Mar. 5, 1930. Serial No. 433,500. 4 Claims. (Cl. 204—2.)



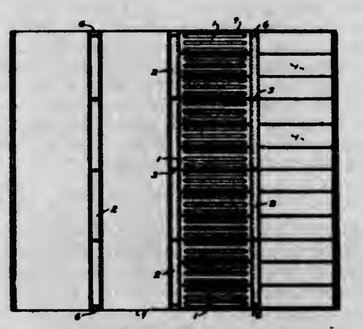
1. An iron or steel article carrying an electrodeposited coating of an alloy consisting of zinc and tin, the zinc and tin being in the ratio of about 75 : 25.

1,904,733. PROPELLER. SPENCER HEATH, Elkridge, Md., assignor to The American Propeller Company, Baltimore, Md., a Corporation of Maryland. Filed June 28, 1929. Serial No. 374,462. 16 Claims. (Cl. 170—162.)



1. Control mechanism comprising in combination, a shaft adapted for rotation, a housing rotatably mounted thereon and two flexible spiral members wound oppositely about said shaft and attached thereto at one end and to the housing at their other end, each of said spiral members consisting of two similar parts symmetrically arranged to form a double spiral around said shaft, said mechanism being actuated by the differential of centrifugal force between the oppositely wound spiral members.

1,904,734. MACHINE FOR ROLLING RINGS. FRIEDRICH IM SCHLAA, Iserlohn, Germany. Filed June 29, 1932, Serial No. 619,973, and in Germany Oct. 10, 1930. 14 Claims. (Cl. 80—5.)



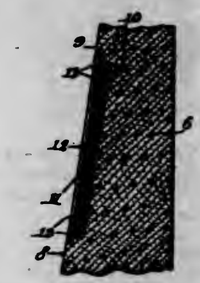
1. An apparatus for making ball bearing rings of radial fibrous structure comprising a rotating roll mandrel provided with a conical working surface and a shoulder adapted to prevent the material of the work from escaping, means for bringing the work into working position, rotatable means for holding the work during the rolling and means for ejecting the rolled ring.

1,904,735. HATCH COVER. JOSEPH WILLIAM ISHERWOOD and WILLIAM ISHERWOOD, Raggles Wood, Chislehurst, England. Filed Dec. 11, 1931, Serial No. 580,448, and in Great Britain Jan. 15, 1931. 31 Claims. (Cl. 114—201.)

1. In a hatch provided with framing the combination of a cover comprising a plurality of small sections two of which constitute closing sections; and cooperating wedging means carried by the sections and the hatch framing for holding the sections in place, one of said means slidable and provided with a transversely operable latch for locking all of said sections.

1,904,736. COVER FOR HATCHES. JOSEPH WILLIAM ISHERWOOD and WILLIAM ISHERWOOD, Raggles Wood, Chislehurst, England. Filed Dec. 11, 1931, Serial No. 580,449, and in Great Britain May 29, 1931. 8 Claims. (Cl. 114—201.)

1. In a hatch the combination of a cover comprising a plurality of small sections; a bar wedgingly engaging the end surfaces of a plurality of said sections, said bar having a recessed end adapted to coact with a similarly recessed end of an adjoining bar; and means to move said bar and the adjoining bar into the plane of said sections to lock the latter, said means lying within said recessed ends.



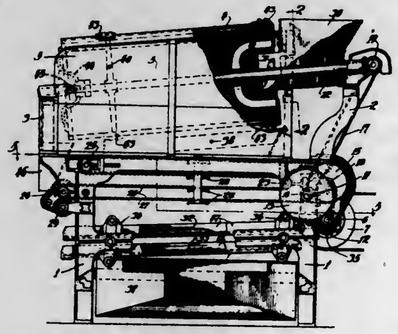
1,904,737. HOLDER FOR YARN PACKAGES. FRANK B. JAVERY, Worcester, Mass., assignor to Warp Compressing Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 6, 1931. Serial No. 535,501. 2 Claims. (Cl. 242—130.)

1. In a device for holding yarn packages wound on conical shells, a spindle carrying a frusto-conical holder providing a series of longitudinally extending slots for receiving compressible strips projecting radially from said holder, with the thickness of said strips substantially less than the length which said trips project radially beyond said holder,

whereby said strips frictionally engage the inside of a shell and yield peripherally of the holder in response to turning of the shell on the holder.

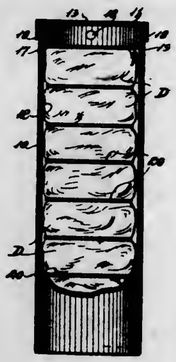
1,904,738. GRAVE MARKER. HENRY JOHNSON, Beatrice, Nebr. Filed Jan. 11, 1933. Serial No. 651,215. 5 Claims. (Cl. 40—124.5.)

2. A marker of the class described, comprising a body portion including a wide head and a tapered portion, the head having a cut out portion, a rubber backing strip positioned in the cut out portion, the edges of the strip extending outwardly lining the walls of the cut out portion, a card having indicia thereon, positioned against the backing strip and between the outwardly extended edges of the backing strip, a translucent cover on the card, and the adjacent edges of the translucent cover and backing strip being cemented together.



1,904,739. CLOSURE FOR CONTAINERS. AUGUST F. KROHN, Beaver Falls, Pa. Filed July 8, 1932. Serial No. 621,444. 4 Claims. (Cl. 221—60.)

1. In a closure for containers, a container having an annular neck, a closure having a tubular portion fitting on the neck, the said closure having an annular channel into which the upper end of the neck projects, a horizontally disposed partition having apertures below the upper end of the neck, the said closure having an opening for the escape of the contents of the container, a cone-like plug on the partition extending into the aperture of the closure, the diameter of the plug being greater than the diameter of the opening whereby when the closure is moved



downwardly the wall of the opening engages the plug for closing the opening, a shoulder on the plug embraced by the annular channel adapted to engage the partition and close the openings therethrough, and means for communicating reciprocatory motion to the closure during its rotation.

1,904,740. CORN SILKER. HAROLD R. LEWIS, Hoopeston, Ill., assignor to Sprague-Sells Corporation, Hoopeston, Ill. Filed Aug. 14, 1929. Serial No. 385,890. 10 Claims. (Cl. 209—12.)

1. A machine for removing refuse matter from a mass of cut green corn comprising a preliminary screening means for effecting a rough separation of refuse matter from a mass of corn and discharging the corn so it will fall vertically, a second separating means comprising a series of parallel arranged rods, means for supporting and moving said rods in permanently spaced relation through a plurality of superposed paths wherein the rods move in reverse direction in traversing each path, the rods thereby continually intercepting the falling corn and collecting the residue of débris falling with the corn and moving it laterally away from the path of the falling corn with means along the path of said moving rods for removing the collected débris therefrom.

1,904,741. METHOD AND MEANS FOR PACKETING DOUGH. CHARLES LORBER, Louisville, Ky. Filed Sept. 9, 1931. Serial No. 561,944. 18 Claims. (Cl. 99—8.)

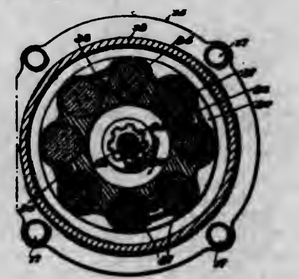
1. A method of packeting raw dough preservatively for commercial purposes which consists in applying the dough within a closed container having a vent opening, causing the dough to expand within the container, and restraining the expanded dough from closing the vent opening to provide space for the accumulation of generated gases.

1,904,742. ICING BISCUITS AND THE LIKE. ROBERT FRENCH MACFARLANE, Fulham, London, and WILLIAM EDWARD PRESCOTT, Willesden, London, England, assignors to Baker Perkins Company Inc., Saginaw, Mich. Filed Dec. 11, 1928, Serial No. 325,194, and in Great Britain Dec. 30, 1927. 19 Claims. (Cl. 107—1.)

1. In combination a stenciling machine comprising biscuit platforms adapted for continuous travel in an endless train the runs of which lie substantially in one horizontal plane and travel in a path defined by a pair of rectilinear portions joined at each of the adjacent ends by a substantially semicircular portion, and a co-operating rotary stencil plate mounted over a semicircular portion.

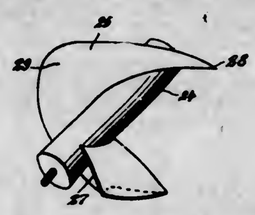
1,904,743. STEAM DEFLECTOR AND GUARD FOR DAIRY SINKS. JOB FORDYCE MALSBARY, Fresno, Calif. Filed Jan. 3, 1931. Serial No. 506,449. 3 Claims. (Cl. 141—7.)

1. The combination with a dairy sink having the open end of a steam conveying pipe terminating slightly above the plane of the sink, of a steam guard slidable on the sink and comprising an inverted cup-shaped member with an opening in its side wall for receiving the end of the pipe, a handle secured to the member and lying in the plane of the sink, and guides slidably securing the handle to the sink, said handle having a hand grip portion extending beyond the edge of the sink.



1,904,744. ALARM FOR TYPEWRITERS. WILLIAM F. H. MANN, New York, N. Y. Filed July 7, 1930. Serial No. 466,827. 2 Claims. (Cl. 197—189.)

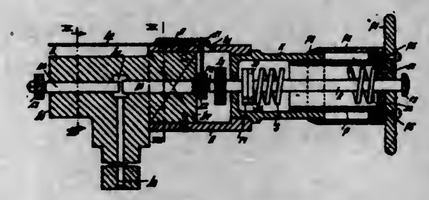
1. A typewriter attachment including a rotatably mounted gear wheel provided on one face thereof with a series of rack teeth, additional gear wheels for driving the first named gear wheel from the platen of the typewriter, an audible signal including a tapper and a resilient support therefor, and actuating means for the tapper comprising an arm arranged to rotate on an axis coincident with the axis of the first named gear wheel, and being also adapted



to engage said rack teeth to thereby rotate with said first named gear wheel, and a spring return trigger pivotally mounted on said arm and arranged to engage said resilient tapper support and thereby actuate said signal.

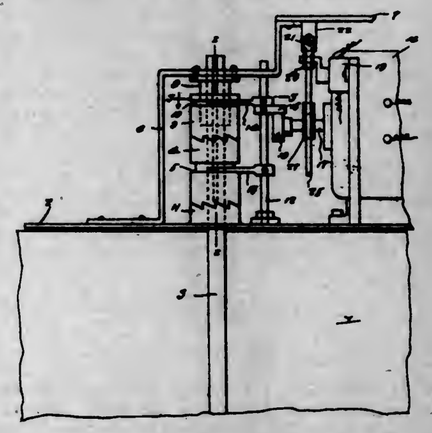
1,904,745. YIELDING COUPLING. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a Corporation of New Jersey. Filed Nov. 21, 1929. Serial No. 408,902. 7 Claims. (Cl. 64—96.)

1. A yielding coupling comprising a disk having a plurality of elements extending from the lateral face thereof and rotatable therewith, a plurality of yielding elements arranged in pairs, each pair of the latter having engagement with one of said first named elements, and means for mounting said yielding elements, said mounting means operating to prevent expansion of said yielding elements in any direction other than toward said first named elements.



1,904,746. ROTARY WING AIRCRAFT PROPELLER. CHARLES R. OHNSORG, New York, N. Y., assignor of one-half to Josie Ohnsorg, New York, N. Y. Filed Nov. 23, 1929. Serial No. 409,214. 1 Claim. (Cl. 170—156.)

In an aircraft, means for propelling the same comprising a cylindrical drum adapted to be rotated, a helical annular wing mounted on the surface of the drum, said wing extending around said surface, the front edge of said wing being substantially straight and extending a distance from the drum, the width of said wing being increasingly greater rearward of said edge and attaining its maximum width at a point intermediate said edge and the opposite end of the wing, said wing tapering to a point from the point of maximum width, said tapered point lying beyond the surface of the drum, the edge of said wing lying nearest said drum contacting with said surface the greater part of its length and departing from said surface at a point intermediate the length of the drum and continuing convergently therefrom to said tapered point.

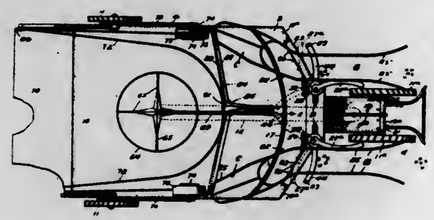


1,904,747. DEVICE FOR MEASURING AND INDICATING FLUID PRESSURES. JOHN OKILL, Birkenhead, England. Filed Mar. 12, 1931, Serial No. 522,088, and in Great Britain Mar. 15, 1930. 11 Claims. (Cl. 73—111.)

1. In apparatus for measuring fluid pressure, in combination;—a casing having two cylindrical surfaces of different diameters, the space between the surfaces being provided with a passageway adapted to be connected to the pressure to be measured; a pressure actuated device having two cylindrical surfaces adapted respectively to make a fluid-tight sliding fit with the said two respective cylindrical surfaces; two stops limiting the movement of the said device, against one of which stops the latter is pressed when subject only to the pressure to be measured;

a regulable balancing spring adapted to transmit a measurable pressure to the pressure-actuated device tending to move it away from the said stop; a measuring device for indicating the pressure transmitted by the spring to the said device; and balance indicating means comprising a lever actuated by the pressure-actuated device adapted to indicate the movement of the said device, in respect to its stops.

1,904,748. DOORLOCK. WILLIAM V. PARR, CHARLES A. LOVE, and JOHN J. BARNES, Minneapolis, Minn. Filed July 14, 1932. Serial No. 622,556. 8 Claims. (Cl. 70—50.)



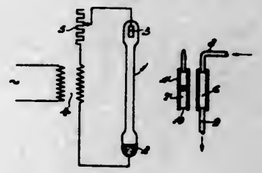
1. A door lock comprising a shaft fixed to the door for rotation therewith, a clutch mounted on the shaft for rotation with said shaft, a clutch engageable with the first named clutch for retaining said first named clutch against rotation, an electric motor, and means operatively connecting one of the clutches to the electric motor for actuation thereby, said means including a cam mounted on the motor shaft, a slidably mounted shaft, an arm fixed on the slidable shaft and engageable by the cam for actuation thereby, and a yoke operatively connecting said one clutch to the slidable shaft for actuation thereby.

1,904,749. CORN HARVESTER. RICHARD B. PERKINS, Everett, Mass. Filed July 2, 1931. Serial No. 548,401. 24 Claims. (Cl. 56—71.)

1. A corn harvester including a wheel-supported platform, a knife carried by said platform to sever the stalks near their base, a gathering means supported by the plat-

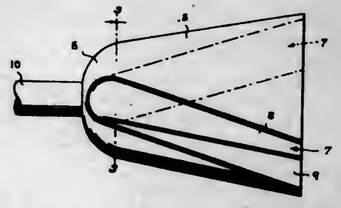
form including a member movable to a position in back of the stalks being presented to the knife for bracing the stalks during the cutting operation, an operable means

for actuating said brace member into and out of said bracing position, and trip means for setting said brace arm in operation.



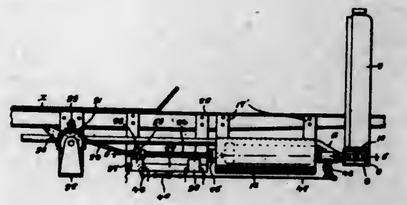
1,904,750. TWO-PIECE METAL SHAFT FOR GOLF CLUBS. MILTON B. REACH, Springeld, Mass., assignor to A. G. Spalding & Bros, New York, N. Y., a Corporation of New Jersey. Filed Nov. 20, 1930. Serial No. 496,962. 8 Claims. (Cl. 273—80.)

1. In a golf club, a two piece metal shaft consisting of short lengths of tapered tubular metal shafting arranged end to end with overlapping end portions to jointly form the permanent shaft of required length, comprising a lower piece of said shafting for connection to the club head, and an upper piece of said shafting, a sleeve of rubber or similar shock absorbing material vulcanized to the lapping end portion of one of said pieces, said end of said piece and its vulcanized sleeve being inserted into the end of the other piece with a driving fit, to firmly connect the said ends of said upper and lower pieces of shafting against separation longitudinally and to provide torsional resiliency between said shaft sections.



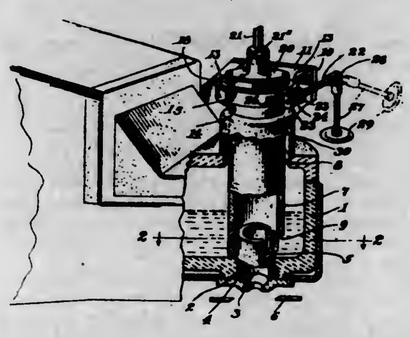
1,904,751. PROCESS OF PREPARING VITAMIN D. ENGBERT HARMEN REERINK and AART VAN WIJK, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed June 9, 1930, Serial No. 460,066, and in the Netherlands July 20, 1929. 5 Claims. (Cl. 167—81.)

3. In a process of preparing a material containing vitamin D, the steps comprising subjecting ergosterol to radiation by artificially produced ultraviolet light while filtering out light of wave lengths of the order of 270 $m\mu$, or less and substantially all of the light of wave lengths



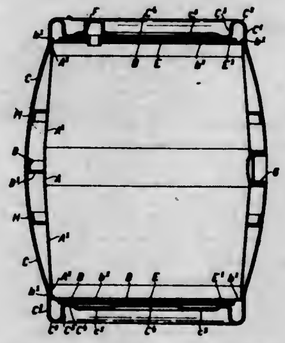
greater than 300 $m\mu$, and discontinuing such radiation before more than approximately 60% of the ergosterol has been transformed.

1,904,752. PROPELLER. JUAN PEDRO RODRIGUEZ, Lake Worth, Fla., assignor of one-half to George W. Krick, Lake Worth, Fla. Filed Aug. 13, 1930. Serial No. 475,111. 6 Claims. (Cl. 170—156.)



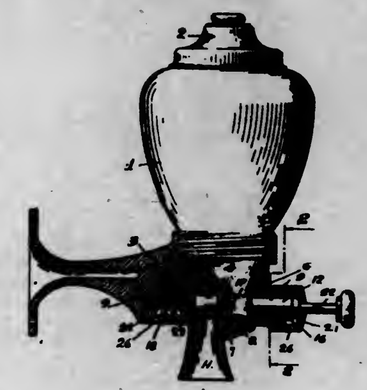
1. A propeller comprising a frusto-conical body, said body dished out to form straight diagonal channels of uniform width and depth extending from end to end of said body, relatively extensive portions between the channels for providing smooth action of the propeller in the water, and each of said channels having an abrupt inwardly extending wall and a wall extending substantially at a right angle to the first mentioned wall.

1,904,753. RADIATOR FILLING AND DRAINING DEVICE. WILLIAM JEROME SMITH, West Palm Beach, Fla. Filed Oct. 9, 1931. Serial No. 567,973. 1 Claim. (Cl. 123—174.)



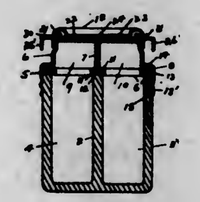
A device for filling and draining radiators comprising a cylinder insulated against heat or cold, a support for said cylinder, means connecting said cylinder to a radiator, a piston in said cylinder, a slidable cross head connected to the piston, a support for the cross head, electrical means for actuating the cross head and manually set in operation and automatically stopped by the cross head reaching the limit of its movement in each direction, a self-closing drain means between the cylinder and the radiator, and means between said drain means and the cross head for opening the drain means when said cross head reaches the limit of its movement in one direction.

1,904,754. GLASS FEEDER. DAVID STENHOUSE, Washington, Pa., assignor to Hasel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Apr. 25, 1930. Serial No. 447,387. 9 Claims. (Cl. 49—55.)



1. A pneumatic glass feeder, including a flow spout having a flow orifice, a rotatably adjustable vacuum and pressure tube projecting into the flow spout in alignment with the flow orifice, and means associated with the lower portion of the tube to vary the volume of glass flowing through the flow orifice as the tube is rotatably adjusted.

1,904,755. METAL DRUM. PETER WOLF, Essen, Germany, assignor to Fried Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 28, 1929, Serial No. 395,952, and in Germany Oct. 27, 1928. 2 Claims. (Cl. 220—10.)

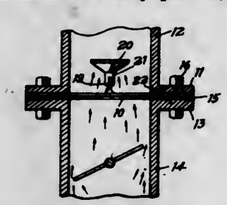


1. A metal drum consisting of a drum proper having end walls and a substantially cylindrical shell, and of a jacket having end walls too and a barreled shell, the jacket consisting of two pot-shaped halves, with the shell portion of each of said pot-shaped halves subsiding into the respective end wall by a substantially U-shaped rim of abundant curvature, the drum proper being constructed as a unit independent of said jacket and firmly held within said jacket solely by the extremities of the shell of said drum proper abutting on the extremities of the shell of said jacket and the end walls of the drum proper abutting on the end walls of the jacket whereby the end walls of the drum proper are substantially protected from being bellied

1,904,756. DISPENSING DEVICE. PHILIP A. WOOSTER, San Francisco, Calif. Filed Sept. 30, 1931. Serial No. 566,057. 7 Claims. (Cl. 221—104.)

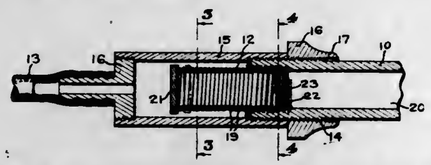
1. A dispensing device comprising a receptacle having a vertically disposed discharge passage intersected by a valve casing and an outlet extending downwardly from said casing and offset from said discharge passage; detachable means for closing the bottom of said discharge passage below the valve casing whereby said passage may be rendered accessible for cleaning by removal of said closing means; a reciprocable valve mounted within said casing and having a vertically disposed aperture registerable with either the discharge passage or the outlet; resilient means for normally urging said valve to register with the discharge passage; and adjustable means for limiting the movement of said valve when urged by said resilient means whereby said aperture within said valve may normally register with the discharge passage to receive a charge of the contents of said dispensing means.

1,904,757. SALT AND PEPPER SHAKER. CLAUDE G. WATSON, Pasadena, Calif., assignor of one-half to John Byers and George D. Gottschick, Pasadena, Calif. Filed Mar. 7, 1932. Serial No. 597,307. 3 Claims. (Cl. 65—45.)



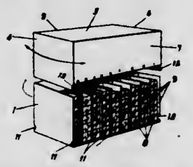
1. A device of the class described, comprising a container having separate compartments, a partition within said container, the upper edge of which is preferably flush with the edge of the container, an enclosing cover, a cap upon said enclosing cover, means for securing the enclosing cover upon said container, means for securing the cap upon said enclosing cover, perforated shutters disposed between said enclosing cover and said cap and adapted to move against the resistance of a U-shaped spring disposed in an annular channel formed in said cap.

1,904,758. MIXING DEVICE. GEORGE E. COOK, New York, N. Y. Filed Aug. 10, 1931. Serial No. 556,179. 1 Claim. (Cl. 48—180.)



A device as characterized comprising a substantially flat body portion adapted to be positioned between the flanges

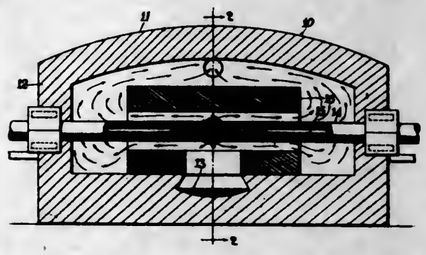
of an intake manifold and a carburetor, said body portion having a middle opening, grooves in the body portion extending from the outer edge to the said middle opening to permit entry of air therethrough, an upwardly projecting support extending from and integral thereto and centrally position from said body portion, and a deflector



having a downwardly extending stem adapted to be mounted on said support, and said deflector at its underside sloping upwardly outward so that fuel from the said manifold and air from the grooves will deflect the fuel from the middle of the manifold towards the side wall thereof.

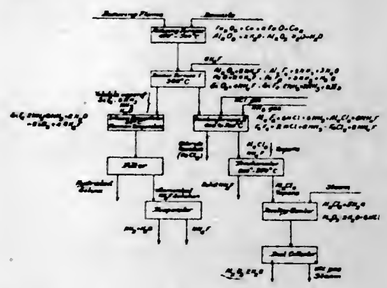
1,904,759. FLUID PRESSURE HORN. HENRY HUBBER, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed May 25, 1931. Serial No. 539,924. 15 Claims. (Cl. 116—138.)

1. In a fluid pressure operable horn, a casing having a fluid inlet passage and a fluid outlet passage, and a sound creating member comprising a resilient member normally closing one of said passages and having a plurality of convolutions normally abutting, said convolutions separating to allow fluid to pass through said casing.



1,904,760. MERCHANDISING AND DISPLAY RECEPTACLE. AVERY A. MATHESON, Binghamton, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Mar. 16, 1931. Serial No. 522,824. 2 Claims. (Cl. 312—42.)

1. A receptacle comprising a box having open front and rear sides, partition members in said box forming a plurality of compartments opening on both sides of the box, and a removable cover member adapted to close either side of said box entirely, the lower edge of one side only of said cover terminating slightly above the bottom of said box, permitting access to the compartments at the lower edge of one side of said box.

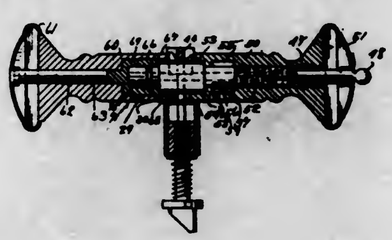


1,904,761. PRODUCTION OF ALLOYS. DONALD M. SCOTT, Buffalo, N. Y., assignor to Buffalo Electric Furnace Corporation, Buffalo, N. Y. Filed Aug. 14, 1931. Serial No. 557,146. 4 Claims. (Cl. 75—22.5.)

1. A method of producing multi-constituent alloy which comprises finely dividing and admixing solid ingredients for reducing one metal constituent of the alloy, feeding a charge of the finely divided solid ingredients through a conduit formed in an energized electrode, controlling the rate of movement of the charge through the electrode, finely dividing and mixing solid ingredients for reducing a sec-

ond metallic constituent of the alloy, feeding a charge of the finely divided solid ingredients of the second metallic constituent through a second electrode, and discharging the reduced metallic ingredients from both electrodes into a common hearth.

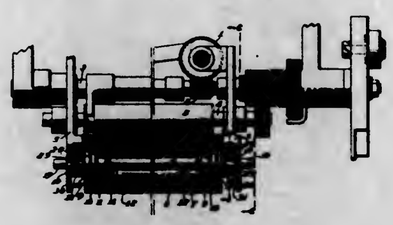
1,904,762. PRODUCTION OF ALUMINUM CHLORIDE AND ALUMINA. SVEND S. SVENDSEN, Chicago, Ill., assignor to Clay Reduction Company, Chicago, Ill., a Corporation of Illinois. Filed May 13, 1927, Serial No. 191,267, and in Norway Oct. 25, 1926. 21 Claims. (Cl. 23—93.)



1. The method of producing anhydrous aluminum chloride which consists in treating aluminum fluoride with hydrogen chloride and ammonia gas.

21. The method of producing aluminum chloride from material containing aluminum oxide, silica and iron impurities, which consists in reacting on said material with ammonium fluoride to form ammonia-silicon-fluorine compounds and aluminum fluoride, heating the mixture to volatilize the ammonia-silicon-fluorine compounds, heating the residual fluorine compounds in a reducing atmosphere to reduce the ferric iron content thereof, and treating the residual compounds with hydrogen chloride and ammonia at a temperature of at least about 400° C., thereby converting the aluminum fluoride into aluminum chloride.

1,904,763. LOCK. EDWALL JAMES BAUMÉ, Long Beach, Calif. Filed July 6, 1932. Serial No. 621,009. 12 Claims. (Cl. 292—169.)

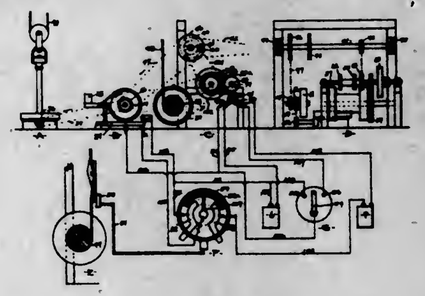


1. In a lock of the character described a bolt adapted to be reciprocated to and from extended position, a latch bolt carrier to which said bolt is adjustably connected, said carrier being substantially rectangular in side elevation and having a rectangular slot therethrough, a non-rotatable spindle arranged axially perpendicular to said carrier and being provided centrally of its length with a rectangular portion adapted to fit within said carrier slot, a substantially key shaped locking member slidably mounted

within said spindle slidable lengthwise, the rectangular portion of the spindle being slitted to permit the passage therethrough of the locking plate of said locking member, a pair of tubular sleeves surrounding said spindle, one for each end thereof, and independently rotatable therearound, the inner ends of said sleeves terminating in segmental portions adapted to cooperate with said latch bolt carrier to retract the same upon the rotation of said sleeves, a slit in the inner end of one of said sleeves adapted to register

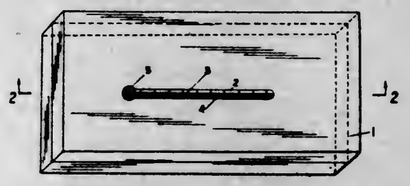
with the slot of the spindle and receive a portion of the locking plate to lock said spindle and sleeve against rotative movement relatively, means to rotate said sleeves, a spring support supported by said carrier and bolt, slidable longitudinally thereof and having its inner end bearing against said sleeves and its outer end extending across the outer end of said carrier, and a coil spring surrounding said latch bolt between the outer end of said spring support and the nose of said bolt.

1,904,764. INK ROLL FOR PRINTING PRESSES. OSCAR H. BANKER, Philadelphia, Pa. Filed Mar. 20, 1931. Serial No. 524,018. 5 Claims. (Cl. 101—348.)



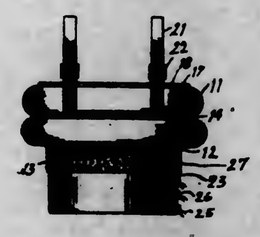
1. In a printing press, a stationary shaft, antifriction bearings thereon, resilient means to maintain alignment of said bearings, a roll mounted on said bearings, and adjustable supporting means to secure said shaft in locked position and releasable at either end of said shaft.

2. In a printing press, a supporting shaft, a roll free to revolve thereon, roller sockets in which said shaft is eccentrically fixed, and spring pressed plungers to lock said sockets in their locked position and also in position for the removal of said roll from said sockets.



1,904,765. MEANS FOR TORQUE CONTROL AND AUTOMATIC DRILL CONTROL. WATSON L. HAWK, Long Beach, Calif. Filed Nov. 28, 1930. Serial No. 498,557. 15 Claims. (Cl. 255—19.)

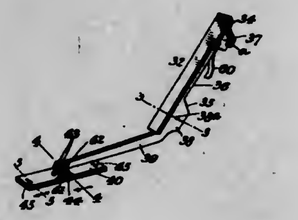
1. In a well drilling apparatus, the combination of a draw works, a cable, a tool string suspended from said cable, a weighing device carried by said cable adapted to indicate the weight of said tool string and means set in motion by said weighing device to cause the tool string to be raised or lowered for maintaining a predetermined portion of the weight of the tool string upon the drill bit, a torque control device adapted to divert from the drill the excess torque or driving force over and above the resistance set for said drill and means set in motion by said



torque control device to raise said tool string until resistance to rotation is lessened and normal rotation is resumed by said drill.

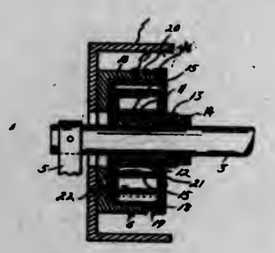
1,904,766. DENTIST'S MIXING PLATE. CHARLES J. MCCANN, Bay City, Mich. Filed Dec. 26, 1930. Serial No. 504,725. 1 Claim. (Cl. 73—52.)

A dental mixing plate comprising a body of glass having one side substantially plane with a depression therein, another body of glass similar to the first and having one side substantially plane with a depression therein similar to that of the first, said glass bodies being placed together with said plane sides against each other and with the surfaces of the said sides substantially coplanar and with the depressions cooperating to form a confined space, said confined space having a shape such as to receive a thermometer with a bulb and stem with the depressions providing an enlarged portion of the confined space for receiving the bulb, a thermometer disposed in said space and substantially fitting the same, and said glass bodies being sealed together around their edges.



1,904,767. LIFE-SAVING DEVICE. TOSHICHI NAKAMURA, Los Angeles, Calif. Filed June 14, 1932. Serial No. 617,088. 4 Claims. (Cl. 9—17.)

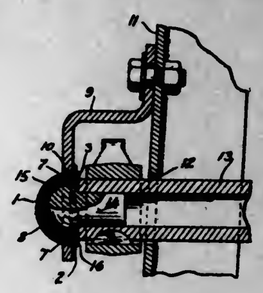
2. In a life-saving device, a fabric receptacle, inflatable rubber tubes mounted in the receptacle, a cork fibre sup-



porting band depending from the receptacle, an elastic belt mounted on the outer face of the supporting band, and a plurality of waterproof fibre elements mounted on the inner face of the supporting band.

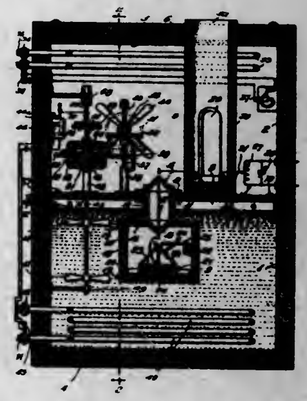
1,904,768. ALL METAL KEY FOR PIANO-ACCORDIONS. REINHOLD RIBSCHICK, New York, N. Y. Filed Mar. 11, 1932. Serial No. 598,147. 10 Claims. (Cl. 84—376.)

4. In combination with a piano-accordion having a ported panel; a plurality of keys comprising wholly metallic structures having integral horizontal head and web portions, the web portions being extended to form shanks; valves having pivotal joints with their respective shanks; and yielding and retarding packings in said joints for the purpose described.



1,904,769. SHAFT MOUNTING. NEWTON SKILLMAN, Highland Park, Mich., assignor to O. & S. Bearing Co., Detroit, Mich., a Corporation of Michigan. Filed Oct. 18, 1926. Serial No. 142,430. 8 Claims. (Cl. 308—72.)

1. The combination with a rotary cross shaft for vehicle frames, of a mounting for each end of said shaft comprising a cylindrical housing radially spaced from the shaft, and resilient means upon said shaft and serving as the sole means for carrying said shaft, said resilient means being connected at one end to the inside of said housing and providing for rotative and universal movements through relatively great ranges of said shaft relative to said housing and normally retaining said shaft in a predetermined lateral and rotative position relative to said housing.

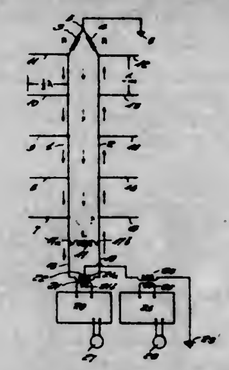


1,904,770. COMBINED END THRUST AND SELF-ALIGNING SUPPORTING BEARING. NEWTON SKILLMAN, Highland Park, Mich., assignor to O. & S. Bearing Co., Detroit, Mich., a Corporation of Michigan. Filed May 16, 1928. Serial No. 278,179. 5 Claims. (Cl. 308—168.)

1. In combination with a hollow oscillatable shaft, of plugs having substantially hemispherical heads within the ends of said shaft, hemi-spherical bearing members formed of stamped sheet metal linings in said bearings of preformed, compressed, lubricant impregnated fibrous

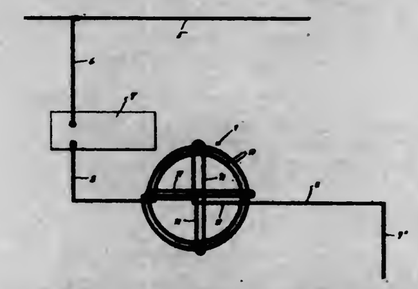
material for directly engaging the spherical heads of said plugs whereby to provide end thrust as well as bearing supports for each end of said shaft.

1,904,771. CONSTANT FREQUENCY CONTROL APPARATUS. ERNEST R. HENTSCHEL, Washington, D. C.; John Olson, administrator of said Ernest R. Hentschel, deceased, assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 23, 1930. Serial No. 455,131. 13 Claims. (Cl. 250—36.)



1. In a constant frequency control apparatus, a heat insulated chamber divided into a pair of sections, a frequency determining element mounted within one of said sections, an oscillator circuit having parts thereof disposed in another of said sections and means in said last mentioned section controllable by temperature conditions in said first mentioned section for governing the temperature in said last mentioned section around said frequency determining element.

1,904,772. RADIO SIGNALING SYSTEM. ALBERT H. TAYLOR, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1930. Serial No. 490,729. 6 Claims. (Cl. 250—20.)



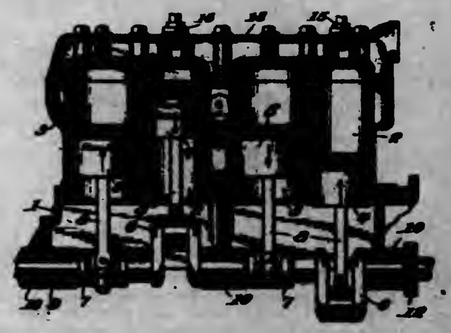
1. In a signal receiving system, a radio frequency energy collecting system comprising a pair of longitudinally extending conductors, a plurality of laterally extending conductors connected to each of said longitudinal conductors at spaced intervals along the length thereof

and projecting normal thereto, said laterally projecting conductors being spaced a distance apart equal to substantially one-half of the received wave length, a primary inductance disposed in series with said longitudinally extending conductors, a receiving circuit coupled with said primary inductance, a connection between a nodal point

in said primary inductance and through an independent primary inductance to ground, a separate receiving circuit coupled with said independent primary inductance, and means connected with each of said receiving circuits for integrating the effects of the received signaling energy of said conductors in shifting planes of polarisation.

1,904,773. RADIO GROUND. CHRIST J. AANENSON, Magnolia, Minn. Filed Mar. 10, 1931. Serial No. 521,539. 1 Claim. (Cl. 173—31.)

In a ground terminal for radios, a single length of wire having an intermediate portion formed with a plurality of convolutions and diametrical elongated loops, said loops being at right angles to each other and having the intermediate portions thereof located approximately at the axis of said convolutions and being interlocked, said convolutions being extended through and being restrained by the outer portions of said elongated loops.



1,904,774. FLOOR AND WALL BRUSH. ALBERT E. BAKER, Mount Vernon, Ohio, assignor of one-third to Paul J. Scott and one-third to Bittie A. Hileman, Richmond, Va. Filed May 16, 1931. Serial No. 537,925. 1 Claim. (Cl. 15—244.)

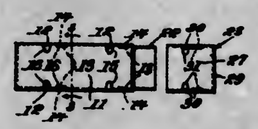
A cleaner including a cleaning element in sheet form, a holder therefor comprising a tubular member provided with a slot extending longitudinally thereof whereby said sheet may be wrapped about said member and opposite edges thereof tucked into the slot, an elongated clamping plate for substantially closing said slot and having side flanges engaging the sheet at the sides of the slot exteriorly of said member, said plate being also provided with a socket on the opposite side of said plate from said slot, a handle member having one end fitted into said socket, and a screw having a headed end anchored within said tubular member and a threaded tapered end adapted to extend through an opening in said plate communicating

with said socket and to be screwed into said end of said handle for securing said end of the handle within said socket, and also for securing said tubular member and said plate in assembled relation on said handle.

1,904,775. ENGINE. GILBERT A. BARTHOLOMEW, Cleveland, Ohio. Filed Nov. 16, 1931. Serial No. 575,423. 1 Claim. (Cl. 60—15.)

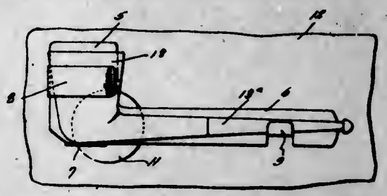
An internal combustion engine comprising a base, an explosion cylinder on said base, a compressor cylinder on said base, a crank shaft carried by said base, pistons in said cylinders, means for connecting the pistons to the crank shaft so that the piston of the explosion cylinder travels in advance of the piston of the compressor cylinder, said explosion cylinder having a fuel intake port, said compressor cylinder having intake and exhaust ports, valve means for said ports, a conduit between the cylinders, a control valve for said conduit and adapted to establish communication between said cylinders during the explosion of fuel within the explosion cylinder, means actuated by the crank shaft for operating the valve means of the ports for the explosion cylinder, a fuel manifold connected to the intake port of the compressor cylinder and the fuel port of the explosion cylinder, and means whereby fuel may be admitted to the cylinders from the manifold or whereby a portion of the manifold may be closed to prevent the admission of fuel to the compressor cylinder and establish communication between the latter and the atmosphere so that air may be drawn into the compressor cylinder instead of fuel.

1,904,776. COMBINATION THERMOMETER CASING. WILLIAM C. BAILEY, Los Angeles, Calif. Filed Oct. 16, 1931. Serial No. 569,299. 5 Claims. (Cl. 73—52.)



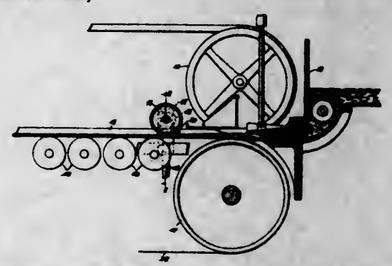
5. In a device of the character described, a casing provided with two compartments, one of which is adapted to contain a thermometer and the other of which is adapted to contain a rotatable shaft, a shaft in the latter compartment equipped with means for engaging the thermometer to retain the latter at an angle to the shaft, and means for rotating the shaft for subjecting the thermometer to centrifugal force for the purpose of restoring the original low reading of the thermometer.

1,904,777. COMBINED TOBACCO BOX AND CIGARETTE PAPER HOLDER. JOHN K. BARSZICKI, Moon Run, Pa., assignor of one-half to Martin Herbert, Moon Run, Pa. Filed July 16, 1932. Serial No. 622,973. 5 Claims. (Cl. 206—38.)



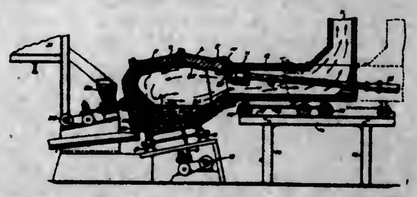
1. In a combined tobacco box and cigarette paper holder, the combination with a box having a slotted bottom wall, of a pack of interfolded cigarette papers in the box overlying the bottom wall slot with the side edge of each paper positioned for projection through the slot, a follower plate on the cigarette paper pack having depending end fingers to confine the separate papers of the pack in a compact condition, and a pull cord attached to the lowermost paper of the pack to facilitate feeding of the papers through the bottom wall slot.

1,904,778. METHOD OF MAKING METAL BOXES. RALPH V. BURDICK, Albany, N. Y. Filed Oct. 28, 1929. Serial No. 403,085. 1 Claim. (Cl. 113—120.)



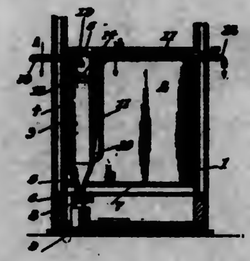
The method of forming a sheet metal box, comprising, stamping a blank with two parts, each having securing ears thereon and receiving depressions therein along corresponding edges, bending a substantial portion of one part of the blank at either side at right angles thereto to form three sides of the box, bending the blank medially upon two parallel lines to form the bottom and the remaining side of the box from the other part of the blank, and finally securing the bent side portions of the first-named part and the side-forming portion of the second-named part together by bending the securing ears of each part of the blank into the receiving depressions of the other part thereof.

1,904,779. PIPE HOLDER. AUGUSTUS BURR, Oaklynne, N. J. Filed May 20, 1932. Serial No. 612,595. 8 Claims. (Cl. 131—51.)



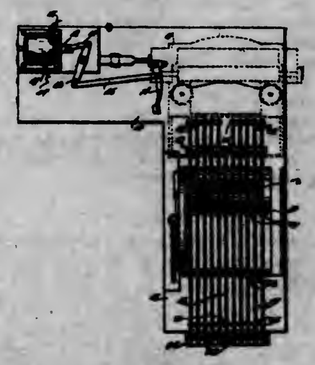
1. A pipe holder comprising a plate provided on the back side thereof with means for detachably securing it to a support, and on the front side thereof with a seat for the pipe bowl and also with a pair of relatively spaced spring clips one of which is disposed above the bowl seat for resiliently engaging the bowl, and the other of which is removed from said seat and arranged to resiliently engage the stem of the pipe.

1,904,780. METHOD OF SMOOTHING STOCK ON FOURDRINIER WIRE. AUSTIN B. COPPIN, Green Bay, Wis. Filed Mar. 25, 1931. Serial No. 525,271. 2 Claims. (Cl. 92—44.)



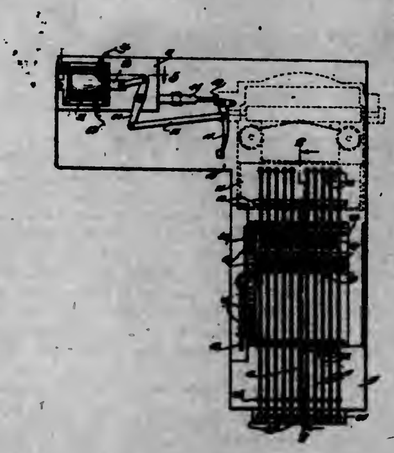
1. The process of smoothing the surface of stock upon a Fourdrinier wire which comprises placing a smooth surfaced roll to dip into the layer of stock and causing the roll to revolve in a direction and at a speed to provide relative motion between the surface of the roll and the layer of stock.

1,904,781. FURNACE. JOHN F. CRAWFORD, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a Corporation. Filed Dec. 27, 1932. Serial No. 648,914. 5 Claims. (Cl. 266—38.)



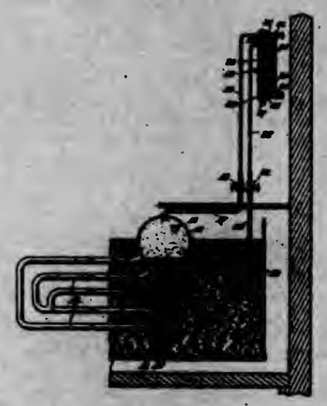
5. A furnace for melting metal, comprising a chamber rotatable about an inclined axis substantially coincident with the axis of the chamber, said chamber having a fuel receiving inlet in one end and a metal receiving inlet in its opposite end, means for supplying metal to the chamber through the latter inlet, means for rotating the chamber, a non-rotatable flue normally abutting the fuel receiving end of the chamber, means associated with the flue for conveying fuel into the chamber, and means for engaging and disengaging the flue in relation to the chamber.

1,904,782. REFRIGERATOR WATER COOLER. SAMUEL H. FLANNAGAN, Richmond, Va. Filed Dec. 29, 1931. Serial No. 583,761. 5 Claims. (Cl. 62—41.)



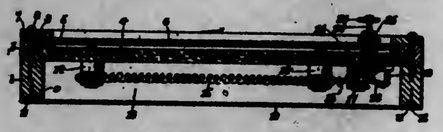
1. In combination with a household type refrigerator, a combined water storage and cooling receptacle placed within the main food compartment so as to interfere to a minimum with its normal use, comprising a tall, narrow, closed vertical tank constructed of good heat conductive material and having an inwardly sloping bottom pitched to substantially prevent the accumulation of sediment thereon, a sediment receptacle directly below the lowermost part of the tank and passage means therebetween, a water inlet to the tank, and a water outlet permitting the intermittent withdrawal of cooled water as desired, said tank permitting the cooling and quiescence of the water so as to precipitate out solids.

1,904,783. ELECTRIC AUTOMATIC RECORDING APPARATUS. JOHN G. GARRITY and EDWARD L. MCCARTHY, Pittsburgh, Pa. Filed Dec. 22, 1931. Serial No. 582,669. 8 Claims. (Cl. 234—1.5.)



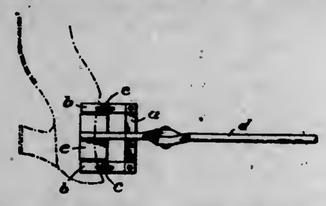
1. Apparatus to record car numbers by effecting actuation of a typewriter having keys, a spacer bar, a carriage and platen, and a platen shift lever, said apparatus including a series of electro-magnetic means arranged when energized to actuate respective keys of a typewriter, and means carried by a car and operable to successively close circuits through selected electro-magnetic means.

1,904,784. ELECTRIC AUTOMATIC RECORDING SCALE. JOHN G. GARRITY and EDWARD L. MCCARTHY, Pittsburgh, Pa. Filed Dec. 22, 1931. Serial No. 582,670. 16 Claims. (Cl. 234—5.4.)



1. Apparatus to record car scale weights by a typewriter having number keys, a spacer bar, a carriage and platen roll, and means for actuating the latter, said apparatus including an electro-magnetic key actuating means for each number key, a series of circuit closing contacts each associated in circuit with a respective one of said electro-magnetic means, and means controlled by the weight on a scale for closing a circuit through a corresponding contact and its associated electro-magnetic means.

1,904,785. LIQUID LEVEL GAUGE FOR VOLATILE LIQUIDS. NORMAN H. GAY, Los Angeles, Calif. Filed Mar. 29, 1932. Serial No. 601,827. 8 Claims. (Cl. 73—54.)

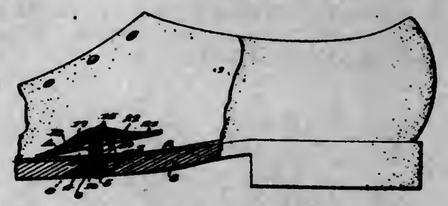


1. A liquid level indicator for a vessel containing a volatile liquid, comprising a U-tube containing an indicating liquid, a balancing conduit for connecting the top of one leg of the U-tube to the top of the vessel, and a pressure conduit for connecting the top of the other leg of the U-tube to the vessel at a point not higher than the minimum level to be indicated, said pressure conduit being exposed for at least a part of its length to a temperature above the vaporizing point of said volatile liquid.

1,904,786. HEATING DEVICE. LUTY HAWKINS, Mount Vernon, Ill. Filed Sept. 11, 1931. Serial No. 562,376. 1 Claim. (Cl. 219—34.)

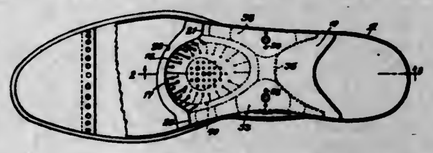
A heating device comprising, a pair of superposed horizontal frames, the upper of said frames having its lower and inner peripheral faces formed with a recess, a heat insulating plate having marginal portions disposed within said recess, said upper frame having its upper and inner peripheral faces formed with a recess, a cover having marginal portions disposed within the recess in the upper and inner peripheral faces of the upper frame, a retaining frame secured to said upper frame for maintaining said cover in position, a flexible bottom member secured to the lower face of the lower of said frames, and electrical heating means disposed between said plate and bottom member.

1,904,787. DEVICE FOR SHRINKING LEATHER. JOSEF HITZLER, Frankfort-on-the-Main, and FRIEDRICH CARL JULIUS MERZ, Frankfort-on-the-Main-Rudelheim, Germany. Filed Nov. 4, 1930, Serial No. 493,876, and in Germany Nov. 6, 1929. 1 Claim. (Cl. 12—142.)



A method of shrinking or contracting leather and especially of reshaping the widened upper leather of shoes and the like, comprising the steps of clamping the piece of leather to be contracted in wrinkled state and applying heat and pressure to said clamped piece in order to bring forth the shrinkage of the same.

1,904,788. DISPLAY OF CUT FLOWERS. JESSE H. HOLMES, Bound Brook, N. J., assignor to Thomas Young Nurseries, Inc., Bound Brook, N. J., a Corporation of New Jersey. Filed June 8, 1932. Serial No. 616,131. 10 Claims. (Cl. 47—41.)

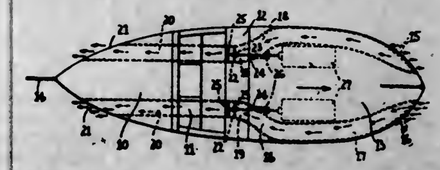


1. A composite flower plant display comprising at least a portion of a growing plant of the type having main stems or pseudo-bulbs, and a flower emerging from a sheath-like jointure with said stem or pseudo-bulb, an artificial sheath in the simulation of said sheath-like structure, and attached to said main stem adjacent the jointure, and a cut flower having its stem inserted in said artificial sheath.

1,904,789. ADJUSTABLE ARCH SUPPORT. JOSEPH C. HOWELL, Fort Lee, N. J. Filed Oct. 26, 1931. Serial No. 571,236. 8 Claims. (Cl. 36—71.)

1. The combination with a shoe or similar article, of an arch support comprising a pair of spaced-apart plates, means for securing said spaced-apart plates to the sole of the shoe, a screw extending through one of said plates, and a disk of ovate shape having a threaded cylindrical portion arranged to be engaged by the threads of the screw for moving the disk relatively to said plates.

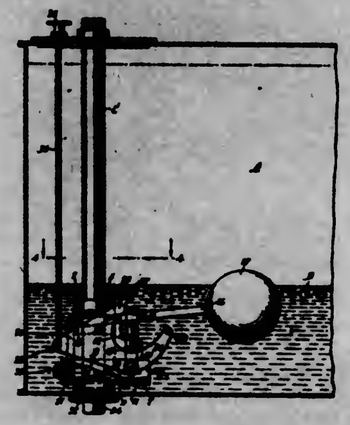
1,904,790. ARCH SUPPORT FOR SHOES. JOSEPH C. HOWELL, Fort Lee, N. J. Filed June 24, 1932. Serial No. 619,142. 11 Claims. (Cl. 36—71.)



1. The combination of a shoe and a plate for supporting the arch of the wearer, spring leaf plates arranged on the insole of the shoe, and means secured to the arch plate and connected to the spring leaf plates supporting said arch plate in spaced relation above the said spring leaf plates.

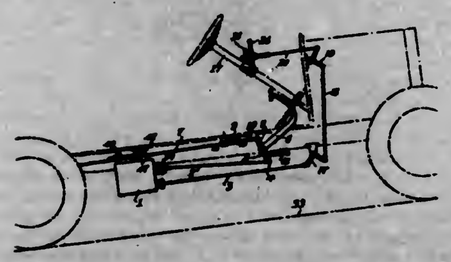
1,904,791. PROCESS FOR MAKING SULPHONATED PRODUCTS. HANS KANTOROWICZ, Berlin-Wilmersdorf, and ARNOLD KÖHLER, Spandau near Berlin, Germany, assignors to Fettsaure- und Glycerin-Fabrik G. m. b. H., Mannheim, Germany. Filed Apr. 9, 1932, Serial No. 604,350, and in Germany Apr. 14, 1931. 4 Claims. (Cl. 87—12.)

1. A process for making sulphonated commercial oleic acids or oliens consisting in sulphonating commercial oleic acids or oleins which have been destearinised with a sulphonating agent at low temperature.



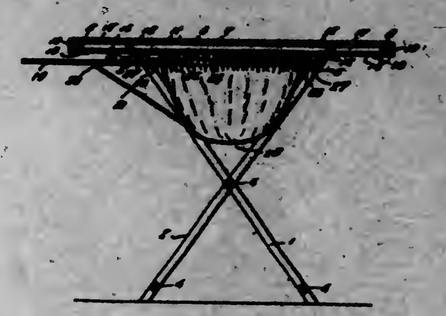
1,904,792. BOAT PROPELLING SYSTEM. JOHANNES KESSLER, Long Island City, N. Y. Filed Aug. 31, 1932. Serial No. 631,213. 3 Claims. (Cl. 115—16.)

1. A boat having tubes extending longitudinally throughout the lengths of its hull in spaced relation and below the water line, a screen at the bow entrance to said tubes,



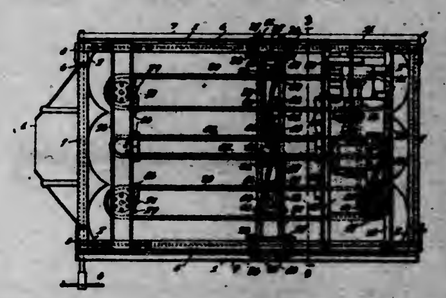
propellers rotatably mounted substantially centrally in the length of said tubes, and independent motors coupled to each propeller, said motors being inset from the forward portions of said tubes.

1,904,793. OUTLET CONTROL FOR LIQUID CONTAINERS. LOUIS LAVOIE, Quebec, Quebec, Canada. Filed Apr. 2, 1932. Serial No. 602,801. 9 Claims. (Cl. 158—46.5.)



1. The combination with a liquid container having an outlet adjacent its bottom, of a device for controlling said outlet, including a valve normally closed by the buoyancy of the liquid to reserve a portion of the contents at a predetermined emergency level in the container, manually operable means for opening said valve to render said reserved liquid available, means operable by the buoyancy of the liquid to initially lock the valve open, to subsequently gravitationally release the lock and to retain the valve open gravitationally.

1,904,794. PERMANENT AND TEMPORARY BRAKE LOCK. HENRY LIVA, Scranton, Pa., assignor of one-half to Angelo Sebastianelli, Scranton, Pa. Filed Oct. 28, 1931. Serial No. 571,629. 16 Claims. (Cl. 188—265.)

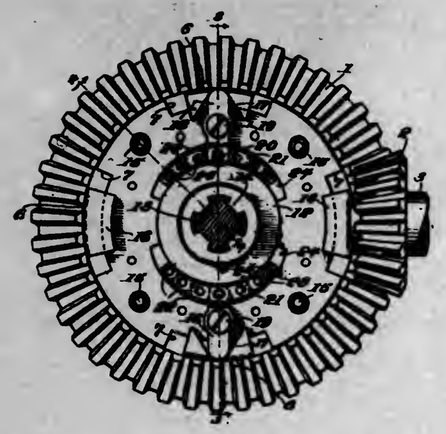


1. The combination of an automobile provided with a brake mechanism having a brake pedal, of a rod connected with said pedal and adapted to be moved longitudinally in one direction when the brake pedal has been moved to braking position, a mechanism associated with said rod for permitting a slow return of said rod and thereby a slow releasing of said braking mechanism, and hand operated means for setting the first mentioned means into functioning position, said hand operated means including a plurality of rods and levers extending to near the steering column of said automobile, a hand member for reciprocating said rod and means detecting with the hand member for locking the hand member in an operative position.

1,904,795. COMBINATION TABLE. ERNEST L. MCFARLAND, Strasburg, Va. Filed July 21, 1931. Serial No. 554,812. 2 Claims. (Cl. 46—21.)

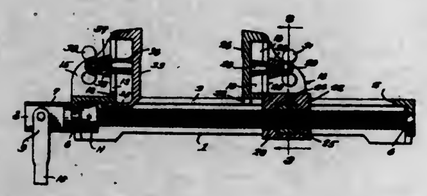
1. A table comprising pairs of pivotally connected, crossed supporting legs, rods extending between the upper ends of each pair of legs, a top, a frame secured to the marginal portions of the lower side of the top and including end members and side members, spaced, parallel bars secured to the lower side of the top and extending between the end members of the frame, oppositely disposed hooks secured to the longitudinal bars and engageable with the rods for limiting the swinging movement of the legs in one direction relative to each other and for removably mounting the top in position on said legs.

1,904,796. AGITATING APPARATUS. EARL DANIEL MCCADDAM, San Francisco, Calif. Filed Aug. 13, 1931. Serial No. 556,653. 8 Claims. (Cl. 33—73.)



1. In apparatus of the class described, a rectangular receptacle body, a frame mounted over said body and including a pair of longitudinal tracks located adjacent the sides of said body, a trolley running on each track, spaced cross bars connecting said trolleys to move in unison and constituting therewith a trolley car, endless chains taking over sprockets and extending one adjacent each side of said body parallel thereto, a slide mounted on said cross bars for movement transversely of said body, driving connections between said chains and said slide, means to drive said chains for moving said slide, said cross bars and said trolleys back and forth in the length of said body, and agitators carried by said slide.

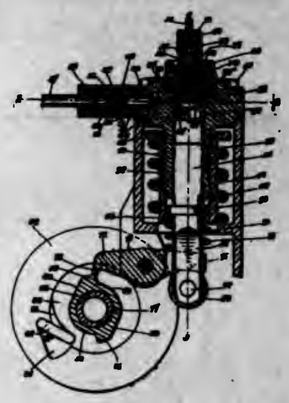
1,904,797. AUTOMOBILE DIFFERENTIAL. CHARLES N. MCMANUS, Mitchell, S. Dak. Filed Apr. 28, 1932. Serial No. 607,621. 3 Claims. (Cl. 74—7.)



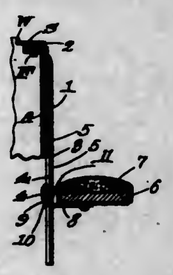
1. A differential comprising a mounting having grooves, bars mounted in said grooves for limited circumferential movement relative to the mounting, a ring gear secured to said bars, bearings journalled in said mounting, double acting overrunning clutches between said bearings and the

mounting, pivotally mounted levers between the clutches and the bars for rendering the clutches operative and inoperative by the movement of the ring gear relative to

the mounting and to permit the bearings to rotate free of the mounting when the power on said bearings exceeds the power on the mounting.



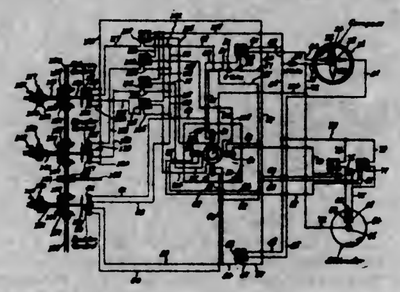
1,904,798. VISE. JOSEPH SAMUELS NURNBERGER, St. Albans, W. Va. Filed Jan. 11, 1932. Serial No. 585,987. 2 Claims. (Cl. 81—33.)



1. A vise including a slotted base, a feed screw therein, fixed and movable jaws on the base, an operative connection between the screw and movable jaw, a rib on one face of each jaw, supplemental jaws bearing against and adapted to receive the ribs, said ribs constituting means for holding the supplemental jaws against lateral displacement, and means carried by the supplemental jaws for clamping them to the main jaws.

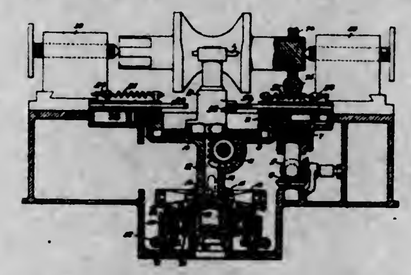
1,904,799. PUMP MECHANISM. HARRY A. PALMER, Boston, Mass., assignor to Palmer Inventions, Incorporated, a Corporation of Massachusetts. Filed Apr. 29, 1932. Serial No. 608,330. 2 Claims. (Cl. 103—154.)

1. In a fuel pumping mechanism for internal combustion engines, a tubular structure having a part thereof of uniform inner diameter to provde a chamber for a fuel intake and expelling plunger, said chamber being open at its inner end, a normally closed valve controlled fuel outlet structure secured to the tubular structure and having a reduced portion extending into the outer portion and abutting the inner face of said part to provide a normally closed apertured outer wall for said chamber, said tubular structure including a valve controlled fuel intake normally closed to a source of fuel supply, said intake arranged inwardly of and in very close proximity to said wall, disposed at right angles to the latter and opening into said chamber at the extreme outer end of the latter, and an intermittently operable, spring controlled, reciprocatory fuel intake and expelling plunger operating in said chamber and constituting means for simultaneously closing said intake and apertured wall to said chamber at the end of its expelling stroke and for opening said intake and apertured wall on its intake stroke.



1,904,800. ARMREST. GEORGE RAYMOND PITTMAN, Wichita, Kans. Filed July 18, 1931. Serial No. 551,775. 1 Claim. (Cl. 155—198.)

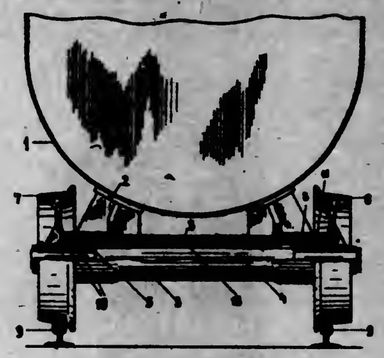
The combination with a hanger having spaced apertures, of a rest, a wing connected thereto, there being a hanger receiving opening between the rest and wing, means operated by the downward movement of the rest away from the hanger for pivotally connecting the wing to the hanger, said means including a stud on the wing and overhanging the opening for insertion into one of the apertures in the hanger, and a longitudinal stiffening rib pressed from the hanger and providing a guide groove for the stud, said apertures opening into the groove.



1,904,801. AUTOMATIC AIRPLANE AND DIRIGIBLE CONTROL APPARATUS. NICOLA CONSOLATO PLUTINO, Welland, Ontario, Canada. Filed July 26, 1932. Serial No. 624,797. 17 Claims. (Cl. 244—29.)

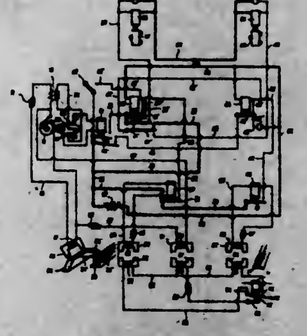
1. An automatic control apparatus for an airplane and the like, comprising separate controls for the airplane, electrical devices for the controls, electrical circuits for the devices, a plumb control relay in said circuits to close the same and operate the devices by deviation of the relay out of its normal axis, a compass, an altimeter, and

electrical circuits between the plumb contact relay and the compass and altimeter to operate the relay independently of its operation by deviation from its normal axis.



1,904,802. APPARATUS FOR MACHINING ROLLS FOR ROLLING MILLS AND THE LIKE. HANS SCHIMMEL, Komotau, Czechoslovakia. Filed Dec. 5, 1931, Serial No. 579,277, and in Germany Dec. 24, 1930. 26 Claims. (Cl. 82—18.)

1. In an apparatus for machining circumferential portions of rolls of the type described, the combination of means for upporting at least one roll to be machined, a tool holder rotatable about an axis disposed transversely to the axis of a roll sp supported, a tool in said holder and which continuously carries out a working movement, mechanism for moving said tool holder positively in an outward radial direction relatively to the axis of rotation thereof as the same rotates and at least one cam operable to move said tool holder in an inward radial direction relatively to said axis for the purpose described.

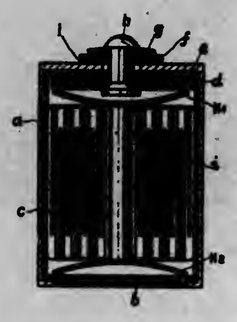


26. In an apparatus for machining the circumferential portions of rolls of the type described the combination of two pairs of headstocks each arranged to support a roll to be machined with the axes of the said rolls disposed parallel to one another, feed mechanism operatively connected to said headstocks and adapted to move each pair of head-stocks towards and away from the other pair in a direction transverse to the axis of a roll supported thereby, a tool holder disposed between a pair of rolls supported by said head-stocks, means for rotating said tool holder about an axis disposed transversely to the plane extending through the axes of said rolls, means operable to move said tool holder positively in an outward radial direction with respect to the axis of rotation thereof as the same rotates and at least a pair of cams operable to move said tool holder in an inward radial direction relatively to said axis as the tool holder rotates for the purpose described.

1,904,803. AUTOMATIC LUBRICATING DEVICE. FRANZ SCHMIED, Teplitz-Schoenau, Czechoslovakia. Filed Mar. 18, 1932, Serial No. 599,774, and in Czechoslovakia June 11, 1931. 8 Claims. (Cl. 184—2.)

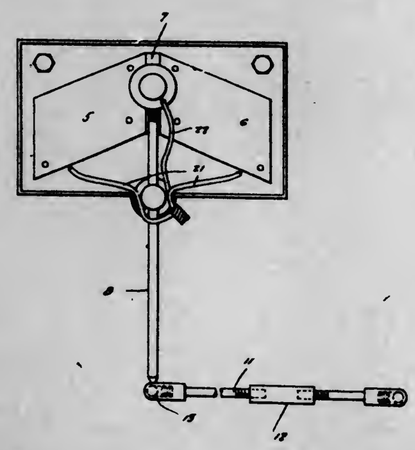
1. In a wheeled vehicle the combination with an axle, and wheel bearings carried by said axle, of a casing located around said axle and between said bearings and constituting a lubricant container, and a weight member in said container adapted to force lubricant from said container to the wheel bearings under the action of gravity when the axle is inclined.

1,904,804. AUTOMATIC TRAIN CONTROL. DANIEL HERBERT SCHWEYER, Easton, Pa. Original application filed Mar. 27, 1922, Serial No. 547,067. Divided and this application filed Mar. 13, 1928. Serial No. 261,275. 10 Claims. (Cl. 246—63.)



1. In automatic train control apparatus, vehicle-carried alternating current inductive means controlled from the trackside and including a generator for energizing said means, a direct current control element, and an electrical connection between said means and element including a transformer and a full wave mechanical rectifier driven with the generator in order that said element be conductive in response to variations in the energization of the first-named means.

1,904,805. ELECTRICAL LEAD-IN. OTTO SELLING, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Feb. 7, 1930, Serial No. 426,126, and in Germany Feb. 27, 1929. 7 Claims. (Cl. 175—41.)

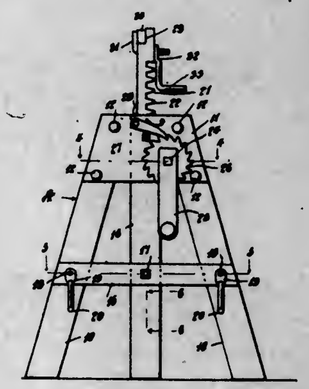


1. An electrical lead-in adapted to exclude moisture from a supporting casing comprising in combination a perforated wall, an electrical conductor having a head

formed on at least one end thereof and extending through said perforation in said wall, a washer of insulating material on one side of said wall, a washer of conducting material adapted to be positioned against the outer face of said insulating washer, a second washer of insulating material on the opposite side of said wall, one of said insulating washers comprising a thin sheet of semi-plastic material,

and metallic resilient means interposed between said second insulating washer and the head of said electrical conductor for maintaining a substantially constant pressure on said insulating washers regardless of the contraction or expansion of the lead-in unit due to temperature variations whereby a moisture tight seal is obtained between the conductor and the wall.

1,904,806. AUTOMATIC DIRECTION SIGNAL SWITCH. ALVA THOMPSON, Los Angeles, Calif. Filed Dec. 18, 1931. Serial No. 581,971. 1 Claim. (Cl. 200—11.)

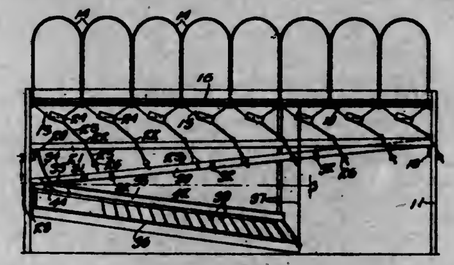


A switch of the class described comprising a casing, a block of non-conductive material located in the casing and having a raised central portion having parallel sides, a pair of contact plates fastened to the block having their adjacent ends contacting the sides of the raised part of the block, said contact plates diverging from the raised part of the block, an arm pivoted intermediate its ends to the casing and having a part extending into the casing and a brush carried by said part of the arm for engaging the contact plates when the arm is moved to either side of its neutral position, said brush engaging the raised part of the block when the arm is in neutral position.

1,904,807. SAFETY ATTACHMENT FOR MOVING PICTURE APPARATUS. ANTON SZELIGA, New York, N. Y., assignor of one-half to Frederick Tichy, New York, N. Y. Filed Apr. 28, 1931. Serial No. 532,333. 7 Claims. (Cl. 88—17.)

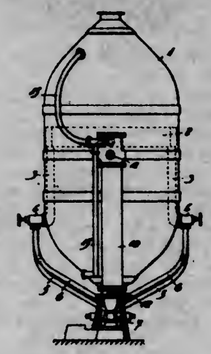
4. In a film cutting device, the combination of a slotted base plate, means for feeding a film through said slot, a cutter reciprocally mounted upon said base plate, a lever pivotally mounted upon said cutter, a spring having one end secured to said base plate and the other end secured to one arm of said lever, a hook on the other arm of said lever, means for retracting said cutter against the action of said spring, a trigger adapted to engage said hook to maintain said lever in position to retain said cutter in a retracted position, electric means for actuating said trigger, and thermostatic means for controlling said electric means.

1,904,808. ADJUSTABLE FOLDING SCAFFOLD. CONSTANT VANHORN, Sentinel Butte, N. Dak. Filed Apr. 27, 1932. Serial No. 607,823. 5 Claims. (Cl. 304—7.)



1. A device of the class described comprising angularly disposed legs, a breast plate connecting the legs, a vertical leg between the first mentioned legs, a cross bar connecting all of the said legs, said vertical leg being of channel form, a lifting bar slidable in the channel of the last mentioned leg and provided with rack teeth, a pinion in mesh with the rack teeth, a shaft journaled on the breast plate mounting said pinion, a ratchet wheel on said shaft, and a pawl coacting with said ratchet wheel.

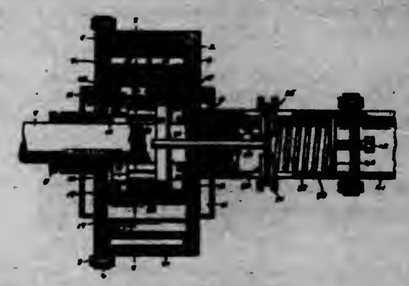
1,904,809. FOWL NEST. HENRY H. WAGNER and CHARLES L. WAGNER, Pickering, Mo., assignors of one-third to Omer Wray, Pickering, Mo. Filed Apr. 19, 1932. Serial No. 606,166. 3 Claims. (Cl. 119—43.)



1. In a device of the kind described comprising a nest and an inclined chute, an egg storage cabinet having an upper portion forming a passageway, a lower portion and a series of pivoted flaps separating said passageway from the lower portion of said cabinet, said lower portion being

provided with transverse means dividing said portion into a plurality of compartments, said cabinet sloping longitudinally and laterally to cause an egg to roll longi-

tudinally in said passageway into the lowermost empty compartment, then laterally in said compartment, substantially as set forth.

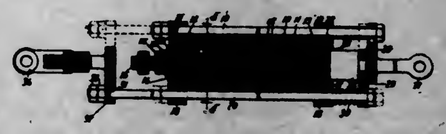


1,904,810. ARRANGEMENT IN DIGESTERS ADAPTED FOR MANUFACTURING CELLULOSE AND WORKING WITH CIRCULATION EFFECTED BY A CENTRIFUGAL PUMP. OSCAR ALBANUS WIRÉN, Stockholm, Sweden. Filed May 7, 1932, Serial No. 609,916, and in Sweden July 26, 1930. 2 Claims. (Cl. 92—7.)

1. Improvement in circulating systems for cellulose digesters wherein the reaction liquid by means of a pump aggregate is forced to circulate through the digester and an outside pipe system, consisting in the arrangement of a plurality of suction pipes conveying reaction liquid from the digester to an intake of a pump; a multiple-branch unit provided with a plurality of inlet branches and a common outlet uniting said suction pipes with said intake; the inlet channels of said multiple-branch unit being at the plane of junction parallel with each other and with the outlet channel, and adjacent channels separated by means of edged partitions; said channels being so formed that cross-sections taken immediately before and immediately after said plane of junction will enclose areas with coincident interior outlines, so that the inlet channels will smoothly merge without any projections and obstructions into the outlet channel.

1,904,811. HYDRAULIC TRANSMISSION MECHANISM. GEORGE EUGENE ZAHN, Freedom, Pa. Filed Dec. 27, 1930. Serial No. 505,153. 3 Claims. (Cl. 192—58.)

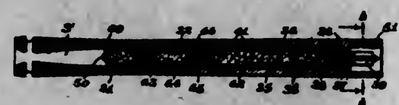
1. A fluid transmission including a fluid casing forming a part of a driven device and a power shaft extending into the casing concentrically thereof, said casing having an eccentrically located chamber in which the shaft is eccentrically located, a rotary element engaging the wall of said chamber, a drive element secured to the shaft, wings pivoted to the drive element to successively engage the rotary element during the rotation of the drive element, and a fluid control means to trap fluid between the walls of the



chamber and certain of a pair of wings to build up desired pressures for rotating the casing from the shaft through the rotary element.

1,904,812. CEMENTING MACHINE. GEORGE G. ALBERT, New York, N. Y. Filed Mar. 16, 1931. Serial No. 523,132. 2 Claims. (Cl. 154—35.)

1. A machine for assembling the plies of laminated boards including a toothed roller for feeding one ply of the board and forming indentations in one surface thereof, a container having an outlet for adhesive, means for transferring adhesive from the outlet of the container to coat the said ply and fill the indentations, means on the container for movably supporting a second ply and maintaining the container normally in a predetermined position, and means for guiding said second ply onto and pressing it upon the coated and indented surface of the other ply.

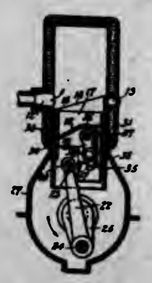


1,904,813. ELECTRIC CONTROLLER. VINCENT G. APPLE, Dayton, Ohio, assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed June 13, 1928. Serial No. 285,091. 4 Claims. (Cl. 201—51.)

4. A controller adapted to be included in an electric circuit to vary the resistance thereof, said controller comprising, in combination, a relatively long insulation lined container, a plurality of discs of relatively good conductive material but of high contact resistance inclosed therein and forming a part of the electric circuit, a binding post associated with the disc at one end of said container, a contact plug adapted to be brought into contact with the disc at the opposite end thereof to complete the circuit, yieldable means normally retaining said plug out of contact, supporting means for said binding post rigidly associated with said container and including a tension link projecting beyond the end thereof opposite said binding post and a cooperating slidable tension link secured to said plug and

extending beyond the end of said container opposite thereto, whereby mechanical tensioning of said links brings said contact plug into contact with said disc and places the same under compression in proportion to the tension created to decrease the resistance in said circuit.

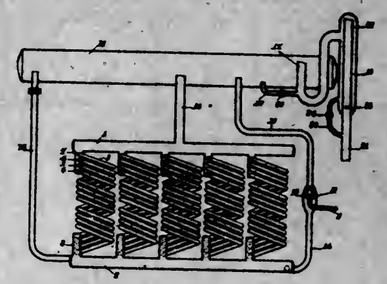
1,904,814. CIGAR AND CIGARETTE HOLDER. ABRAHAM ANNELEWITZ, Far Rockaway, N. Y. Filed July 11, 1931. Serial No. 550,257. 2 Claims. (Cl. 131—10.)



1. A cigar and cigarette holder including a mouthpiece, a body, said mouthpiece and body having bores extending entirely therethrough longitudinally, said body having a cigar receiving socket, a foraminous container arranged in said body, a container open at both ends positioned in said mouthpiece and extending into the other container, and a piercing member carried by said foraminous container positioned to extend into said socket.

1,904,815. PROCESS FOR PRINTING ACETATE SILK OR MATERIALS CONTAINING AN ORGANIC CELLULOSE ETHER OR ESTER. OSCAR BALLY, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Sept. 30, 1929, Serial No. 396,407, and in Switzerland Oct. 12, 1928. 6 Claims. (Cl. 8—5.)

1. A process of printing the group of textile materials consisting of colloids of the cellulose series of the group of the organic esters and ethers of cellulose, which consists in printing the material with such sulfonic acids of a-aminoanthraquinones which contain aromatically bound sulfo groups, and then steaming the material.

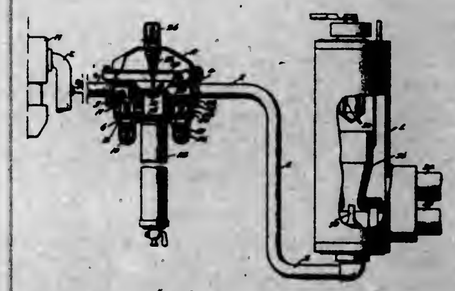


1,904,816. INTERNAL COMBUSTION ENGINE. GEORGE P. BEAUDRY, Montreal, Quebec, Canada. Filed Feb. 14, 1930. Serial No. 428,478. 2 Claims. (Cl. 123—47.)

1. In an internal combustion engine, the combination of a cylinder, a tubular element arranged within said cylinder and slidable on the wall thereof, a piston slidable in said element, axially alined bearings on said element, a piston rod having axially alined stub shafts on the upper end thereof received in said bearings respectively, said piston having its lower end cut away to allow the lower edge of the piston to fall below said bearings.

1,904,817. REFRIGERATING PLANT. RAOUL BERNAT and HENRI BERNAT, Bordeaux, France. Filed July 9, 1931, Serial No. 549,746, and in France July 16, 1930. 4 Claims. (Cl. 62—126.)

1. A refrigerating apparatus comprising an upper receptacle, a lower receptacle, refrigerating tubes extending between said receptacles and connecting the same, means for leading a refrigerating liquid from the lower receptacle to the upper receptacle, an exit conduit leading from the



upper portion of the upper receptacle and another conduit leading from the lower part of said receptacle to said exit conduit.

1,904,818. CLEANING APPARATUS. MARION H. BISSELL, Chicago, Ill. Filed Apr. 20, 1929. Serial No. 356,854. 2 Claims. (Cl. 15—230.)

1. A device of the character described comprising a member including a plate and a rim around and upstanding from the plate, a member adapted to be disposed within the rim, means for retaining said second-named member on said first-named member, a resilient split ring disposed within the rim between the rim and the second-named member, a cleaning member including a portion extended across one side of said second-named member and including a portion disposed between the ring and the second-named member, means for contracting the ring to bind the said second-named portion of the cleaning member against the second-named member and means to rotate said device.

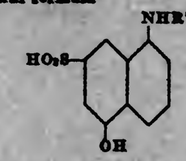
1,904,819. PRESSURE AND FLOW CONTROL DEVICE FOR COMBUSTION INDICATORS. GEORGE R. BLODGETT, Toledo, Ohio, assignor to Moto Meter Gauge & Equipment Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 6, 1931. Serial No. 520,667. 12 Claims. (Cl. 23—255.)

7. Means for supplying gas to a combustion indicator comprising a connection to a source of a pulsating supply of gas for said indicator, a container supplied from said connection and pressure regulating means controlling the supply from said container to the indicator.

1,904,820. AZO DYE. RAINALD BRIGHTMAN, Manchester, England, assignor to Imperial Chemical Industries Limited, a Corporation of Great Britain. Filed June 30, 1930, Serial No. 465,064, and in Great Britain July 3, 1929. 3 Claims. (Cl. 260—77.)

3. A dyestuff having the general formula

$$R-N=N-C_6H_4.CO.NH.C_6H_4-N=N-R'$$



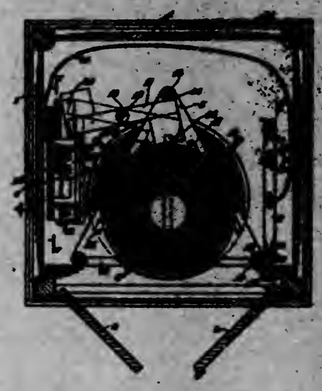
in which R represents an organic residue of a 2:8-, 1:8-, or 1:5-amino-naphthol-sulfonic acid or an N-substituted or a benzene azo derivative thereof and R' represents the residue of a coupling component selected from the group consisting of an aromatic compound of the benzene series and a compound of the naphthalene series consisting of the naphthols and their sulfonic acids, the naphthylamines and their sulfonic acids, the 2:8-, 1:8-, 1:5-amino-naphthol-sulfonic acids and their N-substituted derivatives.

1,904,821. DISAZO DYESTUFFS AND METHOD OF PREPARING SAME. RAINALD BRIGHTMAN, Manchester, England, assignor to Imperial Chemical Industries Limited, Westminster, England. Filed Aug. 6, 1930, Serial No. 473,512, and in Great Britain Aug. 16, 1929. 8 Claims. (Cl. 260—78.)

8. A disazo dyestuff obtainable by coupling tetrazotised m:m' tolidine with one molecular proportion of a compound of the group consisting of salicylic acid and a methyl-2-naphthyl-amine-7-sulphonic acid and with one molecular proportion of a naphthalene compound of the group consisting of 2-naphthol, 2-naphthol-sulphonic acids, and 2-naphthyl amine-6-sulphonic acids.

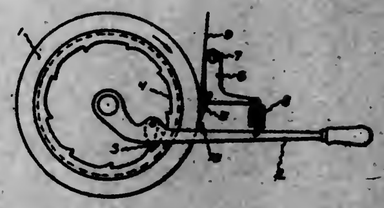
1,904,822. AZO DYESTUFFS AND METHOD OF PREPARING SAME. RAINALD BRIGHTMAN, Manchester, England, assignor to Imperial Chemical Industries Limited, Westminster, England. Filed Aug. 7, 1930, Serial No. 473,764, and in Great Britain Aug. 26, 1929. 7 Claims. (Cl. 260—83.)

7. A disazo dyestuff prepared by coupling the product of diazotisation of a p-aminoazo compound of the benzene and naphthalene series with an amino-naphthol-sulphonic acid of the general formula



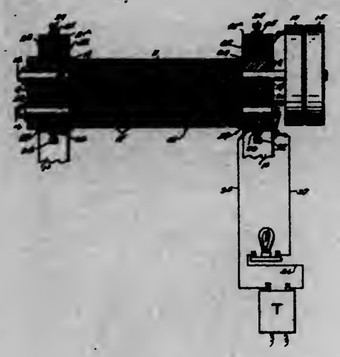
in which R'' represents hydrogen or a radical of the benzene series.

1,904,823. AUTOMATIC TIRE GAUGE. JOHN D. BURKHOLDER, Harrisonburg, Va., assignor to Automatic Devices, Inc., Harrisonburg, Va., a Corporation of Virginia. Filed Mar. 10, 1930. Serial No. 434,785. 7 Claims. (Cl. 73—110.)



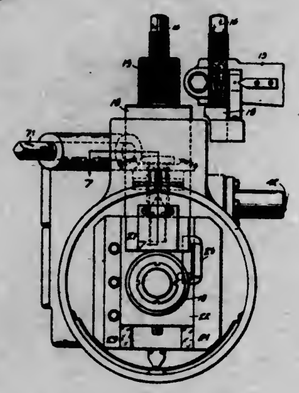
2. A tire gauge including a tube stem, means within the tube stem for frictionless indicating of the pressure of the tire, a disk formed with a central opening, a diaphragm open to the pressure within the tube stem and affected by said pressure through the opening in the disk to thereby engage and operate said pressure indicating means, said disk determining the indicating range of the gauge by the thickness and diameter of the central opening in said disk.

1,904,824. CABINET FOR KEEPING SOUND RECORDS. NICOLAS CROUSEL, Buenos Aires, Argentina. Filed Jan. 5, 1931. Serial No. 506,004. 7 Claims. (Cl. 312—45.)



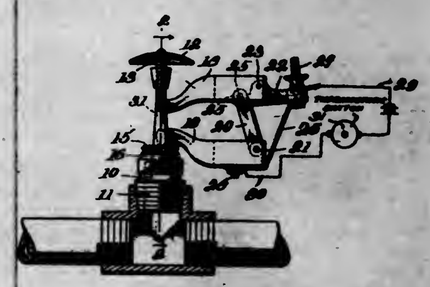
1. An improved cabinet for keeping sound records, comprising a series of individual compartments for holding the records; a record expeller for each compartment which operates to expel the record; an operating button; a mechanism operated by said button to operate any one of the expellers; means controlled by the button for actuating the mechanism; an indicating panel for registering thereon, line by line, the titles or headings of the records contained in the compartments, said panel being adapted to slide adjacent to a fixed index; said mechanism being movable with the panel so that the mechanism will be stopped opposite to the expeller corresponding to the compartment whose record is registered on the line of the indicator situated at the index.

1,904,825. METHOD AND APPARATUS FOR EDGE ROLLING OF CREPE PAPER. CARL ALLAN FREDRIK, Malmo, Sweden. Filed Jan. 7, 1931, Serial No. 507,949, and in Sweden Sept. 24, 1930. 25 Claims. (Cl. 93—1.)



1. A method for edge rolling crepe paper, comprising pressing the paper edge against a resilient pad surface, simultaneously moving such pad surface transversely in relation to a working blade the edge of which is positioned at an acute angle to said surface, and feeding the paper edge in between said working blade and pad surface, due to friction against the latter.

1,904,826. MEANS FOR DETECTING METALLIC OBJECTS IN HIDES AND SKINS. ANTHONY PHILIP GIULIANO, Newark, N. J. Filed May 22, 1930. Serial No. 454,758. 2 Claims. (Cl. 149—14.)

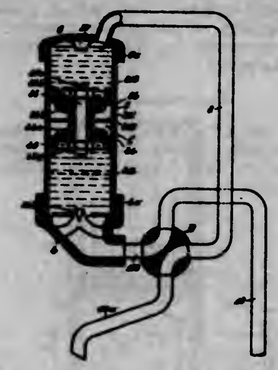


1. Means for detecting the presence of metallic objects in hides including two parallel metallic rollers connected in a normally open signal circuit and spaced from each other to permit the passage of the hide between them, one of said rollers being longitudinally fluted, the other roller having reversely pitched spiral threads extending in opposite directions from the middle of the roller whereby to cause the hide to be laterally stretched as it passes between the rollers and cause the emergence of the object through the faces of the hide and permit the object to come in contact with the upper and lower rollers.

1,904,827. MECHANISM FOR PRODUCING CURVED AXIAL SURFACE ON ROLLS. HARPER A. GOOD, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed May 29, 1931. Serial No. 541,069. 10 Claims. (Cl. 51—49.)

1. A roll grinding machine comprising a bed, a wheel carriage traversable upon the bed, a wheel base tiltably mounted upon the carriage and carrying a grinding wheel mounted approximately above the pivot point, a crank carrying an eccentric pin positioned adjacent the under side of the rear of the wheel base, a block positioned against said pin and the said underside of the wheel base and guided for straight line movement, and means for operating the said crank in proper timed relation with the traverse of the carriage to impart straight line movement to said block to move the said grinding wheel toward and from the said work to grind a crown or concave surface on the work said movement being in accordance with simple harmonic motion to produce approximately a mathematical sine curve on the work, substantially as set forth.

1,904,828. THERMOELECTRIC SPRINKLER HEAD. CHARLES E. GREEN, Pawtucket, R. I., assignor to Pawtucket Screw Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Jan. 28, 1930. Serial No. 424,032. 10 Claims. (Cl. 169—89.)

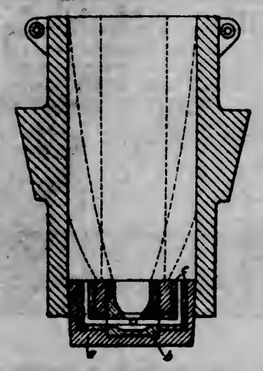


1. The combination with a sprinkler head having a flow controlling valve, of a toggle device for holding the valve on its seat, including means for placing stress upon said toggle device when in operative position, thereby to retain same in valve holding position, means in said sprinkler head cooperative with said first means for placing stress upon said device, and means to retain said device under stress, said last means being operable under the action of heat to release the device from such stress, said first means including an insulating member, thermally responsive means, and electroconductive means connecting said thermally responsive means through said insulating member to said stress retaining means.

7. A thermo-electric sprinkler head, comprising a flow controlling valve, a toggle device for seating said valve, means for placing said device under stress, said toggle device consisting of toggle levers, a rocker hinge forming a fulcrum between the ends of said levers, and a pair of toggle links pivoted respectively to said levers and engageable with each other to restrain said levers from movement, one of said links being pivoted adjacent an end, to its lever and having its other end extending from the lever and thermally controlled means connecting said extended end to the other lever thereby to retain said links in engagement, and effective under the action of heat to permit a dis-engagement of said links.

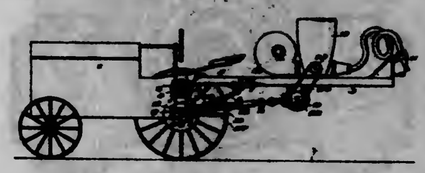
1,904,829. LIQUID DELIVERY AND MEASURING DEVICE. ERNST HURLBRINK, Berlin-Westend, Germany, assignor to the Firm Fabrik Explosionssicherer Gefässe Solskotten G. m. b. H., Salskottem I. W., Germany. Filed Feb. 27, 1931, Serial No. 518,807, and in Germany Jan. 14, 1930. 8 Claims. (Cl. 221—96.)

1. A device for dispensing and measuring of liquids, especially of lubricating oil, comprising: a measuring cylinder of a transparent material, a liquid supply duct, a liquid dispensing duct, a piston adapted to reciprocate in said measuring cylinder and to subdivide the said measuring cylinder into two measuring chambers, reversing means adapted alternately to connect the one or the other of said measuring chambers with the liquid supply duct or with the liquid dispensing duct respectively, said piston formed of two piston-parts spaced apart from each other with an intervening space between them, linear marks provided on the side wall of said measuring cylinder, and a flat disc secured to said piston between said piston-parts, the peripheric edge of said disc being closely



adjacent to the inner face of said measuring cylinder and forming a ring mark being in alignment with said linear marks in each of the end positions of said piston.

1,904,830. PROCESS FOR THE PRODUCTION OF MOTOR DRIVING SPIRITS. HANS KAPPER, Duisburg-Meiderich, Germany. Filed Mar. 27, 1930, Serial No. 439,537, and in Germany Oct. 29, 1926. 1 Claim. (Cl. 196—52.)



Process for the production of motor spirit consisting in mixing in an autoclave 500 kg. of a crude benzine obtained by the low temperature coking of long flaming gas coal with 100 kg. of finely divided active carbon, in heating said mixture in an autoclave for 3 hours at about 350° C. in an atmosphere of hydrogen at a pressure of 110 atmospheres, and in steam blowing the contents of the autoclave.

1,904,831. APPARATUS FOR CASTING HOLLOW BODIES IN CHILL MOLDS ROTATABLE ABOUT VERTICAL AXES. ALBERT KRUP, Gelsenkirchen, Germany. Filed July 17, 1931, Serial No. 551,497, and in Germany Dec. 10, 1930. 2 Claims. (Cl. 22—65.)

1. A casting mold for casting hollow bodies by vertical centrifugal casting comprising a replaceable bottom having a recessed central block provided with a plurality of channels leading from said recess and a plurality of channel blocks arranged about said central block and having passageways therein communicating with the channels of said central block to conduct metal from the recess of said central block into the mold.

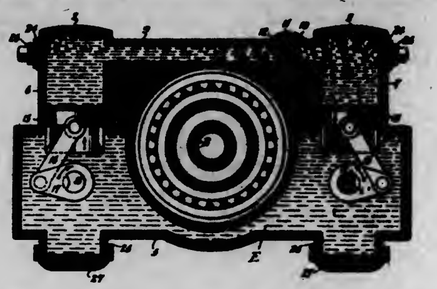
1,904,832. TRACTOR POWER COUPLING MECHANISM. EDGAR KNAPP and CARL G. ALLENDORF, Rittenhouse, N. Y.; George F. Thompson executor of said Edgar Knapp, deceased. Original application filed Dec. 2, 1927, Serial No. 237,208. Divided and this application filed Sept. 27, 1930. Serial No. 484,969. 1 Claim. (Cl. 180—53.)

An apparatus for treating growing plants, comprising an automotive tractor having a power take-off shaft adjacent the center of its rear axle, means enclosing the rear axle, a brace having portions secured to the enclosing means on each side of the power take-off shaft and at points below the plane of the power take-off, said brace being tilted upwardly from the horizontal, a platform having a portion of its frame extended forwardly over the brace and being provided with means at the extremity of said extended portion for securing it to said tractor, means on the bottom of said frame secured to the upwardly tilted brace, whereby the latter is constituted a cantilever support for said platform, a driven device mounted on the platform, and self adjusting means for transmitting power from the tractor motor to the driven device.

1,904,833. MANUFACTURE OF A COAL SUBSTITUTE. JOHN IVO MARRE, Paris, France, assignor to the Firm Carbonäx, Société à Responsabilité Limitée, Paris, France. Filed Oct. 27, 1930, Serial No. 491,636, and in Belgium Nov. 8, 1929. 3 Claims. (Cl. 44—1.)

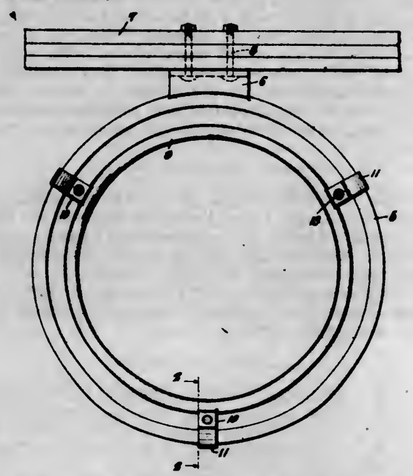
3. As a new product a coal substitute practically free of ash consisting of carbonized lignin substantially free of acid and alkali soluble materials.

1,904,834. PROCESS FOR ELECTRICALLY WELDING METAL TUBING. HAROLD FLETCHER MCLOUGHLIN, Solihull, England. Filed May 10, 1930, Serial No. 451,372, and in Great Britain May 27, 1929. 5 Claims. (Cl. 219—10.)



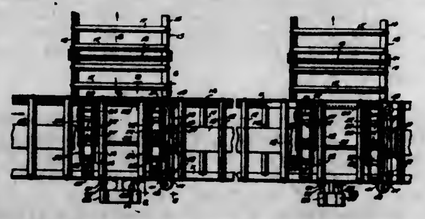
1. An electrical resistance method of continuously welding the seam of a metal tube which comprises progressively moving the tube axially relative to separated points along the tube, applying potential at such points across the seam and simultaneously applying potential between said points.

1,904,835. SPEED REGULATOR FOR REVOLVING DOORS. HARRY MUNSON, Wantagh, N. Y., assignor to Van Kannel Revolving Door Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 6, 1931. Serial No. 520,748. 10 Claims. (Cl. 20—12.)



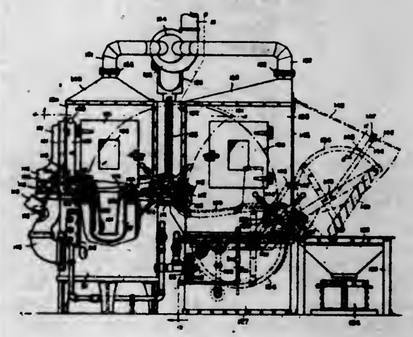
1. In combination, a revolving door and a hydraulic speed regulator therefor including an overhead support for the door fashioned to provide a closed casing filled

with an incompressible fluid, means operable by rotation of the door for moving the fluid in opposite directions within said casing and means intercepting the movement



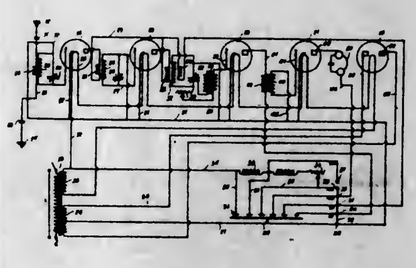
of the liquid to prevent its movement beyond a predetermined maximum whereby to limit the speed of rotation of the door.

1,904,836. GOAL. EARL R. PEOPLES, Beardstown, Ill. Filed May 14, 1930. Serial No. 452,373. 6 Claims. (Cl. 273—1.5.)



1. A goal of the character described comprising a main hoop, a smaller hoop, supporting arms extending radially from the smaller hoop adapted to engage said main hoop and a clamping plate for securing the supporting arm in firm engagement with the main hoop.

1,904,837. SWITCHING CONVEYER. HERBERT D. POSEY, Cleveland, Ohio, assignor to Logan Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed Jan. 3, 1930. Serial No. 416,295. 17 Claims. (Cl. 198—38.)

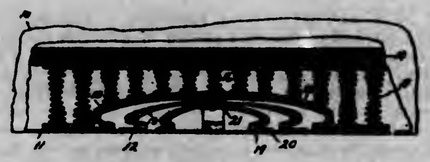


1. A switching conveyer comprising a main conveyer, normally inoperative means movable to operative position for arresting the progress of an article moving along said main conveyer at a predetermined point intermediate the length thereof, means operative for discharging an article from said main conveyer after its progress therealong has been arrested by said first named means, a common device for rendering both of said means operative, and means carried by the article for determining the operation of said actuating device.

1,904,838. HEAT TREATING APPARATUS FOR METAL WORK. HEYMAN ROSENBERG, New York, N. Y. Filed Apr. 29, 1930. Serial No. 448,849. 6 Claims. (Cl. 266—6.)

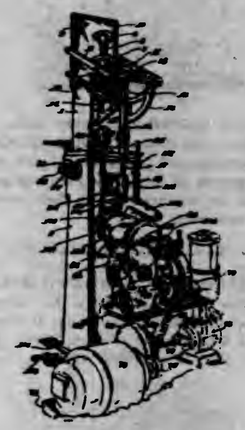
1. In heat treating apparatus for metal work, the combination, with a furnace and salts vat, of a housing for the space above the furnace for confining and directing fumes rising from the furnace and vat, said housing having an elongated, relatively narrow opening adapted to enable movement of a pyrometer thermocouple to and from a position in the vat, and a door for said opening, the parts being apertured to accommodate said thermocouple in either of its positions.

1,904,839. RADIO CIRCUIT. AUGUST F. P. STEMEY, Baltimore, Md., assignor of one-half to Stephen Ratajczak, Baltimore, Md. Filed Oct. 30, 1930. Serial No. 492,341. 3 Claims. (Cl. 250—27.)



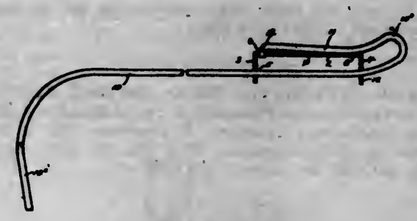
1. In a radio receiving circuit, a plurality of indirectly heated cathode tubes, a rectifier tube having a filamentary cathode, means for energising the cathodes of all of said tubes comprising a series circuit including the heater elements of said indirectly heated cathode tubes, the cathode of said rectifier tube and a source of alternating current, means for energising the anode circuits of the indirectly heated cathode tubes from a source of alternating current which is rectified by said rectifier tube.

1,904,840. SLICER. VERA VAEH, Minneapolis, Minn. Filed Jan. 12, 1931. Serial No. 508,516. 6 Claims. (Cl. 146—125.)



1. A fruit and vegetable slicer comprising an upper closed cylindrical casing mounted on a lower cylindrical casing and having open ends, a vertically corrugated shell within said upper casing, and a circular tamp having notches in its periphery to register with the corrugations in said shell, an operating rod for imparting motion to said tamp, and a cover for the upper end of said upper casing, and having an aperture at its center for receiving said operating means for the tamp, and inward extending flanges on the upper end of said lower casing adapted to support said upper casing and to provide an operating face, a circular rotatable slicing knife, a cog ring mounted on the lower face of said circular knife, and adapted to operate upon said flange, an operating handle having a crank at one end and a pinion at its other end adapted to cooperate with the cog ring to rotate the same.

1,904,841. REAR END CONSTRUCTION FOR VEHICLE BODIES. FRANK B. WATTS, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed Dec. 22, 1930. Serial No. 504,141. 11 Claims. (Cl. 296—63.)



1. A rear end construction for vehicle bodies comprising a floor section having an opening therethrough for axle housing clearance, and a closure member for said opening having flexible portions spaced above the opening providing for maximum deflection of the axle housing with the minimum height of closure.

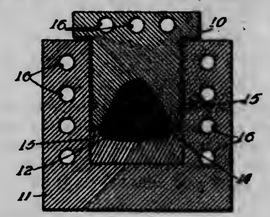
1,904,842. MACHINE FOR VACUUM SEALING. JOHN J. WILLIAMS, Wheeling, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed May 28, 1927. Serial No. 195,103. 16 Claims. (Cl. 226—82.)

1. In a vacuum sealing machine, a sealing chamber, a sealing plunger, a pedestal supporting the sealing chamber, said pedestal constituting a vacuum tank, a shaft journaled in the walls of the vacuum tank, and a cam carried by said shaft and adapted to operate said sealing plunger.

1,904,843. RAKE. WHITMORE WITHINGTON, Cleveland, Ohio, assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 21, 1930, Serial No. 491,125. Renewed Aug. 26, 1931. 11 Claims. (Cl. 55—114.)

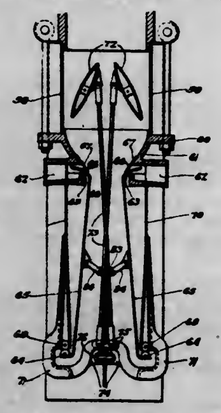
1. In a rake, a cross head in the form of a channel having a pair of relatively angularly disposed walls and a web portion, one of the walls provided with a row of perforations, a plurality of tines provided with looped rear ends each projected through one of said perforations, the free arm of each tine loop spring pressed from without the channel into a perforation cooperatively formed in the web portion of the channel by its inherent resiliency, to prevent displacement of the inserted tine relative to the cross head.

1,904,844. SECTION INSULATOR. FRED L. WOLF, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 16, 1932. Serial No. 599,168. 20 Claims. (Cl. 191—39.)



1. A trolley wire section insulator comprising an elongated insulating bar having a conductor holder at each end, a runner holding member associated with each con-

ductor holder, an insulated runner positioned between the runner holding members and comprising an elongated fiber member having its ends exposed for attachment to the runner holding members on the insulator, metal members embracing the fiber member adjacent its ends adjacent to but spaced from the adjacent holding member, the



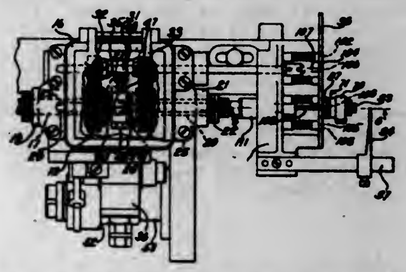
end of the metal embracing member being beveled and the adjacent face of adjacent holding member being correspondingly beveled and the said beveled faces overlapping and a covering of resilient soft vulcanized rubber extending along the surfaces of the fiber member between the said metal members.

1,904,845. METHOD OF FORMING MOLDED ARTICLES. JOSEPH JAMES ZELENKA, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1929. Serial No. 329,811. 2 Claims. (Cl. 18—55.)

1. The method of producing a molded article of ornamental appearance which comprises molding the article in a mold having a recess located within the article forming cavity mold at the parting line thereof to form a ridge around the article with a fin of excess material integral therewith, holding the article in the mold until the material thereof is completely finished and set, removing the article from the mold, and removing the fin of excess material and a part of the ridge.

1,904,846. AUTOMATIC FLUID CONTROL SYSTEM. MAXWELL ALPERN, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1930. Serial No. 431,522. 24 Claims. (Cl. 137—78.)

1. In a fluid system including a series of ducts, a device in each duct automatically throttling the flow of liquid in the duct in inverse proportion to the resistance offered to said flow and a hydraulic interconnection between said devices whereby the throttling operation of any of said devices is accompanied by a reverse throttling in another device or devices.



9. In a fluid control system, a duct, a throttle within the duct, a motor for operating the throttle operated by variations in pressure in the duct in advance of the throttle, and means providing a constricted throat for the duct between the motor and throttle adjustable as to width, said means being mounted independently of said motor.

1,904,847. ELECTROMAGNETIC DEVICE. BETHEL JAY BABBITT, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1928. Serial No. 318,523. 6 Claims. (Cl. 200—104.)

1. In an electromagnetic device, a coil arranged to be traversed by an electric current for establishing an electromagnetic field, a magnetic member having a portion extending into the coil, a tongue fixed to the magnetic member, an armature hinged to the magnetic member and having a portion thereof extending into the magnetic field at the point of its maximum flux density, and a tongue fixed to the armature and cooperating with the tongues fixed to the magnetic member to provide between the armature and the magnetic member an air gap and path of low reluctance which will be increased upon actuation of the armature.

1,904,848. MATERIAL WORKING MACHINE. ROY J. BRAVERS, Brookfield, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1930. Serial No. 425,050. 15 Claims. (Cl. 29—51.)

1. In a material working apparatus, a transfer arm, means for holding material carried by said transfer arm, a cam member, means for swinging said transfer arm for moving said material holding member relative to said cam member whereby the material may be moved into said material holding member, a processing member, a collar for said processing member disposed in said cam member, and means for imparting a lateral movement to said transfer arm for moving said material holding member and the material with said collar to move the material into engagement with said processing member.

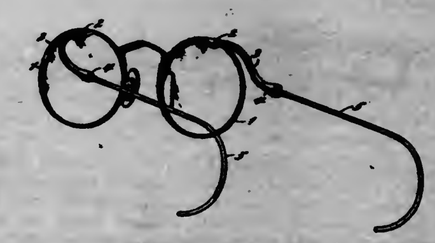
12. In a material working apparatus, means for holding the material, a processing member, power means for rotating said processing member, means for operatively connecting said power means with said processing member whereby said processing member may be rotated in one direction relative to the material, means for locking the operative engagement of the power means with said processing member, means for releasing the locking means whereby said power means may be operatively connected to said processing member for rotating said processing member in the opposite direction, and yieldable means included in the means for operatively connecting said power means with said processing member for permitting longitudinal movement of said processing member.

1,904,849. FISHLINE REEL. LE BONHEUR, Elyria, Ohio, assignor to The General Industries Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,015. 6 Claims. (Cl. 206—166.)

1. In a fishing reel, a frame comprising an end plate, a spool, a shaft therefor, a bearing for said shaft, said bearing being secured to the plate, a cap having inclined lateral walls of circular transverse section threaded onto the bearing providing a thrust bearing for said shaft, and a cup-like friction member secured against the plate and provided with a resilient skirt frictionally engageable with the inclined walls of the cap, said skirt being curved in transverse sections a portion thereof being of varying radius resiliently resisting distortion into circular form during threading of the cap on the bearing, the end wall of the member having arcuate slits adjacent its side walls.

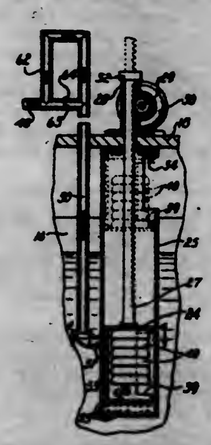
1,904,850. SIGN. JAMES BOYCE, Laketown Township, Allegan County, Mich., and RAYMOND F. HANCOCK, Marion, Ind., assignors to Chicago Glass Novelty Corporation. Filed June 24, 1929. Serial No. 373,087. 7 Claims. (Cl. 40—133.)

1. A sign unit comprising a base plate formed from transparent glass and a composite sign character embossed thereon from the material of said plate to give effect of a plurality of distinct characters of different sizes superposed one upon the other, said composite character comprising, in cross section, an outwardly convexed thin-walled central character stroke positioned forwardly of and opening rearwardly with respect to said plate, and a second character stroke wider than said first stroke and having a portion positioned on each side of said central stroke so as to form a uniform raised border therefor, said portions being formed to provide a lens effect, and a coating of colored paint on the inner side of said central stroke.



1,904,851. METHOD OF MAKING FOOTWEAR. WILLIAM H. BRENNAHAN, Lynn, Mass., assignor, by mesne assignments, to Compo Shoe Machinery Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Apr. 24, 1928, Serial No. 272,449. Divided and this application filed Dec. 5, 1928. Serial No. 323,917. 6 Claims. (Cl. 12—142.)

1. That method of providing a shoe, having inner and outer soles, with an arch support, which comprises as steps providing an arch-supporting pad, providing a last having a cavity in its under surface, lasting the shoe upon the last, disposing the pad between the inner and outer soles and in registry with said cavity, the opposed surfaces of the inner and outer soles being adhesive, and

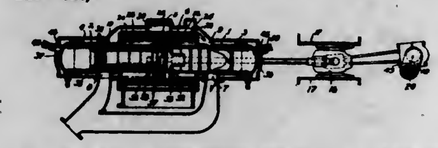


subjecting the shoe to pressure whereby permanently to unite the outer and inner soles and to cause the inner sole to protrude into the cavity of the last.

1,904,852. SPECTACLES. OSWALD B. CARSON, Greensburg, N. Y. Filed Nov. 30, 1931. Serial No. 577,975. 10 Claims. (Cl. 88—38.)

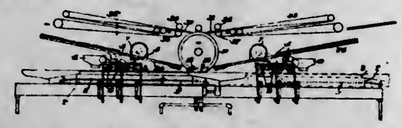
1. In a pair of spectacles, the combination with the lenses of links mounted upon the upper peripheral portion thereof, extending therefrom outwardly, downwardly and rearwardly following the peripheral contour of the lenses and terminating in connecting means for the attachment of the temples.

1,904,853. METHOD OF AND APPARATUS FOR PREPARING AND HANDLING MOLTEN MATERIALS. HERBERT F. CARTER, Roselle Park, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1930. Serial No. 495,056. 7 Claims. (Cl. 266—34.)



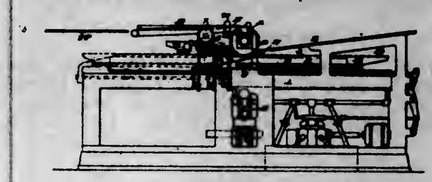
1. A method of preparing a lead antimony alloy, comprising melting a predetermined quantity of lead, sub-

merging a predetermined amount of antimony in the molten lead, and directing a stream of the molten lead against the submerged antimony to dissolve it and thoroughly mix it with the lead.



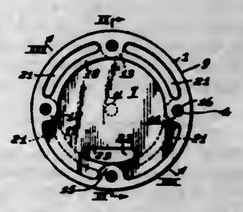
3. In an apparatus for preparing molten materials, means for melting a normally solid material and for maintaining it in a molten state, means for submerging a plurality of layers of a soluble solid material having a specific gravity less than that of the molten material in the molten material, and means for directing a stream of the molten material against the upper layers of said submerged solid material to dissolve said upper layers and to permit the lower layers of said solid material to move upward into the position previously occupied by said upper layers.

1,904,854. DOUBLE ACTING INTERNAL COMBUSTION ENGINE. CHARLES P. CLARK, Olean, and CARL A. BJORNSON, Wellsville, N. Y., assignors to Clark Bros. Co., Olean, N. Y., a Corporation of New York. Filed May 12, 1930. Serial No. 451,616. 8 Claims. (Cl. 123—62.)



7. In an internal combustion engine, two aligned power cylinders, a compression cylinder, of greater diameter than said power cylinders, located between adjacent ends of the power cylinders, removable cylinder heads for the opposite ends of said power cylinders, a piston structure comprising a piston for each of said power cylinders and an intermediate stepped piston for the compression cylinder, piston rings for the power pistons adjacent their head ends, the length of the permissible path of travel of said stepped piston between the power cylinders being great enough to permit the power pistons to be projected so far from the head ends of the power cylinders, when said cylinder heads are removed, as to expose the said piston rings, a cross-head, a piston rod connected to said stepped piston adjacent the periphery thereof and extending therefrom substantially parallel with said piston structure, outside the power pistons thereof, through an opening in said cross-head, the diameter of said piston rod for some distance from its cross-head-end being smaller than the diameter of said opening in the cross-head, a shoulder on the piston rod, and a collar on the piston rod between said shoulder and the cross-head to transmit the thrust of the piston rod to the cross-head, the length of said collar being sufficient and the piston rod having said smaller diameter for a sufficient length from its cross-head-end to permit the piston rod to pass far enough through the cross-head, when the collar is removed, to permit the piston-ring area of the adjacent power piston to be projected beyond the end of its cylinder.

1,904,855. BED AND CYLINDER PRINTING PRESS. CALVERT B. COTTRELL, 3d, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed May 7, 1931. Serial No. 535,685. 15 Claims. (Cl. 101—278.)



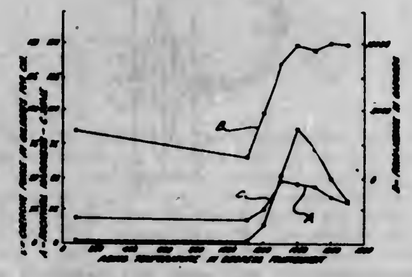
1. In a bed and cylinder printing press, a reciprocating form bed, and an oscillating impression cylinder operable, on each stroke, to print one sheet and deliver a previously printed sheet tail end first.

1,904,856. BED AND CYLINDER PRINTING PRESS. CALVERT B. COTTRELL, 3d, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed May 16, 1931. Serial No. 537,794. 4 Claims. (Cl. 101—361.)

1. In a bed and cylinder printing press, a bed and its form reciprocating in a right line, an inking mechanism including distributing and form rollers, means independent of the bed drive for driving the said rollers continuously in one direction only, and means for raising the form rollers out of the path of the form on one stroke of the bed.

1,904,857. HEAT EXCHANGER. CHARLES A. CROWL, New Castle, Pa., assignor, by mesne assignments, to Stewart P. Folts, New Castle, Pa., as trustee. Filed June 10, 1932. Serial No. 616,459. 2 Claims. (Cl. 257—245.)

1. A heat exchanger comprising a plurality of interchangeable double-walled fluid conducting elements having integral rims projecting outwardly from the walls connected end to end, each of said elements being provided with a conduit through it and a plurality of apertures in its walls and forming with the other elements two parallel intertwining zigzag fluid passages, one of said passages being disposed in said elements and the other between them, and means for delivering fluids to and discharging them from the respective passages.



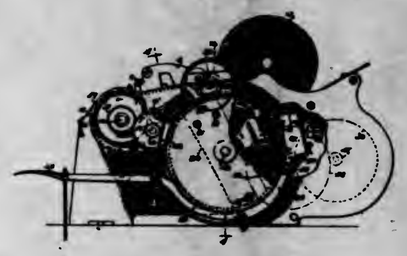
1,904,858. SHIRT PRESSING MACHINE WITH LATERALLY MOVABLE HEAD. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 29, 1928. Serial No. 315,705. 18 Claims. (Cl. 68—9.)

13. A shirt pressing machine including cooperative pressing elements; a neck band holder adjacent one end of one of the pressing elements, the other pressing element being formed with a cut-out portion complemental

to the neck band holder; means for moving one of said pressing elements toward and from the other to close and open the press; and automatic, yieldable means for moving one of said pressing elements laterally with respect to the other to bring the edge of the cut-out portion of the upper pressing element close to the neck band clamp.

1,904,859. FERROUS ALLOY. REGINALD S. DEAN, Washington, D. C., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1930. Serial No. 488,263. 12 Claims. (Cl. 175—21.)

1. The method of producing a permanent magnet which comprises alloying a metal of the group including tungsten, molybdenum, beryllium, and tantalum with substantially carbon-free iron, forming a magnet of the alloy, heating the alloy to form a substantially homogeneous solid solution, cooling the solution at a rate to form a supersaturated solution, heat treating the magnet to develop its magnetic properties, and subjecting the magnet to a magnetising force to magnetise the magnet.



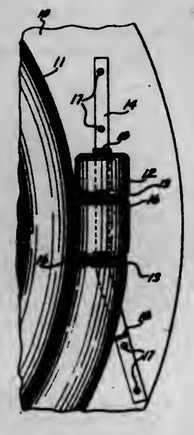
1,904,860. RAKE. CHARLES H. DENNIS, Jackson, Mich., assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 19, 1929. Serial No. 356,366. 12 Claims. (Cl. 55—114.)

1. In a rake, a handle, a head supported at an end thereof and extending transversely thereto, said head being in the form of a channel having down-turned front and rear flanges, a plurality of tine elements supported by the head, each including a pair of tine forks, projected forwardly therefrom and integrally joined by a forwardly extending loop, said loop and forks resiliently compressively engaging said head to retain the forks in a given longitudinal adjustment thereon.

1,904,861. TAPE HANDLING APPARATUS. JOSEPH ETTI., Plainfield, N. J., assignor to Potdevin Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed June 12, 1931. Serial No. 543,875. 17 Claims. (Cl. 164—42.)

8. In tape handling apparatus, the combination of a rotor, a motor for driving the same, a clutch pawl carried by said rotor, a gear adjacent the rotor and adapted to be clutched thereto by said pawl, a relatively stationary shoe in the path of said pawl for retracting the same on predetermined movement of the rotor, a feed roller driven by said gear, a brake therefor, an electromagnet for actuating said brake, contact mechanism carried by said rotor for controlling the circuit of said electromagnet, a pawl for holding the clutch pawl in inoperative position,

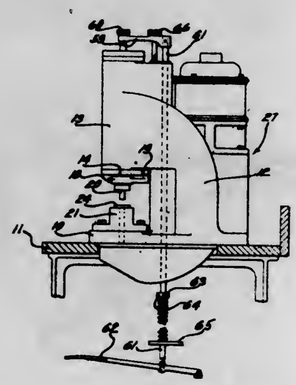
a manual lever for actuating said last mentioned pawl to inoperative position, switch mechanism in the circuit of said electromagnet carried by said lever and moved to closed position when said lever is moved to release the clutch pawl, and stationary contact mechanism adapted to be engaged by the rotor carried contact mechanism to complete the circuit to the electromagnet upon movement of the rotor to position to actuate the clutch pawl to inoperative position.



1,904,862. TOLL POSTING MACHINE. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed May 14, 1925, Serial No. 30,267. Divided and this application filed Apr. 9, 1929. Serial No. 353,778. 14 Claims. (Cl. 197—127.)

1. In a machine of the class described, the combination with a flat platen, and printing mechanism thereover, of a storage receptacle located beyond one edge of the platen, and means for tilting the platen toward the receptacle to facilitate the transfer of a work element from the platen to the receptacle.

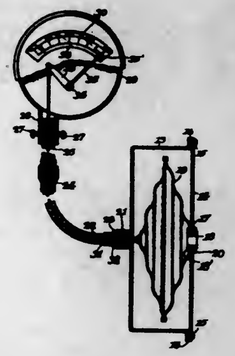
1,904,863. DEVICE FOR FASTENING THE END OF A COILED MEMBER TO A SUPPORTING STRUCTURE. JAMES T. GRIFFIN, Oak Park, JOHN P. DEANE, Berwyn, and JAMES G. CUBERTON, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1929. Serial No. 412,150. 4 Claims. (Cl. 242—117.)



1. A device for securing the end of a sheathed cable to its supporting reel, said end being provided with spaced

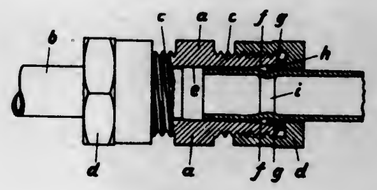
depressions, comprising a member crimped to engage the depressions and interposed between the reel and the cable

end, and means for attaching the cable end to the crimped member.



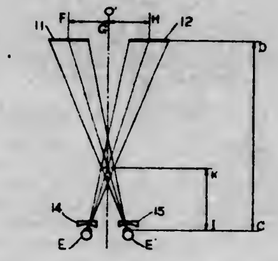
1,904,864. MATERIAL WORKING APPARATUS. RALPH JONGEDYK, Hinsdale, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1930. Serial No. 461,035. 9 Claims. (Cl. 138—17.)

1. In a material working apparatus, a differential area piston, means for delivering pressure fluid to the smaller area of said piston, manually controlled means associated with said first means for delivering pressure fluid to the greater area of said piston from said means, a by-pass for said means, and means connected to said manually controlled means operative after the piston has advanced through a predetermined distance to close the by-pass.



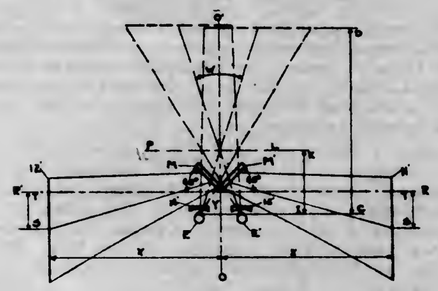
1,904,865. SPEEDOMETER FOR MARINE CRAFT. CARL KNOBLOCH, Akron, Ohio. Filed Oct. 10, 1928. Serial No. 311,611. 3 Claims. (Cl. 73—122.)

1. A speedometer for boats, comprising in combination a diaphragm casing formed with a water inlet opening, means for venting said casing to the atmosphere, and means for attaching said casing to and externally of a boat with said opening below the water line of the boat, a self-collapsing bellows diaphragm mounted in said casing and having an opening in one fold thereof registering and



communicating with said water inlet opening, a speed registering indicator adapted to be mounted on the boat, and a connection between the other fold of said diaphragm and said indicator through which a flexing movement of said diaphragm is transmitted to said indicator.

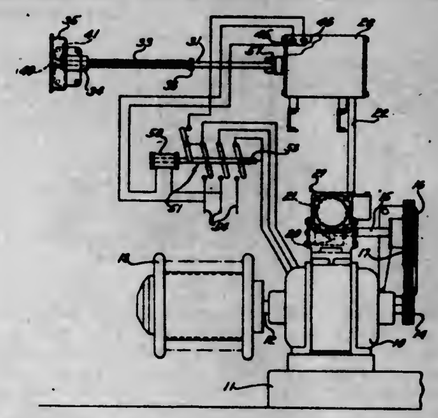
1,904,866. JOINT FOR PIPES. HANS KREIDEL, Wiesbaden, Germany. Filed Mar. 15, 1930, Serial No. 435,992, and in Germany Dec. 27, 1929. 3 Claims. (Cl. 285—182.)



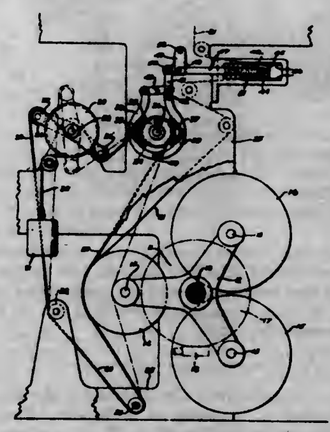
2. A joint for making a fluid pressure tight connection with a metallic tube, comprising a body having a bore to receive the extremity of a tube, said bore having an outwardly flared portion at the tube receiving end of said body, a hollow cylindrical metallic pressure sleeve having an external diameter approximately as great as that of the flared portion of said bore at its point of greatest diameter, said sleeve having an internal diameter slightly greater than the external diameter of the tubing with which it is to be used, said sleeve also having an outwardly extending annular flange at one end thereof, and means having threaded engagement with said body for applying pressure to the flanged end of said sleeve thereby to force the latter into said flared bore, whereby said sleeve will be forced radially inwardly to form an annular inwardly projecting bead thereon, the end portion of said sleeve thereby tightly engaging said tube and forming a fluid tight joint between said body and said tube the angular flange of said sleeve being engageable with the flared end portion of said body for limiting the inward movement of said sleeve into said bore.

1,904,867. METHOD OF RÖNTGENOLOGICAL REPRODUCTION. HENRY F. KURTZ, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 26, 1927. Serial No. 222,161. 8 Claims. (Cl. 250—84.)

8. A method of producing X-ray stereograms which comprises establishing an exposure distance which is greater than normal viewing distance, successively exposing a pair of sensitised elements to a source of X-rays, shifting the source of X-rays between the successive exposures, and developing the exposed elements, the relation of the amount of shift of said source to the exposure distance being substantially the same as the relation of the average interpupillary distance to normal viewing distance.



1,904,868. STEREOSCOPE. HENRY F. KURTZ, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed Sept. 26, 1927, Serial No. 222,161. Divided and this application filed May 19, 1930. Serial No. 453,530. 5 Claims. (Cl. 88—39.)

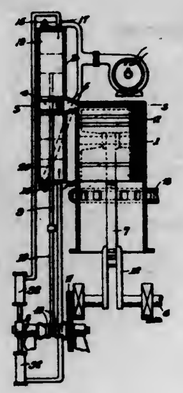


1. A device for stereoscopically recomposing X-ray stereograms comprising angularly disposed reflecting means for reflecting images of stereograms which are disposed laterally of said reflecting means at a predetermined distance and optical means associated with said reflecting means for forming said reflected images at a distance from the observer which is less than the predetermined distance between the stereograms and the reflecting means.

1,904,869. INDICATING AND CONTROL DEVICE FOR MATERIAL RECEIVING APPARATUS. EINER W. LARSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1929. Serial No. 386,561. 6 Claims. (Cl. 242—39.)

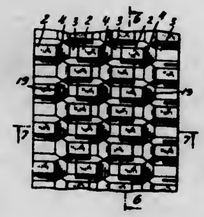
1. In a material receiving apparatus, means for receiving material, means for actuating the receiving means, means for continually indicating the amount of material received by the receiving means, and means for automatically rendering the actuating means effective upon the resetting of the indicating means to a zero indication.

1,904,870. WEB CONTROLLING MECHANISM. KENNETH G. LAYCOCK, Shavertown, Pa., assignor to Goss Printing Press Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1930. Serial No. 436,835. 10 Claims. (Cl. 242—75.)



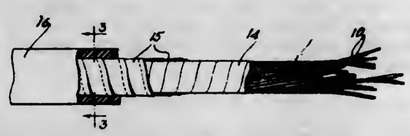
7. Web controlling mechanism including in combination a magazine reel to support active and reserve web rolls, a continuous belt contacting with the active web roll to tension the web drawn therefrom, means for opposing movement of the belt, a pair of rollers between which the belt is threaded and means for revolving the rollers to take up slack in the belt.

1,904,871. MULTIPLE EXPANSION ENGINE. LAWRENCE W. LINDSEY, Brooklyn, N. Y., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 27, 1928. Serial No. 302,269. 1 Claim. (Cl. 60—15.)



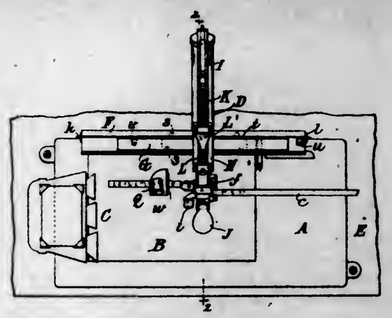
In a two cycle multiple expansion internal combustion engine a high pressure cylinder, a low pressure cylinder, a transfer passage between said cylinders, means to supply a scavenging air charge to one of said cylinders, means

whereby said scavenging air passes through said transfer passage to scavenge the other of said cylinders whereby a fresh charge fills both cylinders, means for partially and



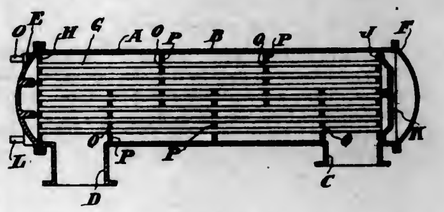
simultaneously compressing the charge in both cylinders to a predetermined pressure and means to further compress said charge in said high pressure cylinder alone.

1,904,872. MOVING PICTURE SCREEN. FRED HARRIS LYNDS, North Attleboro, Mass. Filed Mar. 19, 1930. Serial No. 437,061. 8 Claims. (Cl. 88—24.)



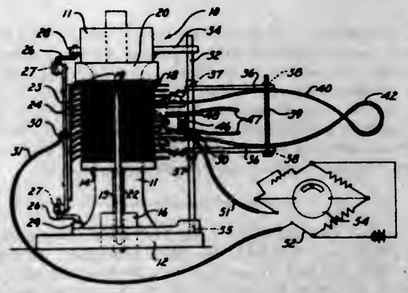
1. A moving picture screen having a substantially continuous corrugated reflecting surface, and having portions thereof of two thicknesses with the depressions and raised portions of said corrugations overlapping to form passages through the screen.

1,904,873. ELECTRIC CABLE. OSCAR SEVERIN MARKUSON, Hilton, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1926. Serial No. 78,798. 2 Claims. (Cl. 173—266.)



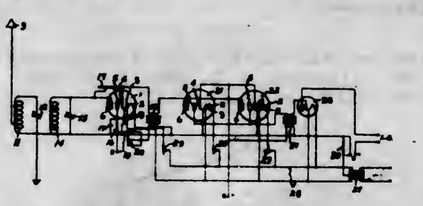
2. A telephone cable comprising a plurality of individually insulated conductors assembled into a solid core, a continuous insulating medium disposed therearound to form an imperforate sheath therefor, a sheath composed of thin lead ribbon wrapped helically about said imperforate sheath, and a relatively thick sheathing of tough rubber formed about and engaging the lead sheath.

1,904,874. MEANS FOR GUMMING TAPE ON BLANKS. RALPH I. MEADER, Lynbrook, N. Y. Filed Feb. 6, 1932. Serial No. 591,383. 14 Claims. (Cl. 216—20.)



1. A tape applier combined with horisontal longitudinal guiding means for directing its movements in parallel, longitudinal lines.

1,904,875. HEAT EXCHANGER. CHESTER W. METZGAR, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 23, 1931. Serial No. 552,587. 8 Claims. (Cl. 257—240.)

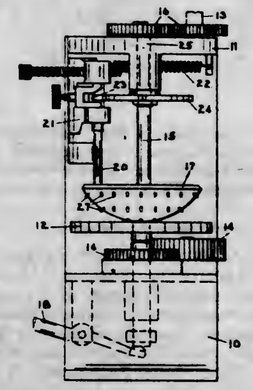


3. A heat exchanger comprising a casing, tubes in the casing, means supporting the ends of the tubes, and bakelite baffles to support the intermediate portions of the tubes and being arranged on opposite sides of the casing and in staggered relationship to deflect a medium flowing through the casing.

1,904,876. METHOD OF MAKING ELECTRICAL CONDENSERS. ROBERT E. PARK, Jr., Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1930. Serial No. 497,806. 11 Claims. (Cl. 175—41.)

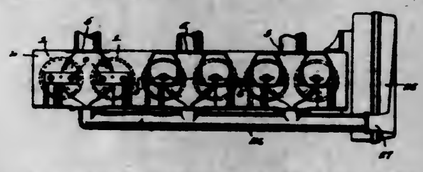
1. A method of making condensers which includes subjecting a plurality of condenser elements to a pressure, and simultaneously segregating by testing a group of some of the elements to comprise a condenser.

1,904,877. RADIO CIRCUIT. EDWARD G. PARVIN, Roselle, N. J. Filed Aug. 4, 1931. Serial No. 554,965. 6 Claims. (Cl. 250—27.)



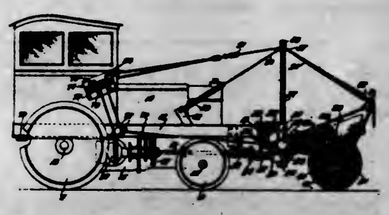
1. A radio circuit of the type described comprising in combination a multi-electrode audion including a cathode, a grid and two anodes, an input circuit connected between one anode and the cathode, an output circuit connected between the grid and the cathode and a connection between the other anode and the cathode.

1,904,878. MACHINE FOR HANDLING STRIP MATERIAL. ADOLPH POTDEVIN, Garden City, N. Y., assignor to Potdevin Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 19, 1930. Serial No. 476,378. 12 Claims. (Cl. 242—58.)



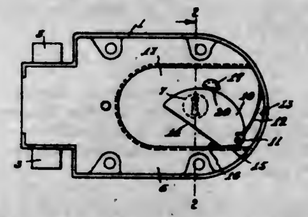
1. In a machine for handling strip material, the combination of a support or stand for a roll of the material, a pair of arms pivoted on said stand or support, bearings carried by said arms, and worm and gear mechanism for rotating said arms to bring said bearings beneath the supply roll, continued rotation of said arms lifting the roll out of its original position into a new position for rotation, while continuing the operation of withdrawing material from the roll.

1,904,879. LENS CUTTING MACHINE. JOHN R. POWELL, Rochester, N. Y., assignor to Bausch & Lomb Optical, Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 21, 1930. Serial No. 430,248. 11 Claims. (Cl. 33—28.)



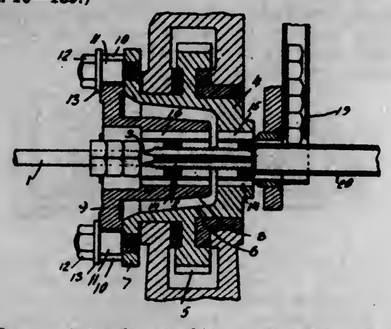
1. A lens cutting machine comprising a cutting tool, a plate, a lens support on said plate, means for rotating said plate and support, said support comprising a spherical shell having an inner concave surface adapted to carry a lens and an outer convex surface positioned to roll upon said plate, and means for moving said plate and support toward said tool.

1,904,880. AIR COOLED INTERNAL COMBUSTION ENGINE. JAMES B. POWERS, Syracuse, N. Y. Filed July 9, 1929, Serial No. 376,896. Renewed Mar. 9, 1932. 18 Claims. (Cl. 123—177.)



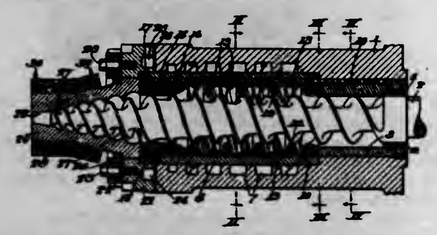
1. In an internal combustion engine, the combination of a cylinder, a head for the cylinder formed with an exhaust chamber having inlets for cooling air and having a port opening between the cylinder and the exhaust chamber formed to cause injector action by the exhaust gases for drawing a cooling air current over the outside wall of the cylinder and into said chamber.

1,904,881. SWEEPING MACHINE. OTIS F. PARKERSON, Brooklyn, N. Y. Filed Nov. 11, 1927. Serial No. 232,612. 6 Claims. (Cl. 15—82.)



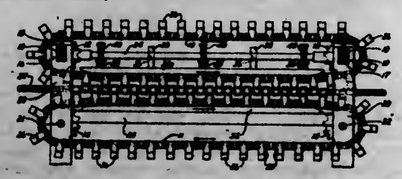
1. In a sweeper of the class described, a wheeled vehicle, a rotatable broom associated with the vehicle, independently movable supports for said broom, separate manually controlled means for positively varying the positions of said supports in two planes, and means for rotating the broom.

1,904,882. BURGLARPROOF LOCK. WALTER PRIOR, Jr., South Orange, N. J., assignor, by direct and mesne assignments, of one-half to August F. W. Viehweger, Poughkeepsie, N. Y., and one-half to Harry B. Morgan, Amenia, N. Y. Filed Apr. 20, 1929. Serial No. 356,662. 8 Claims. (Cl. 70—14.)



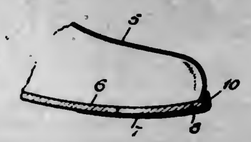
1. A lock of the character described, comprising a casing, a recessed rear plate, a bushing having an actuator disposed within said plate, a baffle plate pivotally leaning on said actuator, a resilient member affixed by one of its ends to said baffle member and its other end loosely bearing on the walls of said casing whereby when said actuator is removed said resilient member will cause the baffle plate to cover said bushing, and a stop pin in said recess for preventing the retraction of said baffle plate.

1,904,883. FLOATING CHUCK FOR TAPPING MACHINES. WILLIAM D. RIGNEY, Port Chester, N. Y., assignor to Russell, Burdsall & Ward Bolt & Nut Company, Port Chester, N. Y., a Corporation of New York. Filed July 11, 1930. Serial No. 467,147. 10 Claims. (Cl. 10—139.)



3. In a nut tapping machine, a threaded tap, a revolving chuck member having an axial passage and a floating chuck member carried by said revolving chuck member and having an axial passage in alignment with said first mentioned passage whereby a nut blank to be threaded may be positioned in said revolving chuck member and said floating chuck member at the same time, the walls of said passages being provided with wear plates adapted to engage the side walls of a nut blank adjacent a corner of the blank.

1,904,884. EXTRUDING MACHINE. VERNON ROYLE, Paterson, N. J. Filed June 4, 1929. Serial No. 368,371. 19 Claims. (Cl. 18—12.)



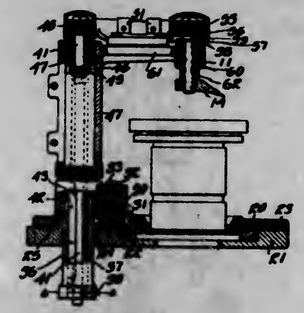
14. A machine of the character described comprising, a feed screw, and a series of removable annular elements juxtaposed and surrounding the screw, said elements having a set of circumferentially arranged formations spaced apart on their interiors, said formations being of substantial depth in a radial direction at one portion and of no substantial depth at another portion and said formations being disposed at an angle to the longitudinal axis of the screw.

1,904,885. CAPSTAN. GEORGE A. SMILEY, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1930. Serial No. 460,867. 6 Claims. (Cl. 254—135.)

1. A capstan for advancing strands, comprising a pair of endless members, and strand gripping elements secured to the members at spaced positions therealong, the gripping elements of one member being disposed in offset relation with respect to the gripping elements of the other member.

1,904,886. TAP PLATE FOR DANCING SHOES. JAMES SELVA, Laureiton, N. Y. Filed Dec. 17, 1931. Serial No. 581,573. 2 Claims. (Cl. 36—8.3.)

1. A tap plate for dancing shoes formed of light metal and comprising a relatively flat body portion adapted to be connected to and substantially only cover that portion of the sole of the shoe beneath the toes and having a concavity at its rear end, and a peripheral substantially vertical flange projecting upwardly from the front and side edges of said body of the shoe to which the plate is secured, said flange being of a depth or height at said front end greater than the thickness of the sole of the dancing shoe to which it is adapted to be applied, and being adapted to engage the edge of the sole at the sides, the height of said flange and the thickness of said body gradually decreasing rearwardly from the tip of the plate.

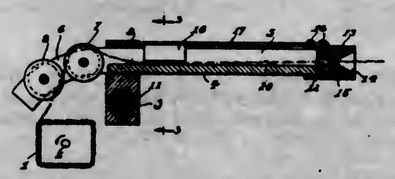


1,904,887. ELECTRIC CABLE. PARKE LAWTON SHEE, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1929. Serial No. 353,960. 16 Claims. (Cl. 173—264.)

7. In an electric cable, a core comprising a plurality of insulated conductors, and a comparatively narrow rigid wall of moisture resistant material surrounding the individual conductors along a portion of the core length.

1,904,888. DIAL AND CYLINDER CONNECTION FOR KNITTING MACHINES. WILLIAM L. SMITH, JR., and ROBERT H. LAWSON, Pawtucket, R. I.; said Smith assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Original application filed Feb. 21, 1930, Serial No. 430,436. Divided and this application filed Mar. 10, 1931. Serial No. 521,578. 2 Claims. (Cl. 66—28.)

1. In a knitting machine of the character described, including a needle dial and a needle cylinder, means for rotating the dial in time with the said cylinder including a train of gears comprising a ring gear attached to for driving the said cylinder, a gear secured to the said ring gear, a shaft operably connected to the dial, a gear on



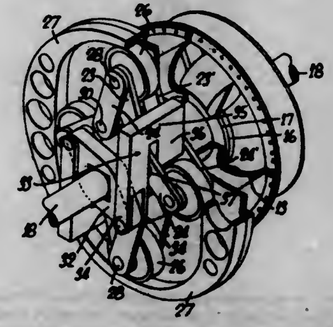
said shaft, an intermediate gear between said last-named gear and the gear on the ring gear, all of said last-named gears lying in a single plane, substantially as set forth.

1,904,889. QUICK BREAK PLUG CONNECTER. HERMAN L. STRONGSON, New York, N. Y., assignor to Bernard D. Colen, New York, N. Y. Filed Nov. 14, 1930. Serial No. 495,705. 9 Claims. (Cl. 173—332.)

1. A plug connecter of the type described comprising an insulating casing having recesses therein, a movable spring clip in each recess, a spring connected to each clip, and means for attaching each spring to the casing.

1,904,890. COIL FORMING DEVICE. CHESTER H. THORDARSON, Chicago, Ill., assignor to Thordarson Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1931. Serial No. 515,185. 10 Claims. Cl. 140—92.2.)

1. A hand tool for shaping and winding coils, comprising a handle portion through which wire is fed, adjustable means cooperating with said handle portion for exerting a frictional drag on said wire, and a pair of wire guiding rollers rotatably mounted in one end of the tool.

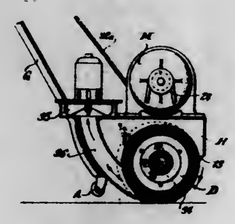


1,904,891. FOLDING CHAIR. MILTON L. TINSLEY, Grantwood, N. J., assignor to Ferguson Brothers Manufacturing Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 11, 1931. Serial No. 574,371. 6 Claims. (Cl. 155—141.)

1. In a folding chair, a combined back and rear leg frame, a seat frame hinged thereto, a front leg frame hinged to the seat frame, and means ensuring a simultaneous folding or unfolding movement of the seat and front leg frames, said means comprising a folding lever connecting the seat and front leg frames and a lever connecting the folding lever with the combined back and rear

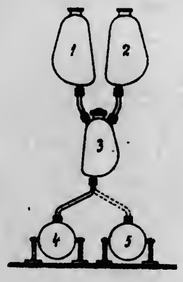
leg frame, and manually releasable means mounted at the front of the seat frame for locking the chair in its unfolded position.

1,904,892. ROTARY ENGINE COMPRESSOR AND THE LIKE. CARL E. TRUBE, Ossining, N. Y.; Sarah M. Trube, administratrix of said Carl E. Trube, deceased, assignor of one-half to William L. Hoge, Louisville, Ky. Filed Jan. 28, 1930. Serial No. 423,922. 27 Claims. (Cl. 121—49.)



4. In a machine of the character described, in combination, a rotatable shaft, an annular cylinder, a plurality of sets of pistons movable within said cylinder, means uniting the pistons in each set, means providing an internal cam surface, a plurality of control elements movable along said cam surface, link-work pivoted to each of said uniting means and arranged to connect each uniting means to said control elements, and means including a link pivoted to the aforesaid link-work at a point within an angle having its vertex on the axis of said shaft and having its sides intersecting a pivot point where said link-work joins one of said uniting means and a pivot point on said link-work adjacent one of said control elements for connecting said link-work to said shaft.

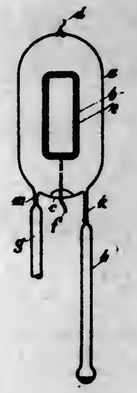
1,904,893. SURFACE CONDITIONING MACHINE. OTTO WEINRICH, Kenmore, N. Y. Filed Aug. 1, 1930. Serial No. 472,432. 3 Claims. (Cl. 51—170.)



1. A drum for surface treating machines comprising a cylindrical reinforcing member, said member being

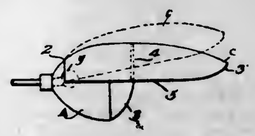
formed with apertures at points in its extent, a layer of rubber upon the outer surface of said reinforcing member forming a base, a layer of rubber upon the inner surface of said member, said outer and inner layers being vulcan-

ized together through said apertures and a layer of relatively softer rubber secured to said outer layer of rubber, said layer of relatively softer rubber being cut away to permit securement of a sheet of treating material upon said drum.



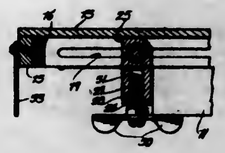
1,904,894. PROCESS AND APPARATUS FOR THE MANUFACTURE OF CELLULOSE. DANIEL WESTAD, Bygdoy near Oslo, Norway. Filed Apr. 4, 1931, Serial No. 527,672, and in Norway May 27, 1930. 9 Claims. (Cl. 92—7.)

1. A process of recovering cellulose from raw materials, comprising subjecting a charge of the raw material to impregnation with a digestion-liquid under a pressure raised several atmospheres above normal and at a temperature considerably below 100° C. in a closed impregnation vessel for a period of several hours, thereupon transferring the entire charge including the contained digestion liquid into another vessel, and then heating the charge consisting of impregnated raw material and digestion liquid to digestion temperatures considerably above 100° C. for a period of time sufficient to effect complete dissolution of the incrustations on the material.



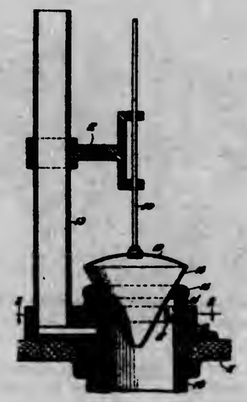
1,904,895. MANUFACTURE OF PHOTO-ELECTRIC CATHODES. NORMAN ROBERT CAMPBELL, Watford, England, assignor to The General Electric Company Limited, London, England. Filed Dec. 16, 1930, Serial No. 502,639, and in Great Britain Jan. 6, 1930. 5 Claims. (Cl. 250—27.5.)

1. In the manufacture of a photoelectric cathode, the process which comprises heating a support, coated with a compound that is to react with an electropositive metal, to a temperature above 50° C., producing a slow stream of the vapour of the electropositive metal, bringing the said stream into contact with the said support, measuring the space current between the support and the anode of the



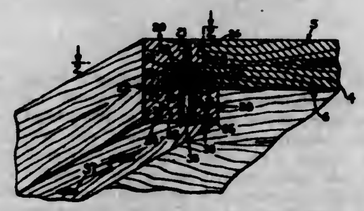
photoelectric tube during the passage of the said stream and stopping the stream when the said space current diminishes rapidly.

1,904,896. HEADLIGHT FOR AUTOMOBILES. LADISLAUS DOBOS, Binghamton, N. Y. Filed Feb. 26, 1929. Serial No. 342,770. 1 Claim. (Cl. 240—48.4.)



A headlight for automobiles, comprising a flaring casing having a body portion open at its top, a complementary lid portion hingedly connected at the rear to the body portion at a right angle to the vertical axial plane of the headlight and forming with the body portion a complete headlight casing, an integral anti-glare hood portion shaped to conform to the headlight casing, projecting forwardly from the lid and extending in front of the body portion, and a reflector on the under surface of the projecting hood.

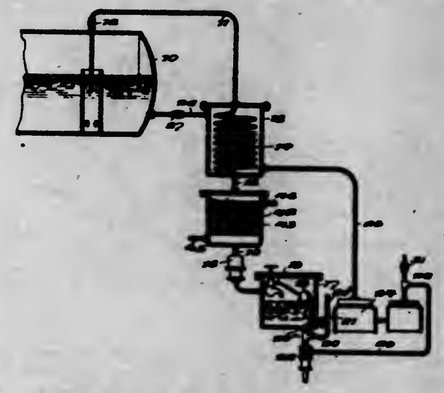
1,904,897. FOLDING TABLE TOP. HENRY KAHRS, Brooklyn, N. Y.; Mary Dickie Wright executrix of said Henry Kahrs, deceased. Filed May 7, 1931. Serial No. 535,758. 2 Claims. (Cl. 45—31.)



1. An auxiliary table top for attachment to various size table tops having a flat top member provided with spaced parallel clamping bars slidably mounted on the under side thereof, and means for securing said clamping bars in an adjusted position, and headed clamping screws threaded into said clamping bars and adapted to have their headed portions screwed into clamping engagement with the under side of a table top proper.

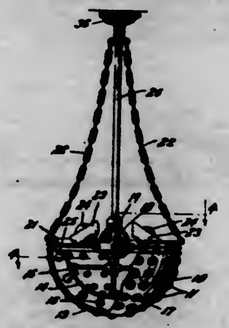
1,904,898. FLUSH VALVE. ALBERT H. KENNEDY, Rockport, Ind. Filed Apr. 9, 1930. Serial No. 442,836. 1 Claim. (Cl. 4—57.)

In a flush tank, an outlet conduit having a cylindrical counterbore and an annular groove adjacent to the bottom of the counterbore; a cylindrical seat member of flexible and yieldable material having an external bead adapted to snap into said groove when the seat member is forced into the bottom of the counterbore; an enlarged, reinforcing bead on the upper end of the seat to receive a tapered valve; and spring means to lock the seat member in the counterbore.



1,904,899. DRAWING BOARD. ADOLF W. KEUFFEL, Montclair, N. J., assignor to Keuffel & Esser Co., Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 28, 1931. Serial No. 577,758. 16 Claims. (Cl. 45—131.)

1. In a device of the character described, in combination, a top having a tongue along at least one edge thereof, at least one end cleat formed with a groove to receive a tongue, and means seated in the respective sides of the groove and drawing the sides of the groove together to clamp the tongue therebetween.



1,904,900. CONTROL OF THE SALINE CONTENT OF BOILER WATERS. HEINRICH KRONSBEIN, New York, N. Y., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Continuation of application Serial No. 173,781, filed Mar. 8, 1927. This application filed Nov. 11, 1931. Serial No. 574,442. 18 Claims. (Cl. 122—1.)

1. In controlling the concentration of salines in boiler water, a simplified method of removing saline matter introduced in the feed water which consists in discharging boiler salines under pressure from the boiler substantially continuously over consecutive operating periods at constant rates fixed for said periods and calculated to remove from the boiler the salines introduced in the feed water during the respective periods, maintaining the rate for each period constant irrespective of changes in the boiler pressure, releasing the discharged boiler salines

to atmospheric pressure and adjusting the rate of flow of the saline discharge at intervals, said adjustment being in accordance with observed variations in the density of the discharged salines.

1,904,901. ELECTRIC LIGHT FIXTURE. HARRY W. LAWRENCE, Denver, Colo. Filed Apr. 4, 1931. Serial No. 527,705. 3 Claims. (Cl. 240—49.)

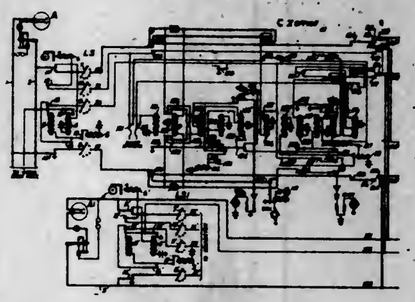
1. An electric light fixture comprising: a perforated outer bowl, faceted lenses carried in the perforations of said outer bowl; a lamp supporting bowl supported within said outer bowl and adapted to carry electric lamps; and means for rotating said lamp supporting bowl said latter bowl conforming in contour to said outer bowl and acting as a shield to prevent the light from said lamps from escaping through the open side of said outer bowl.

1,904,902. FLASH LIGHT. GOODRICH B. PRATT, Grantwood, N. J., assignor to Bond Electric Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 16, 1930. Serial No. 475,855. 4 Claims. (Cl. 240—60.)

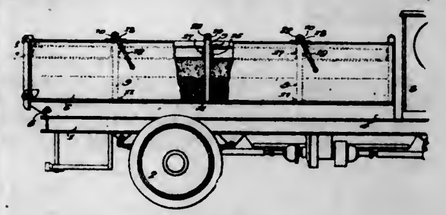
1. In a portable electric lamp, in combination, an adjustable head band, a plate formed with slots proximate opposite edges, respectively, for the reception of the head band, the mid-portion of said plate being offset to form a groove rectangular in cross-section, a pad of yielding non-metallic material secured to the plate on the side opposite to the groove, and a lamp comprising a housing, apertured brackets carried with the housing, a base comprising a frame formed with spaced, parallel apertured

arms, and formed, in a direction opposite to the arms, with spaced foot portions, and a reversely bent spring clip having parallel arms yieldingly pressed together,

one arm being secured to the frame between the arms and the other arm being adapted for reception in the groove on the head band.



1,904,903. CIGARETTE HOLDER. AGNES G. SWEET, Pawtucket, R. I. Filed Nov. 4, 1930. Serial No. 493,428. 1 Claim. (Cl. 131—51.)



A device of the character described comprising an elongated handle, a stationary jaw member having a shank screw threadedly secured to the handle, said shank having a longitudinal slot therein, a movable jaw having an extension adapted to be received in said slot, a pivot pin passing through the shank and through the extension whereby the movable jaw may be pivotally carried by the shank, an extension formed on the movable jaw for operating the same, a coil spring interposed between the shank and extension for normally holding the movable jaw in closed relation with the stationary jaw and means carried by the extension adapted to partially cover and conceal the operative part of the extension and shank and serve as an operating finger piece.

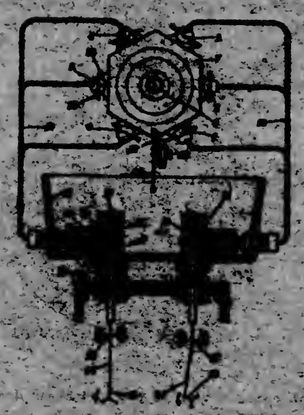
1,904,904. AUTOMATIC TELEPHONE SYSTEM. VICTOR S. THARP, Elmhurst, and CLARENCE E. LOMAX, Oak Park, Ill., assignors, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 7, 1929, Serial No. 330,843. Renewed Sept. 14, 1931. 48 Claims. (Cl. 179—7.1.)

1. In a telephone system, a calling line and a meter associated therewith, a called line, an operator's position, means for extending a connection from said calling line to either said called line or to said position, means responsive when a call is extended to said called line for operating said meter to register an impulse for each unit of time during the course of the call, and means responsive when a call is extended to said position and under the control of the operator for operating said meter to register a plurality of impulses for each unit of time during the course of the call.

1,904,905. BATCH DIVIDING AND COVERING MEANS. JAMES MONNESS TITCOMB, Washington, D. C. Filed Sept. 26, 1930. Serial No. 484,086. 15 Claims. (Cl. 298—8.)

15. In a dump truck body including a bottom and defining walls forming a receiving chamber to receive a batch of sand; gravel and cement or like varied material; a flexible cement encasing envelope; said envelope comprising flexible large area top and bottom body faces, flexible side walls secured to the body faces, a rear portion and front overlap and underlap flaps extending from said top body face and said front wall providing a discharge throat; and means to secure the rear portion to a wall of the truck body; said side walls being secured to the top body face throughout a portion only of their length to provide greater freedom of said overlap flap; and having side wall flap extensions for cooperating with the first mentioned flaps in sealing the envelope against free egress of cement; and releasable means to secure said underlap and overlap flaps to position.

1,904,906. BATCH DIVIDING AND COVERING MEANS. JAMES MONNESS TITCOMB, Washington, D. C. Filed Mar. 16, 1931. Serial No. 523,134. 10 Claims. (Cl. 298—8.)

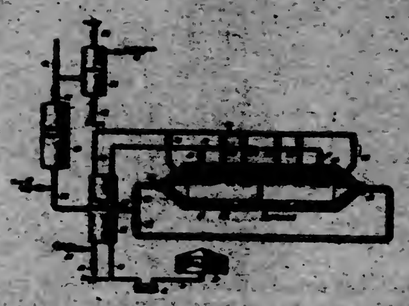


1. The combination with a dump truck body including a bottom, side walls, a front wall, and a rear wall, defining a material receiving compartment, said rear wall being movable when the body is to be dumped to permit egress of material from the compartment; of a flexible separator sheet attached at one end to the front wall and being of an area sufficient to separate upper and lower layers of material and adapted when the truck is dumped

[illegible] layers of the layers of material while on [illegible] thereof to one layer side, and a layer about [illegible] over the upper layer of material and having fric-

tional engagement with the edges of the separator sheet to complete thereunto in completely encasing said upper layer of material.

1,904,907. METHOD AND APPARATUS FOR THE EXTRUSION OF METAL. WILLIAM TRAVIS, Hinckley, Leicestershire, England. Filed Nov. 4, 1931, Serial No. 572,987, and in Great Britain Nov. 5, 1930. 4 Claims. (Cl. 207—10.)



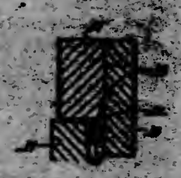
1. A method of extrusion comprising feeding molten material towards an extrusion chamber by a series of impulses and in a stream of small effective cross-section (less the cross-section of the extruding chamber), subjecting the stream to cooling before it enters the extrusion chamber so that the material therein is in a plastic state, and depositing the plastic material by the cooling operation beneath the extrusion chamber and through the [illegible]

1,904,908. HYDROGEN PREPARATION. VARDAMAN VOLLMER, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Aug. 7, 1929. Serial No. 384,248. 2 Claims. (Cl. 23—212.)

1. The method of obtaining hydrogen at a pressure of about 200 to 300 atmospheres which comprises partially oxidizing a hydrocarbon at a pressure slightly higher than the desired pressure and passing the resulting carbon monoxide, hydrogen and [illegible] at the pressure at a catalyst without [illegible]

2. [illegible] at a pressure of about 200 to 300 atmospheres which comprises continuously

introducing a hydrocarbon and an oxidizing gas into a [illegible] zone whereby carbon monoxide, hydrogen and water are formed, and continuing said [illegible]

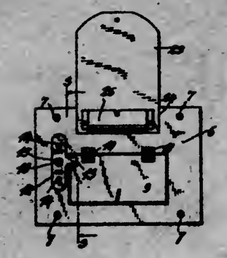


with steam for producing hydrogen without appreciably diminishing the pressure whereby the resulting hydrogen is at a pressure of about 200 to 300 atmospheres.

1,904,909. MORTAR CEMENT. Guy H. Wagner, Youngstown, Ohio, assignor to The Bessemer Cement Corporation, Youngstown, Ohio, a Corporation of Ohio. Filed Jan. 21, 1931. Serial No. 510,819. 18 Claims. (Cl. 106—24.)

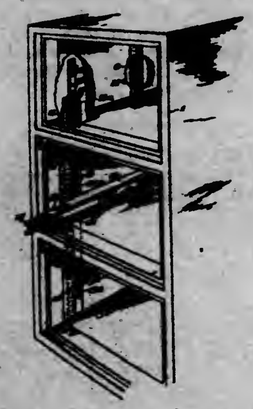
1. A mortar cement having hydraulic characteristics comprising a mixture of hydrated [illegible] cement clinker, and [illegible] ground to a fineness of [illegible] than 96% passing through a 200 mesh screen, the ingredients being in such proportions as to give a [illegible] plasticity in cement mixtures without using [illegible]

1,904,910. GASKET. [illegible], Assignor to W. Arnesen and Peterson Brothers, Worcester, Mass. Filed May 11, 1928. Serial No. [illegible]. 1 Claim. (Cl. 20—69.)



The combination with a door having a rabbet extending into the edge thereof parallel with the plane of the door and having a projection extending from said rabbet of the subject to the edge of the door of a gasket having a dovetailed part projecting into a recess in the rabbet into the rabbet and a fin with bifurcations thereon, the [illegible] bifurcations being adapted to engage the door [illegible]

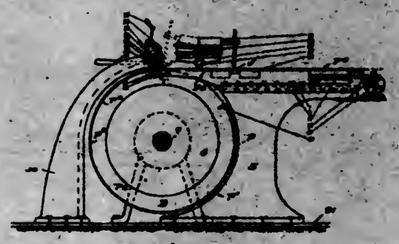
1,904,911. MAIN SWITCH AND FUSE CABINET. Homer A. Wentworth, Denver, Colo. Filed Jan. 4, 1932. Serial No. [illegible]. 8 Claims. (Cl. [illegible]—38.)



2. A panel section and frame [illegible] having a box section provided with a removable cover member, the cover member having a transparent [illegible] ing, a door hinged to one side of the [illegible] with cover [illegible] door [illegible] [illegible] [illegible]

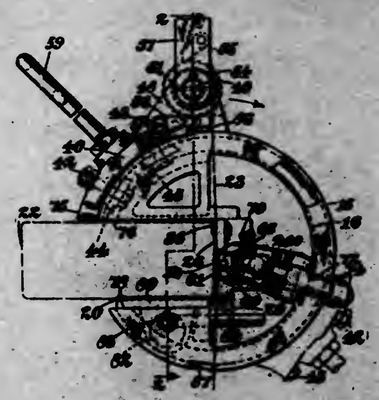
opening through which the handle extends, the slide having also two holes that extend through the other two slots for holding the slide and guiding it in its movements and

a projection formed integral with the slide, said projection extending over the door when the switch is closed and being located above the door when the switch is open.



1,904,912. MONOLITHIC FILING CABINET AND ATTACHMENTS THEREFOR. CARL F. WOLTERS, Marietta, Ohio, assignor to Remington Rand Inc., Buffalo, N. Y., a Corporation of Delaware. Original application filed June 16, 1925, Serial No. 37,527, now Patent No. 1,807,948, dated June 2, 1931. Divided and this application filed July 6, 1928. Serial No. 290,864. 26 Claims. (Cl. 109—2.)

1. A fire proof cabinet, comprising a monolithic body formed with a plurality of thermally insulated compartments open at the front end, a metallic shell encasing said body, a drawer in each compartment mounted for movement into and out of said compartment, a monolithic front on each drawer, a metallic cover encasing said front, the marginal portion of each front and cover being formed for sealing cooperation with the front of said shell and the body in closed position to insulate the contents of each compartment from external heat.

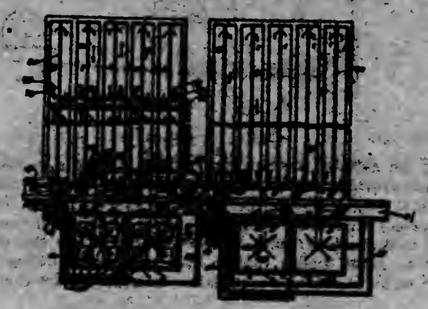


1,904,913. METAL FABRICATING MACHINE. JAMES LUCIAN ADAMS, Jr., East Chicago, Ind., assignor of nine-tenths to Graver Corporation, East Chicago, Ind., a Corporation of Illinois. Filed Jan. 6, 1928. Serial No. 244,924. 12 Claims. (Cl. 219—8.)

1. In a machine for the fabrication of tubular metal structures, an assembly table for receiving and supporting material placed thereon, welding means cooperating therewith for welding material thereon, winding means for drawing material therefrom, means for actuating said winding means to effect drawing of the material, opposed roll supports between which material may be drawn from said assembly table by said winding means, and means

for adjusting the position of said assembly table toward or from the winding means in line one with the other while maintaining the same angular relationship therebetween.

1,904,914. TIGHTENING AND SEALING DEVICE. DANIEL AMBROSE BRADLEY, London, England, assignor to Boabands Limited, London, England, a British Company. Filed Nov. 12, 1931, Serial No. 574,900, and in Great Britain Nov. 20, 1930. 7 Claims. (Cl. 81—9.1.)



1. A tightening device of the character described comprising in combination a support having a face which is to lie against a side of a package to be encircled by a band, in which face is a recess for receiving a clip in a position in which it lies close to said side of the package, which clip has an anchor over which the band may be bent backwards, and to which clip one end portion of the band is to be preliminarily attached, a tensioning means which is mounted on the support, and to which the second end portion of the band extending across the clip is to be attached, which tensioning means is arranged to swing, whilst maintaining the tension on the band, along a semi-circular path whereof the axis is at the anchor of the clip and lies across the band.

1,904,915. IRON SULPHIDE MATERIAL AND PROCESS OF MAKING THE SAME. JOHN E. CAIN, Washington, D. C., and RAMPTON W. YATES, Cincinnati, Ohio, assignors to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Apr. 18, 1932. Serial No. 270,571. 7 Claims. (Cl. 23—152.)

5. A process for producing ferrous sulphide material which consists in causing white iron ore, pyrites and carbon to react together in the presence of burning fuel to produce molten ferrous sulphide material and a slag.

1,904,916. ACTIVATED SLUDGE PROCESS OF SEWAGE AND OTHER SEWAGE LIQUID PURIFICATION. JAMES ALBERT ONSLOW, London, England, assignor to Activated Sludge, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 24, 1927, Serial No. 228,858, and in Great Britain Oct. 27, 1926. 4 Claims. (Cl. 210—2.)

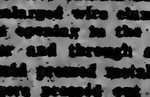
1. A sewage treatment process comprising treating sewage with activated sludge, separating the resulting sludge and effluent, treating the effluent with an activated sludge high in nitrifying bacteria, separating the effluent from the sludge in the second treatment, returning a part of the latter sludge to the sewage in the first treatment, and using the rest of said latter sludge to supply said activated sludge high in nitrifying bacteria.

1,904,917. SANITARY BRUSH. EUGENE CUSHIN, Minneapolis, Minn. Filed Apr. 8, 1932. Serial No. 603,967. 2 Claims. (Cl. 15—194.)

1. A method of constructing a brush head in which a rectangular sheet of material is first folded along the longitudinal center line thereof, the portions adjacent the fold being disposed parallel to and substantially in contact with each other, said folded sheet is then slit transversely from the free edges of said portions thereof toward the folded edge to form a series of narrow, bristle-like strips, the corners are removed from the free ends of said strips, said folded and slit sheet is rolled to form a cylindrical bristle structure, and means is applied adjacent the end formed by said folded edge to retain said structure in rolled form.

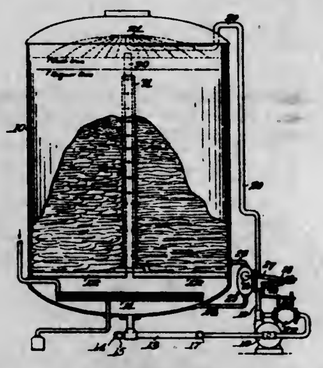
1,904,918. HEATING AND VENTILATING APPARATUS. WARREN EWARD, Columbus, Ohio, assignor, by mesne assignments, to Buckeye Blower Company, Columbus, Ohio, a Corporation of Delaware. Filed Feb. 15, 1932. Serial No. 593,178. 7 Claims. (Cl. 257—137.)

1. In combination, a relatively narrow vertically-disposed casing having an air inlet opening at the bottom, a side inlet and a top air outlet, means of supporting the casing above the floor, a radiator disposed across the bottom inlet, a centrifugal blower located in alignment with the bottom inlet, an electric motor for driving said fan, a damper disposed between the fan and the outlet, a blower adjacent the outlet, and a thermostat over the radiator, and means controlled thereby for actuating said damper.



1,904,919. ELECTRIC TERMINAL CONNECTER. WILLIAM G. HARDWICK, Chicago, Ill., assignor to Railway Utility Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1932. Serial No. 602,711. 4 Claims. (Cl. 173—339.)

2. An electrical connector for securing a wire to a metallic terminal extension, comprising, a pressed metal member substantially U-shaped in form, adapted to fit over an end of the terminal extension, the upper part of said pressed metal member having a cup-shaped seat for the abutment of the wire therein and a threaded binding post having an enlarged wire clamping head adapted to extend through an opening in the upper part of said pressed metal member and through an opening in said terminal extension, said pressed metal member having a pair of resilient fingers projected out of the lower part thereof in thrust engagement with the threaded portion of said binding post on the lower side of said terminal extension.

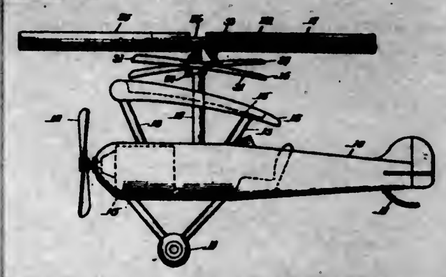


1,904,920. APPARATUS FOR FORMING SEMER METAL CAPS. JOHN M. HOFFMANN, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 21, 1930. Serial No. 477,092. 6 Claims. (Cl. 113—42.)

1. In a cap forming apparatus, the combination of a pair of opposed, relatively movable [illegible] having a forward and a return movement, each [illegible] a die positioned therebetween in the path thereof, [illegible] for guiding a punch pad and an [illegible] therewith [illegible]

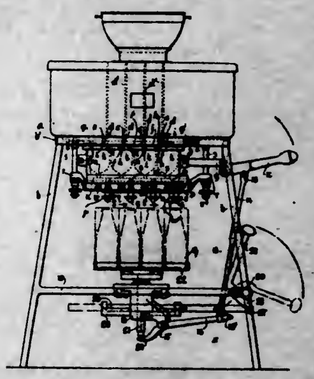
strumentalities and operating during their forward movement to draw the said disc from between the clamping surfaces of said instrumentalities and into them one of them thereby shaping the disc into a cap having its edge left projecting, a curling die formed in one of said instrumentalities and positioned in alignment with the projecting edge of said cap, a relatively strong spring moving with a said instrumentality for engaging said punch pad and resiliently holding the drawn cap against said anvil during a part of the forward and a part of the return movement, said organization permitting initial return movement of the instrumentalities while holding the drawn cap, whereby said curling die engages the projecting edge of said cap and reshapes it to provide a completely formed cap, and spring means for normally pressing said punch pad upwardly relative to said strong spring.

1,904,921. KIER. EUGENE D. JEFFERSON, Waban, Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Mar. 28, 1931. Serial No. 524,438. 3 Claims. (Cl. 8—18.)



1. In a kier, the combination with a grate, of an equalising pipe extending from the grate upwardly practically to the liquor line, said equalising pipe being provided with perforations for admitting liquor from the kier and being closed at the bottom.

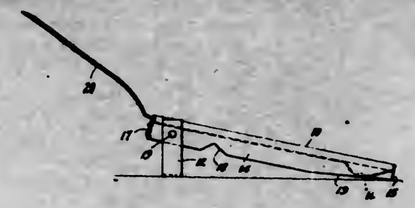
1,904,922. DUMP BODY OPERATING MECHANISM. THEODORE G. JUNGMEYER, Milwaukee, Wis. Filed Jan. 27, 1930. Serial No. 423,676. 8 Claims. (Cl. 298—22.)



1. In combination with a supporting frame having a dumping body pivotally mounted thereon, a tilting mechanism comprising a pair of intermedially pivoted levers, means for supporting the pivotal connections for said levers for longitudinal movement relative to said supporting frame, links connecting one of the arms of each lever to the dumping body, rigid links working below the said pivotal connections of said levers and operatively connecting the other arms of said levers with the supporting frame to cause the last mentioned arms of said levers to swing downwardly and then upwardly as said dumping body is moved to discharge position during their longitudinal movement, and means for moving the fulcrum points of both levers in unison.

1,904,928. AEROPLANE. THOMAS MURDOCH MACCASKIN, Chicago, Ill., assignor to Hathaway Watson, Chicago, Ill. Filed Mar. 21, 1930. Serial No. 437,727. 6 Claims. (Cl. 244—15.)

1. An aeroplane comprising a wing having a pocket or recess provided therein, a pair of auxiliary wings arranged in said recess, means for elevating said auxiliary wings upwardly from said wing and out of said pocket, means for raising one of said auxiliary wings above the other and at right angles thereto and means for tilting one part of an auxiliary wing relative to another part thereof.



1,904,924. MACHINE FOR FILLING BOTTLES AND OTHER VESSELS. HEINRICH VALDEMAR NIELSEN, West Warf, Cardiff, South Wales, assignor to The Hygienic Manufactures and Supplies Company Limited, London County, England, a British Company. Filed May 8, 1928, Serial No. 276,146, and in Great Britain May 27, 1927. 18 Claims. (Cl. 226—102.)

1. For a machine for filling bottles and other vessels with liquid and other flowable material, a supply container, a measuring chamber provided with ports through one of which said chamber is charged from said container and through another of which said chamber is discharged, means for cutting off the supply of flowable material to said chamber, means for cutting off the discharge from said chamber, means for allowing the escape of air from the measuring chamber through the container when the measuring chamber is being charged, other means leading from and forming a direct passage from the measuring chamber to the atmosphere from the commencement of discharge, means being provided whereby there is relative movement between the measuring chamber and the means for cutting off the supply of flowable material.

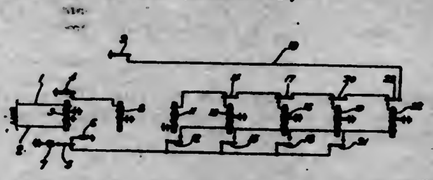
1,904,925. FRYING PAN. GEORGE W. PEARCE, Akron, Ohio, assignor of one-half to Stanley H. Austin, Akron, Ohio. Filed Sept. 10, 1931. Serial No. 562,015. 5 Claims. (Cl. 53—7.)

1. A frying pan having in combination a support pivoted so as to be freely shiftable thereon by lifting the pan and adapted to support the pan in a tilted position, said support being operable to a supporting position by lifting one side of the pan from a supporting surface, said pan being returnable to a horizontal position on said supporting surface by shifting the pan while maintaining contact of the support with said surface.

1,904,926. SANITARY WELL TOP. WILLIAM C. H. PETERS, Albert City, Iowa. Filed Nov. 9, 1931. Serial No. 573,799. 1 Claim. (Cl. 103—218.)

A sanitary well top formed complete in two sections, each section being formed with a raised pump seat portion at the center of its inner edge, the remainder of each section having its top surface inclined downwardly and outwardly, an upwardly extended rib formed on the inner edge of one of the sections and extending from the raised central portion to the outer end, the other section being formed on its inner edge with an inverted U-shaped rib shaped to receive said upwardly extended rib, and to thereby form a leak proof joint and at the same time securely lock the two sections together against movement away from each other.

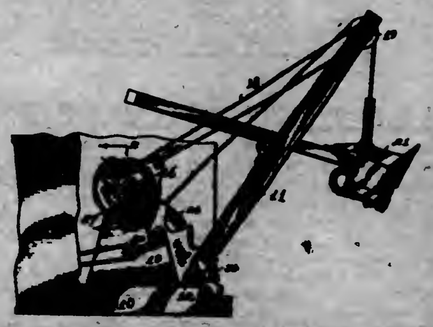
1,904,927. SWITCH MECHANISM. RUDOLF POPP, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed May 12, 1931. Serial No. 536,823. 5 Claims. (Cl. 200—64.)



4. A pull chain connector for switch mechanisms comprising a tubular cap having a wall opening, a connector adapted to be inserted in the cap for receiving the chain at one end and connecting to the switch mechanism at its other end, and a spring catch for the connector adapted to snap into the wall opening to hold the connector and thereby the chain in the cap, said spring catch being pressable inwardly clear of the wall through said opening to remove the cap and chain from the connector.

1,904,928. APPARATUS FOR INSTRUCTION FOR STRINGED MUSICAL INSTRUMENT PLAYING. LEO POSTNOFF, Brooklyn, N. Y. Filed June 16, 1931. Serial No. 543,367. 24 Claims. (Cl. 84—286.)

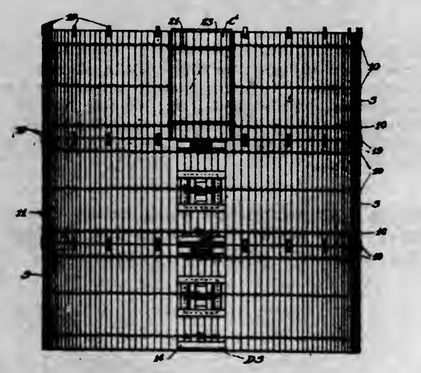
1. Means for use in carrying out instruction in the manipulation of a stringed musical instrument, tones from which are produced by bowing, which includes: a support for carrying the bow for association with the instrument during bowing-simulating movements, and means associated with the support for indicating the pressure applied by the bow against the support during such movements of the bow.



1,904,929. RELAY SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 3, 1931. Serial No. 561,018. 27 Claims. (Cl. 179—16.)

1. In combination, a plurality of counting relays, a condenser, an impulse receiving relay, a charging circuit for said condenser including contacts on said impulse receiving relay, and a discharging circuit for said condenser controlled by said impulse receiving relay to successively operate said counting relays responsive to received impulses.

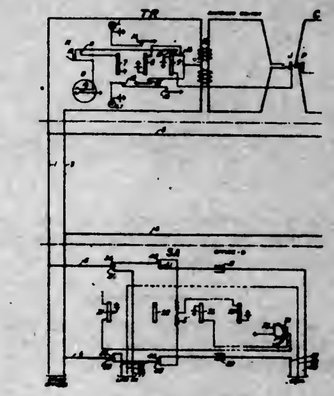
1,904,930. SELF-LOCKING BOOM HOIST. GEORGE T. ROWE, Cedar Rapids, Iowa. Filed Sept. 29, 1930. Serial No. 485,141. 4 Claims. (Cl. 254—187.)



1. In combination, a cable drum, a clutch controlled mechanism for imparting winding movement to said drum, a worm gear mechanism for retarding the unwinding movement of said drum, means actuated by the reverse movement of said drum for automatically connecting said worm gear mechanism to said drum.

1,904,931. METHOD OF ASSEMBLING METAL MEMBERS WITH RUBBER BUSHINGS. RALPH H. ROSENBERG, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1931. Serial No. 509,898. 15 Claims. (Cl. 28—88.2.)

1. An apparatus for assembling a rubber sleeve in telescoping relationship between a pair of metallic members which comprises a funnel, a plunger and a yieldable washer actuable by said plunger and adapted to abut an end of the rubber sleeve and force it through the funnel.

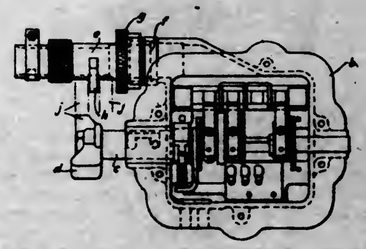


1,904,932. PORTABLE SILO OR THE LIKE. PETER RUTTEN, Osakis, Minn. Filed May 25, 1931. Serial No. 539,812. 4 Claims. (Cl. 20—1.4.)

1. In portable building structure of the class described, a plurality of substantially cylindrical sections each comprising a multiplicity of vertical staves and flexible encircling members to which said staves are attached, and means associated with at least one of the annular edges of each section for securing the adjacent section thereto with edges of said sections in abutment said sections forming a continuous wall and said sections being capable of being rolled into compact cylindrical form.

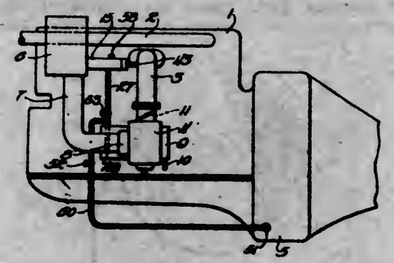
1,904,933. TELEPHONE SYSTEM. NORMAN H. SAUNDERS, Chicago, and CLARENCE E. LOMAX, Oak Park, Ill., assignors, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 24, 1931. Serial No. 558,912. 24 Claims. (Cl. 179—27.)

1. In a telephone system, a switching center and a plurality of automatic offices serially connected by a trunk line, subscribers' lines terminating in said offices, means at the switching center for transmitting digit impulses representing the number of a called subscriber's line over the trunk line, the first digit of the number designating the office in which the called line is located, a switching



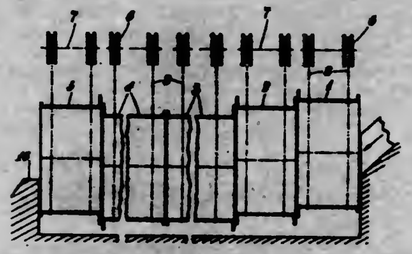
device in each office operated responsive to the transmission of the first digit of the called number, and means controlled by the devices in the offices other than the one designated by the digit transmitted for temporarily clearing the trunk line of all connections in such offices.

1,904,934. RETARDER FOR USE IN RUBBER VULCANIZATION PROCESS. ROBERT L. SIBLEY, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 18, 1931. Serial No. 523,648. 12 Claims. (Cl. 18—53.)



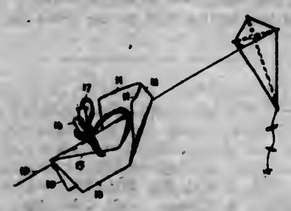
1. The process of vulcanizing rubber which comprises heating a mixture of rubber and sulfur in the presence of a substituted ammonia, wherein one or more hydrogen atoms of said ammonia have been replaced by an acyl radical only containing more than one carbon atom.

1,904,935. ELECTRIC SWITCH. GEORGE SCOTT, London, England, assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 5, 1930, Serial No. 473,205, and in Great Britain Apr. 4, 1930. 4 Claims. (Cl. 200—50.)



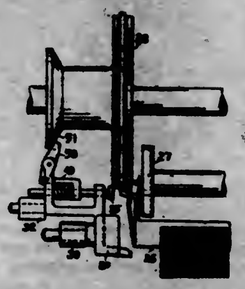
1. In combination, an electric switch, a power lead having a plug secured to said switch, a control shaft for said switch arranged for axial movement and having a handle for actuating the same, said handle being movable to "on" position in at least two positions of axial adjustment of said shaft, an arm in the form of a quadrant on said switch handle, and means on said plug engaged by said arm to prevent withdrawal of the plug when said handle is in each of its "on" positions.

1,904,936. COMBINED PRIMER AND CYLINDER LUBRICATOR FOR INTERNAL COMBUSTION ENGINES. CHARLES LAWRENCE STOKES, Los Angeles, Calif., assignor, by mesne assignments, to Lynn A. Williams, Evanston, Ill., and Clifford C. Bradbury, Glencoe, Ill., trustees. Original application filed Nov. 11, 1925, Serial No. 67,864, now Patent No. 1,764,606, dated June 17, 1930. Divided and this application filed Nov. 2, 1928. Serial No. 316,658. 8 Claims. (Cl. 123—196.)



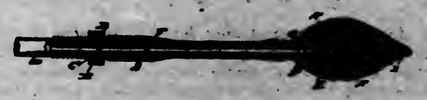
1. A primer and lubricator for internal combustion engines, comprising a valve body having a port for communicating with the intake manifold of an internal combustion engine, means for feeding liquid fuel priming charge to said port during the starting of the engine and other means for feeding a lubricant to the liquid fuel charge.

1,904,937. BARKING DRUM. JOHN STRINDLUND, Tofte I Hurum, Norway. Filed July 21, 1931, Serial No. 552,092, and in Sweden July 23, 1930. 6 Claims. (Cl. 144—208.)



1. In a barking drum having an inlet end and an outlet end, the combination of several substantially horizontal rotary drum sections arranged end to end, each drum section having entirely open and unconstricted ends, the section nearest the inlet end of a pair of adjacent drum sections having its axis located higher than the axis of the other of said drum sections in the direction perpendicular to the slanting level formed by the rolling wood in the drum when rotated.

1,904,938. TRAVELER FOR KITE STRINGS. HERBERT DANIEL AUB, Bloomfield, N. J. Filed May 28, 1932. Serial No. 613,079. 3 Claims. (Cl. 244—24.)

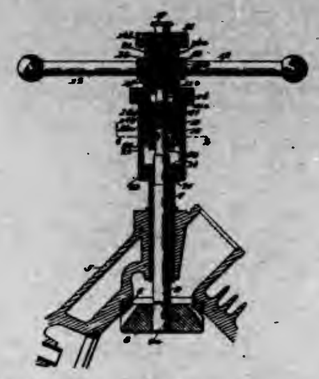


1. A kite-string traveler consisting of a saddle formed with a ridge and sails, a parachute with a sail adapted to be folded and laid over the saddle ridge, and a forked figure connected to the parachute shrouds and adapted to loosely engage the parachute sail.

1,904,939. LOOM FOR WEAVING TUFTED FABRIC AND METHOD OF WEAVING. CHARLES EDWARD BARRETT, Yonkers, N. Y., assignor to Alexander Smith & Sons Carpet Company, Yonkers, N. Y., a Corporation of New York. Filed Aug. 18, 1931. Serial No. 557,772. 2 Claims. (Cl. 139—8.)

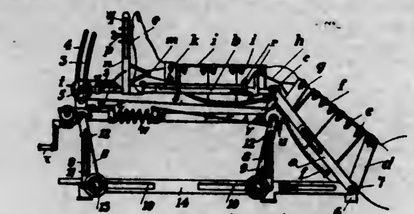
1. The combination in a loom for weaving tufted fabrics, of means for forming a shed of the warp threads, tube frames and tuft yarn spools, a tube frame carrier, a clutch for transferring the tube frames from the carrier to the shed and returning them to the carrier, brake pins carried by the clutch for directly engaging the faces of the spool flanges, means for moving the clutch transversely in and out of engagement with a tube frame, and means for retracting the brake pins in the clutch concurrently with the release of the clutch.

1,904,940. CLEANING AND WASHING BRUSH. HARRY BATMAN, Detroit, Mich., assignor to Oscar Sherr, Detroit, Mich. Filed Apr. 16, 1931. Serial No. 530,449. 2 Claims. (Cl. 15—122.)



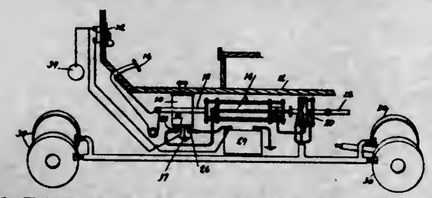
1. In a cleaning and washing brush, the combination of a pipe nozzle fitted at one end with a coupling member for attachment to a cooperating hose coupling, said pipe nozzle being perforated at its forward end for the discharge of water; and a brush having bristles secured between a pair of twisted wires coiled relatively close together around the nozzle, that the bristles may be massed and project radially from and longitudinally beyond the end of the nozzle, the ends of said pair of wires extending through a hole in the nozzle and soldered to the nozzle to secure the brush thereon.

1,904,941. VALVE RESEATING TOOL DRIVER. ALLEN I. DUNN, Cedar Rapids, Iowa, assignor to Cedar Rapids Engineering Company, Cedar Rapids, Iowa. Filed Aug. 12, 1929. Serial No. 385,436. 1 Claim. (Cl. 279—75.)



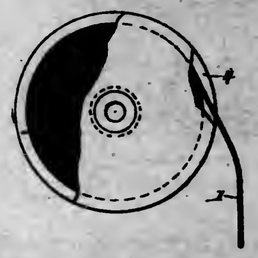
A tool holder for the purpose indicated comprising a chuck member having a longitudinal groove in its external surface, a sleeve having an inwardly tapering opening in its forward end and surrounding said chuck member and having an inward projection to cooperate with said groove, said sleeve having an external screw-threaded surface, a sleeve having its internal cylindrical surface screw-threaded to engage the screw threads of the first mentioned sleeve and cooperate therewith, said chuck member having a ball mounted in the wall thereof to move transversely thereof, said first mentioned sleeve being adapted,

when moving longitudinally relatively to the chuck member, to cause said ball to move inwardly into gripping position or to permit said ball to move outwardly into



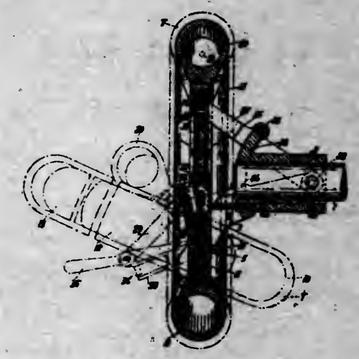
tool-releasing position, and resilient means in said first mentioned sleeve to actuate said chuck member inwardly to cause the ball to assume tool-gripping position.

1,904,942. SURGICAL LEG-STRETCHING DEVICE. LUDWIG HEIGL, Welden, Germany, assignor of one-fourth to Fred Zeissel and James S. Kendall, Knox County, Tex. Filed Mar. 29, 1930, Serial No. 440,088, and in Germany Feb. 12, 1930. 2 Claims. (Cl. 128—84.)



1. A surgical leg-stretching device comprising in combination, a leg supporting frame having a tiltable upper portion, a thigh strap connected to said frame, knee and ankle straps, a foot rest arranged to slide on said tiltable frame portion, means for connecting said foot rest to the ankle strap, ropes connecting said foot rest with the knee strap, adjustable guide pulleys supporting said ropes on the tiltable frame portion, a winch mounted on the frame, ropes connecting said winch with the foot rest, pulleys guiding said latter ropes on the different frame portions to allow a supported leg to be stretched by means of the winch, and a spring element inserted between the ropes and the winch.

1,904,943. VEHICLE CONTROL MECHANISM. VINCENT G. APPLE and WILLIAM H. PETIT, Dayton, Ohio, assignors to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 13, 1930. Serial No. 420,373. 8 Claims. (Cl. 192—3.)

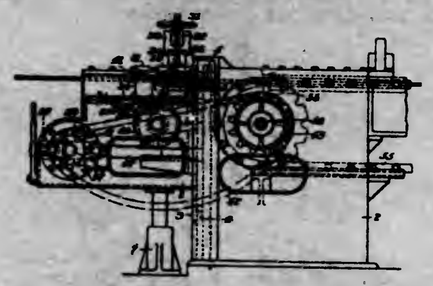


1. Vehicle mechanism comprising brakes, a manually operable brake control member, an ignition switch, power mechanism for applying and releasing said brakes, means controlled by the manual exertion on said brake control member for varying the effective force transmitted by the said power mechanism, and means controlled by said ignition switch for locking the brakes in any position.

1,904,944. RECORD STRIP FOR SOUND REPRODUCING MACHINES. JOHANNUS G. M. HERKLOTS, Koesingan, Cheribon, Java, Dutch East Indies. Filed Oct. 3, 1930. Serial No. 486,245. 1 Claim. (Cl. 274—11.)

A record for a talking machine comprising a flexible strip having a plurality of sound grooves therein, said grooves extending longitudinally and being of gradually decreasing length, and identification indicia located next to the ends of the grooves to identify the composition recorded.

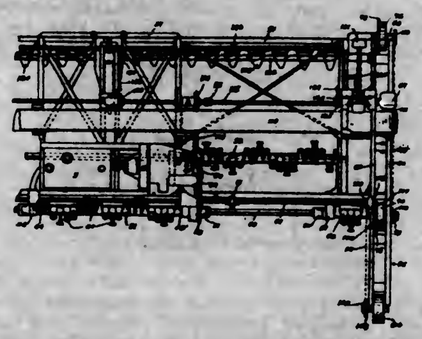
1,904,945. COLLAPSIBLE TIRE BUILDING FORM. FRANK L. JOHNSON, Akron, Ohio. Filed Sept. 10, 1930. Serial No. 480,955. 12 Claims. (Cl. 154—9.)



1. In a collapsible tire building core, the combination of a key section and a group of sections constituting a complete core, an arm rigidly connected to the key section and movable about a pivot in the rear of the core plane, the group of sections being pivoted to swing as a group about a pivot on one side of the core axis.

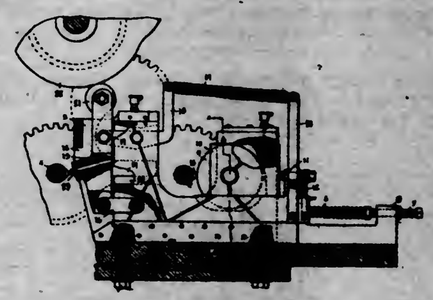
12. In a collapsible tire building core, a key section and a group of sections constituting the complete core, an arm connected to the key section, a pivot for the arm, a pivot for the group of sections, and a toggle connected to the key section and to the pivot for the group of sections.

1,904,946. PRODUCING CALCIUM NITRATE FROM DOLOMITE WHILE SIMULTANEOUSLY OBTAINING MAGNESIA. OTTO KIPPE, Osnabruck, Germany, assignor of one-half to Kleckner-Werke A.-G., Castrop-Rauxel, Germany, a Corporation of Germany. Filed Mar. 29, 1932, Serial No. 601,878, and in Germany Mar. 3, 1931. 4 Claims. (Cl. 23—102.)



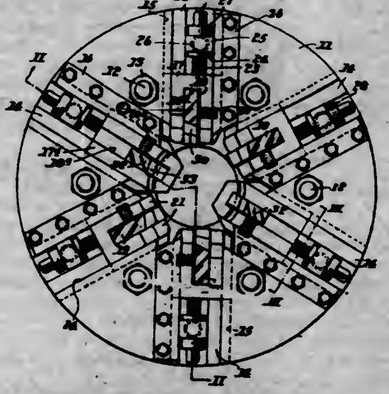
1. A method of producing calcium nitrate, and simultaneously obtaining magnesia, from dolomite, consisting in dissolving the dolomite in nitric acid and precipitating magnesia by means of a material in the group consisting of milk of lime and of dolomite, the milk having previously been filtered through fine sieves.

1,904,947. WIRE DRAWING MACHINE. JACOB T. LEMCK, Beaver, Pa., assignor to Union Drawn Steel Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1928. Serial No. 250,505. 27 Claims. (Cl. 205—4.)



1. Apparatus for feeding wire through a drawing die comprising a pusher mechanism movable with the wire and having wire engaging grippers, and a plurality of wire engaging guides relatively movable longitudinally interposed between the pusher and the drawing die and co-operating with the pusher for guiding the wire into the die.

1,904,948. MECHANICAL FINE GRADER. GLENWAY MAXON, Jr., Chicago, and WILLIAM ORD, deceased, Chicago, Ill., by Harriet P. Ord, executrix, Hollywood, Calif., assignors to The Engineering Development Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 18, 1929. Serial No. 393,516. 6 Claims. (Cl. 37—108.)

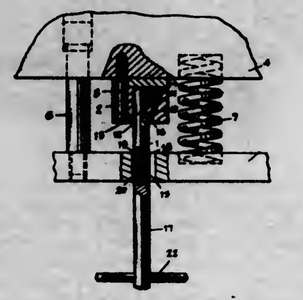


1. A sub-grade surfacing machine having a relatively light rigid frame, wheels for moving said frame upon rails at the sides of the area to be graded, arbor mechanism carried thereby, said arbor mechanism mounted transversely to the direction of travel of the machine, pickers mounted on said arbor mechanism, power means on said frame adapted to rotate said arbor mechanism to move the pickers against the forward travel of the machine, a driving connection from said power means to the wheels, and means for dividing the power between said arbor mechanism and said wheels, the tractive force applied to said wheels being less than the force delivered horizontally by the pickers against the ground, whereby abnormal resistance encountered by the pickers will cause the machine to move backward against the continuing forward tractive effort.

1,904,949. LATHE. HERMAN W. MELLING, Jackson, Mich. Filed Sept. 13, 1930. Serial No. 481,685. 9 Claims. (Cl. 82—19.)

1. In a structure of the class described, the combination of a rotary work holder, a tool carriage reciprocating transversely of the work holder, a spring acting to urge said carriage toward the work, a tool carriage control cam which is a replica of the shape of the work to be cut, a tool holder, a pair of parallel supporting links for said tool holder mounted on said carriage, one of said supporting links being provided with a rearwardly projecting arm, a spring connected to said arm and acting to urge said tool holder upwardly, a tool mounted on said tool holder to face downwardly, a tool holder actuating cam mounted above said tool holder and in a plane above the plane of the work, and a roller on said tool holder coacting with said cam.

1,904,950. PIPE FACING TOOL. WILLIAM M. NECKERMAN, Youngstown, Ohio, assignor to Republic Steel Corporation, Youngstown, Ohio, a Corporation of New Jersey. Filed July 25, 1930. Serial No. 470,664. 2 Claims. (Cl. 82—1.)

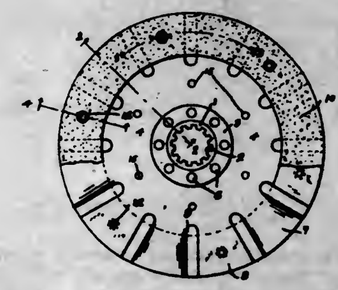


1. In a pipe-finishing device, a rotary head, radial slots therein, tool blocks reciprocable in said slots, radial recesses in said blocks extending to the inner end only of some blocks and to the outer ends only of others, and cutting tools seated in said recesses and engaging the closed ends thereof whereby the tools are firmly supported against radial displacement.

2. In a pipe finishing device, a rotary head having radial slots formed therein, tool retaining blocks slidably mounted in the slots, a plurality of cutters for simultaneously acting on the end of the pipe, certain of said cutters adapted to engage the inner wall of the pipe and the other of said cutters adapted to engage the outer

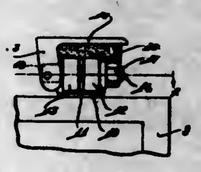
wall of the pipe, said blocks having recesses with closed ends formed therein and adapted to receive said cutters, and bearing surfaces adjacent the closed end of said tool receiving slots against which the tool bears thereby presenting a firm support for the tool during the cutting operation.

1,904,951. PUNCH. PETER PETERSON, Detroit, Mich. Filed Mar. 21, 1930. Serial No. 437,725. 1 Claim. (Cl. 164—124.)



In combination with a ram and a stripper plate, the stripper plate connected to the ram for short limited movements relative to the ram, the stripper plate having an opening, a punch having a shank at one end and a shearing edge at the other end, the punch located in and projecting through the opening, the ram having a socket, a ball latch located in the ram for securing the punch in the socket of the ram, the shank of the punch having a sloping concave surface operable by rotative movement of the punch to force the ball away from the axis of the punch to release the punch from the ball latch, a spring for pressing the ball against the surface of the punch, at a point located at the bottom of the concavity, the punch having a spiral corrugation located on the shank and below the ram and normally above the lower surface of the stripper plate and adapted to receive a tool having a spiral corrugated surface fitting the corrugated surface of the punch and insertable through the said opening and adapted to engage the punch by rotation and rotate the punch to disengage it from the ram and withdraw the punch through the opening of the plate.

1,904,952. APPARATUS FOR MAKING EMULSIFIED COMPOUNDS INCLUDING HYDROCARBONS. ROBERT H. RUSSELL, Cleveland, Ohio, assignor to Gas Fuel Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 4, 1930, Serial No. 425,857. Divided and this application filed Mar. 25, 1931. Serial No. 525,292. 1 Claim. (Cl. 261—92.)

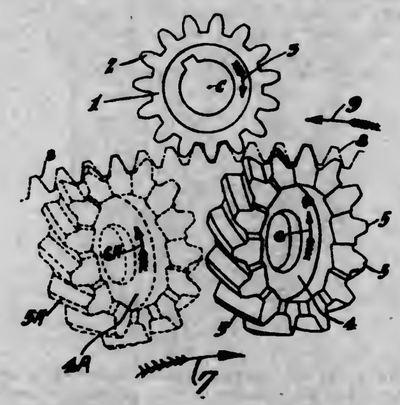


An apparatus for use in making emulsified compounds, comprising a closed pressure chamber, a movable mechanical agitator arranged within the chamber, means for forcing water and oil into one end of said chamber near the bottom of the latter, means for introducing a pressure gas into the top of an intermediate portion of the chamber, a depending partition arranged within the opposite end portion of the chamber, a weir rising from the bottom of the chamber and positioned between said partition and the last mentioned end of the chamber, and means for discharging the compound from a point between said weir and the last mentioned end of the chamber.

1,904,953. CLUTCH OR TRANSMISSION PLATE. IRA SAKS, Cleveland, Ohio. Filed Aug. 18, 1931. Serial No. 557,786. 3 Claims. (Cl. 192—107.)

1. A clutch plate comprising the combination of a pair of discs each having a series of alternately bowed and flat peripheral sectors, radially extending slots between each of said bowed and flat sectors whereby said sectors are circumferentially isolated from each other, said flat sectors of each disc being in registry with each other, and friction facing rings secured to said flat sectors, said slots extending from the circumference of said discs to a point beyond the inner edge of said facing ring.

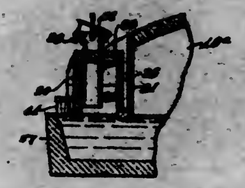
1,904,954. BATTERY POST CLAMP. BYRON M. SCHMUHL, Centerline, Mich., assignor of one-third to Wm. Cadsow Ramsay, Detroit, Mich. Filed Apr. 27, 1929. Serial No. 358,487. 2 Claims. (Cl. 173—269.)



1. A battery post clamp of the class described comprising: a clamping member for clamping about a battery post and having its ends angularly turned and in spaced relation; a bolt projected through said angularly turned ends; a nut threaded on said bolt; a head on said bolt; a cover swingably mounted on said head; a laterally projecting portion on said cover for overlying the battery post; and cam extensions on said cover for moving said ends into approach upon movement of said cover to operative position.

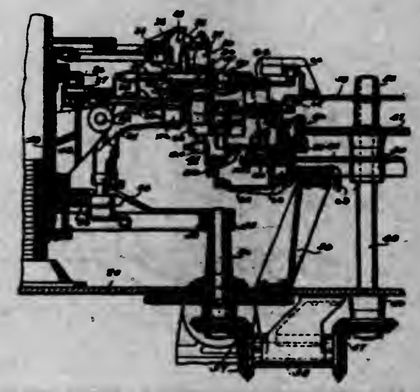
1,904,955. BALANCED SPRING HAMMER MAGNETIC TYPE. FRANK SCHOUTEN, Glenarm, Md., assignor to The Black & Decker Manufacturing Company, Towson, Md., a Corporation of Maryland. Filed Feb. 7, 1931. Serial No. 514,176. 14 Claims. (Cl. 172—126.)

1. The combination in a portable power-driven hammer of a solenoid, having a core, means for energizing the solenoid periodically to reciprocate the core, a ram, means for guiding the ram, and balanced spring means connecting the ram to the core whereby the reciprocating motion of the core is imparted by the spring to the ram.



1,904,956. METHOD OF CUTTING THE TEETH OF GEARS. OLIVER G. SIMMONS, Lakewood, Ohio. Filed Mar. 27, 1930. Serial No. 439,819. 18 Claims. (Cl. 90—9.)

1. The herein described method of generating teeth in a gear blank with a gear shaper cutter having helical teeth which comprises positioning the cutter with its axis at an angle to the axis of the blank, rotating the cutter and blank in intermeshing relation, reciprocating the cutter across the face of the blank and simultaneously moving the cutter laterally into and out of engagement with the blank while maintaining intermeshing relation between the cutter and blank and an imaginary curvilinear rack conjugate to both the cutter and blank and moving between the same.

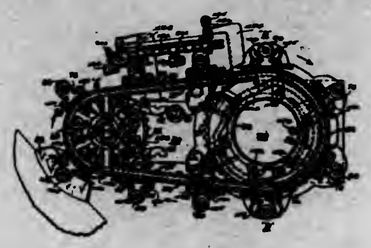


1,904,957. GLASS FURNACE. LEONARD D. SOUDER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 24, 1929. Serial No. 365,627. 1 Claim. (Cl. 49—54.)

In a glass furnace the combination of a tank to contain molten glass, said tank having a lateral extension providing an exposed gathering area, a vertical wall defining the inner margin of the gathering area and having its lower edge spaced a short distance above the level of the glass, a second vertical wall spaced from the first named wall and forming therewith a chamber, said second wall projecting downwardly into the glass to completely segregate the chamber from the furnace proper, a cover connecting the upper ends of said walls, means for introducing a heat regulating medium at one end of the chamber,

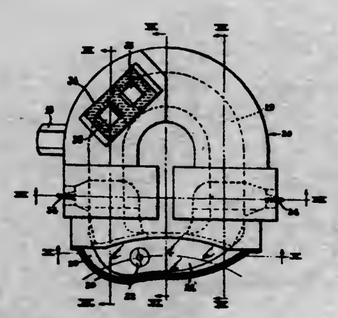
and a stack projecting through the cover in proximity to the other end of said chamber, said stack adapted to be adjusted vertically to change the spaced relation between its lower end and the level of the molten glass whereby to regulate the application of the heat regulating medium to the glass in proximity to the lower end of said stack.

1,904,958. GLASSWARE FORMING MACHINE. LEONARD D. SOUDER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed Mar. 26, 1930. Serial No. 438,941. 11 Claims. (Cl. 49—9.)



2. In a glassware forming machine, the combination of a series of finishing molds moving in a closed horizontal path past a blank transferring position, means for placing blanks in the finishing molds at said position, supporting means for the finishing molds including a continuous upwardly facing bearing plate extending parallel with the path of travel of the finishing molds, carriers individual to the finishing molds slidingly supported on said plate, an endless chain connecting the series of finishing mold carriers, and means for continuously moving the chain to thereby cause the finishing molds to travel in succession past said transfer position.

1,904,959. GLASSWARE FORMING MACHINE. LEONARD D. SOUDER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed Apr. 14, 1930. Serial No. 444,163. 24 Claims. (Cl. 49—5.)

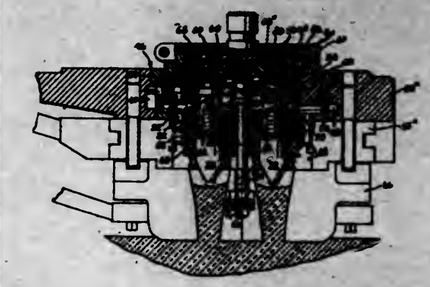


1. In a glassware forming machine, blank and finishing mold carriages arranged side by side and rotatable continuously about different vertical axes, means for rotating said carriages, partible body blank molds on the blank mold carriage, partible finishing molds on the

finishing mold carriage, an endless carrier encircling said carriages and so connected thereto as to be constantly moved by rotation of said carriages, and a series of neck

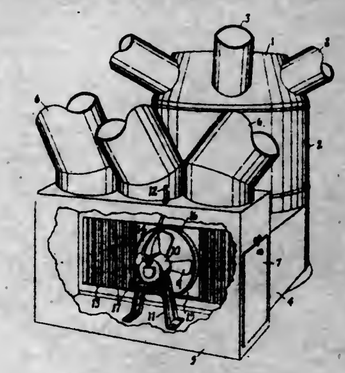
molds mounted on said carrier and adapted to be brought by movement of the latter into register with the blank and finishing molds in alternation.

1,904,960. GLASS WORKING TANK. LEONARD D. SOUBIER, Alton, Ill., assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed June 19, 1931. Serial No. 545,501. 7 Claims. (Cl. 49—56.)



3. In a stationary glass working tank, a continuous upwardly facing channel including a substantially U-shaped portion, means for delivering glass to the channel, a jack arch spanning the ends of said U-shaped portion and defining the inner margin of a gathering area, a cover extending over the U-shaped portion of the channel and cooperating with the jack arch in forming a heating chamber, and means for supplying heat to said chamber.

1,904,961. MACHINE FOR FORMING HOLLOW GLASSWARE. LEONARD D. SOUBIER, Alton, Ill., assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed June 19, 1931. Serial No. 545,502. 22 Claims. (Cl. 49—5.)



4. In combination, a neck mold, a blank mold in register therewith, a plunger, mechanical means for placing the plunger in an operative position in said molds, vacuum applying means for exhausting air from the molds and causing delivery of molten glass thereto, and vacuum operated means for imparting a glass compacting movement to the plunger.

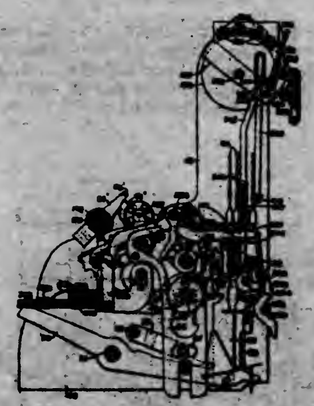
20. A partible two-section mold having a plurality of cavities therein, plungers individual to the cavities, a holder for the plungers, means for projecting the plungers into said cavities, a locking device including a locking pin and means on the meeting faces of the mold sections to interlock with said pin for securing the mold against

premature opening, and means whereby projection of the plungers into said cavities moves the locking pin into locking position.

1,904,962. HOT AIR HEATING SYSTEM. CLAUDE S. STOUT, Marshall, Mich., assignor to Marshall Furnace Company, Marshall, Mich. Filed Dec. 14, 1931. Serial No. 580,799. 18 Claims. (Cl. 126—110.)

1. In a hot air heating system, including a furnace having a hot air chamber, a cold air boot connected to said hot air chamber for supplying air thereto, a cold air chamber connected to said boot for supplying air thereto, cold air supply pipes connected to said cold air chamber, and a forced air supply unit disposed at the juncture between said cold air chamber and said boot, comprising a frame, a cylinder disposed in the center of said frame, a vertical wall having an opening for said cylinder, spaced baffles arranged in staggered relation from front to rear, facing the hot air chamber and carried by said frame in the space at the sides of said wall for allowing air to pass therethrough toward the hot air chamber but resisting the passage of air in the opposite direction, and a fan in said cold air chamber for forcing air through said cylinder as desired.

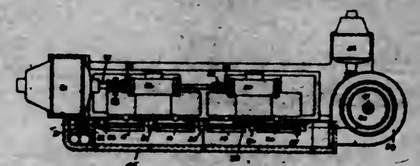
1,904,963. MASK FOR MOVING PICTURE SCREENS. EARL J. VALLEN, Akron, Ohio. Filed July 12, 1929. Serial No. 377,700. 8 Claims. (Cl. 88—24.)



1. A device for reducing the projection area of a moving picture screen to compensate for the difference in the location or extent of sound and silent pictures upon the screen, said device comprising a horizontal rail, carriers

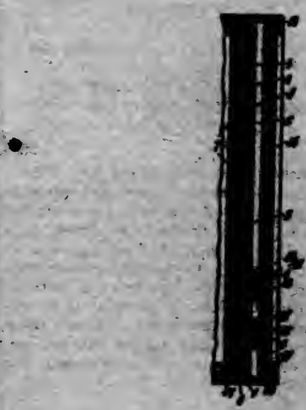
movable over the rail, and a curtain suspended therefrom, the forward edge of the curtain being provided with means to keep the same smooth and unwrinkled, said means in-

cluding a rigid vertical batten and a plurality of spaced levers connected to said batten and so constructed and arranged as to effect lateral movement of the latter.



1,904,964. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Apr. 28, 1919, Serial No. 293,141. Renewed Dec. 26, 1931. 22 Claims. (Cl. 235—3.)

1. In a machine of the class described, the combination of a totalizer, item entering means for entering items on said totalizer, indicators for indicating items entered in the totalizer, means for holding said indicators in the indicating position, an operating device for taking a total of said items from said totalizer, and means operable upon the actuation of said operating device for disabling said holding means.

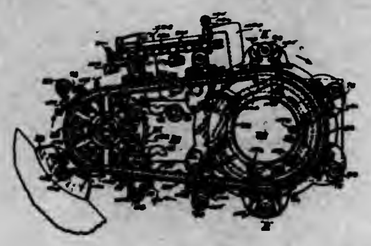


1,904,965. WIRE DRAWING MECHANISM. ALFRED T. YUNGMAN, Akron, Ohio, assignor to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed Feb. 7, 1929. Serial No. 338,142. 8 Claims. (Cl. 205—14.)

8. In combination, a multiple-drum drawing bench including a plurality of dies, a drawing drum for each die, means associated with said drums adapted to drive them at speeds having fixed predetermined differentials, a finishing die, and a winding unit having a winding drum thereon adapted to draw a wire through said finishing die at a speed adjustable to correspond to the number of dies

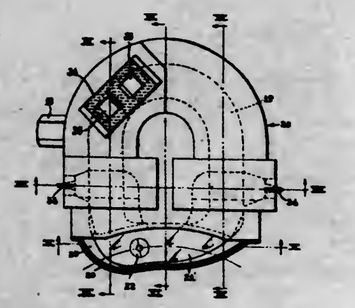
in use, the drive for said winding drum being separate and independent from that of said drawing drums, in order that said winding drum may be driven in combination with any number less than the total number of drawing drums to provide a multiple purpose drawing machine.

1,904,966. COMBINED ANIMATED AND CHANGEABLE SIGN. RUSS M. AMMERMAN, Cincinnati, Ohio. Filed Nov. 19, 1930. Serial No. 496,696. 12 Claims. (Cl. 40—128.)



1. A sign comprising a transparent element and a translucent element behind said transparent element, sets of display matter contrasting with said translucent element, one set of which is in front and the other set of which is in back of said translucent element, at least part of one of said sets being removably mounted on one of said elements whereby it is changeable, and means for intermittently illuminating the rear of said elements and display matter.

1,904,967. PIPE JOINT AND THE METHOD OF MAKING SAME. BYRON E. BARNES, Akron, Ohio, assignor to The Bigge Boiler Works Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 9, 1930. Serial No. 474,722. 19 Claims. (Cl. 113—112.)

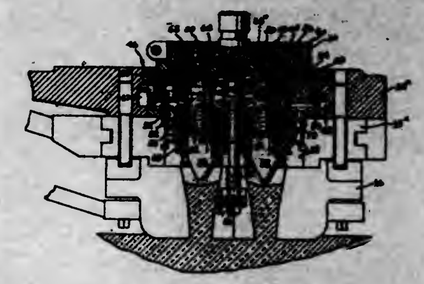


1. The method of joining a male end of a pipe section to a female end of a pipe section which comprises forming recesses in the lower half of the male pipe end and in the upper half of the female pipe end, providing opposed slot-like openings in the end of one of the pipes, bringing the two pipe ends into approximately horizontal alignment with the slots in the male pipe end at the sides thereof, and telescoping the male end in the female end, welding the pipes together through the recesses then sealk welding the upper half of the joint from the outside and the

finishing mold carriage, an endless carrier encircling said carriages and so connected thereto as to be constantly moved by rotation of said carriages, and a series of neck

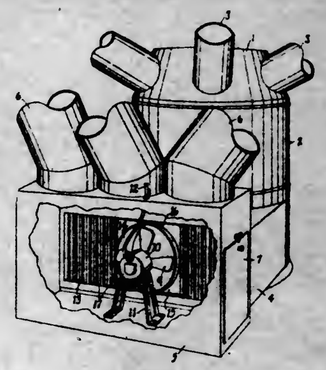
molds mounted on said carrier and adapted to be brought by movement of the latter into register with the blank and finishing molds in alternation.

1,904,960. GLASS WORKING TANK. LEONARD D. SOUBIER, Alton, Ill., assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed June 19, 1931. Serial No. 545,501. 7 Claims. (Cl. 49—56.)



3. In a stationary glass working tank, a continuous upwardly facing channel including a substantially U-shaped portion, means for delivering glass to the channel, a jack arch spanning the ends of said U-shaped portion and defining the inner margin of a gathering area, a cover extending over the U-shaped portion of the channel and cooperating with the jack arch in forming a heating chamber, and means for supplying heat to said chamber.

1,904,961. MACHINE FOR FORMING HOLLOW GLASSWARE. LEONARD D. SOUBIER, Alton, Ill., assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed June 19, 1931. Serial No. 545,502. 22 Claims. (Cl. 49—5.)



4. In combination, a neck mold, a blank mold in register therewith, a plunger, mechanical means for placing the plunger in an operative position in said molds, vacuum applying means for exhausting air from the molds and causing delivery of molten glass thereto, and vacuum operated means for imparting a glass compacting movement to the plunger.

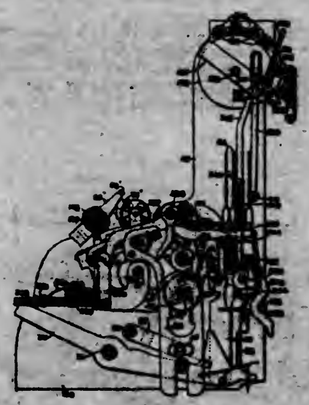
20. A partible two-section mold having a plurality of cavities therein, plungers individual to the cavities, a holder for the plungers, means for projecting the plungers into said cavities, a locking device including a locking pin and means on the meeting faces of the mold sections to interlock with said pin for securing the mold against

premature opening, and means whereby projection of the plungers into said cavities moves the locking pin into locking position.

1,904,962. HOT AIR HEATING SYSTEM. CLAUDE S. STOUT, Marshall, Mich., assignor to Marshall Furnace Company, Marshall, Mich. Filed Dec. 14, 1931. Serial No. 580,799. 18 Claims. (Cl. 126—110.)

1. In a hot air heating system, including a furnace having a hot air chamber, a cold air boot connected to said hot air chamber for supplying air thereto, a cold air chamber connected to said boot for supplying air thereto, cold air supply pipes connected to said cold air chamber, and a forced air supply unit disposed at the juncture between said cold air chamber and said boot, comprising a frame, a cylinder disposed in the center of said frame, a vertical wall having an opening for said cylinder, spaced baffles arranged in staggered relation from front to rear, facing the hot air chamber and carried by said frame in the space at the sides of said wall for allowing air to pass therethrough toward the hot air chamber but resisting the passage of air in the opposite direction, and a fan in said cold air chamber for forcing air through said cylinder as desired.

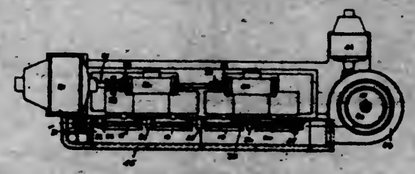
1,904,963. MASK FOR MOVING PICTURE SCREENS. EARL J. VALLEN, Akron, Ohio. Filed July 12, 1929. Serial No. 377,700. 8 Claims. (Cl. 88—24.)



1. A device for reducing the projection area of a moving picture screen to compensate for the difference in the location or extent of sound and silent pictures upon the screen, said device comprising a horizontal rail, carriers

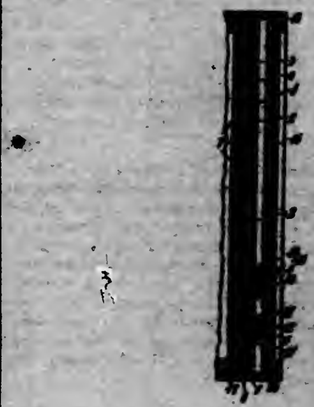
movable over the rail, and a curtain suspended therefrom, the forward edge of the curtain being provided with means to keep the same smooth and unwrinkled, said means in-

cluding a rigid vertical batten and a plurality of spaced levers connected to said batten and so constructed and arranged as to effect lateral movement of the latter.



1,904,964. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Apr. 28, 1919, Serial No. 293,141. Renewed Dec. 26, 1931. 22 Claims. (Cl. 235—2.)

1. In a machine of the class described, the combination of a totalizer, item entering means for entering items on said totalizer, indicators for indicating items entered in the totalizer, means for holding said indicators in the indicating position, an operating device for taking a total of said items from said totalizer, and means operable upon the actuation of said operating device for disabling said holding means.

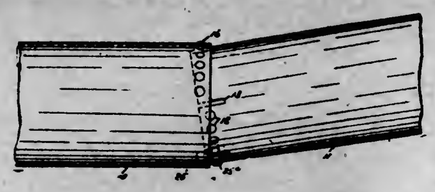


1,904,965. WIRE DRAWING MECHANISM. ALFRED T. YUNGMAN, Akron, Ohio, assignor to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed Feb. 7, 1929. Serial No. 338,142. 8 Claims. (Cl. 205—14.)

3. In combination, a multiple-drum drawing bench including a plurality of dies, a drawing drum for each die, means associated with said drums adapted to drive them at speeds having fixed predetermined differentials, a finishing die, and a winding unit having a winding drum thereon adapted to draw a wire through said finishing die at a speed adjustable to correspond to the number of dies

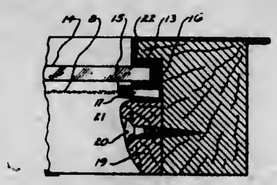
in use, the drive for said winding drum being separate and independent from that of said drawing drums, in order that said winding drum may be driven in combination with any number less than the total number of drawing drums to provide a multiple purpose drawing machine.

1,904,966. COMBINED ANIMATED AND CHANGEABLE SIGN. REX M. ANDERSON, Cincinnati, Ohio. Filed Nov. 19, 1930. Serial No. 496,636. 12 Claims. (Cl. 40—132.)



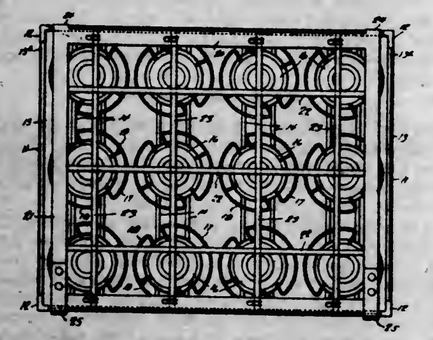
1. A sign comprising a transparent element and a translucent element behind said transparent element, sets of display matter contrasting with said translucent element, one set of which is in front and the other set of which is in back of said translucent element, at least part of one of said sets being removably mounted on one of said elements whereby it is changeable, and means for intermittently illuminating the rear of said elements and display matter.

1,904,967. PIPE JOINT AND THE METHOD OF MAKING SAME. BYRON R. BARNUM, Akron, Ohio, assignor to The Biggs Boiler Works Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 9, 1929. Serial No. 384,722. 19 Claims. (Cl. 113—112.)



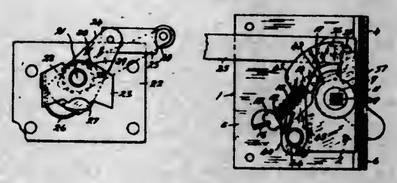
1. The method of joining a male end of a pipe section to a female end of a pipe section which comprises forming recesses in the lower half of the male pipe end and in the upper half of the female pipe end, providing opposed slot-like openings in the end of one of the pipes, bringing the two pipe ends into approximately horizontal alignment with the slots in the male pipe end at the sides thereof, and telescoping the male end in the female end, welding the pipes together through the recesses then caulk welding the upper half of the joint from the outside and the

lower half from the inside, and connecting the inner and outer caulking welds together through the slot-like openings in the male pipe end.



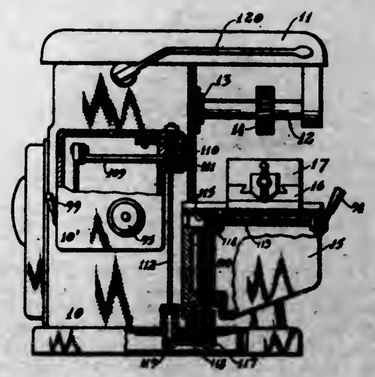
17. A permanent welded pipe joint comprising two aligned pipes, one having a male and the other a female end, and a radially projecting stud on the male pipe end engaged in a recess in the female pipe end, the stud and the recess being at the top of the joint, and the pipe joint being welded about the joint and through said recess.

1,904,968. AUTOMOBILE WINDOW SCREEN. LEWIS L. BREDIN, Detroit, Mich., assignor to Chamberlin Metal Weatherstrip Co., Detroit, Mich., a Corporation of Michigan. Filed Mar. 18, 1929. Serial No. 346,549. 3 Claims. (Cl. 156—39.)



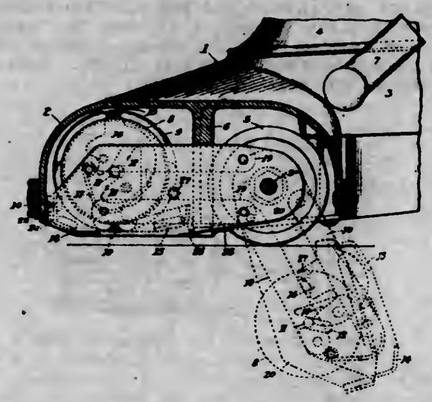
3. In a window having its side members each formed with a rabbet providing an L shaped recess extending in each case from one edge of a member toward the other and providing a side and a bottom face of the recess at a right angle one to the other, a glass channel supported in the recess and against the said side thereof, a finish strip secured to the bottom face of the recess at a distance from the channel, the inner edge of the finish strip in conjunction with the glass channel providing a second channel, and resilient means in the said second channel providing in conjunction with the glass channel a runway for opposite edges of a screen.

1,904,969. SERVING AND WASHING TRAY. JOHN P. CAVANO and GEORGE VONDICAKIS, Cleveland, Ohio. Filed May 24, 1930. Serial No. 455,201. 2 Claims. (Cl. 220—19.)



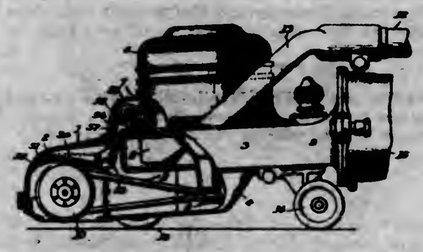
1. A serving and washing tray comprising a skeleton tray made up of a plurality of angle irons one for each corner, and making up a tray structure, a plurality of pairs of cross bars forming a bottom, a plurality of cup sockets attached to each pair of bars, each cup socket comprising a wire skeleton framework defining curved socket walls with diametrically opposed slots and a flanged sheet metal bottom, side walls, each comprising a zigzag wire, and a cover comprising a metallic frame shorter than said tray and provided with hooks at one side to engage a portion of a side wall, a spring latch at the other side to engage the opposite side wall, and non-metallic cross members carried by said cover above said cup sockets to prevent breakage.

1,904,970. DOORLATCH. EVERETT J. COOK, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 22, 1930. Serial No. 504,103. 18 Claims. (Cl. 292—332.)



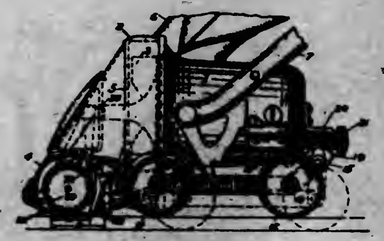
1. In a door latch, the combination with a latch bolt, of levers at opposite sides of said latch bolt for actuating the same, a member engageable with one of said levers to hold the same from actuating said latch bolt, and means for actuating the other of said levers and controlling the engagement of said holding member and the first mentioned of said levers.

1,904,971. MILLING MACHINE. HANS ERNST and LESTER F. NENNINGER, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 31, 1930. Serial No. 458,852. 17 Claims. (Cl. 74—58.)



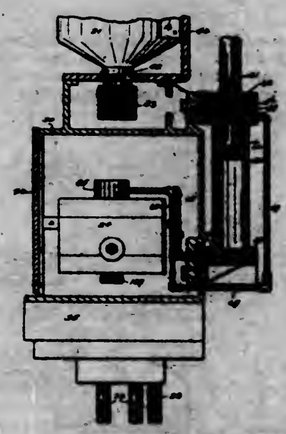
1. In a milling machine having a rotatable spindle, a variable speed transmission therefor, a prime mover, means to couple the prime mover with the transmission, a branch transmission mechanism connected with the branch transmission for actuation during non-rotation of the spindle, independently actuable clutch means for connecting the branch transmission to the prime mover, and an automatic knock-out for said clutch operable when the first transmission is coupled to the prime mover.

1,904,972. SUCTION CLEANER. OLE C. WILLIS, Lakewood, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Jan. 21, 1931. Serial No. 510,068. 9 Claims. (Cl. 15—8.)



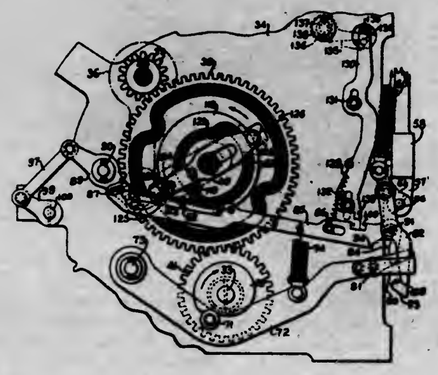
1. In a suction cleaner, a casing including a nozzle, a sub-nozzle including nozzle lips, means sealing said lips to said nozzle, and means supporting said sub-nozzle for vertical translation without tilting relative to said nozzle.

1,904,973. SUCTION CLEANER. DONALD G. SMELLIE, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed June 29, 1931. Serial No. 547,563. 3 Claims. (Cl. 15—16.)



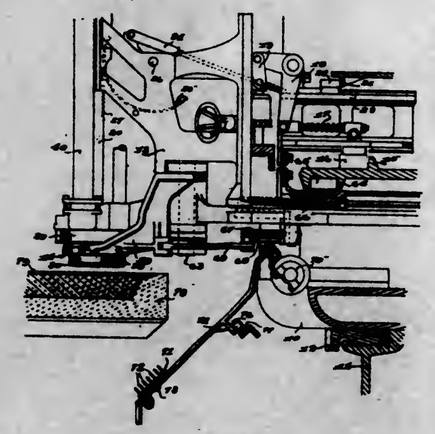
1. In a suction cleaner, a casing including a suction nozzle having spaced surface-contacting lips, a fan open to said nozzle, an electric motor connected to said fan, and means to reduce the suction in said nozzle upon said suction passing a predetermined point in order to limit the covering displacement in said nozzle between said lips, said means comprising means to control the speed of said motor, a pressure-responsive device in the nozzle exposed to the pressure therein, and means connecting said pressure-responsive device to said speed-controlling means.

1,904,974. SUCTION CLEANER. HOWARD EARL HOOVER, Glencoe, Ill., assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Dec. 17, 1931. Serial No. 581,569. 6 Claims. (Cl. 15—16.)



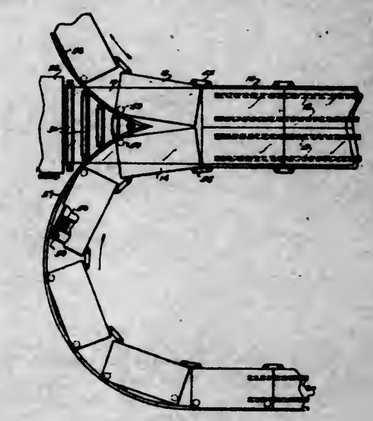
1. In a suction cleaner a body including a nozzle, a movable lip on said nozzle defining one side of a nozzle mouth, means to raise and lower said body relative to a supporting surface, and means operable upon the adjustment of said last mentioned means to move said lip to widen or narrow said nozzle mouth.

1,904,975. METAL CUTTING MACHINE AND CONTROL SYSTEM THEREFOR. WALTER F. BABCOCK, Detroit, Mich., assignor to The Foote-Burt Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 25, 1930. Serial No. 491,174. 15 Claims. (Cl. 77—32.)



1. In a metal cutting machine, a frame, a plurality of tool driving and supporting carriages slidably mounted on the frame, cylinders fixed to respective carriages, pistons fixed to the frame and operating in respective cylinders to advance and retract the carriages toward and from their operating positions, pumps mounted on respective carriages, connections between the pumps and their respective cylinders, valve control mechanisms mounted on respective carriages to control the action of their respective pumps, means interconnecting the valve control mechanisms to cause their respective pumps to initiate the movement of each head simultaneously, and motors on respective carriages to drive respective pumps and tools.

1,904,976. CASH REGISTER. FRIEDRICH W. F. BURGER, Berlin, Germany, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 14, 1929. Serial No. 362,962. 20 Claims. (Cl. 235—2.)

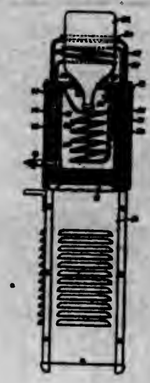


2. In a machine of the class described; the combination with a total control member adjustable from one position to another; means to automatically restore the total control member to the position from which it was adjusted; and means controlled by the total control member to render the automatic restoring means effective; of a plurality of manipulative devices; and means controlled thereby to control the effectiveness of the automatic restoring means.

1,904,977. MACHINE FOR MAKING GLASS STOPPERS AND THE LIKE. JOHN E. COLLINS, Alton, Ill., assignor to Owens-Illinois Glass Company, a Corporation of Ohio. Filed Oct. 1, 1930. Serial No. 485,589. 16 Claims. (Cl. 49—29.)

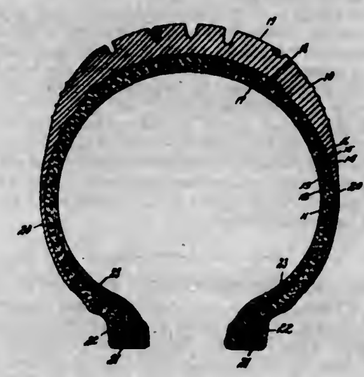
11. The combination of a mold block having mold cavities therein opening downwardly through said block, means providing a wall surrounding and rising from said block, means cooperating with said wall for forming a vacuum chamber, means for exhausting the air from said chamber and the mold cavities for filling the mold cavities with molten glass by suction, means for moving the formed articles from the cavities into said chamber, and means for removing the articles from said chamber.

1,904,978. APPARATUS FOR THE MANUFACTURE OF SHEET GLASS. CARROLL CONE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 10, 1931. Serial No. 562,118. 6 Claims. (Cl. 198—189.)



1. In apparatus for receiving a newly formed sheet of glass from a forming machine, a plurality of tables movable in relation to the forming machine for receiving the sheet therefrom, each table being composed of two separate sections positioned side by side, the opposed table sections abutting one another throughout their entire length to provide a substantially solid unbroken sheet supporting surface, conveying means located in the projected path of travel of the tables, and means for moving opposed table sections forwardly and also laterally away from one another as they approach said conveying means.

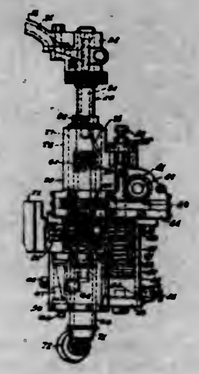
1,904,979. HAIR WAVING CLAMP. PETER FALCONE and RALPH E. WINTON, San Jose, Calif. Filed Oct. 28, 1930. Serial No. 491,668. 2 Claims. (Cl. 132—36.1.)



1. In combination, a hair waving clamp comprising a pair of hingedly connected clamping members having a cross-sectional configuration such as to form a groove along the bottom edges of their meeting sides whereby to form a chamber when the clamp is placed on a head, and means disposed in the chamber so formed adapted to discharge air upwardly between the said clamping members.

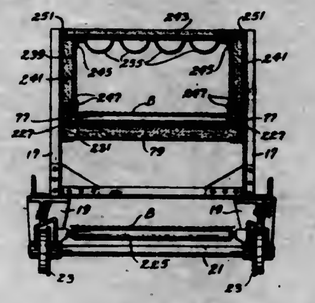
1,904,980. REFRIGERATING APPARATUS. HARRY B. HULL, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1929. Serial No. 359,205. 8 Claims. (Cl. 62—141.)

1. A beverage cooling and dispensing apparatus comprising an insulated beverage chamber, a removable beverage container supported in an inverted position above said chamber and having its opening projecting into said chamber, mechanical cooling means about said container and mechanical cooling means in said chamber.



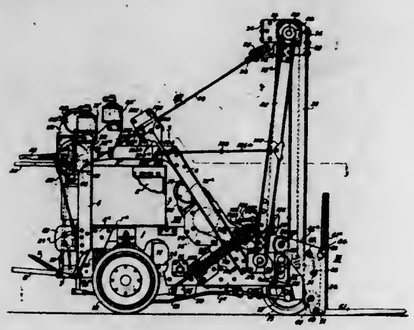
1,904,981. TIRE CONSTRUCTION. WILLIAM A. KARL, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 2, 1929. Serial No. 396,725. 8 Claims. (Cl. 152—13.)

1. In a pneumatic tire construction, a tire carcass formed of a plurality of plies of suitable material, a pair of beads embedded at the inner periphery of said carcass, and a flipper about about each bead and extending between certain of the plies into the sidewalls of the tire, said flipper being formed of strip material including fibres felted with rubber, in which the fibres extend circumferentially of the bead.



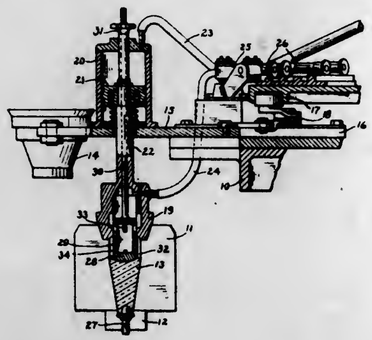
1,904,982. GLASSWARE FORMING MACHINE. JOHN E. MCLAUGHLIN, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 8, 1928. Serial No. 316,935. 12 Claims. (Cl. 49—14.)

10. The combination with a finishing mold and means for moving said mold in a closed path, of a holding device mounted for movement in a closed path with the mold, said holding device adapted to engage an article in the mold and hold it during opening of the mold, a piston motor, means operated and controlled by said motor to move the holding device laterally to a position over the article, cam actuated means to move the holding device



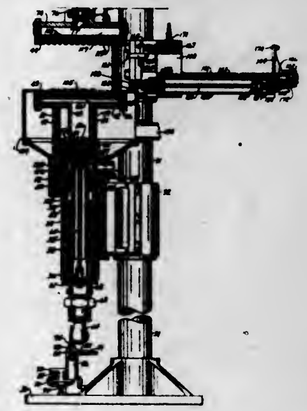
downwardly into engagement with the article, a cam brought by movement of the mold into engagement with said means for moving the holding device downwardly into contact with the article, and means for adjusting the cam to vary the point of initial contact of the holding device with said article.

1,904,983. LEER. FRANK T. NESBITT, Alton, Ill., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 9, 1928. Serial No. 245,331. 1 Claim. (Cl. 49—47.)



In a leer for annealing glassware, a support, a tunnel carried by said support, a leer conveyor arranged in the lower portion of the tunnel, supporting means for the conveyor, said tunnel including abutting heating and cooling sections, said cooling section comprising a continuous sheet metal jacket inverted U-shape in cross section forming a roof and pair of opposed longitudinal side walls, means for anchoring the inner end of said jacket to the support, a pair of side rails spaced apart transversely of the leer and extending longitudinally thereof in proximity to the margins of the roof, jacket supporting means fixed to the jacket and slidingly contacting the upper surface of the side rails providing for expansion and contraction of the jacket independently of the conveyor support and remaining leer structure near the anchoring point, cooling flues extending lengthwise of the upper portion of the jacket, and means for directing a temperature regulating medium through said flues.

1,904,984. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 18, 1930. Serial No. 436,855. 19 Claims. (Cl. 187—11.)

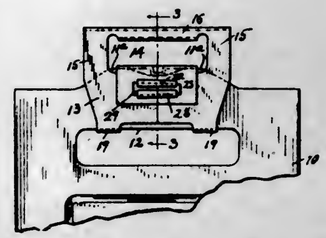


1. In apparatus of the class described, the combination of a wheel mounted frame, a guide frame thereon, an elevating member mounted for movement along said guide frame, a flexible member connected to said elevating member for moving it along said guide frame, a sheave at the upper end of said guide frame and around which said flexible member is reeved, a support movably mounted on one of said frames, near the lower end of said guide frame, a sheave carried by said support and around which said flexible member is reeved, means for winding up and paying out said flexible member, the pull on said flexible member operating through the sheave on said support to move the latter in one direction, and a spring normally acting on said support to move it in the opposite direction.

1,904,985. MACHINE FOR FORMING HOLLOW GLASSWARE. JOHN F. RULE, Toledo, Ohio. Filed Sept. 15, 1927. Serial No. 219,596. 3 Claims. (Cl. 49—8.)

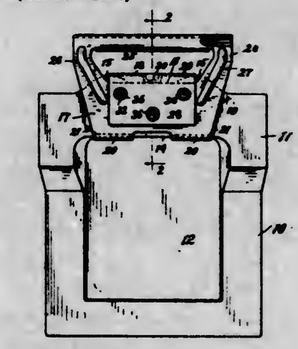
1. In a machine for forming hollow glass articles, the combination of a mold open at its upper end to receive a charge of glass, a blow head movable to and from the mold and adapted to seat on the said open end of the mold, a piston within the blow head adapted to be projected downward into the mold into position to rest on the glass in the mold, and means for supplying air to the blow head for compacting the glass in the mold, said piston being movable upwardly by the pressure of the glass thereon when the glass is blown upward in the mold by air pressure supplied through the lower end thereof, said piston being of hollow cylindrical formation and having openings adjacent its upper end to admit air under pressure from the blow head, and having openings adjacent its lower end for the transmission of the air pressure into the mold during the compacting of the glass in the mold.

1,904,986. QUENCHING MACHINE. HOWARD B. SCOTT and RALPH E. MCCOY, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Feb. 6, 1930. Serial No. 426,391. 27 Claims. (Cl. 266—6.)



1. In a machine of the class described having a plate; means, including a hollow shaft, to guide the plate; a pipe therein adapted to carry a fluid; and means, including a relative movement of the hollow shaft and pipe to begin a flow of the fluid.

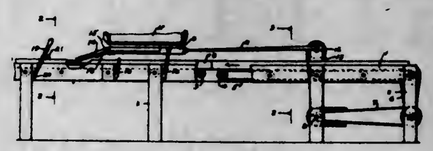
8. In a machine of the class described, two press assemblies operated pneumatically; a valve; means to operate one assembly through its pressing stroke, and the other assembly through its return stroke, when the valve is in one position; and means to reverse the operation when the valve is in another position.



14. In a machine of the class described, a lower plate upon which an article to be hardened is placed; an upper plate assembly; means to lower the upper plate assembly to press the article against the lower plate; and a wiping means, tripped for operation by the upper plate assembly upon its return movement.

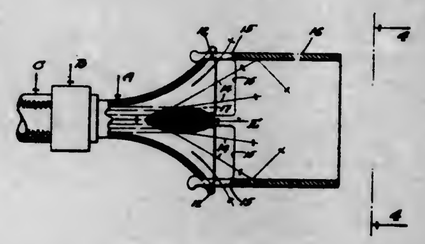
1,904,987. BATTERY HANDLE. MALVERN W. SEVERANCE, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed June 24, 1930, Serial No. 463,390. Renewed May 31, 1932. 4 Claims. (Cl. 16—114.)

1. A container handle comprising a pair of sheet metal members having cooperating portions adapted to receive a portion of a container therebetween, one of said members having a slot therein and an inclined flange adjacent thereto formed by the metal struck up to form said slot, and the other of said members having an abutment projecting through said slot, and a wedge engaging said inclined flange and abutment for urging said cooperating portions toward each other.



1,904,988. BATTERY HANDLE. MALVERN W. SEVERANCE, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Feb. 21, 1930. Serial No. 430,149. 2 Claims. (Cl. 16—125.)

2. In combination with a storage battery box having a pair of spaced protuberances on each upper end wall, a sheet metal handle adapted to be detachably secured to one of said end walls, comprising a sheet metal member extending across the end wall above said protuberances and having a flange engaging the inner faces of said protuberances, said sheet metal member having a depression located between the protuberances extending downwardly far enough to bear upon the end wall and adapted to receive the upper extremity of a hold-down member and transmit pressure therefrom directly to said end wall.



1,904,989. SPREADER. WILLIAM B. SIMPSON, Campbell, Calif. Filed Sept. 26, 1931. Serial No. 565,887. 1 Claim. (Cl. 214—1.)

A machine for spreading fruit and similar material comprising, in combination, supporting means, a tray mounted thereon, means for moving the tray continuously thereover, a reciprocating spreader chute mounted for movement longitudinaly of the tray and adapted to receive the material and having a discharge end communicating with

the tray adjacent the bottom thereof to engage the material discharged on to the tray when a shaking movement is applied to the chute whereby to push the individual elements into close relationship.

1,904,990. CEMENT GUN NOZZLE. JOHN T. VAWTER, Los Angeles, Calif. Filed Dec. 31, 1929. Serial No. 417,648. 4 Claims. (Cl. 91—45.)

1. A nozzle of the character described comprising: a casing adapted to be mounted upon a material conveying conduit, said casing being tromba shaped; a particle obstructing element mounted in the orifice of said nozzle; and a sleeve mounted upon said casing beyond the orifice of said tromba shaped nozzle.

Patents Nos. 1,904,901 to 1,906,219

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 429—No. 4 TUESDAY, APRIL 25, 1933 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $14.00 per annum, including annual index; $14.35; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices

U. S. Patent Office, *Washington, Apr. 6, 1933.*

Edward S. Carey, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Frank A. Whiteley, 911 Foshay Tower, Minneapolis, Minn., and patent granted October 4, 1932, No. 1,880,786, to Edward S. Carey, 881 Park Place, Milwaukee, Wis., and a notice of such declaration sent by registered mail to said Carey at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Carey, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. Patent Office, *Washington, Mar. 28, 1933.*

Frank L. Myers, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Edwin Archer Turner, 350 Madison Avenue, New York, N. Y., and patent granted January 12, 1932, No. 1,840,913, to Frank L. Myers, 508 Cathedral Street, Baltimore, Md., and a notice of such declaration sent by registered mail to said Myers at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Myers, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation

U. S. Patent Office, *Washington, Mar. 24, 1933.*

Lee B. Gribbons, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Simonis Company, 2101 Indiana Avenue, Chicago, Ill., to effect the cancellation of the trade-mark registration of Lee B. Gribbons, of 58 East 29th St., Chicago, Ill., No. 217,228, dated August 31, 1926, and the notice of such proceeding sent by registered mail to the said Gribbons at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Gribbons, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,815,840, H. J. L. Frank, Wiring trough flange, decided March 29, 1932, claims 1 and 3.

Pat. 1,881,716, Bertram Mayer and Hugo Siebenbürger, Vat-dyestuffs of the dibenzanthrone series and process of making same, decided March 27, 1933, claims 1, 2, 3, 4, 5, and 6.

Pat. 1,844,212, W. H. De Lancey, Visible discharge indicater, decided March 29, 1932, claims 1, 2, 3, 4, 5, 6, 7, and 8.

Pat. 1,900,477, C. F. Richter, Digester, decided March 21, 1933, claims 1, 2, and 7.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Fischer

No. 3,064. Decided February 6, 1933

Patentability—Roofing Element.

Claims for a roofing element *Held* unpatentable over the prior art.

Appeal from the Patent Office. Affirmed.

Mr. Albert F. Robinson for Fischer.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

Bland, *J.:*

Claims 13 to 18, inclusive, being all of the claims of appellant's application for a patent, were disallowed by the Examiner, which action was affirmed by the Board of Appeals of the United States Patent Office. From such decision of the Board, appeal to this court has been taken.

The application relates to an insulation roofing element, particularly a shingle element, which shingle is treated with waterproofing solution such as liquid asphalt. One of the embodiments of appellant's alleged invention is to treat one surface only of the shingle, leaving the remaining portion of the fibrous shingle unimpregnated with the waterproofing coating. The second embodiment disclosed is to impregnate both sides, leaving the center unimpregnated. A third form is to impregnate both sides and the ends, leaving the center unimpregnated. A fourth embodiment consists in impregnating one surface of the shingle as in the first embodiment, and then having on the surface a further protective waterproof covering, which may be made of the same impregnating material, if sufficiently thick. The fifth claimed invention is the same as the fourth, except that upon shingles which have been impregnated with a heavy waterproofing coating, either on both sides or on both sides and the ends, slate particles are embedded in one of the layers.

The claims are drawn to cover the said five embodiments. Claim 13 is fairly illustrative and reads:

13. A roofing element comprising a thick body of fibrous material having a heavy coating of waterproofing material applied to one surface and partially penetrating the body to provide a waterproof layer over an unsaturated layer.

The Examiner rejected the claims on the following references: White, 1,029,652, June 18, 1912; Young, 1,488,186, March 25, 1924; White, 1,569,107; Jan. 12, 1926.

The Board of Appeals set out the above references in its decision and held as follows:

The patent to Young states on page 1, in the paragraph commencing at line 93, that the fibrous material may be covered or impregnated. The drawing clearly discloses and describes a covering layer for the fibers. It is appellant's allegation that this patent is too indefinite in this respect and does not clearly disclose the heavy coating which only partially penetrates the body of fibrous material. We cannot agree with appellant's view. We believe that this reference is a clear and adequate anticipation of the subject-matter of the appealed claims. Appellant contends that the surface of the Young structure is not granular as called for in some claims. In our opinion it is, although there is a certain uniting of the grains. In any event, viewing this patent merely as a publication, we do not consider that there would be any invention in omitting the patentee's welded layer.

It would serve no useful purpose to discuss the details of the references, since we agree with the conclusion of the Board and the reasons which brought it to such conclusion.

We have not overlooked the extended argument in appellant's elaborate brief on a number of different contentions, and especially the contention that the *"omission of parts so that a less number perform all the functions of the greater is invention."* Under the circumstances of this case, we do not think that invention would rest in such omission.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

Woelm *v.* Hasselquist

No. 3,082. Decided January 3, 1933

1. Interference—Patent and Application—Construction of Issue.

"In view of the fact that the count is not limited to the precise structure disclosed in the specification of appellant's patent, appellant may not now insist that limitations be read into it for the purpose of avoiding the issue of priority. On the contrary, the count must be given the broadest interpretation which it will reasonably support."

2. Same—Priority—Right to Make the Claims.

Record reviewed and *Held* that H. is entitled to make the claim in issue and that priority was properly awarded to him since his filing date was prior to any date of conception alleged by W.

Appeal from the Patent Office. Affirmed.

Messrs. Warfield, Fraser & Brown and *Mr. Donald L. Brown* for Woelm.

Messrs. Cromwell, Greist & Warden and *Mr. Raymond L. Greist* for Hasselquist.

Hatfield, *J.:*

This is an appeal in an interference proceeding from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Examiner of Interferences awarding priority of invention to appellee.

The count in issue was taken from appellant's Patent No. 1,700,246, issued January 29, 1929, on an application filed June 1, 1928. It reads:

2. In a step-by-step pencil mechanism, the combination of a plurality of reciprocable lead propelling grippers provided with jaws arranged for the reception of lead therebetween, means to reciprocate said grippers, and means to impart to said grippers a jaw-separating movement of definite extent at predetermined periods in the operation of the mechanism.

The invention in issue relates to mechanical pencils, so constructed that the lead contained therein is advanced step by step by reciprocable lead-propelling grippers provided with jaws, as described in the count.

In the operation of appellant's structure, the jaws, gripping the lead, are moved downwardly toward the point of the pencil, and, upon reaching a certain point, release the lead and return to their former position, where they again grip and hold the lead securely while the pencil is in use. The jaws remain in this position until the beginning of another operation.

In appellee's structure, the cycle of operation is reversed—the jaws, in gripping engagement with the lead at the lower limit of movement, are disengaged, move upwardly to the upper limit of movement, reengage the lead and move downwardly to their original position, where they hold the lead securely while the pencil is in use. They remain in this position until the beginning of another operation.

Appellant's structure is of the "push-cap type," that is, it is operated by subjecting the cap at the upper end of the pencil to pressure, and then removing the pressure.

Appellee's structure is of the rotary type, that is, it is operated by: First, rotating the ferrule to the left, which causes the gripping jaws to release the lead and move upwardly to the upper limit of movement, and second, rotating the ferrule to the right, which causes the jaws to grip the lead and move downwardly to the lower limit of movement.

Counsel for appellant moved to dissolve the interference on the ground that appellee had no right to make the claim constituting the count in issue.

The motion was denied by the Law Examiner.

Due to the fact that the date alleged in appellant's preliminary statement for conception of the invention defined in the involved count was subsequent to the filing date of appellee, and as the Law Examiner had theretofore held that appellee could make the claim constituting the count in issue, the Examiner of Interferences awarded priority of invention to appellee.

On appeal, the Board of Appeals held that the involved count was sufficiently broad to read upon appellee's disclosure.

It is conceded by counsel for appellant that, if appellee is entitled to make the count in issue, he is entitled to an award of priority. It is contended, however, that appellee does not disclose in his application either

a plurality of reciprocal lead-propelling grippers,

or

means to impart to said grippers a jaw-separating movement of definite extent at predetermined periods in the operation of the mechanism,

within the meaning of the language of the count.

Relative to the first contention, counsel for appellant claims that appellant's structure consists, among other things, of two lead-propelling grippers "separable and distinct," and that the involved count is limited to such a structure.

It appears from the record that this question was not raised in appellant's motion to dissolve the interference, and was not discussed in the decision of the Law Examiner. Whether that issue was presented to the Board of Appeals does not appear from the record. It may be observed, however, that appellee discloses in his application a feed-finger unit, comprising a band of triangular cross-section and, formed integrally therewith, *three reciprocable resilient lead-engaging feed fingers*—lead propelling grippers—provided with a plurality of jaws. The count in issue calls for a plurality of reciprocable lead-propelling grippers, and is not limited to a plurality of *separable* and *distinct* lead-propelling grippers, as disclosed in the specification of appellant's patent.

With reference to appellant's second contention, that appellee's application does not disclose means to impart to the lead-propelling grippers a jaw-separating movement of definite extent "at predetermined periods in the operation of the mechanism," it may be said that, if appellee's application did not disclose means to impart to the lead-propelling grippers a jaw-separating movement of definite extent, at predetermined periods in the operation of his structure, the mechanism could not be successfully operated, that is, the jaw-separating movement must be, and, in our opinion, is, definite and of sufficient extent to release the lead at predetermined periods. If, as argued by counsel for appellant, the engaging fingers in appellee's structure should, due to use and age, lose their resiliency and fail to perform their intended function—admittedly the same as that performed by the lead-propelling grippers of appellant's structure—age and wear will have merely taken their inevitable toll.

We are here concerned with the structure and operation, not the durability, of appellee's device.

[1] In the operation of appellee's mechanism, the jaw-separating movement always takes place at the beginning of the lead-advancing operation, whereas, in the operation of appellant's structure, the jaw-separating movement takes place when the lead has been completely advanced. In that respect, the two devices are distinguishable. They are identical, however, in that the jaw-separating movement in each device is at the beginning of the rearward movement of the lead-propelling grippers. Accordingly, we are clearly of the opinion that, although the structures of the two devices are different, the count in issue is sufficiently broad to cover them. In view of the fact that the count is not limited to the precise structure disclosed in the specification of appellant's patent, appellant may not now insist that limitations be read into it for the purpose of avoiding the issue of priority. On the contrary, the count must be given the broadest interpretation which it will reasonably support. *Field* v. *Stow*, 18 C. C. P. A. (Patents) 1437, 49 F.(2d) 840, 412 O. G. 557; *Sweetland* v. *Cole*, 19 C. C. P. A. (Patents) 751, 53 F.(2d) 709, 415 O. G. 4.

[2] We conclude, therefore, that the tribunals of the Patent Office reached the right conclusion. Accordingly, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

WOELM *v.* HASSELQUIST

No. 3,923. Decided January 5, 1933

INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIM. Record reviewed and *Held* that H. is entitled to make the claim in issue and that priority was properly awarded to him since his filing date was prior to any date of conception alleged by W.

APPEAL from the Patent Office. Affirmed.

Messrs. Warfield, Fraser & Brown and *Mr. Donald L. Brown* for Woelm.

Messrs. Cromwell, Greist & Warden and *Mr. Raymond L. Greist* for Hasselquist.

GARRETT, *J.*:

This is a companion case to No. 3068, between the same parties, but presents different issues.

On January 29, 1929, Woelm received Patent No. 1,700,247 on application filed April 27, 1925, for "magazine lead pencil." The application upon which the patent was granted seems to have been a continuation, in part, of a prior application filed June 1, 1923.

On February 23, 1922, Hasselquist filed an application, which has since been pending.

Shortly after the issuance of said Woelm patent, Hasselquist copied therefrom claim 12, for the purpose of interference.

The interference was declared June 15, 1929. Woelm, who is the junior party, moved its dissolution on the ground that Hasselquist had no right to make the claim. The Law Examiner denied the motion and the Examiner of Interferences gave judgment for Hasselquist upon the record which, upon appeal, was affirmed by the Board of Appeals. From the latter decision appeal was taken to this court.

The single count reads:

In a step by step pencil, the combination of a casing, a lead-gripping and feeding unit reciprocable within said casing and comprising a plurality of lead-gripping jaws, a member fixedly connected with said casing and formed with an inclined surface in the path of movement of said gripping unit for causing a lead gripping action by said jaws.

The sole question is whether Hasselquist may make the claim which constitutes the count.

An analytical examination of the count discloses the following so-called units, which we designate by numerals in parentheses, with the features of unit No. 2 designated by letters in parentheses.

(1) A casing.

(2) A lead-gripping and feeding unit reciprocable within the casing, comprising

(*a*) A plurality of lead-gripping jaws; (*b*) a member fixedly connected with the casing formed with an inclined surface in the path of movement of said gripping unit.

The foregoing elements comprise the entire combination embraced in what the count defines as a "step by step pencil."

The complete physical structures of the contending parties are evidently quite different in internal arrangement, although the drawings bear much external resemblance. In Woelm's structure the lead is driven downwardly by pressure upon the cap at the top of the casing. In Hasselquist the lead is advanced by the rotary movement of one portion of the casing with respect to another portion of the casing. Woelm's brief states:

Woelm's pencil is a push type pencil, Hasselquist's pencil is a rotary type pencil.

It results that Woelm's casing (leaving the cap out of consideration) comprises a single barrel, having a sloping lower end, while Hasselquist's barrel, or casing, apparently consists of two parts, an upper and lower, so combined as that one revolves with relation to the other, the lower part sloping gradually from near its upper end to its point.

As we view the case, the essential issue is quite a narrow one.

Appellant states his conception of it in the following contention:

* * * Hasselquist cannot make the count as he shows no casing surrounding his lead-gripping and feeding unit to which a member is fixedly attached for causing a lead-gripping action to the jaws, nor does he show any member with an inclined surface in the path of movement of the gripping unit for causing a lead-gripping action to said jaws within the meaning of the count in issue.

The issue was, in effect, stated by the Board to be, whether certain gripping means disclosed by Hasselquist, whereby there is a gripping of the lead for holding it securely during the writing operation (such means being in addition to other means that grip the lead for the purpose of advancing it), may be regarded as "a gripping unit for causing a lead-gripping action" as called for in the last clause of the count.

A detailed description of the operation of the respective devices is given in the opinion by Judge Hatfield in the companion case, 3068, *Woelm* v. *Hasselquist*, 20 C. C. P. A. (Patents) ——, —F.(2d) —, and need not be here repeated.

Appellant's contention is based upon the construction which he insists should be given the count, to wit, that the "gripping unit for causing a lead gripping action" refers to a unit confined to the first gripping movement; also appellant insists that in the Hasselquist device the lead gripping and feeding unit is in the lower, sloping end, or point, of the container and that this is not a casing in the meaning of the count.

To so hold would require that the count be construed strictly by appellant's *device*, whereas it seems, as stated, to be broader in its import.

We are unable to see wherein there is error in holding the sloping section of the barrel of Hasselquist to be a part of the casing. Nothing in the count itself indicates anything to the contrary, nor is there any language in the count which limits the location of the lead gripping and feeding unit to any specific place within the casing.

Neither is there anything in the count to limit the connection of "a member fixedly connected with said casing" to the *front end* of such member, nor does the count limit the "lead gripping action of the gripping movement" to the *first and only* "lead gripping action."

All these limitations would have to be read into the count in order to sustain appellant's conten-

tion. We see no reason why the rule of broad interpretation is not here applicable. Of course, in an interference case well defined limitations may not be disregarded, but such limitations, to be binding, must appear in the count itself. *Woelm* v. *Hasselquist*, supra.

The decision of the Board of Appeals is affirmed. Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,177,697, Leon Gaumont, Developing, fixing, toning and otherwise treating photographic films and prints; 1,209,696, same, Apparatus for drying photographic films, appeal filed October term C. C. A., 3d Cir., Doc. 4943, *Cinema Patents Co., Inc.*, v. *Craft Film Laboratories, Inc., et al.* Decree affirmed Mar. 9, 1933.

1,199,111, Claborn P. Randolph, Vehicle spring; 1,207,807, Theodore Lindenberg, Spring attachments; 1,284,482, Lawrence Skok, Metal casings for leaf springs; 1,544,669, Justin W. Macklin, Metal casing for leaf spring cover; 1,648,742, Fred Schlesser, Spring covers, filed Feb. 16, 1933, D. C. Del. (Wilmington), Doc. 1016 Eq., *Ajax Spring Stabilizer* v. *Briggs and Stratton Corp.*

1,205,678, Erich Steudel, Folding paper boxes, 1,423,272, same, Foldable carton; 1,840,425, Oliver B. Andrews, Bread band, filed Mar. 18, 1933, D. C., E. D. N. Y. (Brooklyn), Doc. E 6901, *O. B. Andrews Co.* v. *S & B Bakers Supply Corp.*

T. M. 116,845. Moses Herzog, Hair nets, filed Feb. 6, 1933, D. C. Mid. D. Pa. (Scranton), Doc. 1028, Jan. term 1933, *Moses Herzog* v. *Nathan B. Cohen*. Decree granting permanent injunction Mar. 7, 1933.

T. M. 155,871, Winthrop Chemical Co., Inc., Sedative and hypnotic, filed Nov. 28, 1931, D. C., N. D. Ill. (Chicago), Doc. 11188, *Winthrop Chemical Co., Inc.*, v. *Christian A. Christiansen (Witte's Pharmacy)*. Consent decree holding validity and infringement Jan. 11, 1932.

Disclaimers

Re. 17,585.—*Josef Mayer*, Karlsbad, Czechoslovakia. PERMANENT-HAIR-WAVING APPLIANCE. Patent dated February 11, 1930. Disclaimer filed April 4, 1933, by the assignee, *The Philad Company*.

Disclaimer is hereby entered to claims 4, 5, 6, and 7 in the above identified Letters Patent, the said claims being in the following words, to wit:

"4. A heater comprising a pair of rigid levers pivoted intermediate their ends, an arcuate casing with straight parallel edges carried by one end of each lever, a heat insulating grip at the other end of each lever, electrical heating elements within said casings, and a spring between said levers pressing said casings toward each other.

"5. A heater comprising two arcuate members arranged to substantially enclose a strand of hair on all sides except that adjacent the scalp of the wearer, electrical heating means associated therewith, a pair of levers pivoted together intermediate their ends, each lever being rigidly attached to one of said arcuate members at one end, and having its other end formed into a heat insulating handle, and a spring means pressing said members toward each other.

"6. A heater comprising a pair of rigid levers pivoted intermediate their ends, an arcuate casing carried by one end of each lever, a heat insulating grip at the other end of each lever, electrical heating elements within said casings, and a terminal-enclosing insulating cover carried by each lever.

"7. A heater comprising two arcuate members arranged to substantially surround a flat spirally wound strand of hair and in this position to have their edges adjacent the wearer's scalp spaced from each other throughout their length, electrical heating means associated therewith, a pair of levers pivoted intermediate their ends, each lever being rigidly attached to one arcuate member and carrying a heat insulating handle."

1,673,942.—*David Helpern*, Brooklyn, N. Y. PERMANENT-WAVING ATTACHMENT. Patent dated June 19, 1928. Disclaimer filed April 4, 1933, by the assignee, *The Philad Company*.

Disclaimer is hereby entered to claims 2, 3, 4, 5, and 6 in the above identified Letters Patent, the said claims being in the following words, to wit:

"2. A device of the character described, including a clamp having elongated jaws in which a lock of hair is adapted to be gripped adjacent to the roots of the hair, a core extending along the said clamp, about which the lock of hair is wound, and means acting between the clamp and the core to set the latter in central relation to the opening between said jaws.

"3. A device of the character described, including a clamp having elongated jaws between which a lock of hair is adapted to be gripped in proximity to the roots of the hair, a core extending along the clamp, about which the hair is adapted to be wound, and means acting between the clamp and the core to cause the latter to retain the hair wound thereon in close proximity to the clamp.

"4. A device of the character described, including a clamp having elongated jaws between which a lock of hair is adapted to be gripped in proximity to the roots of the hair, a core extending along the clamp, about which the hair is adapted to be wound, and means acting between the core and the clamp to prevent the core from turning and hair unwinding, said means serving to set the core in central relation to the opening between the jaws.

"5. A device of the character described, including a clamp having elongated jaws between which a lock of hair is adapted to be gripped in proximity to the roots of the hair, a core extending along the clamp, about which the hair is adapted to be wound, and means acting between the core and the clamp to prevent the core from turning and the hair unwinding, to retain the hair in close proximity to the clamp, wound on said core.

"6. A device of the character described, including a clamp having elongated jaws between which a lock of hair is adapted to be gripped in proximity to the roots of the hair, a core extending along the clamp, upon which the hair is adapted to be wound, and means acting between the clamp and the core to prevent the core from turning and the hair unwinding."

1,683,581.—*George Decker*, Cleveland, Ohio. HAIR-WAVING OUTFIT. Patent dated September 4, 1928. Disclaimer filed April 4, 1933, by the assignee, *The Philad Company*.

Disclaimer is hereby entered to claims 1, 4, and 5 in the above identified Letters Patent, the said claims being in the following words, to wit:

"1. In a hair waving outfit, a clamp comprising a pair of members hingedly connected together at one end, disengageable means for connecting the opposite ends together said disengageable means including an eccentrically mounted cam, a pair of protecting bars, and means for connecting one protecting bar with each of said members, said protecting bars conforming to the size and shape of said members."

"4. In a hair waving outfit, a clamp comprising a pair of metallic members hingedly connected together at one end, swinging disengageable means connecting the opposite ends together, a pair of protecting bars formed of substantially non-heat conducting material, and means for connecting one protecting bar to each of said members, said protecting bars conforming to the size and shape of said members, said last mentioned means being formed to space the protecting bars from said members.

"5. A clamp of the character described comprising a pair of arms articulately connected together at one end of the clamp, a pair of links pivotally connected at one end to the free end of one of said arms, said links being adapted to be positioned to embrace the end of the other arm, a latching lever pivotally connected to the free end of said links, said latching lever having a cam end engageable with the end of the arm inserted between the links and operative to press said arms together."

Adjudicated Patents

(D. C. Ind.) Butterfield patent, No. 1,461,067, for process for making paper folding boxes or the like, *Held* invalid. *Interstate Folding Box Co.* v. *Empire Box Corporation*, 2 F. Supp. 531.

(C. C. A. N. Y.) Regar patent, No. 1,719,062, for method of producing scallops in knitted fabrics, *Held* invalid. *H. K. Regar & Sons* v. *Scott & Williams*, 63 F.(2d) 229.

(D. C. Md.) Benese patent, No. 1,837,752, for tinsel winding machine, *Held* invalid. *George Franke Sons Co.* v. *Wiebke Mach. Co.*, 2 F. Supp. 490.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 25, 1933

[VOL. 429. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 328,199. ZELLSTOFFFABRIK WALDHOF, Mannheim-Waldhof, Germany. Filed June 21, 1932.

Applicant disclaims the words "Suomi Finland" apart from the mark as shown in the drawing.

For Chemical Pulp, Sulphite and Sulphate Pulp, and Mechanical Pulp.

Claims use since July 1, 1931.

CLASS 2

Receptacles

Ser. No. 335,074. SHELLMAR PRODUCTS COMPANY, Chicago, Ill. Filed Feb. 17, 1933.

SHELLMAR

For Wrappers, Bags, and Cartons Produced Wholly or in Part from Paper or Cellulose Sheeting.

Claims use since Aug. 5, 1931.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 324,577. WHITTEMORE BROS. CORP., Cambridge, Mass. Filed Feb. 27, 1932.

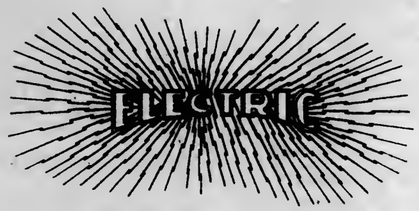
Bag O' Shines

The word "Bag" as found in the trade-mark, when used apart from the mark, is disclaimed.

For Brushes and Materials for Cleaning, Polishing and Coloring Leather Goods, Contained in a Flexible Bag.

Claims use since January, 1932.

Ser. No. 324,558. GARFINKEL & RITTER, doing business as Jaunty Silk Company, New York, N. Y. Filed Feb. 2, 1933.



The drawing is stippled for shading purposes only. No claim is made to the exclusive use of the words "Silk Stain Remover" apart from the mark as shown in the drawing.

For Preparation for Removing Spots, Stains, and the Like.

Claims use since August, 1931.

Ser. No. 334,983. THE CLEVELAND CLEANER AND PASTE CO., Cleveland, Ohio. Filed Feb. 15, 1933.

For Compound for Cleaning Wall Paper, Frescoe, Calcimine, Window Shades, and Tapestries.
Claims use since Jan. 1, 1889.

Ser. No. 334,984. THE CLEVELAND CLEANER AND PASTE CO., Cleveland, Ohio. Filed Feb. 15, 1933.

PAINTERS' FRIEND

For Paint Cleaning Compound which May Also be Used for General Household Cleaning Purposes.
Claims use since Dec. 15, 1932.

Ser. No. 335,006. SHU-MILK PRODUCTS CORPORATION, Orange, N. J. Filed Feb. 15, 1933.

The drawing is lined to indicate red. The representation of the carton is disclaimed apart from the mark as shown in the drawing.
For Shoe Cleanser, Shoe Polishes, and Dressing.
Claims use since Jan. 3, 1933.

Ser. No. 335,280. LEE W. LOCKWOOD, doing business as La Dento Laboratories, Minneapolis, Minn. Filed Feb. 25, 1933.

LA DENTO

For Sterilizing, Cleansing Powder for Artificial Teeth.
Claims use since Dec. 17, 1930.

Ser. No. 335,595. RICHARD HUDNUT, New York, N. Y. Filed Mar. 11, 1933.

CHEVRON

For Shaving Cream.
Claims use since Sept. 10, 1932.

Ser. No. 335,768. COLGATE-PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Mar. 17, 1933.

BARDELLO

For Soap.
Claims use since March, 1925.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 313,573. THE J. W. WOOLFOLK CO., INC., Fort Valley, Ga. Filed Apr. 20, 1931.

ZINK-O-DUST

Applicant disclaims the right to the exclusive use of the words "Zink" and "Dust", apart from the trade-mark as shown in the drawing.
For Dry Insecticide and Fungicide Composition.
Claims use since December, 1929.

Ser. No. 318,897. GEORG DRALLE, Hamburg and Altona, Germany. Filed Sept. 4, 1931.

ILLUSION

For Perfumery.
Claims use since Mar. 25, 1909.

Ser. No. 324,002. ARTHUR A. DORT, Brooklyn, N. Y. Filed Feb. 12, 1932.

Trodacha

For Perfumes, Face Creams, Face Powders, Talcum Powder, Body Powders, Sachets, Manicuring Necessities.—Namely, Cuticle Softener, Cuticle Remover, Nail Cleanser, and Nail Polish; Skin Tonics, Ointments, and Lotions; Hair Preparations, Shampoos, Bath Crystals, Bath Powders, Dental Cream, and Mouth Wash; Toilet Waters, After-Shaving Lotions and Essential Oils—Namely, Perfume Preparations.
Claims use since Nov. 11, 1931.

Ser. No. 327,600. ORLANDO KEITH OWEN, doing business as Dao Corporation, Terre Haute, Ind. Filed May 31, 1932.

DAO

For Insecticide.
Claims use since Apr. 5, 1932.

Ser. No. 332,240. JOSEPH THIMEY, Denver, Colo. Filed Nov. 17, 1932.

For Cold Cream, Acne Cream, Liquefying Cream, Hand Lotions, Cucumber Cream, Witch Hasel Cream, Complexion Rejuvenator Cream, After Shave Lotion, Nourishing Cream, Vanishing Cream, Rose Cleansing Cream, Antichap Lotion, Freckle Cream, Lemon Cleansing Cream, Wrinkle and Tissue Cream, Skin Tonic, Skin Lotion for Pimples and Blackheads, Skin Bleach, Skin Whitener, Beauty Clay, Deodorant, Lilac Vegetal, Henna Shampoo, Depilatory, Hair Curler, Brilliantine, Pineapple Shampoo, Hair Dressing, Dandruff Lotion, Tar Shampoo, Cocoanut Shampoo, Hair Pomade, Hair Tonic, Eau de Cologne, Muscle Oil, Bay Rum, Astringent, Nail Polish, Talcum Powder, Liquid Powder.
Claims use since September, 1922.

Ser. No. 332,390. THE R. M. HOLLINGSHEAD CO., Camden, N. J. Filed Nov. 21, 1932.

WHIZ

For Carbon Decomposer, Anti-Freeze Compounds, Chemicals and Chemical Preparations—Namely, Insecticides.
Claims use since Sept. 1, 1905.

Ser. No. 333,219. GODFREY L. CABOT, INC., Boston, Mass. Filed Dec. 20, 1932.

SPHERON

For Carbon Black for Use in the Manufacture of Rubber.
Claims use since Dec. 6, 1932.

Ser. No. 333,468. PARFUMERIE ST. DENIS, New York, N. Y. Filed Dec. 29, 1932.

DE TOUT MON COEUR

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs; Skin Whitener in Liquid, Cream, and Solid Form; Eyebrow and Eyelash Grower, Eye Drops, Eyebrow Pencils, Chemical Preparations Suitable for the Darkening of Eyebrows and Eyelashes, Hand Lotions, Skin Lotions, After Shaving Lotions, Pomades, Face Powders, Talcum Powders, Body Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Depilatories, Nail Creams, Nail Bleaches, Nail Powders, Nail Polishes, Witch Hasel, Peroxide, Petroleum Jellies, Witch Hasel Salves, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disinfectants, Bay Rum, Perfumes and Toilet Water.
Claims use since Nov. 15, 1932.

Ser. No. 333,783. ADA FLINT SMITH, doing business as Essa Manufacturing Co., Albany, N. Y. Filed Jan. 5, 1933.

For Ointment and Toilet Cream.
Claims use since Aug. 15, 1902.

Ser. No. 334,023. PARFUMERIE RIGAUD, INC., New York, N. Y. Filed Jan. 17, 1933.

RIGAUD

The proper name "Rigaud" being disclaimed herein apart from the mark shown.

For Perfumes, Toilet Waters, Face Creams, Bath Salts, Bath Powder, Face Powder, Talcum Powder, Sachet, Rouge, Lip Sticks, Lotion for the Skin and Hair, Brilliantine.

Claims use since Dec. 29, 1932.

Lady of Leisure

For Perfumes.

Claims use since Nov. 10, 1932.

Ser. No. 335,045. THE J. B. WILLIAMS COMPANY, Glastonbury, Conn. Filed Feb. 16, 1933. Under section 5b of the act of 1905 as amended in 1920.

Williams

For Preparations for Treatment of the Hair and Beard, Toilet Powders, Preparations for Cleaning the Teeth, and After-Shaving Preparations.

Claims use since October, 1901, as to preparations for treatment of the hair and beard; since about the month of March, 1915, as to toilet powders; since about the year 1891 as to preparations for cleaning the teeth; and since about Oct. 27, 1917, as to after-shaving preparations.

Ser. No. 335,082. HERMAN BARST, doing business as Selsit Products Co., New York, N. Y. Filed Feb. 18, 1933.

B. X. T.

For Preparation for the Treatment of Indigestion.

Claims use since Feb. 8, 1933.

Ser. No. 335,405. TENNESSEE EASTMAN CORPORATION, Kingsport, Tenn. Filed Mar. 1, 1933.

TEC-ANTI-FREEZE

The term "Anti-Freese" is disclaimed except as part of the compound word shown in the drawing.

For Anti-Freese Compound.

Claims use since Nov. 12, 1932.

Ser. No. 335 512. MCCOY'S LABORATORIES, INC., New York, N. Y. Filed Mar. 6, 1933.

In the drawing the background upon which the letters are superimposed is shown in red. The words "Cod Liver Oil Extract Tablets" are disclaimed apart from the mark shown on the drawing.

For Cod Liver Oil and Cod Liver Oil Compound in Tablet Form.

Claims use since Nov. 30, 1929.

Ser. No. 335,524. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Mar. 6, 1933.

BANDIP

For Insecticides.
Claims use since Jan. 18, 1933.

Ser. No. 335,640. HOUBIGANT, INC., New York, N. Y. Filed Mar. 14, 1933.

DULL finish

For Face Powder.
Claims use since Jan. 2, 1933.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 335,300. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 25, 1933.

ALLSTATE

For Gun and Revolver Cartridges.
Claims use since Dec. 29, 1932.

CLASS 10

Fertilizers

Ser. No. 335,497. CAPITOL RENDERING WORKS, INC., Denver, Colo. Filed Mar. 6, 1933.

IVY

For Fertiliser.
Claims use since 1905.

Ser. No. 335,665. COMMERCIAL LABORATORIES, INC., Newark, N. J. Filed Mar. 15, 1933.

Thrivo

For Plant Fertiliser.
Claims use since July 21, 1932.

CLASS 11

Inks and Inking Materials

Ser. No. 334,903. THE AULT & WIBORG COMPANY, New York, N. Y. Filed Feb. 13, 1933.

RITE RITE

For Carbon Paper and Typewriter Ribbons.
Claims use since March, 1925.

CLASS 12

Construction Materials

Ser. No. 335,077. STANDARD FUEL ENGINEERING COMPANY, Detroit, Mich. Filed Feb. 17, 1933.

ZERO

For Refractory Material in Plastic Form—Namely, for Use in the Formation of Furnace Hearths and for Boiler and Furnace Linings and for Repair Thereof.
Claims use since Feb. 15, 1933.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 333,146. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Filed Dec. 17, 1932.

OLYMPIC

For Sheet-Metal and Wire.
Claims use since Sept. 28, 1932 on sheet-metal and since Oct. 4, 1932, on wire.

CARNEGIE LIBRARY OF ATLANTA

Ser. No. 333,508. COPPER & BRASS RESEARCH ASSOCIATION, New York, N. Y. Filed Dec. 30, 1932.

CABRA

For Copper and Copper Alloys.
Claims use since Dec. 1, 1932.

Ser. No. 334,350. DORMAN, LONG & CO., LIMITED, Middlesbrough, England. Filed Jan. 26, 1933.

CHROMADOR

For Joist Steel, Channel Steel, Angle Steel, T Steel, and Steel in Flats and Plates, All for Use in Bridge Building and Structural Engineering.
Claims use since July 1, 1932.

CLASS 16

Paints and Painters' Materials

Ser. No. 320,592. S. C. JOHNSON & SON, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis., a Corporation of Wisconsin. Filed Oct. 29, 1931.

JOHNSON'S WAX

Claim is hereby waived to the word "Wax" apart from the trade mark shown in the drawing.
For Polishing Wax for Coating and Polishing Wood, Metal, and Other Surfaces.
Claims use since Jan. 21, 1931.

Ser. No. 334,962. THE CLEVELAND CLEANER AND PASTE CO., Cleveland, Ohio. Filed Feb. 15, 1933.

APEX

The word "Apex" is printed in red.
For Painters Wall Size.
Claims use since March, 1932.

Ser. No. 334,985. THE CLEVELAND CLEANER AND PASTE CO., Cleveland, Ohio. Filed Feb. 15, 1933.

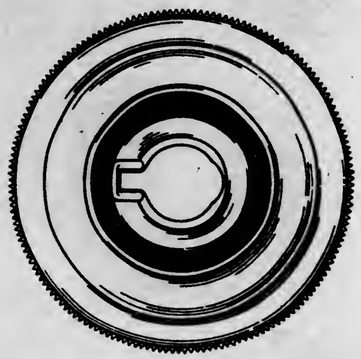
The drawing is lined for the colors blue and red.
For Brush Cleaner.
Claims use since April, 1929.

CLASS 17

Tobacco Products

Ser. No. 335,762. BAYUK CIGARS INCORPORATED, Philadelphia, Pa. Filed Mar. 17, 1933.

PRINCE HAMLET

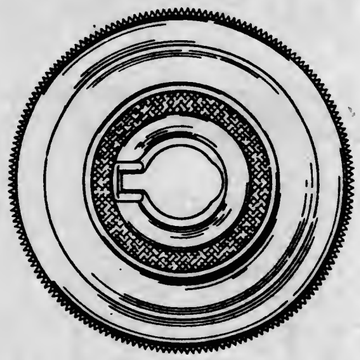


For Cigars.
Claims use since Mar. 9, 1897.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 326,960. STANT MANUFACTURING COMPANY, Connorsville, Ind. Filed May 7, 1932.



The trade-mark consists of a black circle arranged concentric with the center portion of said filler caps and spaced between said central portion and the periphery of said filler caps, all other subject matter in the drawing being specifically disclaimed for trade-mark purposes.

For Vehicle Radiator and Gasoline Filler Caps.

Claims use since Apr. 21, 1932.

Ser. No. 326,965. STANT MANUFACTURING COMPANY, Connorsville, Ind. Filed May 7, 1932.

The trade-mark consists of an orange circle arranged concentric with the center portion of said filler caps and spaced between said central portion and the periphery of said filler caps, all other subject matter in the drawing being specifically disclaimed for trade-mark purposes.

For Vehicle Radiator and Gasoline Filler Caps.

Claims use since Apr. 21, 1932.

Ser. No. 335,418. GREEN FOUNDRY COMPANY, St. Louis, Mo. Filed Mar. 2, 1933.

GREENITE

For Cast Metal Brake Drums.

Claims use since Feb. 21, 1933.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 328,420. THE FRINK CORPORATION, Long Island City, N. Y. Filed June 30, 1932.

No claim is made to the word "Lamp" apart from the mark shown in the drawing.

For Electric Floor and Table Lamps and Parts Thereof.

Claims use since May 31, 1932.

Ser. No. 328,421. THE FRINK CORPORATION, Long Island City, N. Y. Filed June 30, 1932.

The picture is a representation of St. Therese.

For Electric Floor and Table Lamps and Parts Thereof.

Claims use since May 31, 1932.

Ser. No. 329,794. THE FRINK CORPORATION, Long Island City, N. Y. Filed Aug. 24, 1932.

The
Little Flower

For Electric Floor and Table Lamps and Parts Thereof.

Claims use since May 31, 1932.

Ser. No. 331,259. THE KITCHENAID MANUFACTURING COMPANY, Troy, Ohio. Filed Oct. 14, 1932.

Kaidette

For Electrically-Driven Beating, Treating, and Mixing Machines for Foodstuffs and Whipping, Beating, Mixing, Stirring, and Juice Extracting Attachments Therefor.

Claims use since Oct. 1, 1932.

Ser. No. 332,787. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Dec. 5, 1932.

CRAFTSMAN

For Portable Electric Drills and Saws and Portable Electric Motors.

Claims use since Oct. 28, 1927.

Ser. No. 333,958. WESTINGHOUSE ELECTRIC AND MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Jan. 14, 1933.

MICRO-TROLLER

For Vacuum Tube Controllers for Controlling Electric Motors.

Claims use since Dec. 15, 1932.

Ser. No. 334,091. EDISON-SPLITDORF CORPORATION, West Orange, N. J. Filed Jan. 19, 1933.

ALBANITE

For Spark Plugs.

Claims use since Jan. 14, 1933.

Ser. No. 334,672. ECLIPSE MACHINE COMPANY, Elmira Heights, N. Y. Filed Feb. 6, 1933.

PROTIX

For Unitary Electrical Starting Mechanism for Internal Combustion Engines and Parts Thereof and Circuit Controlling Mechanism Therefor, Automatic Starter Controllers and Backfire Circuit Breakers.

Claims use since Jan. 20, 1933.

Ser. No. 334,673. ECLIPSE MACHINE COMPANY, Elmira Heights, N. Y. Filed Feb. 6, 1933.

STARTIX

For Unitary Automatic Electrical Starting Mechanism for Internal Combustion Engines and Parts Thereof and Circuit Controlling Mechanism Therefor, Automatic Starter Controllers and Backfire Circuit Breakers.

Claims use since June 20, 1931.

Ser. No. 334,868. THE CROSLEY RADIO CORPORATION, Cincinnati, Ohio. Filed Feb. 11, 1933.

SYNCRONODE

For Power Devices Comprising the Combination of a Transformer and a Rectifier for Adapting Current to Radio Use, and Parts Therefor.

Claims use since Jan. 30, 1933.

Ser. No. 334,972. CHICAGO TELEPHONE SUPPLY COMPANY, Elkhart, Ind. Filed Feb. 14, 1933.

C.T.S.Co.

For Volume Controls, Tone Controls, and Switches, for Use in Connection with Radio Receiving and Amplifying Equipment.

Claims use since April, 1930.

Ser. No. 334,989. DRIVER-HARRIS COMPANY, Harrison, N. J. Filed Feb. 15, 1933.

Lohm

For Wire Especially Adapted for Electrical Purposes.

Claims use since Dec. 31, 1932.

Ser. No. 334,990. DRIVER-HARRIS COMPANY, Harrison, N. J. Filed Feb. 15, 1933.

Midohm

For Wire Especially Adapted for Electrical Purposes.

Claims use since Dec. 12, 1932.

Ser. No. 335,223. WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Feb. 28, 1933.

MOTOR WATCHMAN

For Manually-Operated Motor Starting Switches.

Claims use since Mar. 3, 1932.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 332,577. THE DRAPER-MAYNARD COMPANY, Plymouth, N. H. Filed Nov. 29, 1932.

HUSKY  BRAND

The word "Brand" is disclaimed apart from the mark shown in the drawing.

For Balls, Bats, Rackets, Clubs, Sticks, Bases, Goals, Gloves, Mitts, Masks, Protectors, Racket-Presses, Racket-Covers, Nets and Bags Used in the Games of Baseball, Football, Basketball, Tennis, and Golf.

Claims use since Nov. 22, 1932.

Ser. No. 335,387. AMERICAN ANODE INC., Akron, Ohio. Filed Mar. 1. 1933.

ANODE

For Rubber Toy Balloons.
Claims use since Jan. 29, 1932.

Ser. No. 335,388. AMERICAN ANODE INC., Akron, Ohio. Filed Mar. 1, 1933.

ANOTEX

For Rubber Toy Balloons.
Claims use since Jan. 29, 1932.

Ser. No. 335,389. AMERICAN ANODE INC., Akron, Ohio. Filed Mar. 1, 1933.

ANODEX

For Rubber Toy Balloons.
Claims use since Jan. 29, 1932.

Ser. No. 335,465. ESTHER LAROSE HARRIS, Atlanta, Ga. Filed Mar. 7, 1933.

For Toy Drawing Books.
Claims use since Feb. 25, 1933.

Ser. No. 335,505. HAMBLET STUDIOS, INC., Akron, Ohio. Filed Mar. 6. 1933.

JIGETTE

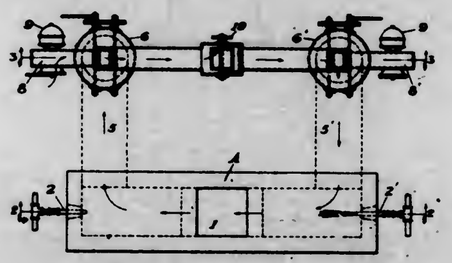
REISSUES

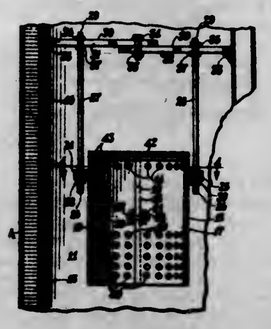


APRIL 25, 1933

18,800. ANTIRATTLE DEVICE. ISAAC ANDREWS, Spartanburg, S. C. Original No. 1,813,182, dated July 7, 1931, Serial No. 493,180, filed Nov. 3, 1930. Application for reissue filed Oct. 31, 1932. Serial No. 640,573. 5 Claims. (Cl. 16—86.)

5. In a door dovetail, in combination, a casing, an abutment thereon, a carrier vertically slidable in said casing above said abutment, a substantially non-resilient roller carried by said carrier and exposed below the same, and resilient means for urging said carrier downwardly.

18,801. RECIRCULATING SYSTEM AND APPARATUS FOR WASTE FURNACE GASES. GUSTAV A. MERKT, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Original No. 1,814,567, dated July 14, 1931, Serial No. 393,100, filed Sept. 18, 1929. Application for reissue filed Feb. 13, 1933. Serial No. 656,559. 22 Claims. (Cl. 263—15.)



1. In the operation of a heating furnace, the improvement which consists in entraining the waste furnace gases by a blast of air on the outgoing side of the furnace, and using a portion only of the resulting mixture of air and waste gases on the ingoing side of the furnace to support combustion therein.

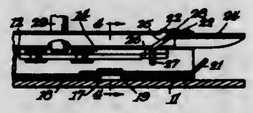
18,802. PROCESS FOR MAINTAINING THE COMPOSITION OF VISCOSE PRECIPITATING BATHS CONTAINING MAGNESIUM SULPHATE. JOHANN JOSEPH STOECKLY and RICHARD BARTUNEK, Teltow Seehof near Berlin, Germany, assignors to American Glanzstoff Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 27, 1928, Serial No. 322,295, now Patent No. 1,793,640, and in Germany Dec. 15, 1927. Divided and application filed June 17, 1930, Serial No. 461,845, Patent No. 1,863,172, dated June 14, 1932. Application for reissue filed Oct. 21, 1932. Serial No. 638,914. 4 Claims. (Cl. 23—121.)

1. For maintaining the composition of sulphuric acid viscose precipitating baths containing magnesium sulphate and sodium sulphate in solution, a process comprising the steps of separating out part of the soluted sodium sulphate in substantially pure form from the bath at a magnesium sulphate content of less than about 170 gr. per litre by cooling the same, to from 0 to —10° C. separately concentrating the resulting liquor and adding it, with a proportion of magnesium sulphate to the precipitating bath.

18,803. FURNACE APPLIANCE. JOHN M. DUFFY, Ventnor, N. J. Original No. 1,822,517, dated Sept. 8, 1931, Serial No. 513,839, filed Feb. 6, 1931. Application for reissue filed Jan. 24, 1933. Serial No. 653,276. 4 Claims. (Cl. 126—148.)

4. A device of the kind described for use in a furnace having a fire box, said device comprising a hollow apertured member, a horizontally adjustable supporting framework attached thereto, whereby said hollow member may be adjusted horizontally, and means for securing said hollow member in its position of horizontal adjustment.

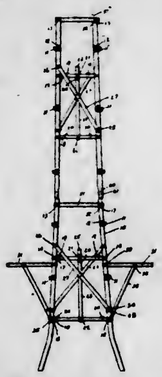
18,804. KNITTED FOOTWEAR AND METHOD OF MAKING THE SAME. ELMER N. JOHA, Wauwatosa, Wis., assignor to Reliable Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Original No. 1,888,172, dated Nov. 15, 1932, Serial No. 615,605, filed June 6, 1932. Application for reissue filed Jan. 5, 1933. Serial No. 650,342. 17 Claims. (Cl. 66—177.)



13. Knitted footwear of the shoe or slipper type having longitudinally extending wales in the side portions, connected across the toe and instep by wales extending at an angle to those in the side portions from the point of the toe to the ankle encircling margin, and having selvedged margins at the ankle and along the sole, said toe and instep covering wales being continuous with the side wales along lines of deflection extending from the ankle embracing selvedged margins to the selvedged sole margins.

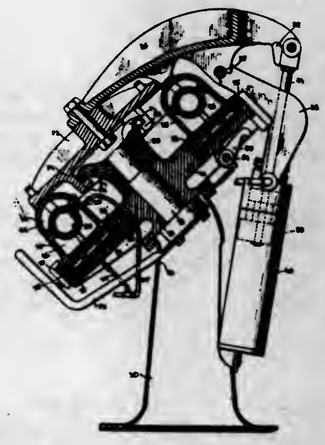
18,805. PROCESS OF MANUFACTURING WHITE PORTLAND CEMENT, ETC. GUSTAV BERGER, FELIX ENGELHARDT, and RICHARD STECKHAN, Brunswick, Germany, assignors to "Miag" Mühlenbau und Industrie Aktiengesellschaft, Brunswick, Germany. Continuation of original application Serial No. 171,366, filed Feb. 26, 1927, Patent No. 1,865,418, dated June 28, 1932, Serial No. 573,304, filed Nov. 5, 1931, and in Germany Jan. 27, 1927. Application for reissue filed Dec. 16, 1932. Serial No. 647,696. 9 Claims. (Cl. 106—25.)

9. The herein described process of manufacturing cement, which consists in adding fluorspar and borax to ground raw material containing coloring matter, melting the mixture, granulating the same, and thereafter treating the same for transforming the same into cement.



18,806. LOOSE LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Original No. 1,897,001, dated Feb. 7, 1933, Serial No. 519,137, filed Feb. 28, 1931. Application for reissue filed Feb. 27, 1933. Serial No. 659,542. 12 Claims. (Cl. 129—24.)

5. In a loose leaf binder, a plate arched transversely with the crown upward, a toggle including prong-bearing members having a toggle joint beneath the intermediate portion of the plate, a rivet through the plate in the crown of the arch, a booster lever fulcrumed upon the rivet and having one arm operatively associated with the toggle joint to raise it and open the prongs.

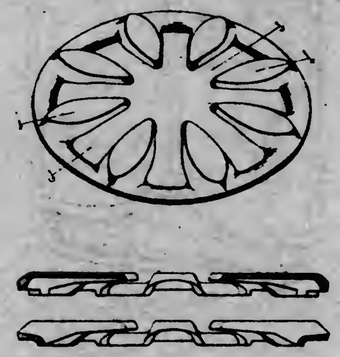


10. A loose leaf binder having a cover plate, a rivet head projecting above the normal surface of the plate, and a transverse rib formed in the cover adjacent the rivet to prevent the paper leaves from catching upon the rivet head.

18,807. KNOCKDOWN CONVERTIBLE STAND. WILLIAM C. KIRK, Indianapolis, Ind. Original No. 1,688,546, dated Oct. 23, 1928, Serial No. 161,788, filed Jan. 18, 1927. Application for reissue filed Oct. 22, 1930. Serial No. 490,519. 4 Claims. (Cl. 211—85.)

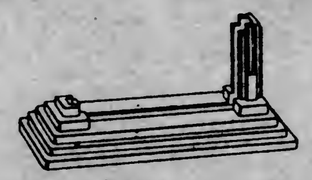
1. A knockdown display stand, comprising a pair of independent and self-sustaining stand units, each comprising four legs arranged in pairs, two opposite pairs being rigidly connected together for forming sides and means connecting collapsibly said paired sides together for knockdown purposes, the upper ends of the lower stand legs and the lower ends of the upper stand legs being complementary and forming a detachable connection between the units.

18,808. VULCANIZER. JAMES WILLIAM BRUNDAGE, Akron, Ohio, assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Original No. 1,832,856, dated Nov. 24, 1931, Serial No. 261,449, filed Mar. 14, 1928. Application for reissue filed Mar. 4, 1932. Serial No. 596,880. 7 Claims. (Cl. 18—17.)



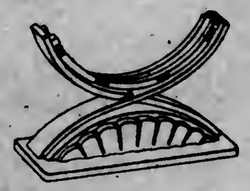
7. Apparatus for vulcanizing inner tubes or the like, said apparatus comprising complemental mold sections, means for supporting one mold section in a fixed position against movement in one axial direction and against movement in transverse directions therefrom, said mold section being freely movable in the other axial direction, a fixed pivot independent of the mold sections, means carrying the other mold section, and normally supported on said fixed pivot, said supporting means and said fixed pivot being located whereby the second section may be swung on said fixed pivot into a closed position in registry with the first section when supported in said fixed position, said carrying means being free to move off said fixed pivot, locking means associated with the supporting means for engaging the swinging section to hold it in registry with the first named section on said supporting means, and means for forcing the first named section and the swinging section off said supporting means against said locking means to squeeze the mold sections together after the same are closed, said forcing means comprising a fluid pressure operated platen associated with said supporting means.

DESIGNS



APRIL 25, 1933

89,673. GAS RANGE GRID. WILLIAM D. ANTRIM, Gloucester, N. J., assignor to Roberts & Mander Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1933. Serial No. 46,973. Term of patent 7 years.

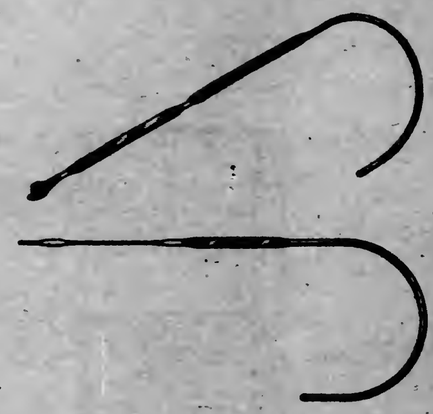


The ornamental design for a gas range grid, substantially as shown.

89,674. PICTURE FRAME. WALTER BARTZ, New York, N. Y., assignor to Man-O-Lamp Corporation, a Corporation of New York. Filed Mar. 1, 1933. Serial No. 47,362. Term of patent 3½ years.

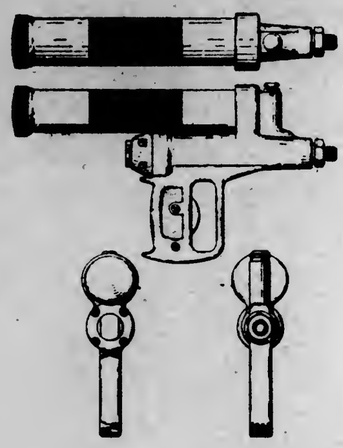
The ornamental design for a picture frame substantially as shown and described.

89,675. PICTURE FRAME. WALTER BARTZ, New York, N. Y., assignor to Man-O-Lamp Corporation, a Corporation of New York. Filed Mar. 1, 1933. Serial No. 47,363. Term of patent 3½ years.



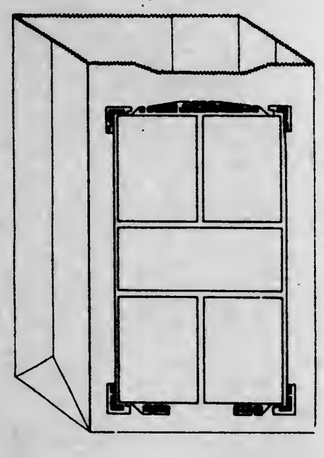
The ornamental design for a picture frame substantially as shown and described.

89,676. PICTURE FRAME. WALTER BARTZ, New York, N. Y., assignor to Man-O-Lamp Corporation, a Corporation of New York. Filed Mar. 1, 1933. Serial No. 47,364. Term of patent 3½ years.



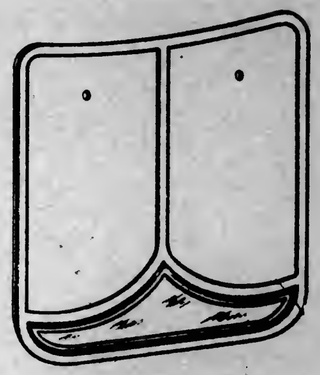
The ornamental design for a picture frame substantially as shown and described.

89,677. TEMPLE FOR SPECTACLES. AUSTIN B. BELGARD, Chicago, Ill., assignor to Belgard-Spero, Inc., a Corporation of Delaware. Filed Oct. 29, 1932. Serial No. 45,629. Term of patent 7 years.



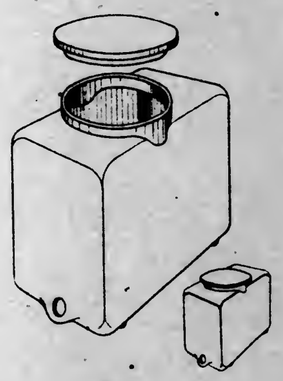
The ornamental design for a temple for spectacles, as shown.

89,678. GREASE GUN. JOHN F. CARTER, Bryan, Ohio, assignor to The Aro Equipment Corporation, Bryan, Ohio, a Corporation of Ohio. Filed Jan. 18, 1933. Serial No. 46,818. Term of patent 7 years.



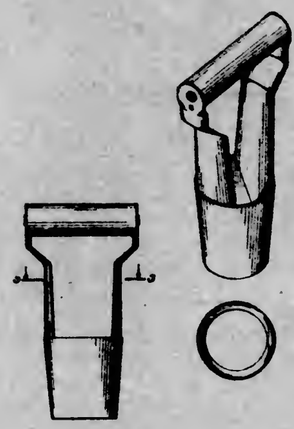
The ornamental design for a grease gun substantially as shown.

89,679. BAG. DAVID A. CHRISTIANSON, Atlanta, Ga., assignor, by mesne assignments, to The Ad-Bag Sales Corporation, a Corporation of Delaware. Filed Sept. 8, 1932. Serial No. 44,774. Term of patent 3½ years.



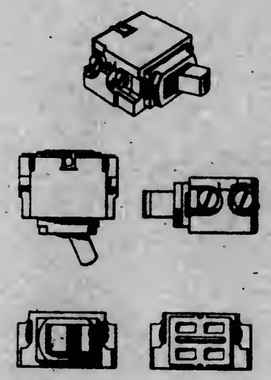
The ornamental design for a bag, as shown.

89,680. FENDER APRON. JOSEPH H. COHEN, Bridgeport, Conn. Filed Dec. 29, 1932. Serial No. 46,650. Term of patent 14 years.



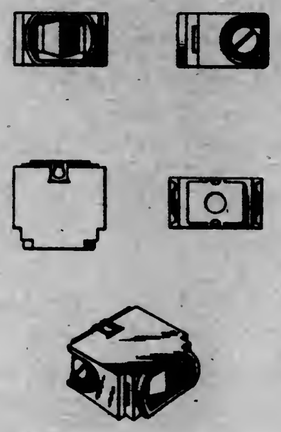
The ornamental design for a fender apron, as shown and described.

89,681. COMBINED GLASS CONTAINER AND COVER. ALVIE C. CRIMMEL and HENRY H. CRIMMEL, Hartford City, Ind. Filed July 11, 1932. Serial No. 44,309. Term of patent 7 years.



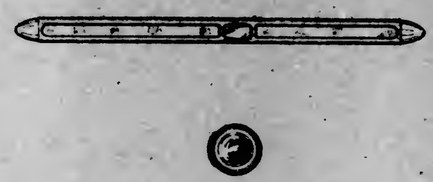
The ornamental design for a combined glass container and cover substantially as shown and described.

89,682. PLANTING TOOL. JOHN P. CROASDALE, Jr., Berwyn, and JOHN ARTHUR ROBERTS, Philadelphia, Pa. Filed Oct. 5, 1932. Serial No. 45,233. Term of patent 7 years.



The ornamental design for a planting tool as shown.

89,683. ELECTRIC SNAP SWITCH. VICTOR R. DESPARD, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 28, 1933. Serial No. 47,029. Term of patent 14 years.

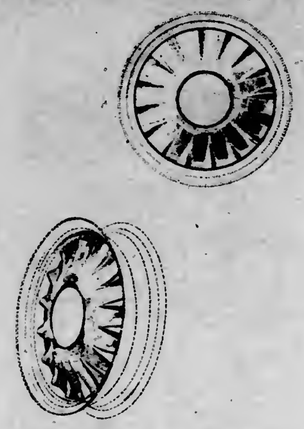


The ornamental design for an electric snap switch substantially as shown.

89,684. ELECTRIC CONVENIENCE OUTLET. VICTOR R. DESPARD, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 28, 1933. Serial No. 47,030. Term of patent 14 years.

The ornamental design for an electric convenience outlet substantially as shown.

89,685. VEHICLE SIGNAL LAMP. CHARLES L. DILLINGHAM, Indianapolis, Ind. Filed Oct. 24, 1932. Serial No. 45,534. Term of patent 14 years.

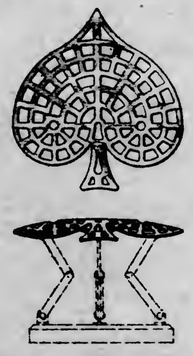


The ornamental design for a vehicle signal lamp, as shown.

89,686. VEHICLE SIGNAL LAMP. CHARLES L. DILLINGHAM, Indianapolis, Ind. Filed Oct. 28, 1932. Serial No. 45,605. Term of patent 14 years.

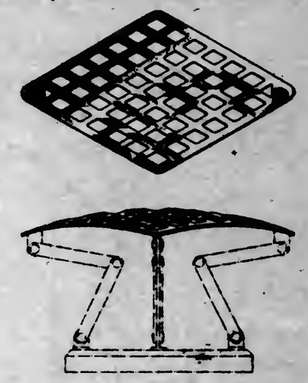
The ornamental design for a vehicle signal lamp, as shown.

89,687. DISK WHEEL. CAROLUS L. EKSERDJIAN and TALMON A. DAVENPORT, Detroit, Mich. Filed Dec. 7, 1932. Serial No. 46,820. Term of patent 3½ years.



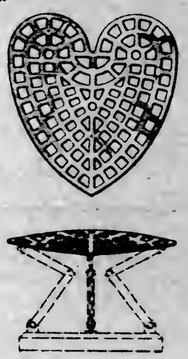
The ornamental design for a disk wheel substantially as shown.

89,688. FLOWER HOLDER. ETHEL A. FIELD, New York, N. Y. Filed Jan. 11, 1933. Serial No. 46,791. Term of patent 14 years.



The ornamental design for a flower holder as shown.

89,689. FLOWER HOLDER. ETHEL A. FIELD, New York, N. Y. Filed Jan. 11, 1933. Serial No. 46,792. Term of patent 14 years.



The ornamental design for a flower holder as shown.

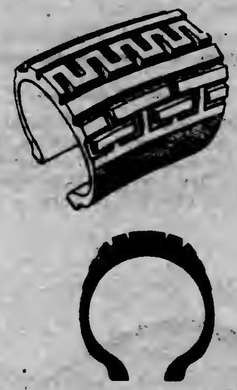
89,690. FLOWER HOLDER. ETHEL A. FIELD, New York, N. Y. Filed Jan. 11, 1933. Serial No. 46,793. Term of patent 14 years.

The ornamental design for a flower holder as shown.

89,691. FLOWER HOLDER. ETHEL A. FIELD, New York, N. Y. Filed Jan. 11, 1933. Serial No. 46,794. Term of patent 14 years.

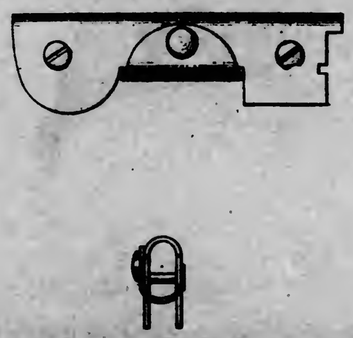
The ornamental design for a flower holder as shown.

89,692. DRESS. NETTIE FISCHMANN, St. Louis, Mo. Filed Mar. 1, 1933. Serial No. 47,359. Term of patent 3½ years.



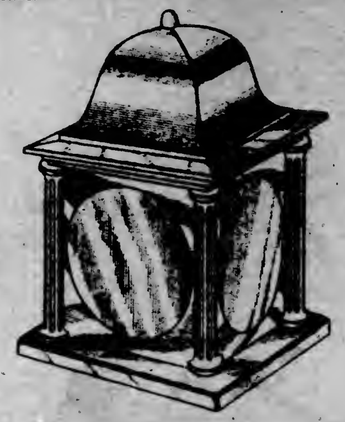
The ornamental design for a dress, as shown.

89,693. LADIES' SUIT. NETTIE FISCHMANN, St. Louis, Mo. Filed Mar. 1, 1933. Serial No. 47,360. Term of patent 3½ years.



The ornamental design for a ladys' suit, as shown.

89,694. VEHICLE TIRE. ELIS O. FRITCH, Cumberland, Md., assignor to The Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Jan. 14, 1933. Serial No. 46,829. Term of patent 14 years.



The ornamental design for a vehicle tire as shown.

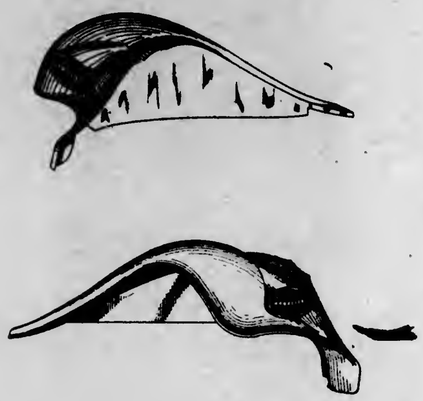
89,695. POCKET KEYHOLDER. MORTON GOLDSHOLL, Chicago, Ill. Filed Dec. 30, 1932. Serial No. 46,668. Term of patent 14 years.

The ornamental design for a pocket keyholder as shown.

89,696. DOME FOR A LIQUID DISPENSING APPARATUS. CLEMENT P. GRIFFITH, Fort Wayne, Ind., assignor to S. F. Bowser & Company, Inc., Fort Wayne, Ind. Filed Dec. 15, 1932. Serial No. 46,482. Term of patent 7 years.

The ornamental design for a dome for a liquid dispensing apparatus substantially as shown and described.

89,697. TEXTILE FABRIC OR SIMILAR ARTICLE. MACLYN GUHL, Forest Hills, N. Y., assignor to William Willheim Co., Inc., New York, N. Y. Filed Mar. 18, 1933. Serial No. 47,503. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article as shown.

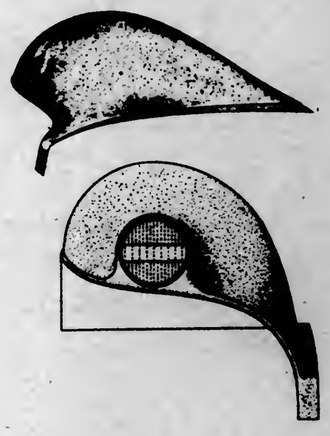
89,698. FINGER RING. ARTHUR HOPPE, River Edge, N. J., assignor to J. R. Wood & Sons, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 25, 1933. Serial No. 46,979. Term of patent 14 years.

The ornamental design for a finger ring, as shown and described.

89,699. COMBINED FENDER, HEAD LAMP, PARKING LAMP, AND HORN CASING. JAMES R. HUGHES, South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 29, 1932. Serial No. 45,643. Term of patent 14 years.

The ornamental design for a combined fender, headlamp, parking lamp, and horn casing substantially as shown.

89,700. COMBINED FENDER, HEAD LAMP, PARKING LAMP, AND HORN CASING. JAMES R. HUGHES, South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 29, 1932. Serial No. 45,644. Term of patent 14 years.

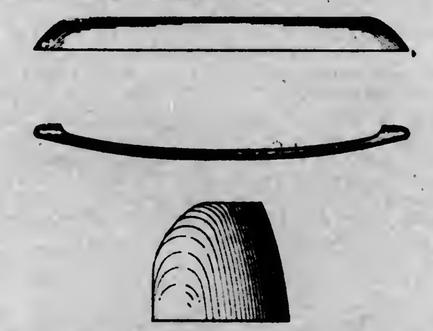


The ornamental design for a combined fender, headlamp, parking lamp, and horn casing substantially as shown.

89,701. COMBINED FENDER, HEAD LAMP, PARKING LAMP, AND HORN CASING. JAMES R. HUGHES, South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 29, 1932. Serial No. 45,645. Term of patent 14 years.

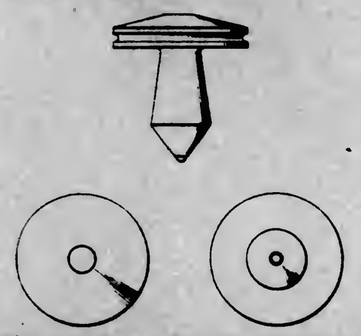
The ornamental design for a combined fender, headlamp, parking lamp, and horn casing substantially as shown.

89,702. COMBINED FENDER AND HEAD LAMP CASING. JAMES R. HUGHES, South Bend, Ind., assignor to The Pierce-Arrow Motor Car Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 29, 1932. Serial No. 45,646. Term of patent 14 years.



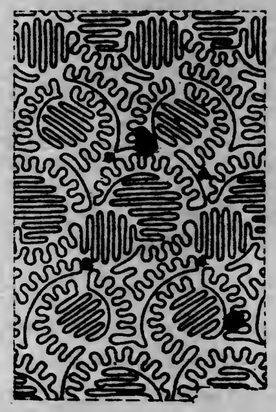
The ornamental design for a combined fender and headlamp casing substantially as shown.

89,703. COMBINED FENDER, HEAD LAMP CASING, PARKING LAMP CASING, AND HORN CASING. JAMES R. HUGHES, South Bend, Ind., assignor to The Pierce-Arrow Motor Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 29, 1932. Serial No. 45,649. Term of patent 14 years.



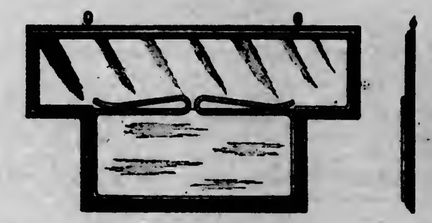
The ornamental design for a combined fender, headlamp casing, parking lamp casing and horn casing substantially as shown.

89,704. IMPACT BAR FOR AUTOMOBILE BUMPERS. HERBERT S. JANDUS, Detroit, Mich., assignor to General Spring Bumper Corporation, Detroit, Mich., a Corporation of Michigan. Filed Feb. 6, 1933. Serial No. 47,121. Term of patent 7 years.



The ornamental design for an impact bar for automobile bumpers as shown.

89,705. SPINNING TOP. JOSEPH JOHNSON, Milwaukee, Wis. Filed Feb. 14, 1933. Serial No. 47,212. Term of patent 7 years.

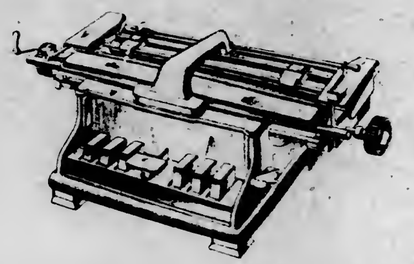


The ornamental design for a spinning top as shown.

89,706. TEXTILE FABRIC. MAX U. JUROTRICH, Ridgefield, N. J., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 27, 1932. Serial No. 46,689. Term of patent 3½ years.

The ornamental design for a textile fabric, substantially as shown and described.

89,707. DISPLAY SIGN OR SIMILAR ARTICLE. ALFRED KANTER, University City, Mo. Filed Feb. 6, 1933. Serial No. 47,130. Term of patent 3½ years.



The ornamental design for a display sign or similar article, substantially as shown.

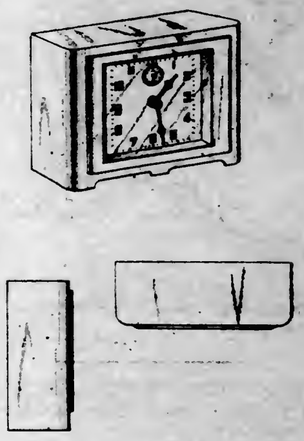
89,708. PASTRY CUP. URBAN A. KREIDLER, East Orange, N. J., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed July 30, 1932. Serial No. 44,491. Term of patent 14 years.

The ornamental design for a pastry cup, as shown and described.

89,709. BRAILLE-WRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1933. Serial No. 47,309. Term of patent 14 years.

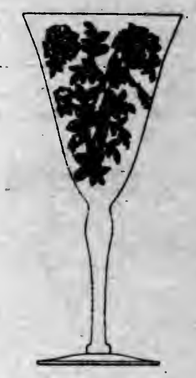
The ornamental design for a Braille-writing machine, as shown.

89,710. WRIST WATCH OR SIMILAR ARTICLE. SAMUEL LACHOWITZ, Brooklyn, and IRVING SCHIFFMAN, New York, N. Y. Filed Jan. 24, 1933. Serial No. 46,963. Term of patent 7 years.



The ornamental design for a wrist watch or similar article, substantially as shown and described.

89,711. ENSEMBLE DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 1, 1933. Serial No. 47,367. Term of patent 3½ years.

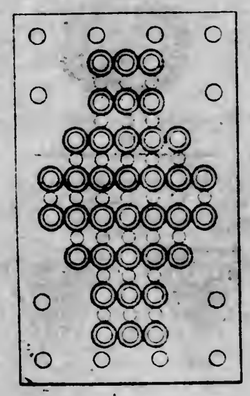


The ornamental design of an ensemble dress substantially as shown.

89,712. COMBINED ALARM CLOCK CASE AND DIAL. PAUL LUX, Waterbury, Conn., assignor to LUX Clock Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 21, 1933. Serial No. 47,279. Term of patent 3½ years.

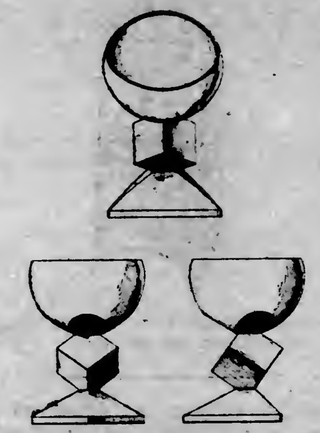
The ornamental design for a combined alarm clock case and dial, as shown.

89,713. GOBLET OR SIMILAR ARTICLE. DENNIS E. MARTIN, Glassport, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1933. Serial No. 46,892. Term of patent 7 years.



The ornamental design for a goblet or similar article, substantially as shown and described.

89,714. GOBLET OR SIMILAR ARTICLE. DENNIS E. MARTIN, Glassport, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1933. Serial No. 46,893. Term of patent 7 years.



The ornamental design for a goblet or similar article, substantially as shown and described.

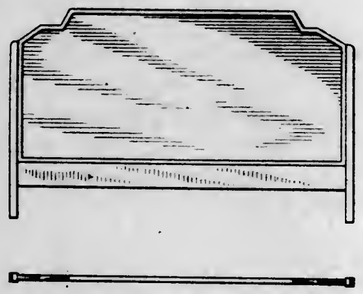
89,715. GAME BOARD. ROBERT B. MCCLURE, Warren, Ohio. Filed July 18, 1931. Serial No. 40,594. Term of patent 3½ years.

The ornamental design for a game board as shown and described.

89,716. GLASS CONTAINER. ARTHUR DOUGLAS NASH, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 11, 1933. Serial No. 47,179. Term of patent 3½ years.

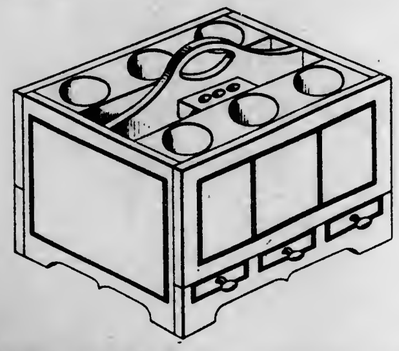
The ornamental design for a glass container, as shown.

89,717. DRINKING WATER COOLER FOUNTAIN. DONALD H. RENYME, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1930. Serial No. 37,776. Term of patent 7 years.



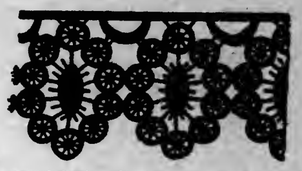
The ornamental design for a drinking water cooler fountain as herein shown and described.

89,718. DRINKING WATER COOLER FOUNTAIN. DONALD H. REEVES, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1930. Serial No. 87,778. Term of patent 7 years.



The ornamental design for a drinking water cooling fountain as herein shown and described.

89,719. FOOTBOARD FOR A BEDSTEAD OR SIMILAR ARTICLE. HARRY RODSTEIN and ISIDORE NATHANSON, New York, N. Y. Filed Feb. 20, 1933. Serial No. 47,272. Term of patent 7 years.



The ornamental design for a footboard for a bedstead or similar article, as shown.

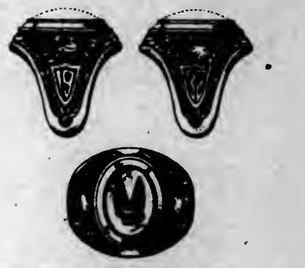
89,720. CHIP CONTAINER. SOL ROTH, Columbus, Ohio. Filed Feb. 4, 1933. Serial No. 47,103. Term of patent 7 years.

The ornamental design for a chip container, as shown.

89,721. LACE OR THE LIKE. OSCAR F. SCHICKER, Teaneck, N. J. Filed Jan. 30, 1933. Serial No. 47,041. Term of patent 7 years.

The ornamental design for lace or the like as shown.

89,722. LACE OR THE LIKE. OSCAR F. SCHICKER, Teaneck, N. J. Filed Jan. 30, 1933. Serial No. 47,042. Term of patent 7 years.

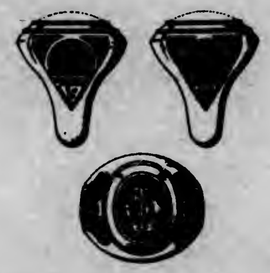


The ornamental design for lace or the like as shown.

89,723. LACE OR THE LIKE. OSCAR F. SCHICKER, Teaneck, N. J. Filed Jan. 30, 1933. Serial No. 47,043. Term of patent 7 years.

The ornamental design for lace or the like as shown.

89,724. FINGER RING. SIDNEY SIZELER, New Orleans, La. Filed Feb. 4, 1933. Serial No. 47,111. Term of patent 7 years.

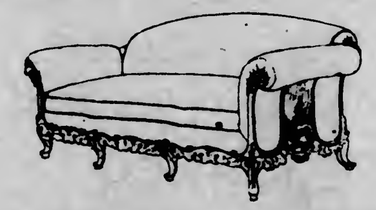


The ornamental design for a finger ring, as shown.

89,725. FINGER RING. SIDNEY SIZELER, New Orleans, La. Filed Feb. 4, 1933. Serial No. 47,112. Term of patent 7 years.

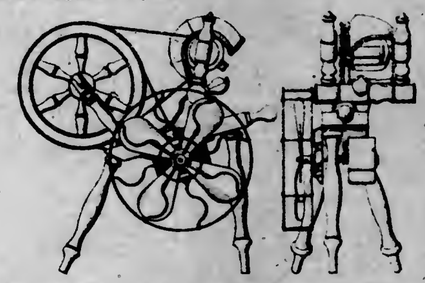
The ornamental design for a finger ring, as shown.

89,726. FINGER RING. SIDNEY SIZELER, New Orleans, La. Filed Feb. 4, 1933. Serial No. 47,113. Term of patent 7 years.



The ornamental design for a finger ring, as shown.

89,727. COMBINED PAPER WEIGHT AND PEN HOLDER. LOWELL J. SMITH, Connersville, Ind., assignor to Stant Manufacturing Co., Connersville, Ind., a Corporation of Indiana. Filed Feb. 11, 1933. Serial No. 47,192. Term of patent 7 years.



The ornamental design for a combined paper weight and pen holder as shown.

89,728. UPHOLSTERED SOFA OR SIMILAR ARTICLE. JOHN TAVIS, Bayside, N. Y., assignor to Mendel Singer, Samuel Singer, Nathaniel Singer and Hayward Singer, copartners trading as M. Singer & Sons, New York, N. Y. Filed Feb. 8, 1933. Serial No. 47,149. Term of patent 3½ years.

The ornamental design for an upholstered sofa or similar article, as shown.

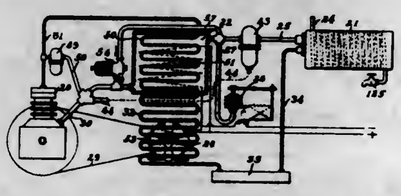
89,729. COMBINED LAMP AND FAN. LOUIS TUCKER, Chicago, Ill. Filed Dec. 19, 1932. Serial No. 46,532. Term of patent 7 years.

The ornamental design for a combined lamp and fan, as shown.

89,730. COMBINED FOUNTAIN PEN AND DESK STAND HOLDER THEREFOR. AMOS S. VAN HISE, Brooklyn, N. Y. Filed Aug. 9, 1932. Serial No. 44,561. Term of patent 7 years.

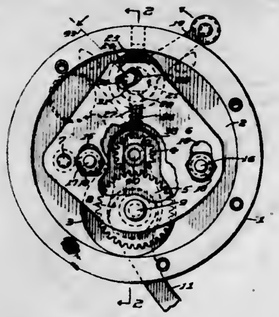
The ornamental design for a combined fountain pen and desk stand holder therefor substantially as shown.

89,731. COMBINED FOUNTAIN PEN AND DESK STAND HOLDER THEREFOR. AMOS S. VAN HISE, Brooklyn, N. Y. Filed Aug. 9, 1932. Serial No. 44,562. Term of patent 7 years.



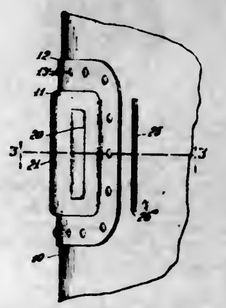
The ornamental design for a combined fountain pen and desk stand holder therefor, substantially as shown.

PATENTS



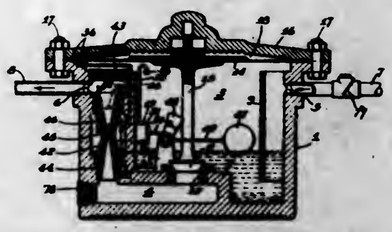
GRANTED APRIL 25, 1933

1,904,991. REFRIGERATING APPARATUS. ROBERT R. CANDOR, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 28, 1929. Serial No. 343,399. 8 Claims. (Cl. 62—115.)



1. A refrigerating apparatus including liquid refrigerant supplying and gaseous refrigerant liquefying means, an expansion coil receiving liquid refrigerant from said means, an automatic pressure regulating valve for said coil, a water cooling conduit in thermal relation with said coil, the flow of refrigerant in said coil and of liquid in said conduit being in relatively opposite directions, a valve for said conduit, said last named valve and said regulating valve having common manual means for controlling same.

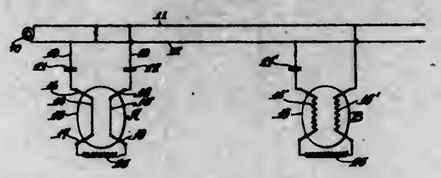
1,904,992. FISHING REEL. CLARENCE A. GODSHALK, Ardmore, and FREDERICK HENKE and DAVID BEHRSING, Philadelphia, Pa., assignors, by mesne assignments, to Ocean City Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 2, 1932. Serial No. 608,600. 4 Claims. (Cl. 242—84.7.)



1. In a free spool reel, the combination of a reel head, a spool spindle, one end of which is journaled in said head, a pinion fixed on said spindle, a driving gear, an oscillatory member mounted on the outer side of said head to oscillate, and movable back and forth in a fixed path, connections between said member and said driving gear to move said gear toward the axis of said pinion into mesh with said pinion when said oscillatory member is moved to one limit of its motion, and to move said driving gear away from the axis of said pinion and out of mesh with said pinion when said oscillatory member is moved to the other limit of its motion, and resilient means on said reel and head to yieldingly hold said member at the limits of its motion in either direction, and operative, when said member is manually moved toward one of said limits beyond a point substantially midway between said limit, to automatically throw said member to that limit of its travel toward which it was being manually moved.

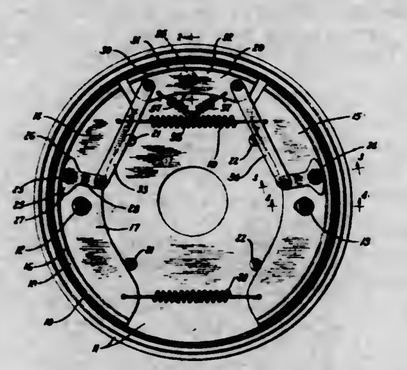
1,904,993. FACE PROTECTOR. ROBERT MALCOM, Chicago, Ill. Refiled for abandoned application Serial No. 455,174, filed May 24, 1930. This application filed Aug. 3, 1931. Serial No. 554,904. 2 Claims. (Cl. 2—8.)

1. In a protector of the character described having a main body provided with a sight-opening and with slots arranged beyond said opening; a lens-holding frame arranged about said opening and riveted to the forward face of the body, the opposite side walls of the frame intermediate of the front and rear sides thereof being provided with indentations on the inner faces thereof; a lens-holding skeleton member of resilient material of length greater than the distance between the side walls of the frame, the opposite ends of the member being each provided with an extension adapted to seat in said indentations; and a sheet of bendable non-conducting material provided with a sight-opening, said sheet being of dimensions greater than said frame and adapted to extend across the sight-opening in the body on the face side thereof, the ends of said sheet having tongues adapted to pass through the slots in the body and thereby removably hold said sheet flush with the inner face of the main body.



1,904,994. STEAM TRAP. JOHN M. MALONE, Pittsburgh, Pa. Filed Mar. 1, 1932. Serial No. 596,049. 12 Claims. (Cl. 137—103.)

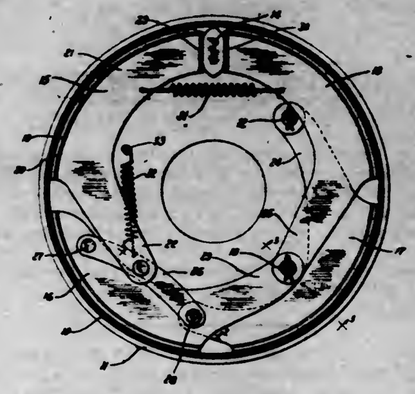
1. A steam trap comprising an enclosed casing having an inlet and an outlet orifice provided therein, a partition dividing said casing into an inlet chamber containing said inlet orifice and an outlet chamber containing said outlet orifice, a discharge valve seated in a valve opening in said partition, a flexible partition arranged in the upper portion of said inlet chamber and forming a pressure chamber with the top of said casing, means operably connecting said valve to said flexible partition, and means responsive to the level of condensate collected in the inlet chamber for selectively placing said pressure chamber in



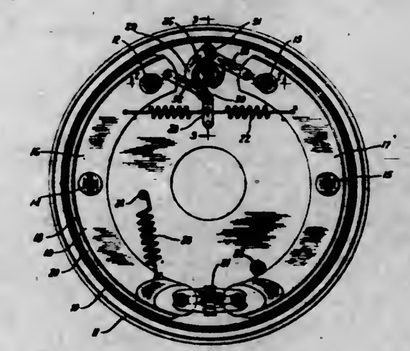
communication with the inlet chamber and the outlet chamber to control the opening and closing of said valve in response to the resultant movement of said flexible partition.

1,904,995. METHOD AND APPARATUS FOR PRODUCING LIGHT. EDWIN FITCH NORTHRUP, Princeton, N. J. Filed June 11, 1930. Serial No. 460,531. 19 Claims. (Cl. 176—124.)

6. In an electric lamp, a source of current supply, a lamp body containing a plurality of elements adapted to be heated to incandescence, connections from the source to the respective elements, reactance in the connections, and opposite reactance connected from one element to another.



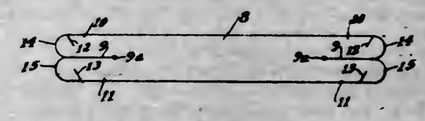
1,904,996. BRAKE. HUMPHREY F. PARKER, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 17, 1930. Serial No. 453,381. 1 Claim. (Cl. 188—78.)



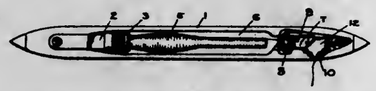
A brake comprising a rotatable drum, a fixed support associated with the drum, centrally anchored primary and secondary shoes arranged in oppositely disposed relation on the support and adaptable for movement thereon, double action cams positioned on the support and adaptable for applying forces at substantially the center of the respective shoes, an actuating shoe positioned between the primary and secondary shoes adapted to be moved against the drum and to be given a slight circumferential movement thereby and means connecting the actuating shoe with the cams so that the cams may be actuated to apply the primary and secondary shoes in either a forward or reverse direction with equal braking effects.

1,904,997. BRAKE. HUMPHREY F. PARKER, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 17, 1930. Serial No. 453,382. 9 Claims. (Cl. 188—78.)

1. A brake comprising a train of friction elements each having a heel and a toe, two of the elements being anchored at their heels and means operated by another element for applying force to the toes of the anchored elements, and another friction element effective in reverse braking and actuated simultaneously with said third element.

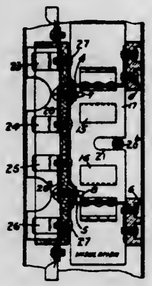


1,904,998. BRAKE. HUMPHREY F. PARKER, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 17, 1930. Serial No. 453,383. 12 Claims. (Cl. 188—78.)



1. A brake comprising a fixed support forming a brake anchorage, levers slidably fulcrumed on the support, operating means connected to the power applying ends of the levers and means connecting the levers to the separable ends of the friction member of the brake.

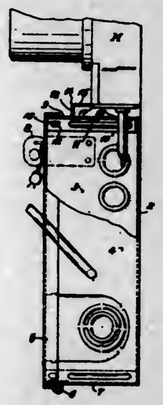
1,904,999. GARMENT HANGER COVER. HARRY M. REED, Chattanooga, Tenn., assignor of one-half to H. L. Reis, Birmingham, Ala. Filed Dec. 15, 1932. Serial No. 647,383. 8 Claims. (Cl. 223—61.)



1. A garment hanger cover comprising an elongated strip of sheet material having end slits forming a pair of tongues at each end of the strip, and flap means to interlock the tongues at each end in overlapped relationship.

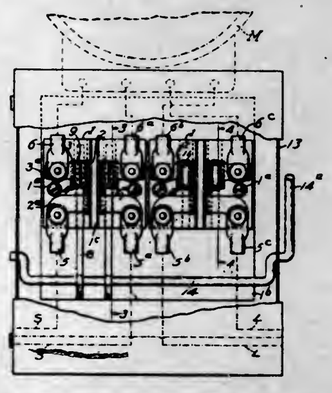
1,905,000. LOOM SHUTTLE. EDWARD ROSS, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 13, 1932. Serial No. 632,961. 13 Claims. (Cl. 139—217.)

1. A shuttle for filling replenishing looms, comprising a shuttle body supporting an automatically ejected filling carrier, an automatically threading tension device carried by the said shuttle body, and an inclined guide pin positioned between the said tension device and the filling carrier and operable upon ejection of the filling carrier to engage and guide the outgoing filling end laterally out of the said tension device.



1,905,001. ELECTRIC CIRCUIT CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Apr. 14, 1930. Serial No. 444,050. 5 Claims. (Cl. 200—3.)

1. In a fused electric switch, the combination of two similar pairs of stationary switch contacts respectively having oppositely facing parallel contact faces substantially perpendicular to a rear supporting wall, a pair of forward facing fuse receiving contacts in front of a transverse plane at the front of the switch contacts, means for establishing external circuit connections with one switch contact of each pair, means for establishing other external circuit connections with the other switch contact of one pair and with one fuse contact, a direct electrical connection between the remaining switch contact and fuse contact, and a switching member behind the said transverse plane movable between the switch contacts of the two pairs and comprising contact means adapted to engage and electrically connect the contacts of either pair while the contacts of the other pair remain electrically unconnected, the said switching member thus serving optionally to establish a circuit through one pair of switch contacts and the fuse and fuse contacts or through the other pair of switch contacts independently of the fuse and fuse contacts.

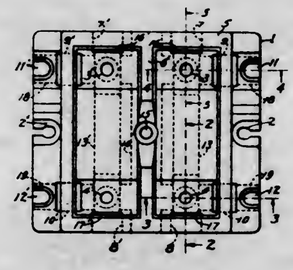


1,905,002. ELECTRIC APPLIANCE INCLOSING CABINET. JOSEPH SACHS, West Hartford, Conn. Continuation of application Serial No. 204,077, filed July 27, 1927. This application filed Sept. 23, 1931. Serial No. 565,536. 5 Claims. (Cl. 247—2.)

1. In an electric meter protecting cabinet adapted for inclosing a current controlling appliance, the combination with the back and side walls of the cabinet, of an end wall normally positioned perpendicularly to the said back and side walls so as to substantially close the cabinet at one end, the said end wall having an opening therein open at the rear and smaller than the downward projecting portion of an electric meter with which the cabinet may be associated and the said end wall being movable forward out of its normal position to facilitate meter installation, and an adapter member normally movable with the end wall and provided with vertical front and side flanges directly engaging and fitting the end wall at the outer face thereof in front of and at the sides

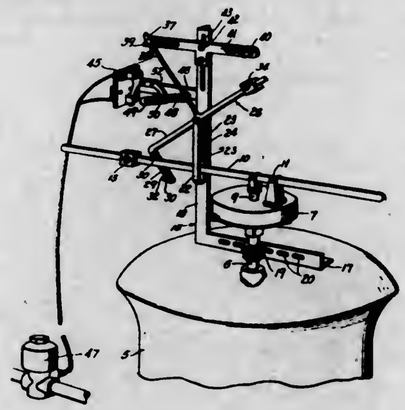
of the opening therein, the said adapter member being provided with a flat top wall parallel with the end wall and having an opening therein into which the aforesaid portion of the meter may extend with a substantially close fit in order to ensure the protection of the said portion of the meter as well as of parts within the cabinet.

1,905,003. ELECTRIC METER SERVICE APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Apr. 2, 1932. Serial No. 602,861. 14 Claims. (Cl. 200—5.)



1. A contact holding unit for an electric circuit making and breaking device, comprising in combination, two stationary contacts, and a base supporting the contacts and having two separate differently positioned means thereon respectively adapted for controlling the movement of two different optionally usable circuit making and breaking members into and out of circuit making position between the said contacts.

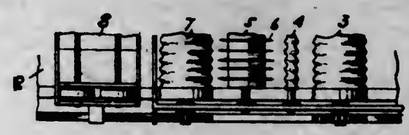
1,905,004. FUSE DEVICE. JOSEPH SACHS, West Hartford, Conn. Filed June 10, 1932. Serial No. 616,405. 12 Claims. (Cl. 200—133.)



1. A fuse block having a forward facing portion adapted for the mounting thereon of at least one pair of spaced fuse contacts and also having a forward projecting barrier at the ends and at both sides of the said portion, the said barrier having at least one opening in each

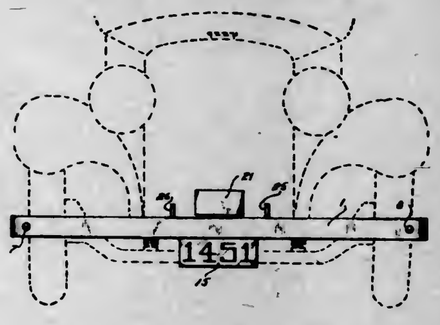
end wall and two openings in each side wall and each said opening being in register with a fuse contact position so as to be adapted to receive a conductor connectible at

its inner end with a fuse contact and connectible at its outer end with a wire terminal or other electrical appurtenance.



1,905,005. CONTROL MECHANISM FOR STEAM HEATING SYSTEMS. HENRY SCHIBBLOH, Kansas City, Mo. Filed Dec. 6, 1930. Serial No. 500,547. 3 Claims. (Cl. 236—26.)

3. In combination with a pressure-actuated diaphragm surrounded by a casing, a rod pivotally connected adjacent one of its ends to the diaphragm and to said casing, a weight adjustably mounted on the rod adjacent its opposite end, a frame, means for mounting the frame in adjustable relation to said casing, spaced stop members carried by the frame, a lever assembly pivotally mounted on the frame including a bar having a lateral end provided with adjustably spaced stop means for engaging opposite sides of said rod, a weight adjustably mounted on the opposite end of the bar, a lateral arm fixed to the bar intermediate its ends and provided with a weight engageable with the stop members on the frame, a switch carried by the frame, and means for operably connecting the switch to said arm.



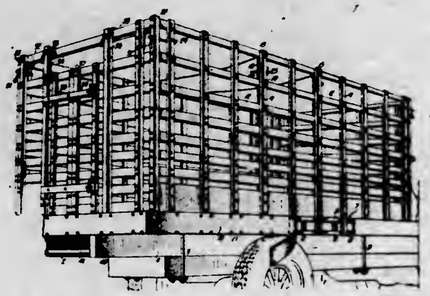
1,905,006. METHOD OF MAKING CORRUGATED WIRE GLASS. ARNO SHUMAN, Philadelphia, Pa., assignor to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed June 25, 1930. Serial No. 463,624. 1 Claim. (Cl. 49—86.)

A process of the manufacture of corrugated wire glass, comprising the following steps: embedding wire mesh into the fluid glass which causes wounds at the peaks of the corrugations of the glass; closing the wounds by

rolling the glass on a line surface of glass to push the plastic glass from the valleys toward the peaks to close the wounds; and pressing the glass to smooth its surface.

1,905,007. COMBINATION AUTOMOBILE LICENSE CARRIER, BUMPER, AND RELEASE. STEPHEN SKOKO, Portland, Oreg. Filed Dec. 7, 1932. Serial No. 646,134. 5 Claims. (Cl. 116—32.)

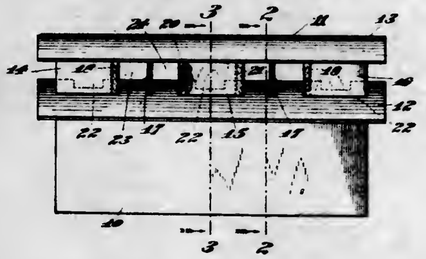
1. In a device of the class described, the combination of front and rear members spaced apart by compressible elements disposed at the oppositely disposed ends of the front and rear members, means for removably securing the rear member to the frame of an automobile, a cross bar disposed at the rear and secured to and in spaced relationship with the rear bumper member, a locking lug disposed upon the cross bar and forwardly extending therefrom, guide brackets secured to the rear member and in which a license plate is normally held and supported upon the forwardly extending lug of the cross bar, rockable means for normally maintaining the front and rear members spaced apart, said means being adapted for being actuated by wind pressure, and means for locking the front and rear members together when the front member is repressed.



1,905,008. RUG UNDERLAY. WILLIARD JORDAN SLAGLE, Cambridge, Mass., assignor to Dewey and Almy Chemical Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 10, 1930. Serial No. 487,922. 8 Claims. (Cl. 154—49.)

2. An underlay for floor coverings comprising a sheet of creped paper having both faces surfaced with a thin coating of vulcanized rubber.

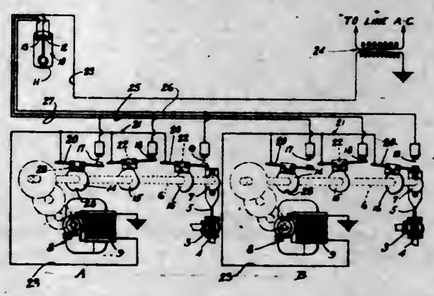
1,905,009. TRUCK BODY. MYLES STANDISH, Omaha, Nebr. Original application filed Aug. 18, 1928, Serial No. 300,725. Divided and this application filed Apr. 28, 1930. Serial No. 447,894. 2 Claims. (Cl. 296—3.)



1. In a truck body including a platform having spaced pockets, a rack section including a stake receivable in one of said pockets and a series of vertically spaced horizontal slats fixed to the stakes and having registering free ends projecting beyond the stake, an angle iron including a leg fixed to the outer faces of said slats and

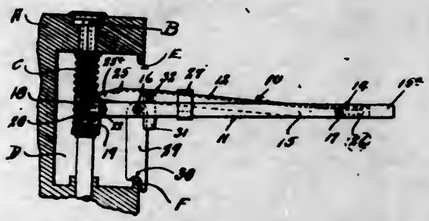
having a free edge registering with the registering end faces of said ends of the slats, and an apertured leg projecting outwardly from the slats, a second rack section including a stake receivable in another of said pockets and having a longitudinal groove in the inner edge thereof, and a series of vertically spaced slats fixed to the inner face of the stake and having registering vertical end faces registering with one wall of said groove and spaced from the vertical free edge of the stake to abut

the end faces of the slats of the first named rack section, a vertical plate fixed to the inner faces of the slats and having an edge portion projecting beyond said end faces of the slats, and a fastener having a portion engaged with said grooved stake and a portion engageable in the aperture of said projecting angle iron leg for retaining the slats of the second named rack section in end abutting relation with the slats of the first named rack section.



1,905,010. VENTILATOR. RICHARD H. STEVENS, Baltimore, Md., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Apr. 17, 1931. Serial No. 530,871. 4 Claims. (Cl. 98—42.)

1. A ventilator for a building having an apertured roof comprising, two monitors each superposed over an aperture in the roof of said building, a vertical transverse baffle, said monitors having their inner oppositely disposed transverse walls apertured and in spaced relation to one another and to said baffle, and a secondary roof continuous over said monitors and said baffle.



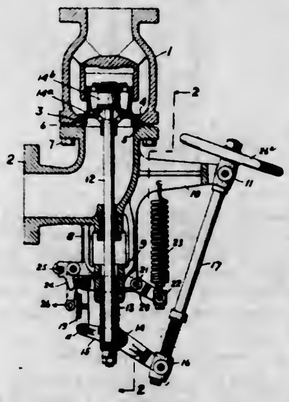
1,905,011. TEMPERATURE REGULATING SYSTEM. DUNCAN J. STEWART, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Jan. 10, 1931. Serial No. 507,900. 4 Claims. (Cl. 236—74.)

1. In a heating system, the combination of a pair of valves controlling the radiation of heat from different radiators in a room to be heated, a power operator for each valve including an electric motor and a shaft rotated thereby and adapted in successive half revolutions to alternately open and close the associated valve, a thermostat common to both of said operators, a circuit for each operator for maintaining energization of the operator motor independently of said thermostat including a switch actuated by said shaft so as to be opened when the shaft reaches valve-open or valve-closed position and to be closed in each operator cycle after a predetermined movement of said shaft, a pair of circuits for each operator arranged to be closed selectively by said thermostat to initiate successive cycles of the associated operator and each including a switch adapted to be closed in the approach of said shaft toward one of its rest positions but prior to opening

of said maintaining switch, and to be opened in the subsequent movement of the shaft after closure of the maintaining switch, and cam means on each operator shaft for timing the actuation of the associated starting circuit switches so that the time interval between the closure of either of such switches and the succeeding opening of the maintaining switch is shorter than the interval between the starting of the other operator shaft and the closure of the maintaining switch actuated thereby.

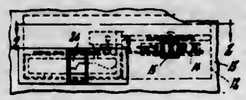
1,905,012. COMBINED VALVE LIFTER, SPRING COMPRESSOR, AND REPLACER. JOSEPH SUNNEN, Kirkwood, Mo. Filed Dec. 4, 1930. Serial No. 499,893. 6 Claims. (Cl. 29—86.8.)

1. A tool of the class described comprising in combination a pair of longitudinally disposed levers, each having one of their ends bifurcated to form spring engaging jaws, said jaws being adapted to be arranged in the same vertical plane, a slot and pin connection pivotally connecting the opposite ends of said levers whereby one of said levers can be moved longitudinally so as to dispose the jaw thereof rearwardly of the jaw of the other lever, a laterally disposed projection formed on one of said levers, and an extension formed on the other member and projecting vertically therefrom for engaging said transverse projection and locking said levers against longitudinal movement relatively to each other.



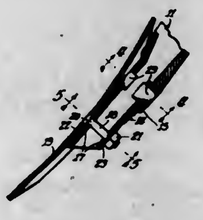
1,905,013. TOOTH SWAGE. SAMUEL M. TAYLOR, Loyalton, Calif., assignor to Smooth Saw Equipment Company, Loyalton, Calif., a Corporation of Nevada. Filed Mar. 7, 1931. Serial No. 520,822. 9 Claims. (Cl. 76—54.)

1. A tooth swage including the combination of a swage block, a saw clamping means associated therewith, a swaging die operatively mounted in said block and having a flattened portion adapted to be initially engaged by the face of the tooth to be swaged, and means for initially



rotating said die and then to simultaneously rotate and draw said die substantially parallel to and along the face of the tooth to be swaged.

1,905,014. COMBINED SHUT-OFF AND TRIP VALVE. MARTIN P. TELLER, Philadelphia, Pa., assignor to Schutte & Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1932. Serial No. 602,162. 2 Claims. (Cl. 137—139.)



2. In a shut off and trip valve the combination of an upper or inlet valve body or section, a lower or outlet valve body or section, a valve seat ring clamped at the joint between the bodies or sections, the outlet body or section being integrally provided with a valve yoke and with a bracket, valve operating gear carried by the yoke, a hand wheel shaft carried by the bracket for actuating said gear, a projection integrally provided on the yoke, and a latch pivoted to the projection for cooperation with said gear.

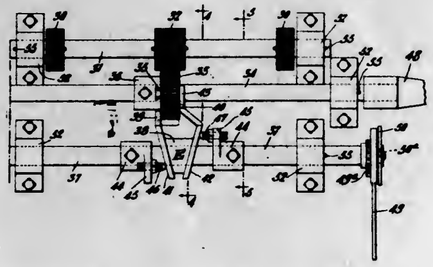
1,905,015. MOTOR VEHICLE SPEEDOMETER. ALOIS A. THOMANN, Brookline, and ALBERT H. THOMANN, Medford, Mass. Filed July 30, 1930. Serial No. 471,812. 9 Claims. (Cl. 234—33.)

1. In a speed recording device having a ribbon feeding means controlled by a speed responsive means; a cylindrical member rotatively oscillatable by a motor vehicle at a speed determined by that of the vehicle, a plurality of independently movable markers arranged to mark the ribbon at different distances from its edges, operating mechanism for the markers including a conditioning member adapted to cause said operating mechanism to actuate any marker, and selecting mechanism operable by oscillations of the cylindrical member to adjust said conditioning member to position causing the actuation of any marker by the operating mechanism.

1,905,016. UNIVERSAL FOOTPIECE FOR CULTIVATOR SHOVELS AND THE LIKE. HARRY RANDALL TRAPHAGEN, Rockford, Ill., assignor to J. I. Case Company, Racine, Wis., a Corporation of Wisconsin. Original application filed Aug. 12, 1929, Serial No. 385,283. Divided and this application filed Mar. 20, 1931. Serial No. 524,046. 3 Claims. (Cl. 97—187.)

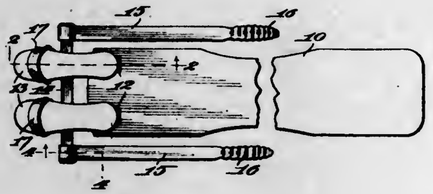
1. A universal footpiece for cultivators and the like, comprising an elongated bar having a substantially cylindrical lower end portion provided with an aperture extending transversely therethrough intermediate the length thereof, said cylindrical portion having a shovel-back-fitting seat on its forwardly presented surface the bar also having a transversely apertured and transversely enlarged portion adjacent the upper end of said cylindrical portion.

1,905,017. ROOF FLASHING. LIONEL VALLAS, Chicago, Ill. Filed Sept. 3, 1931. Serial No. 560,944. 7 Claims. (Cl. 108—26.)



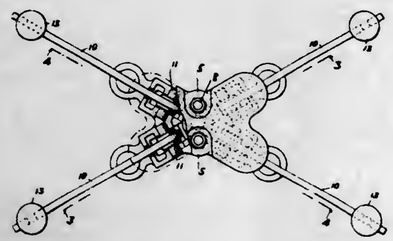
1. Flashing of the character described comprising a plurality of saturated sheets of fabric; a sheet metal reenforcing strip for the upper longitudinal edges of the fabric sheets, bent along a longitudinal line with the edges of the fabric disposed at said bend, the two parallel sides of said metal strip with the enfolded fabric sheets then bent upwardly to provide a shoulder along the upper longitudinal edge of the flashing; and a resilient wedge member adapted to ride onto said shoulder into tilting position with one longitudinal edge in bearing relation with the upper side of the metal reenforcing strip while the other longitudinal edge is in binding relation with the upper side of a crevice in the wall to which the flashing is applied.

1,905,018. MATERIAL MEASURING AND HANDLING APPARATUS. FRED VOELKER, Jr., Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 18, 1929. Serial No. 393,393. 1 Claim. (Cl. 221—145.)



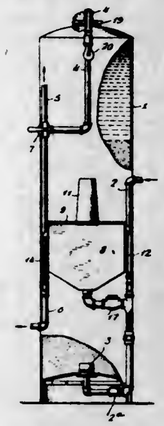
In material measuring and handling apparatus, the combination of a material supply device, a discharge con-

trol means for the device including a gear, operating means for the control means including a shaft, a gear mounted for rotative and sliding movement on said shaft



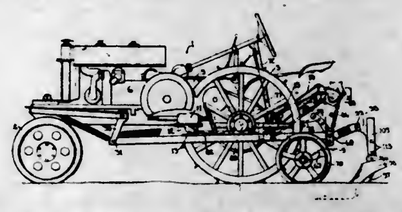
and clutch means for coupling and uncoupling the second mentioned gear and the shaft without disengaging the intermeshing gears.

1,905,019. EXERCISING APPARATUS. DEB TURNER, Hollywood, Calif. Filed Feb. 24, 1930. Serial No. 430,614. 1 Claim. (Cl. 272—79.)



In an exercising apparatus, a base, a pair of foot boards hinged to the forward portion of said base, a transverse bar secured to the undersides of the intermediate portions of said foot boards, elastic straps connected to the ends of said transverse bar and extending rearwardly therefrom, a bolt extending transversely through the forward portion of each foot board and a foot retaining strap connected to the ends of each bolt and overlying the forward portion of the corresponding foot board.

1,905,020. AUTOMATIC EQUALIZING SUPPORT. FRANK R. WALLACE and JOHN T. RAMSDEN, Philadelphia, Pa., assignors to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1930. Serial No. 494,330. 12 Claims. (Cl. 248—30.)

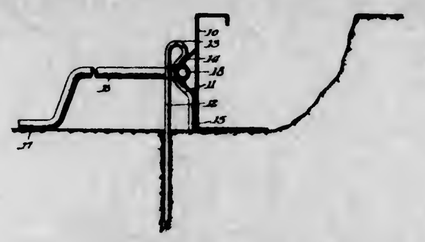


9. An equalising support comprising, in combination, relatively fixed elements arranged in spaced relation, a group of contacting wedges arranged between said elements and adapted in some positions to partially fill the space between them and in other positions to jam between them, supports for receiving the load, and means cooperating with the supports and wedges and adapted to position the supports in load receiving position and the wedges in position for partially filling the space between the element and said means further adapted to concentrate the group of wedges and jam them between said elements under deposition of the load on the supports.

1,905,021. WATER SOFTENING APPARATUS. RICHARD E. WAGNER, Rockaway Park, N. Y. Filed June 13, 1930. Serial No. 460,926. 6 Claims. (Cl. 210—24.)

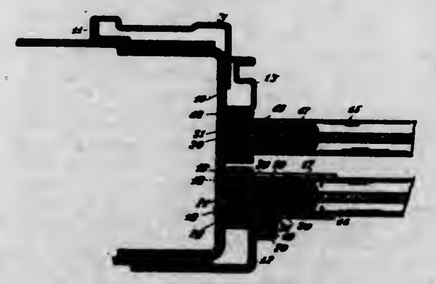
1. An apparatus for the treatment of water comprising a main tank provided with requisite water inlet and outlet connections, an auxiliary tank supplied from the main tank water inlet connection, and an ejector utilising the inlet flow to the main tank for effecting continuous delivery during such flow from the auxiliary tank to the main tank.

1,905,022. MIDDLE BURSTER. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 12, 1930. Serial No. 495,045. 35 Claims. (Cl. 97—47.)



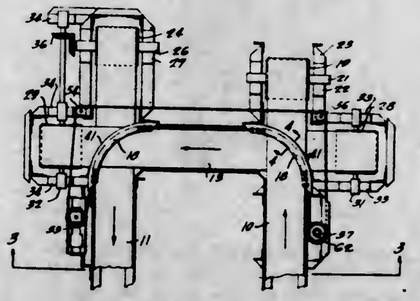
1. The combination with a tractor including front and rear wheels, of an implement attachment comprising a transverse draft bar detachably connected with the tractor forward of the rear wheels thereof, a plurality of beams extending longitudinally of the tractor and attached to said bar, earth-working devices on said beams directly behind said rear wheels, and power lift mechanism for raising and lowering the beams.

1,905,028. ROAD STRIP AND SUPPORT. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed May 26, 1930. Serial No. 455,898. 8 Claims. (Cl. 25—118.)



5. In combination, a channel adapted to act as a groove-forming element in the edge of a concrete slab,

said channel having an opening adapted to receive an angularly bent dowel bar, and a stake adapted to be driven



into the soil and to be rotated after being driven, said stake having a recess at one side of its center of rotation adapted to receive and hold said channel.

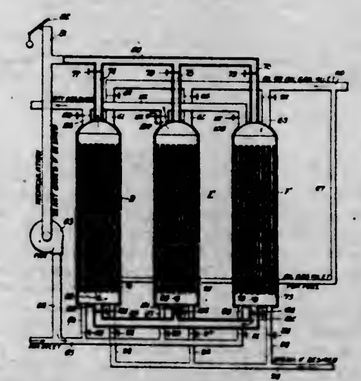
1,905,024. WINDOW CONSTRUCTION. EMIL A. ZETMEIR, Topeka, Kans. Filed Sept. 18, 1931. Serial No. 563,520. 11 Claims. (Cl. 189—65.)

1. In a window construction, channeled members secured to opposite sides of the window opening and slidingly receiving the sides of a window-sash, the members being provided with rack forming ribs, intermediate of the sides of the members, with one side of each member provided with a weather-strip disposed toward the side rail of the sash.

1,905,025. CONVEYER SYSTEM. LAVONT C. ALLEN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Nov. 5, 1930. Serial No. 493,486. 8 Claims. (Cl. 198—20.)

1. Conveying apparatus comprising a plurality of belt conveyers having intersecting courses of travel and having their adjacent surfaces contiguous at intersections of their courses of travel, live roller deflector mechanism at intersections of their courses of travel comprising a series of closely adjacent vertically disposed live rollers arranged in an arcuate path extending approximately diagonally across the intersection, frames for rotatably supporting the rollers in this position, and an endless belt in operative engagement with the rollers of the deflector mechanism of at least two intersections for operating such rollers.

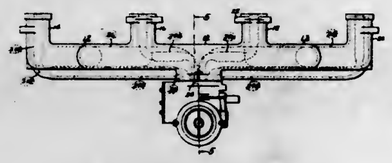
1,905,026. DISPERSION OF RUBBER IN NONAQUEOUS LIQUIDS. RICHARD ALMY, Little Compton, R. I., assignor to Dewey and Almy Chemical Company, North Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 16, 1930. Serial No. 489,243. 10 Claims. (Cl. 106—28.)



1. The method of colloidally dispersing rubber in paraffin wax which comprises adding molten paraffin wax to concentrated latex at a temperature approximating the boiling point of water to produce an oil-in-water type of emulsion of the paraffin in the latex and heating the mixture to remove the water by evaporation.

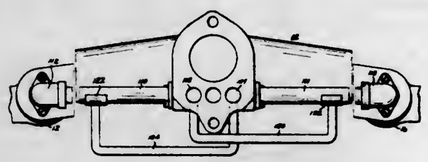
1,905,027. SIX-LAMP WRAPPER. HAROLD AMATEL, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 1, 1930. Serial No. 432,320. 2 Claims. (Cl. 206—65.)

1. A container for fragile articles comprising a four sided open ended casing having a corrugated interior wall, and a plurality of four sided open ended article wrappers proportioned to completely occupy the space within the casing and having portions of the edges of their ends depressed to conform with said corrugated wall and other edges disposed in the trough portions of the corrugations.



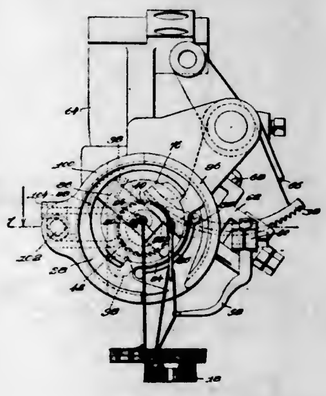
1,905,028. TREATMENT OF OIL GAS. CHARLES W. ANDREWS and ARTHUR J. BOYNTON, Chicago, Ill., assignors to H. A. Brassert & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1928. Serial No. 311,003. 1 Claim. (Cl. 48—197.)

The method of reducing the specific gravity of gas, which comprises passing the gas through a plurality of stoves, the first stove being at such a temperature that



heavier constituents of the gas are cracked therein, the second stove being at a lower temperature and absorbing heat from the treated gases passing therethrough, simultaneously heating a third stove to a temperature suitable for cracking the heavier constituents of the gas, by combustion of a portion of untreated gases therein, controlling the temperature by recirculation of a selected portion of combustion products, and periodically varying the operation so that in the complete cycle each of the three stoves is in turn first heated by combustion, second used to treat the gas, and third heated by passing the hot treated gas therethrough.

1,905,029. DUPLEX CHARGE FORMING DEVICE. FRED E. ASELTINE, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 2, 1929. Serial No. 404,321. 19 Claims. (Cl. 123—52.)

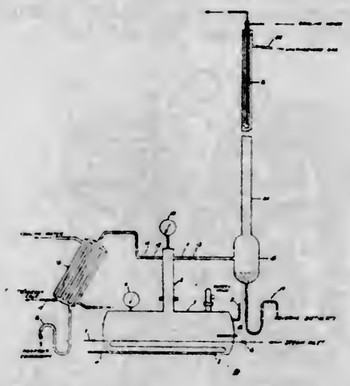


1. A charge forming device for a multi-cylinder internal combustion engine comprising a plurality of mixing chambers, means for supplying fuel to said mixing chambers, an air chamber for supplying air to said mixing chambers having a partition therein dividing said chamber into two passages each of which communicates with one of said mixing chambers, and a single air inlet admitting air to both of said passages.

1,905,030. CHARGE FORMING DEVICE. FRED E. ASELTINE, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 2, 1929. Serial No. 404,322. 13 Claims. (Cl. 123—52.)

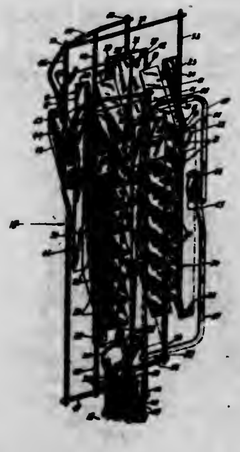
1. A charge forming device for multicylinder internal combustion engines comprising a plurality of secondary mixing chambers communicating with different intake ports of said engine, primary mixture conduits supplying a primary mixture of fuel and air to said secondary mixing chambers, and means preventing the accumulation of fuel in any one of said secondary mixing chambers during the intake stroke of the piston in any engine cylinder not receiving combustible mixture directly from that particular secondary mixing chamber, said means comprising means for communicating the engine suction to the primary mixture conduit delivering into said particular secondary mixing chamber at a point anterior to the outlet of said conduit.

1,905,031. SHOE SEWING MACHINE. FRED ASHWORTH, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 9, 1929. Serial No. 338,756. 9 Claims. (Cl. 112—36.)



1. In a lockstitch sewing machine the combination, with the other stitch forming devices including a straight hook needle, of a shuttle, a shoe supporting horn arranged to extend within the shoe, needle threading mechanism located within the horn, a loop spreader to engage and spread the needle loop for the entrance of the shuttle, and means acting automatically when rendered operative to stop the needle, shuttle and loop spreader with the last needle loop engaged and spread by the needle and loop spreader with the work side of the loop in position to be readily severed.

1,905,032. SEWING MACHINE SHUTTLE. FRED ASHWORTH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Feb. 9, 1929, Serial No. 338,756. Divided and this application filed May 1, 1930. Serial No. 448,909. 6 Claims. (Cl. 112—233.)

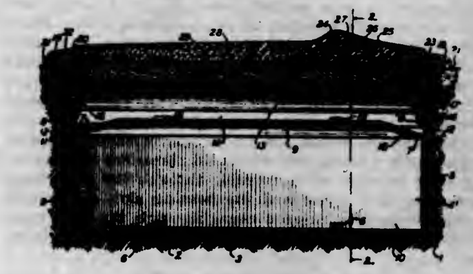


1. A shuttle for shoe sewing machines comprising a discoidal shuttle casing having an open end, and a removable thread holder forming a closure for the open end of the shuttle casing provided with a central hollow thread supporting stud projecting inwardly into the shuttle casing and forming a thread passage extending through the stud and opening on the outer side of the thread holder.

1,905,033. CONCENTRATION OF FORMALDEHYDE SOLUTIONS. HARLAN A. BOND, Metuchen, N. J., assignor, by mesne assignments, to The Roessler and Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 9, 1927. Serial No. 238,879. 20 Claims. (Cl. 260—138.)

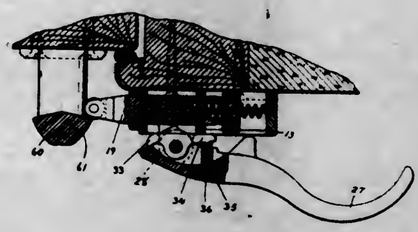
1. The process comprising distilling aqueous formaldehyde solutions under such conditions that the vapors therefrom are at a temperature above the normal atmospheric boiling point of the solution and collecting the vapors therefrom as formaldehyde of greater concentration than that of said aqueous solutions.

1,905,034. ELECTRON EMISSION DEVICE. JOHN W. MARDEN and ERNEST A. LEDERER, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 27, 1927. Serial No. 228,995. 12 Claims. (Cl. 250—27.5.)



8. An electron emission device comprising a grid element composed of a plurality of vertical rows of vanes arranged in parallel spaced relation, a plate element composed of a plurality of vertical rows of vanes disposed in parallel spaced relation, a cathode consisting of a plurality of lengths of filament wire and means for supporting said elements in a common vertical plane at the side of said cathode and with the vanes substantially transverse to said lengths of filament wire.

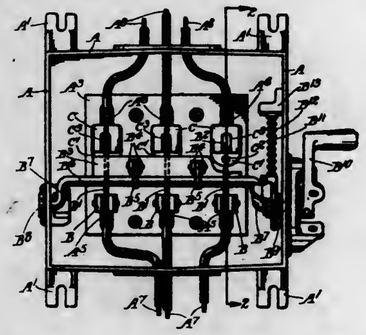
1,905,035. ELECTRON DISCHARGE DEVICE. JOHN W. MARDEN, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 26, 1929. Serial No. 342,787. 6 Claims. (Cl. 250—27.5.)



1. A cathode structure for an electron discharge tube comprising a disc of insulating material, said disc having a shoulder on the periphery thereof, a hollow cup shaped cathode, having an open end, supported on said disc with the open end thereof engaging said shoulder, said disc having a pair of apertures therein, current conductors extending through said apertures and a heating element supported above said insulator by said conductors.

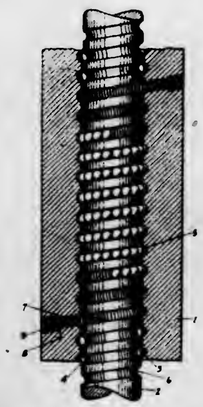
1,905,036. MAUSOLEUM. WILLIAM A. MARTIN, Trenton, Mo. Filed June 6, 1932. Serial No. 615,531. 6 Claims. (Cl. 72—7.)

1. A vault including a container having a vertical peripheral wall provided with an interior upwardly facing shoulder, an inside cover adapted to rest on said shoulder, a layer of sealing cement on said cover having its entire upper surface extending to a level for draining liquid rising in the cement over the upper edge of said wall, and a top for the container.



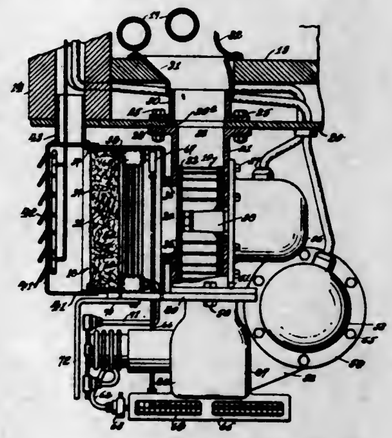
1,905,037. REFRIGERATING APPARATUS. WILLIAM H. MATTHEWS, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 27, 1930. Serial No. 431,749. 10 Claims. (Cl. 292—173.)

1. In combination with a keeper therefor, a free bolt latch comprising a casing, a bolt mounted to reciprocate in said casing, a handle, and means cooperating with said



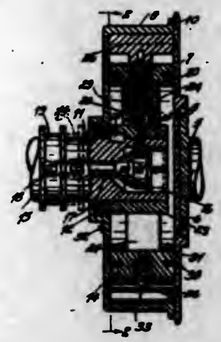
handle for positively reciprocating said bolt in both directions, and means whereby said bolt may reciprocate out of and into engagement with said keeper without imparting motion to said handle.

1,905,038. ARC REDUCING ELECTRIC SWITCH. THOMAS E. MCDOWELL, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 15, 1930. Serial No. 475,441. 5 Claims. (Cl. 200—144.)



1. Switch mechanism including in combination, a contact member, a blade movable into and out of engagement with said contact member, an arc quenching device about said contact member, said device comprising a housing having spaced side walls providing a slot, the inner faces of said side walls being provided with a plurality of spaced parallel grooves forming pockets, metal plates in said grooves disposed one plate to a pocket, said plates having notches therein which are in register with one another and with the housing slot when said plates are in position, the blade member being movable through the registering notches of said plates and the housing slot, said plates having projections thereon engaging with the side walls to prevent displacement of said plates from said housing.

1,905,039. ANTIFRICTION THREAD FOR SHAFTS. MARION S. MCKELLAR, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed May 16, 1931. Serial No. 537,982. 2 Claims. (Cl. 74—41.)

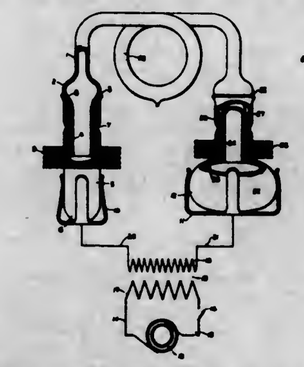


1. A shaft, a nut thereon, said shaft and nut having mating spiral grooves therein forming screw threads, a single row of balls movable in said grooves, and a single spring at each end of said grooves bearing against said row of balls, to limit the movement of said balls toward either end of said nut.

1,905,040. AIR CONDITIONING SYSTEM FOR RAILWAY CARS. LEE W. MELCHER, Winnetka, Ill. Original application filed Sept. 2, 1930, Serial No. 479,227. Divided and this application filed July 9, 1931. Serial No. 549,623. 12 Claims. (Cl. 257—7.)

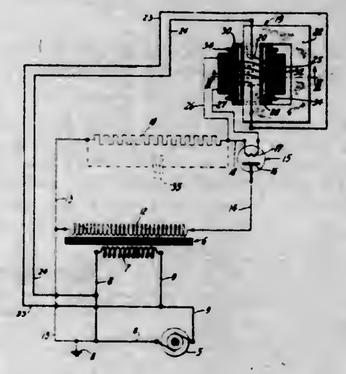
5. The combination with a railway car, of an air filter mounted under the body of the car, a conduit extending through the bottom of the car, a motor-driven fan also mounted under the car-body and connected to draw air through the filter and to discharge the filtered air through the conduit into the car, and a refrigerating unit associated with the filter and fan and comprising a refrigerant line positioned to cool the air forced through the filter by the fan.

1,905,041. HYDRAULIC CLUTCH. EDWARD R. MONROE, Bay City, Mich., assignor of one-fourth to Clyde G. McPherson, Black River, Mich. Filed Aug. 25, 1930. Serial No. 477,504. 8 Claims. (Cl. 192—58.)



1. In a hydraulic clutch comprising an eccentrically bored shell adapted to be connected to a driving member, a driven member journaled in said shell and including a shaft, said driven member being provided with a rim forming a chamber between said rim and shell, a liquid reservoir in the driven member and concentric with said chamber, and check valves mounted in said rim for admitting liquid from said reservoir to said chamber as the shell is rotated.

1,905,042. PRESSURE CONTROLLED VALVE. EMMETT B. MOORE, Evanston, Ill. Filed Aug. 14, 1930. Serial No. 475,151. 1 Claim. (Cl. 152—11.5.)



A device for connecting a sealed container with a source of fluid pressure comprising a stem having a flow passage through it and constituting a rigid part of said device and arranged to be permanently mounted in the container wall; a casing of which said stem is a rigid part arranged to be located within the container, said casing having a diaphragm chamber communicating with the passageway through the stem, and a duct providing communication between said chamber and the cavity of the container; a diaphragm in the casing having one side exposed to pressure in the chamber, the passageway through the stem being formed to provide a valve seat; a valve member co-acting with said seat for controlling flow through the stem passageway; a valve stem connected to the valve member and associated with the diaphragm for movement therewith in the pressure-responsive movement of the diaphragm, the valve being adjustable relatively to the diaphragm for varying the predetermined pressure necessary for moving the valve to closed position, said stem being formed with a detachable part at the portion of said stem outside the container to permit access to said valve for adjustment thereof; means normally urging the diaphragm in valve-opening direction, and a check valve mounted in the detachable portion of the stem arranged to open for inflow and seating against reverse flow.

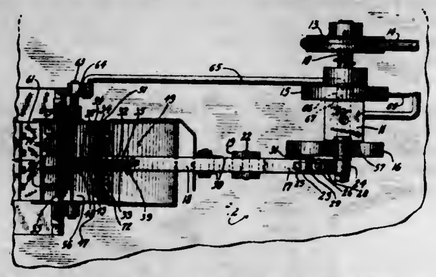
1,905,043. LUMINOUS DISCHARGE DEVICE. MONTFORD MORRISON, Montclair, N. J., assignor, by mesne assignments, to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 25, 1929. Serial No. 342,463. 6 Claims. (Cl. 176—126.

1. A gaseous ionization electrical discharge device comprising a translucent tube with a spaced extension end and a hollow metallic electrode of relatively large area surrounding said tube end and sealed externally to a small area thereof to provide a substantial spacing between the greater portion of the area of said tube end and said surrounding electrode, said electrode being operated internally at sub-atmospheric pressure and externally at atmospheric pressure.

1,905,044. CONSTANT POTENTIAL DEVICE. MONTFORD MORRISON, Montclair, N. J., assignor to Westinghouse X-Ray Company, Inc., a Corporation of Delaware. Filed July 2, 1931. Serial No. 458,281. 6 Claims. (Cl. 175—363.)

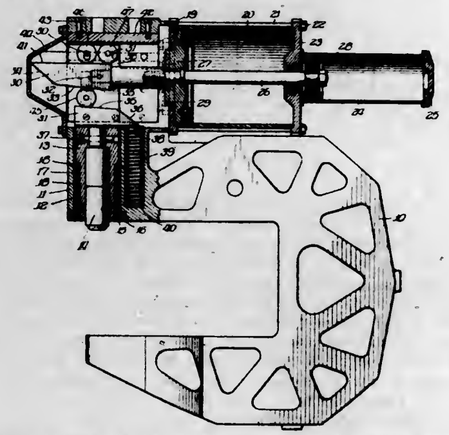
1. In combination with a unitary load, a source of alternating current therefor, a thermionic discharge device provided with a cathode to be heated for permitting current to flow to said load during one half wave of the alternating current cycle while suppressing the remaining half wave, and a transformer for heating the cathode of said device provided with a primary winding having an elongated surface area and a secondary winding disposed relative to said primary winding and having an elongated surface area for producing an electrostatic capacity effect within said transformer to supply constant potential energy to said unitary load.

1,905,045. TROMBONE. FREDERICK W. NEPTUNE, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Oct. 12, 1931. Serial No. 568,357. 5 Claims. (Cl. 84—395.)



3. In a trombone having a bell section, a bell branch, and a pair of braces rigidly connecting said bell section with said bell branch, a curved thumb hook mounted between said braces and adjacent the lower junction of one of said braces with said bell branch.

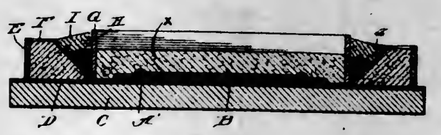
1,905,046. MACHINE FOR FEEDING COILED SECTIONS. CHARLES A. NICOLAI and ERIK LINDEGAARD, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 8, 1930. Serial No. 487,238. 11 Claims. (Cl. 140—182.)



1. A machine for feeding coiled sections comprising a hopper for supporting a plurality of sections, lifting means

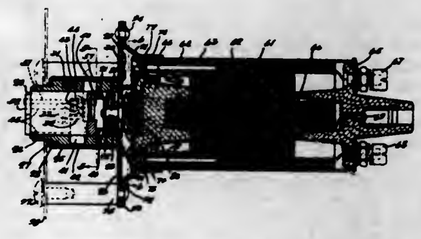
for removing a section from said hopper, a rocker plate, means for moving said lifting means over said plate for

the deposit of a section on said plate and means for actuating said plate to discharge said section.



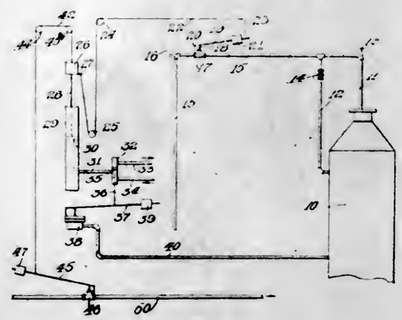
1,905,047. ROLLER WEDGE RIVETER. ALLAN A. NORIN, Chicago, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1930. Serial No. 462,735. 1 Claim. (Cl. 74—14.)

In a machine of the character described, a longitudinally movable wedge, means for producing movement of said wedge in opposite directions, a transversely movable plunger actuated in one direction by the working stroke of said wedge, resilient means for returning said plunger during the return stroke of said wedge, a wedge-shaped block carried by said plunger, said wedge and said wedge-shaped block each having a double inclined working surface for producing initial rapid movement of said plunger and final slow movement of said plunger with respect to the movement of said wedge, a movable roller in rolling contact with the working surface of said wedge and said wedge-shaped block, means guided for movement in the direction of travel of said wedge supporting the axis of said roller for movement in the direction of movement of said plunger with respect to the movement of said wedge and means actuated by the return movement of said wedge for moving said last-named means and said roller into a predetermined initial position with respect to the working surfaces of said wedge and said wedge-shaped block.



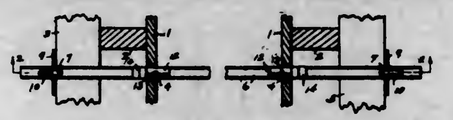
1,905,048. METHOD OF MAKING WOOD MOLD DIES. CHARLES B. NORRIS, FRANK M. CURRAN, and HENDRIK W. VAN STERNWYK, Grand Rapids, Mich., assignors to Haskelite Manufacturing Corporation, a Corporation of New York. Filed Apr. 23, 1930. Serial No. 446,656. 5 Claims. (Cl. 22—204.)

1. The method of producing one of a pair of dies adapted to mold wood panels, which comprises the making of an electro-deposited shell with flaring sides and having the design in the under face of the bottom wall, setting the shell on a support, placing a frame, larger than the shell on the support, around the shell, setting a second



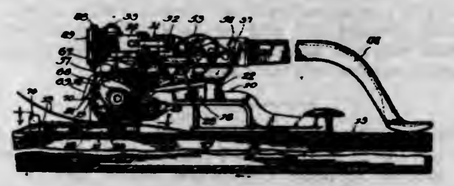
frame within the shell, filling the spaces between the sides of the pan and the two frames with non-combustible material, and pouring molten metal into the pan in the space within the inner frame.

1,905,049. LOCK SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Aug. 21, 1926, Serial No. 130,615. Divided and this application filed Apr. 12, 1927. Serial No. 183,143. 7 Claims. (Cl. 200—44.)



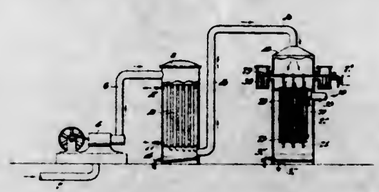
1. An electric circuit controller and lock therefor comprising, in combination, a unitary sub-assembly including a linearly movable operating member, a lock therefor, and a case for the member and lock; a unitary sub-assembly including a switch having a linearly movable contact and a case for the switch; means for connecting the two cases; and means including in one of the sub-assemblies for transmitting motion from the operating member to the movable contact and extending through an opening in one of the cases.

1,905,050. APPARATUS FOR AND METHOD OF COOKING WOOD PULP. LEON VICTOR PELOT, Wisconsin Rapids, and FRANK PELOT, Port Edwards, Wis., assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis., a Corporation of Wisconsin. Filed Apr. 29, 1932. Serial No. 608,154. 10 Claims. (Cl. 92—7.)



1. In combination with a pressure cooking vessel, valved pressure relief means, valved steam inlet means and means actuated by pressure in the vessel to operate said relief and steam inlet means.

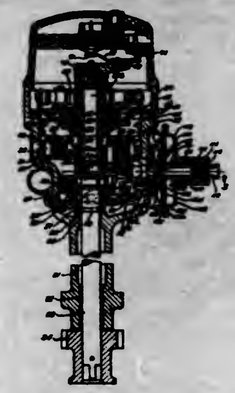
1,905,051. SPREADER CLAMP. ERNEST A. POOD, Houston, Tex. Filed Aug. 14, 1930. Serial No. 475,815. 2 Claims. (Cl. 25—131.)



2. The combination with a form for molding concretious material and having aligned openings, of a clamp formed of a strip of material having end keyways and fitted through said openings, wedges through said keyways, keys fitted inwardly through said openings adjacent said strip and whose inner ends project into the form and means on the keys engaging with the form to retain the keys against accidental displacement.

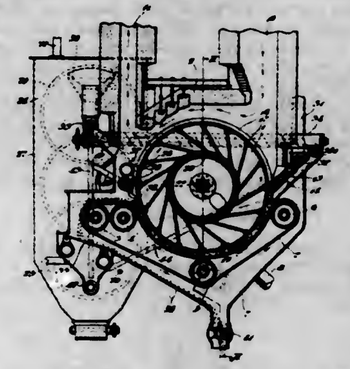
1,905,052. STRETCHING TOOL. HOWARD C. PORTER, La Grange Park, Ill., assignor to Signode Steel Strapping Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 18, 1932. Serial No. 599,694. 13 Claims. (Cl. 254—51.)

1. In a stretching tool, in combination a frame having a foot to underlie a binder, a rotatable tensioning device overhanging the foot, manually operable means for actuating the tensioning device, and a tie actuated by said means for securing the outer ends of said foot and tensioning device against spreading.



1,905,053. TREATMENT OF GAS. ALFRED R. POWELL, Elizabeth, N. J., assignor to The Koppers Company of Delaware, a Corporation of Delaware. Filed Aug. 5, 1931. Serial No. 555,216. 4 Claims. (Cl. 183—114.)

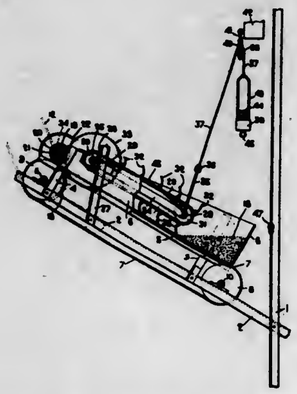
1. The process of treating fuel gas, which comprises freeing the gas from tar, ammonia, and other undesirable constituents, compressing the purified gas, cooling the compressed gas to substantially atmospheric temperature, and removing oil mist thereby formed in the gas by electrical precipitation.



1,905,054. IGNITION APPARATUS. FRANK H. PRESCOTT and JAMES L. ARTHUR, Anderson, Ind., assignors to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Mar. 25, 1931. Serial No. 525,200. 6 Claims. (Cl. 123—117.)

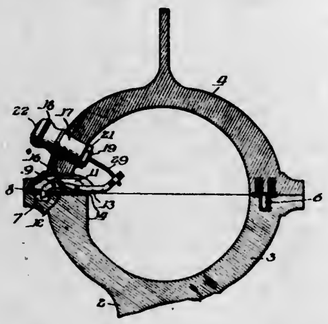
1. An ignition timer for internal combustion engines comprising in combination, a circuit interrupter, an engine driven cam for operating the same, devices responsive respectively to engine load conditions and engine speed conditions for controlling the timing of the operation of the circuit interrupter with respect to the cycle of engine operations, and means carried by one of said devices co-

operating with the other of said devices for limiting the total amount of ignition interrupter advance produced by the combined effect of the devices.



1,905,055. METHOD OF AND APPARATUS FOR PRODUCING COKE. FRANZ PUENING, O'Hara Township, Allegheny County, Pa. Filed Apr. 7, 1928. Serial No. 268,204. 8 Claims. (Cl. 202—14.)

1. The combination with two spaced movable members, one of said members being adapted to be heated to coke coal in contact therewith, and means for supplying a layer of coal to the heatable member and a layer of fine coke superposed on the layer of coal and in contact with the other member, of a source of heating gases for heating said heatable member, means for discharging the resultant product of said heatable member and said fine coke from said heatable member, and means for supplying fine coke adjacent to said discharging means and so as to constitute a seal by the fine coke between the heating gases and the gases of distillation of said coal.

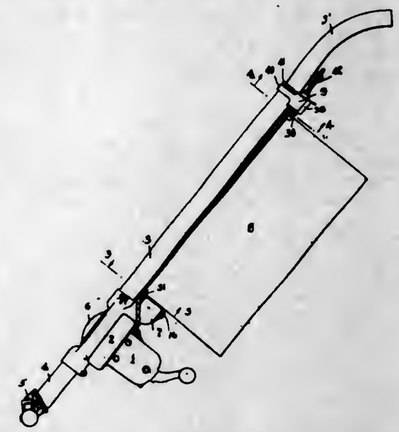


2. The method of coking coal by means of a moving heat-storage device which comprises supplying coal to a portion of the surface of said device to be treated during a portion of its path of movement, supplying hot gases for heating said device to coking temperature during another portion of its path of movement, the coal and heating gases being applied to the same surface of the device, coking the coal on the device by heat previously absorbed thereby and supplying solid granular material infusible at the coking temperature for sealing said device between the different portions of its path of movement to prevent interchange of heating gases and gases of distillation.

1,905,056. MECHANISM FOR DISTRIBUTING ARTICLES UPON A TRAVELING ASSEMBLING CARRIER. FORREST G. PURINTON, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 3, 1930. Serial No. 499,717. 8 Claims. (Cl. 198—29.)

1. A machine for assembling small articles in predetermined closely arranged juxtaposition comprising an inclined hopper having a bottom, side walls and a transverse wall at its lower end to receive a compact mass of said small articles, said bottom comprising a traveling assembling carrier provided with means to engage and remove from the mass of articles in said hopper only such articles as are presented thereto in a predetermined position, a traveling spreader having yieldable means to engage the mass of articles, means for actuating said spreader to cause it gradually to drag the articles from the mass and sweep and distribute the same over said assembling carrier, and means for yieldably supporting said spreader to permit it to accommodate itself to the varying depth of the mass of articles in the hopper.

1,905,057. LOCK. BRUNO RICCINI, Chicago, Ill., assignor to Daprato Statuary Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1931. Serial No. 524,033. 3 Claims. (Cl. 70—14.)

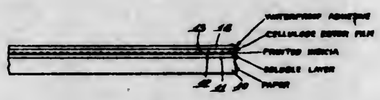


1. In a locking mechanism, a cylindrical casing terminating at one end in an operating knob, a lock cylinder slidingly mounted in said casing, means for limiting the sliding movement of said cylinder in both directions comprising a collar upon said cylinder and a sleeve within said casing, a spring within said casing for maintaining the cylinder in one extreme position, and means for locking the cylinder in its other extreme position and a latch actuated by said cylinder.

1,905,058. SWAB PLUNGER. NORMAN H. RICKER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Feb. 1, 1932. Serial No. 590,073. 5 Claims. (Cl. 103—52.)

1. A swab plunger comprising a tubular body member, a valve seat at the lower end thereof, a valve adapted to close upwardly into said seat, a support for said valve below said seat, and means within said support normally acting to move said valve to open position.

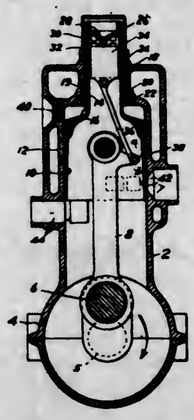
1,905,059. VACUUM CLEANER. FREDERICK RIEBEL, Jr., and DEWEY M. DOW, Toledo, Ohio, assignors to Air Way Electric Appliance Corporation, Toledo, Ohio, a Corporation of Delaware. Filed May 20, 1931. Serial No. 538,638. 6 Claims. (Cl. 183—51.)



1. In combination with a suction cleaner including a handle and a projecting part extending therebelow, a latch member longitudinally slidable relative to said part and projecting therebeyond at each end, one end of said latch member being formed to receive a bag element, and the other end being formed for engagement by an operator.

1,905,060. PROCESS OF TREATING COAL WITH OIL. HAROLD J. ROSE, Penn Township, Allegheny County, Pa., and WILLIAM H. HILL, New York, N. Y., assignors to The Koppers Company of Delaware, a Corporation of Delaware. Filed Apr. 12, 1929. Serial No. 354,694. 2 Claims. (Cl. 44—1.)

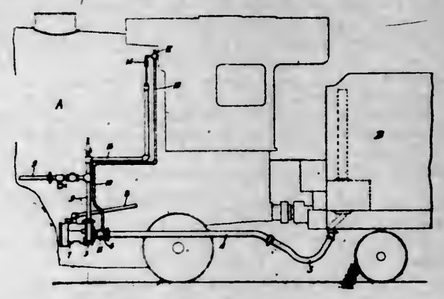
1. A process comprising heating a mixture of water-gas tar and about 10 per cent of sulphur in the presence of coal up to about 320° C. under pressure, gradually reducing the temperature below 200° C., and then reducing the pressure.



2. A process comprising heating 80 parts by weight of water-gas tar and 8 parts by weight of sulphur in the presence of 20 parts by weight of coal up to about 320° C. under pressure, gradually reducing the temperature below 200° C., and then reducing the pressure.

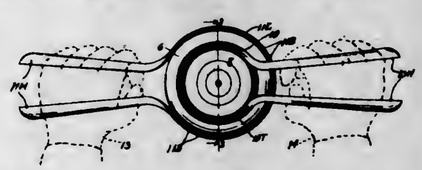
1,905,061. ART OF SHADING DRAWINGS. HARRY SAX, Chicago, Ill. Filed Feb. 11, 1931. Serial No. 515,061. 8 Claims. (Cl. 41—33.)

1. A film for toning drawings which comprises a thin cellulose ester support, a plurality of indicia on one side thereof, and a waxy non-smudging adhesive on the other side.



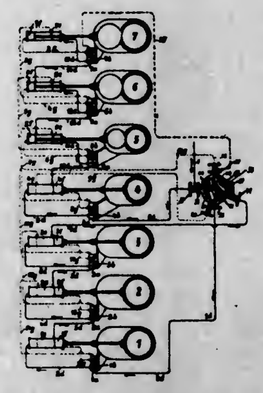
1,905,062. INTERNAL COMBUSTION ENGINE. JOSEPH SCHAEFFERS, Camden, N. J. Filed May 24, 1930, Serial No. 455,180, and in Germany Jan. 4, 1930. 8 Claims. (Cl. 123—47.)

7. A two-cycle internal combustion engine comprising a cylinder, a piston movable in the cylinder, a shaft, connections between the piston and shaft for driving the latter, a hollow extension carried by the piston, providing communication between its opposite sides, and reciprocating in a bore aligned with the cylinder, said extension having an intake port arranged to communicate with the cylinder when the piston is at the outer end of its stroke, and the cylinder having an exhaust port arranged to be uncovered by the piston at the outer end of its stroke, and automatic means within the extension of the piston arranged to delay the closing of the intake port until after the closing of the exhaust port.



1,905,063. LOCOMOTIVE. EUGENE L. SCHELLENS, Millburn, N. J., and CHRISTOPHER A. SCHELLENS, Marblehead, Mass., assignors to C-S Engineering Company, Jersey City, N. J., a Corporation of Delaware. Filed July 27, 1927. Serial No. 208,796. 4 Claims. (Cl. 122—412.)

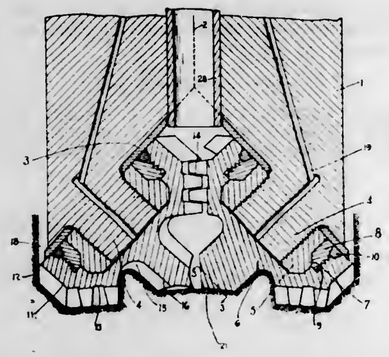
1. In a locomotive having a boiler with its feed check valve and a tank, a feed water system including a heater, a centrifugal pump positioned for gravity feed from said tank, said pump having connections to said boiler and heater, whereby it is subject to possible leak or influx of steam and air from both, vent means for the pump



in communication with the discharge side of the pump, and means for closing off said communication upon operation of the pump.

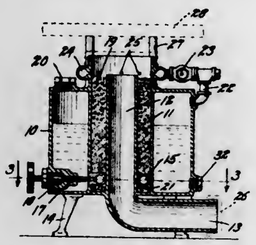
1,905,064. PRESERVING JAR HANDLING MEANS. SARAH E. SCHLOTT, St. Paul, Minn. Filed May 12, 1930. Serial No. 451,820. 1 Claim. (Cl. 81—3.1.)

In a car cap manipulating device of the class described, comprising a clamp formed of flat metal stock with a loop part threaded interiorly to engage a correspondingly threaded jar-cap, and a pair of integral handles extending approximately radially from said loop, the latter comprising in part a lower outwardly flared flange terminating at its perimeter in a downwardly directed rim flange to form a guard for the lower rim of the jar cover.



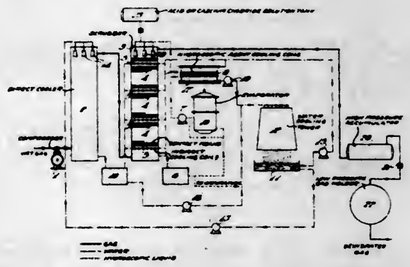
1,905,065. VALVE ACTUATING MEANS FOR AIR HEATERS. BERNHARD SCHOLL, Rolsdorf near Duren, Germany, assignor to Zimmermann & Jansen, G. m. b. H., Duren-Rhld., Germany, a Company of Germany. Filed Oct. 27, 1930, Serial No. 491,459, and in Germany Dec. 16, 1929. 6 Claims. (Cl. 137—144.)

1. In a system for controlling valves or gates of commercial plants, the combination, with the members to be controlled, of actuating cylinders and pistons one for



each of said members, fluid operated valves controlling the supply of motive fluid to said cylinders, tubular connections for connecting said valves and cylinders in series and so that after operation each piston connects the working chamber of its cylinder with the next valve for supplying the motive fluid from the working chamber thereto and each valve connects the chambers of the cylinder controlled thereby respectively with the supply and discharge of the motive fluid, and means for supplying the motive fluid to said valves for setting the same in positions for directing the motive fluid to said cylinders.

1,905,066. ROLLING DRILL CUTTER. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Aug. 19, 1930. Serial No. 476,301. 9 Claims. (Cl. 255—71.)



1. A well drill including a head, a pair of downwardly and inwardly inclined shafts thereon, inwardly tapered, cutters rotatable on said shafts, said cutters having a toothed cylindrical area, positioned to cut the outer part of the hole, and a toothed cylindrical area adjacent the center of the hole.

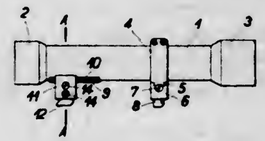
1,905,067. LIQUID FUEL BURNER. SAMUEL T. SHERRICK, Denver, Colo., assignor to S. & C. Holding Corporation, Denver, Colo., a Corporation of Colorado. Filed Mar. 28, 1932. Serial No. 601,543. 5 Claims. (Cl. 158—72.)

1. A liquid fuel burner comprising: a fuel reservoir; a burner sleeve projecting upwardly from within said reservoir through the top thereof; an air conduit passing upwardly through said burner sleeve in spaced relation to the walls thereof and opening through the bottom of said fuel reservoir; porous material filling the space between said air conduit and said burner tube; and a perforated tubular ring surrounding said air conduit within said burner sleeve, said ring communicating with said reservoir.

1,905,068. APPARATUS FOR DEHYDRATING GAS. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company of Delaware, a Corporation of Delaware. Original application filed Oct. 11, 1926, Serial No. 140,749. Divided and this application filed Dec. 30, 1930. Serial No. 505,567. 1 Claim. (Cl. 261—11.)

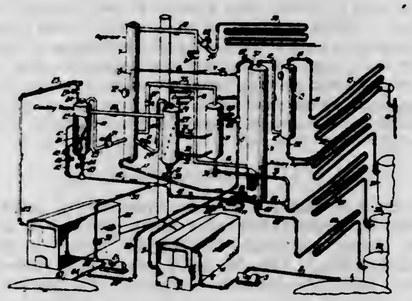
Apparatus for dehydrating fuel gas which comprises, in combination, a compressor located in the path of the gas, a direct cooler and a scrubber having internally disposed direct-contact sections and indirect cooling sections, located in the path of the compressed gas, a brine cooler, means for recirculating a water absorbent brine through said brine-cooler and the direct-contact sections of said scrubber, an atmospheric cooling tower, and means for supplying cooled water from said tower to said direct cooler, the indirect cooling sections of said scrubber and said brine-cooler.

1,905,069. SOAP DISH. RAY L. STAIR, Los Angeles, Calif. Filed Jan. 2, 1929. Serial No. 329,872. 1 Claim. (Cl. 45—28.)



As an article of manufacture, a soap dish, comprising a body formed in a single piece from rubber and comprising a bottom and inclined walls projecting upwardly from the sides and ends of said bottom, there being a drain opening formed through the bottom of the dish adjacent to one side thereof, the upper surface of the bottom of which dish declines from all directions toward said outlet opening, a spout formed integral with the underside of the dish around the opening therein, which spout projects outwardly and downwardly a reenforcing member formed integral with the underside of the bottom of the receptacle immediately to the rear of said spout and below the lowermost portion of the upper surface of the bottom of the soap dish, nuts imbedded in the bottom of said dish for the reception of vacuum suction cup fastening means lugs formed integral with the bottom of the body of the disc immediately below said nuts, vacuum suction cups applied to the underside of the dish with their upper portions engaging said lugs and screws projecting from said cups upwardly through said lugs and engaging said nuts.

1,905,070. TELESCOPE SIGHT. ADOLF STEINLE, Jena, Germany, assignor to Firm of Carl Zeiss, Jena, Germany. Filed Feb. 25, 1930, Serial No. 431 184, and in Germany Mar. 6, 1929. 1 Claim. (Cl. 33—50.)



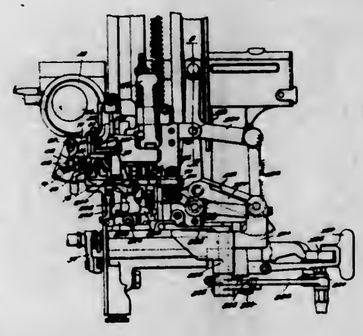
A device for fixing a telescope on a rifle, the said device consisting of two clamping devices adapted to detachably

support the telescope and to engage projections in the rifle barrel, at least one of the clamping devices being provided with a row of projections approximately parallel

to the axis of the telescope, and the telescope being equipped with rack teeth interlocking with the projections of the clamping device.

1,905,071. METHOD OF TREATING HYDROCARBONS. EDWARD E. STEWART, Wichita Falls, Tex. Original application filed Nov. 6, 1926, Serial No. 146,671. Divided and this application filed Feb. 11, 1929. Serial No. 338,951. 3 Claims. (Cl. 196—58.)

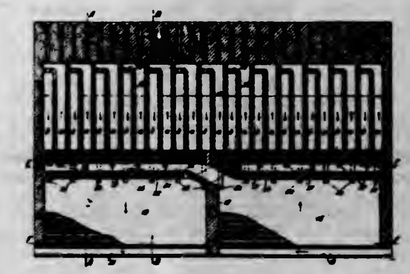
1. The method of treating hydrocarbon oil including heating a stream of oil under pressure to cracking temperature, passing the heated stream of oil through a confined column of the hot oil at cracking temperature in a primary cracking zone, maintaining pressure on said column of hot oil to retain the column in liquid state, passing oil from said primary cracking zone to a secondary cracking zone, drawing off liquid from the secondary cracking zone at a rate to prevent substantial accumulation of liquid oil therein, passing vapors from said secondary cracking zone to a vapor reaction zone, controlling flow of vapors to the vapor reaction zone to maintain relatively high pressure in the secondary cracking zone, delivering vapors from the vapor reaction zone to a blending zone, condensing heavier components of said vapors in the blending zone, delivering condensate from the blending zone to a primary separating zone, withdrawing vapors from the primary separating zone, drawing liquid oil from said primary separating zone for supply of cracking stock, and delivering preheated initial charging stock to the blending zone for commingling of vapors and condensate of said initial stock with vapors and condensate of the cracked oil.



1,905,072. FILMED COAL AND COMPOSITION OF MATTER FOR PRODUCING SAME. KENNETH B. STUART, Pueblo, Colo., assignor to The Colorado Fuel and Iron Company, Denver, Colo. Filed Oct. 24, 1930. Serial No. 491,069. 1 Claim. (Cl. 44—6.)

A composition of matter, for filming coal, comprising residue from the refining of benzol, rosin size and water in substantially the following proportions—residue 8 gallons and rosin size 8 pounds, mixed with sufficient water to make 50 gallons.

1,905,073. METHOD OF FILMING COAL. KENNETH B. STUART, Pueblo, Colo., assignor to The Colorado Fuel and Iron Company, Denver, Colo. Filed Oct. 13, 1930. Serial No. 488,551. 13 Claims. (Cl. 44—6.)



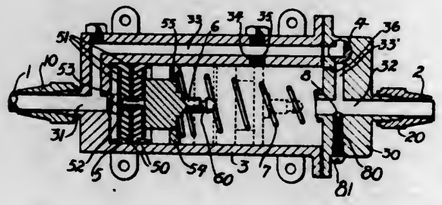
1. The method of filming coal comprising applying to the surface of the coal para coumarone in solution.

1,905,074. SHOE SEWING MACHINE. LAURENCE E. TOPHAM, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 27, 1928. Serial No. 265,169. 26 Claims. (Cl. 112—47.)

1. In a machine provided with devices engaging the work and acting intermittently to perform an operation on the work and feed the work, carriers to which said devices are connected arranged to reciprocate along the line of feed, mechanisms for actuating said devices and reciprocating said carriers to impart a continuous feeding movement to the work, and adjusting means common to said carrier reciprocating mechanisms for adjusting said mechanisms simultaneously.

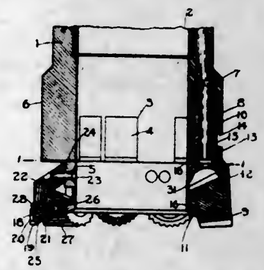
1,905,075. RETORT OVEN FOR PRODUCING GAS AND COKE. FRIEDRICH TOTZEK, Essen-Stoppenberg, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 3, 1928, Serial No. 316,975, and in Germany Nov. 10, 1927. 18 Claims. (Cl. 202—144.)

1. A coke oven battery comprising a series of alternate horizontal coking chambers and heating walls therefor arranged side by side in a row, each of said heating walls comprising a row of vertical flues, two parallel rows of regenerators along opposite sides of the battery respectively and below the coking chambers and heating walls, a partition extending throughout the longitudinal middle axis of said battery and separating the two rows of regenerators, ducts directly communicably connecting the re-



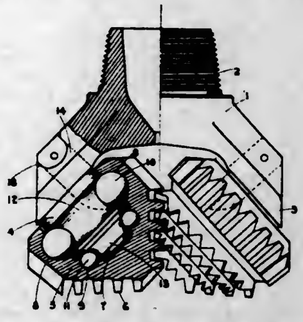
generator chambers on one side of said partition with flues in the portion of the oven above them, and a canal extending from the inner top corner of each regenerator chamber first slightly ascending and then in substantially horizontal direction above the regenerator chamber and below the levels of the bottoms of the flues on the other side of said partition, and ducts communicably connecting each canal with flues in the portion of the oven above the same, the ascending portions of adjoining canals crossing each other in spaced relation.

1,905,076. WALKING STICK. LLOYD VAN SCIVER, Chestnut Hill, Pa. Filed Feb. 3, 1932. Serial No. 590,701. 8 Claims. (Cl. 135—47.)



3. A combination cane and pickup device including a cane, a finger normally along the lower part of the cane, a pivoted connection between the finger and cane at the upper end of the finger, teeth arcuate with respect to the pivot and rigidly connected to the finger, a rack operatively connected to the said teeth, a link having a lower end supporting the rack and mechanism operative at the handle of the cane for vertically shifting the link in order to open and close the finger with respect to the cane.

1,905,077. SAFETY MEANS FOR HYDRAULIC BRAKES. HENRY A. WALKER, Rockport, Wash. Filed July 19, 1930. Serial No. 469,026. 3 Claims. (Cl. 303—84.)

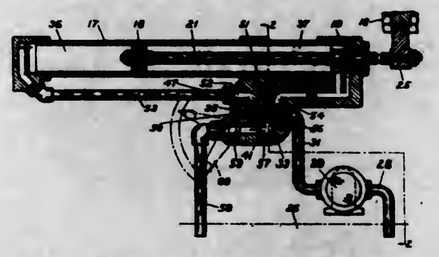


2. In combination with a pressure supply conduit and a pressure transmitting conduit, a cylinder connected at its opposite ends to the respective conduits, a piston normally movable from a position of rest, at the pressure end of the cylinder, towards the opposite end, but normally stopping short of such end, its return being induced by reacting pressure through the pressure transmitting conduit, means for engaging and holding said piston following abnormal movement away from the pressure end, but releasable upon application of reacting pressure, comprising a circumferentially grooved stem on said piston aligned with and of a size to enter the pressure transmitting outlet of the cylinder, and a ball-catch in such outlet engageable with said groove.

1,905,078. CORE DRILL REAMER. LOUIS H. WELLENSIEK, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Oct. 5, 1931. Serial No. 566,856. 6 Claims. (Cl. 255—72.)

1. A core drill including a body, a head thereon, rolling drill cutters mounted on said head, rolling reamer cutters on said head between said drill cutters, said reamer cutters being tapered upwardly and outwardly and having cutting teeth on the periphery and along the lower outer margin acting on the side wall of the hole and a beveled larger end presented downwardly and toothed to cut the bottom of the hole.

1,905,079. ROLLER CUTTER RETAINING DEVICE. LOUIS H. WELLENSIEK and FRED C. SMITH, Jr., Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Nov. 21, 1931. Serial No. 576,510. 2 Claims. (Cl. 255—71.)

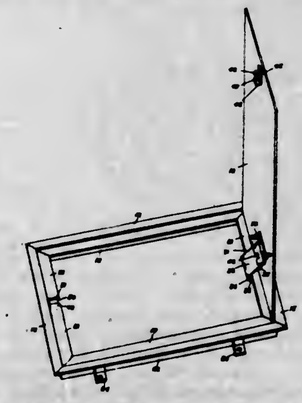


1. In a well drill, a head, cutter shafts thereon tapered adjacent their ends, said shafts having grooves thereon for ball bearings, one of which is upon said tapered area, balls in said grooves, cutters on said shafts and a bore in said head and shaft leading in a straight line to one of said grooves, and means to fill said bore holding the balls in said groove.

1,905,080. HYDRAULICALLY ACTUATED TABLE RECIPROCATING MECHANISM. JOSEPH R. WHITTLES, Rockford, Ill., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1930. Serial No. 505,661. 2 Claims. (Cl. 121—45.)

1. In combination with a fluid pressure motor having a cylinder and piston for reciprocating a machine table and end ports in the cylinder, a reversing valve connected with said ports comprising a casing having a chamber for a rotary valve, an axial inlet port and three peripheral

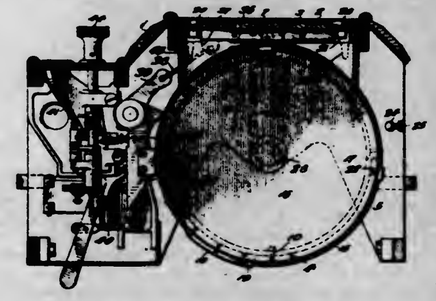
ports opening through the casing to the chamber, one of which ports serves as an exhaust and the others serve for feeding fluid to the motor, a rotary valve within the chamber having an axial bore communicating with the inlet port, a feed passage in said valve extending from the bore to the periphery and having its opening at the periphery so shaped and arranged that, when the valve is in a neutral position, it may communicate with both feed ports to balance the pressure on both sides of the piston and at the same time prevent exhaust of fluid from either



end of the cylinder, an exhaust passage on the opposite side of the valve from the feed groove and spaced therefrom by walls, but which is so arranged that it may connect either feed port with the exhaust port, each of said walls being narrower than the width of either feed port so that when the valve is moved from a neutral to a reverse position, part of the fluid may by-pass in a gradually decreasing amount from the feed groove through one of the feed ports into the exhaust passage and cause a gradual acceleration of the piston.

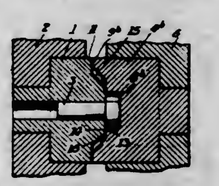
1,905,081. COVERED WELDING ROD. HENRY B. WOODS, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Dec. 23, 1929. Serial No. 416,211. 3 Claims. (Cl. 219—8.)

1. A welding electrode composed of a metal core, a covering therefor containing calcium carbonate, silica, sodium silicate and ferromanganese in the following proportions by weight:



Calcium carbonate	24 to 45
Silica	25 to 45
Sodium silicate	5 to 20
Ferromanganese	5 to 25

1,905,082. FLUSH PANEL CONSTRUCTION. HARRY B. WUBBLING, Cincinnati, Ohio. Filed Dec. 19, 1930. Serial No. 503,418. 3 Claims. (Cl. 184—46.)

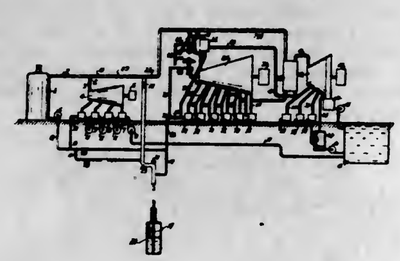


2. The combination with a frame having an inwardly projecting flange with a way therethrough and a closing panel adapted to contact said flange, of a latch member attached to the rear of the panel and movable from the outer face thereof, said latch member being receivable through said way and movable to a latched relationship with said flange, and means on the latch member and flange and adapted to initiate opening movement of the panel upon unlatching thereof.

1,905,083. VENDING DRUM FOR COIN CONTROLLED VENDING MACHINES. ALBERT M. CRAMER, Philadelphia, Pa., assignor to Horn and Hardart Baking Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Oct. 17, 1927. Serial No. 226,675. 3 Claims. (Cl. 232—1.)

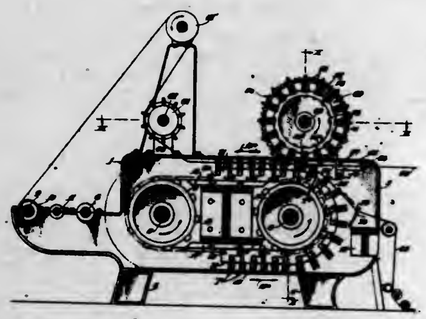
1. A rotatably mounted vending drum for coin controlled vending machines having super-imposed article receiving compartments, said drum having a second opening in proximity to each compartment provided with a bottom bar extending below the top of the juxtaposed compartment, and a door for each compartment controlling access thereto and adapted to move into a second opening and have its opening movement limited by the bar thereof.

1,905,084. MANUFACTURE OF BOLTS. JOSEPH F. FING, La Grange, Ill., assignor to United Screw and Bolt Corporation, Chicago, Ill., a Corporation of Ohio. Filed Nov. 28, 1930. Serial No. 498,636. 15 Claims. (Cl. 10—25.)



1. A pair of die members for use in a bolt or screw forming machine, one of said die members being provided with a recess to receive a piece of stock, the other of said die members being provided with a die recess therein, one of said members being further provided with a projecting abutment surface arranged to engage the other die member and limit the relative movement of said members toward each other, one of said members also being recessed to provide a depository to receive scrap material trimmed from the stock.

1,905,085. HOT WATER STORAGE FOR POWER GENERATION. FRANK W. GAY, Newark, N. J. Filed Apr. 28, 1930. Serial No. 447,921. 6 Claims. (Cl. 60—84.)



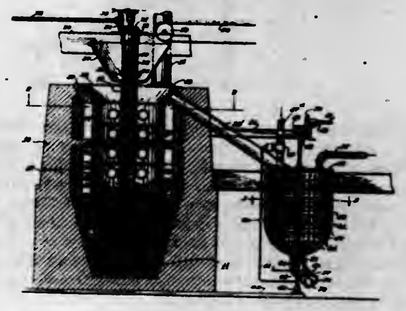
1. In a power generating station adapted to carry peak loads, a high pressure boiler, a huge storage reservoir arranged to store water at high temperature and pressure, means for utilizing the greater portion of the energy delivered by said boiler during light load periods to heat

water for storage in said reservoir, a plurality of evaporators arranged in series, said evaporators being connected to said storage reservoir during heavy load periods so that hot water from said reservoir is allowed to pass in succession through each of said evaporators, a turbine having a plurality of turbine stages, said turbine being connected to receive steam from said boiler during heavy

load periods, connecting pipes serving to connect each of said evaporators to a respective stage of said turbine, whereby a portion of the water from said reservoir, in passing through a respective one of said evaporators, flashes into steam and is delivered through a connecting pipe to the respective turbine stage, thereby augmenting the steam supplied directly from the boiler to said turbine.

1,905,086. WIRE FABRIC MAKING MACHINE. ISRAEL C. GELLMAN, Rock Island, Ill., assignor to Northwestern Barb Wire Company, Sterling, Ill., a Corporation of Illinois. Filed Sept. 8, 1931. Serial No. 561,527. 17 Claims. (Cl. 140—4.)

1. In a machine for making wire fabric embodying line and mesh wires, means for feeding a plurality of mesh wires, cams engageable with said mesh wires for deflecting juxtaposed portions of the mesh wires on opposite sides of each line wire alternately toward and away from said line wire, and means for wrapping the deflected portions about the line wires.



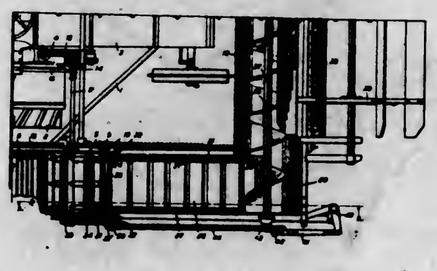
1,905,087. REACTIVATION OF SPENT FILTER MATERIALS. MAX GONBEL, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed June 19, 1930. Serial No. 462,426. 11 Claims. (Cl. 252—2.)

1. A process for the revivification of spent decolorising agents which comprises extracting with a solvent mixture comprising an alcohol, a ketonic body, an aromatic hydrocarbon, and a diluent comprising a low-boiling petroleum fraction.

1,905,088. ANTHRAQUINONE VAT DYES AND A PROCESS OF MAKING THE SAME. ROBERT J. GOODRICH and EDWARD T. HOWELL, South Milwaukee, Wis., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, a Corporation of Delaware. Filed Aug. 8, 1929. Serial No. 384,463. 9 Claims. (Cl. 260—61.)

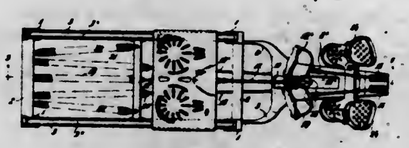
8. As a new product, a dyestuff composed of substantially pure brominated dimethoxy dibenzanthrone.

1,905,089. APPARATUS FOR THE CONTINUOUS CALCINATION OF GYPSUM. FRED J. GOUGH, Fort Dodge, Iowa, assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 18, 1929. Serial No., 407,812. 4 Claims. (Cl. 222—6.)



1. In a calcining apparatus for gypsum, a pair of cylinders of different diameters and in concentric arrangement, means for rotating the smaller of said cylinders, stirring arms secured to said small cylinder, said small cylinder being provided adjacent the upper and lower ends thereof with openings for the admission and discharge of material, a screw conveyor rigidly positioned in said small cylinder, means for rotating said small cylinder so as to cause the movement of material down said small cylinder into the bottom of said large cylinder, and means for heating said large cylinder.

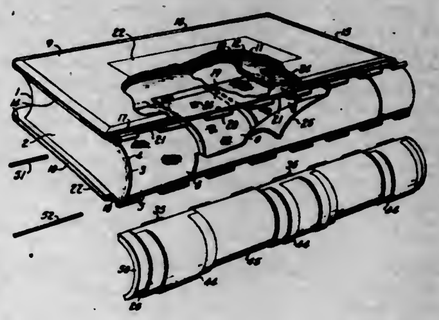
1,905,090. CLUTCH MECHANISM. RONALD GEORGE GRIFFITH, Croydon, England, assignor to Creed and Company, Limited, Croydon, England. Filed Aug. 14, 1931, Serial No. 557,083, and in Great Britain July 2, 1931. 7 Claims. (Cl. 178—34.)



1. A rotatable type-head clutch mechanism comprising, a rotatable driving member, a type-head having a number of type characters arranged thereon and frictionally driven by said driving member, a stationary series of selectable stop members corresponding to said type characters, a yielding stop arm carried by said type-head and engageable with an actuated one of said series of stop members, and means controlled by the stop arm and rendered effective by the engagement thereof with an actuated stop member to reduce the frictional driving contact between the driving member and the type-head.

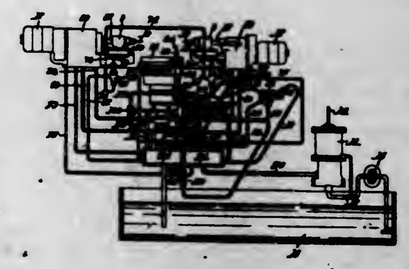
1,905,091. COMBINED HARVESTER, THRESHER, AND SEPARATOR. PERRIN J. HANSON, Independence, Mo., assignor, by mesne assignments, to Gleaner Harvester Corporation, Independence, Mo., a Corporation of Delaware. Filed Apr. 28, 1930. Serial No. 448,072. 4 Claims. (Cl. 56—20.)

1. In a machine of the character described including a main frame and a separating mechanism on the main frame, a substructure adjustably supported from the main frame including a transverse conveyor housing, an interconnected longitudinal raddle housing communicating the transverse housing with the separator mechanism, a raddle in the longitudinal housing for delivering grain to the separator mechanism, and a screw conveyor in the transverse housing extending across the width of the raddle and arranged so that flights thereof move over the upper surface of the raddle for discharging grain substantially uniformly across the width of said raddle.



1,905,092. EXERCISE MACHINE. PETER S. HARDY, Stratford, Conn., assignor to Health Developing Apparatus Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 11, 1931. Serial No. 556,380. 14 Claims. (Cl. 272—72.)

1. An exercising machine comprising a main frame having parallel side rails and front and rear transverse members supporting said rails, a seat movable over said rails, a supplemental frame member pivotally connected to and projecting forwardly of the first-named frame member and held against upward movement by abutment with the said front transverse member, a foot rest and a guide device carried by the supplemental frame member, hand grips and flexible tensioned connections therefor led over said guide device.



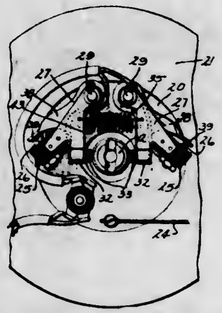
1,905,093. COVER FOR PERMANENTLY BOUND BOOKS. ERNEST C. HAHEL and ERNEST C. HAHEL, Jr., Atchison, Kans. Filed Dec. 16, 1931. Serial No. 581,286. 14 Claims. (Cl. 281—37.)

14. In a book including permanently bound signature sections, side covers for the signature sections, means permanently connecting the side covers to the signature sections, hinge sections permanently carried by the side covers, a removable back member for the book, hinge sections fixed to the side edges of the back member, and

means detachably connecting the respective hinge sections for securing the back member to said permanently attached side covers.

1,905,094. HYDRAULIC FEED SYSTEM FOR MACHINE TOOLS. ERIC J. HIRVONEN, Worcester, Mass., assignor to Leland-Gifford Company, a Corporation of Massachusetts. Filed May 31, 1930. Serial No. 457,953. 13 Claims. (Cl. 77—32.)

1. In a device for operating a machine tool, the combination with a tool head mounted to reciprocate, hydraulic means for moving the tool head forwardly to perform the work and withdrawing it automatically to its extreme retracted position, a feed pipe connected with a source of fluid under pressure, a hand-operated starting valve connected to said feed pipe, and a second pipe leading from the valve and adapted to be opened and closed thereby, of a work table, means for moving the work table to place the work in operative position, and a system of piping connected with the first named pipe through which pressure is applied to said work table moving means to actuate the table, means including a hydraulically-operated valve under conjoint control of said starting valve and said tool head for effecting the actuation of said hydraulic means to reciprocate said tool head, a second valve in the pipe system which is in series with said starting valve and is normally closed, but adapted to be opened by the movement of the tool head to its extreme retracted position to effect the operation of said table moving means.



3. In a hydraulic operating means for machine tools and the like, the combination with a reciprocable tool head and automatic means for operating the tool head,

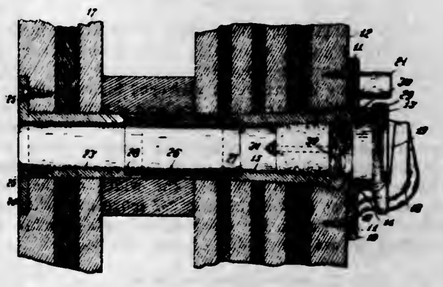
said tool head having a cam thereon, of means for conducting fluid under pressure, a valve to which said means is connected, the valve being provided with means whereby the pressure of the fluid will normally keep it closed, and means operated by the cam for opening the valve upon withdrawal of the head to its extreme neutral position, of a movable work table, means adapted to be operated upon the opening of said valve by the pressure of the fluid for advancing the work table a step to bring a piece of work into position for the tool to operate thereon, a work rest on the table, a jaw, means for moving the jaw in a position to engage the work on the rest and hold the jaw closed, a valve connected with the first named valve, and a handle on the second valve in position to be moved by said jaw to close said second valve whenever the jaw is held in an abnormal position either by the misplacement of the work therein or the presence of a foreign body.

1,905,095. BLACK VAT DYESTUFF PREPARATION. EDWARD T. HOWELL, Milwaukee, and ROBERT J. GOODRICH, South Milwaukee, Wis., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, a Corporation of Delaware. Filed May 21, 1930. Serial No. 454,506. 8 Claims. (Cl. 8—6.)

1. A vat dyestuff for coloring fibrous bodies in black shades comprising a composite mixture of dibenzanthrone and a vat dyestuff producing on the fibre a color within the range of orange to yellow, said vat dyestuff forming from 10 to 50% of the mixture.

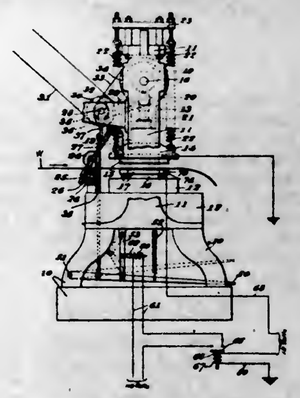
1,905,096. BREAKER MECHANISM. FINN T. IBSENS, Wauwatosa, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a Corporation of Michigan. Filed Feb. 26, 1932. Serial No. 595,271. 7 Claims. (Cl. 200—27.)

1. In a timer mechanism, the combination with a cam shaft, a relatively fixed support, and breaker mechanism including relatively fixed and movable contacts, means yieldably mounting said relatively fixed contacts upon said support, means for governing the yielding movement of said relatively fixed contacts in accordance with erratic movements of said shell, and means for actuating the relatively movable contacts from said shaft whereby the several contacts are positioned as to timing by said support and are positioned entirely by said shaft in their movement to and from each other.



1,905,097. LOOSE LEAF MEMORANDUM BOOK. CLARENCE B. IRVING, Kansas City, Mo., assignor to Wilson-Jones Company, Chicago, Ill., a Corporation of Massachusetts. Filed Jan. 28, 1932. Serial No. 589,364. 7 Claims. (Cl. 129—1.)

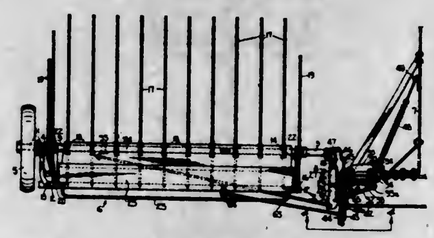
1. In a loose leaf memorandum book, sheet holding means; a filler carried by said means comprising a plurality of filler units, each unit including a number of superimposed sheets all engaged by the holding means; and



binding means comprising a narrow strip of adhesive at the edge of each unit for releasably maintaining the sheets thereof in associated relation.

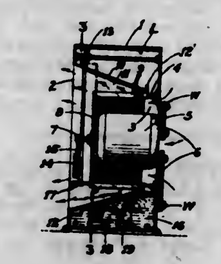
1,905,098. CAR GASSING DEVICE. FRED A. ISAACSON, Chicago, Ill. Filed Sept. 10, 1931. Serial No. 562,105. 5 Claims. (Cl. 20—39.)

5. In a medium introducing device for railroad cars, a medium conveying sectional conduit arranged to extend from the car exterior to the car interior, the sections being arranged in interengaging relation at their ends and one of the sections composed of temperature non-conducting material; and a closure member for one end of the conduit.



1,905,099. SAFETY DEVICE FOR DIE PRESSES. WILLIAM C. JAY, Philadelphia, Pa., assignor to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed May 15, 1929. Serial No. 363,124. 4 Claims. (Cl. 192—127.)

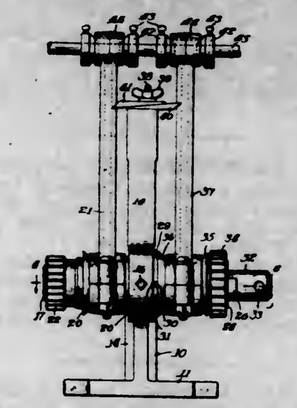
1. In a machine having relatively movable die members for die stamping articles from sheet material, means for feeding sheet material between said members, mechanism



for relatively moving said members toward and away from each other, and means for starting and stopping said mechanism, the combination therewith of a stripper plate yieldingly mounted on one of said die members, mechanism for automatically actuating said last-named means to stop the machine including an electrically actuated device, a circuit through said device having a contact carried in an insulated mounting in said stripper plate and a conductor connected to the other die member.

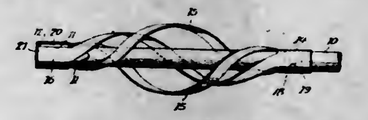
1,905,100. BUNDLE CARRIER. ELLSWORTH T. JOHNSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed June 17, 1931. Serial No. 544,968. 31 Claims. (Cl. 56—480.)

1. In combination with a binder, a bundle carrier, and means mounted on said binder for supporting said carrier for horizontal swinging movement, said means having a longitudinally disposed sleeve providing a first pivotal support whereby said carrier is swingable vertically, and a second pivotal means about which said carrier may be tilted into bundle discharging position.



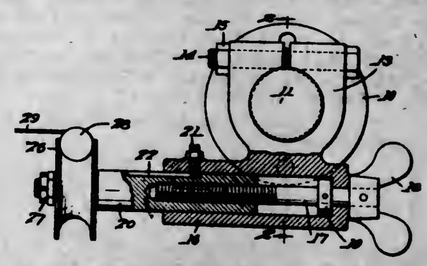
1,905,101. AIR CONDITIONER. HALBERT T. JOHNSON, Paso Robles, Calif. Filed Mar. 18, 1932. Serial No. 599,677. 6 Claims. (Cl. 261—92.)

1. An air conditioner comprising an open-topped tank for liquid, a horisontal open-ended rotary liquid-absorbing air conduit disposed relative to the tank to dip into the liquid, a fan inside the conduit clear of the liquid, arranged to cause air to be drawn into the conduit from one end and to be then thrown into contact with the inner periphery of the conduit and discharged from the opposite end thereof, and means to rotate the fan and conduit in opposite directions.



1,905,102. ALIGNING FIXTURE. LEONARD W. JOHNSON, Batavia, Ill. Filed Mar. 20, 1929. Serial No. 348,431. 4 Claims. (Cl. 77—62.)

1. A fixture comprising in combination, a base member, a shaft thereon extending outward at one side thereof, a second shaft extending outward from said base member on the side opposite said first mentioned shaft, an eccentric bearing member on one of said shafts, clamping means on each of said shafts whereby the crank shaft ends of a



pair of connecting rods are secured in side to side relation with each other, and means whereby the said eccentric member may be rotated.

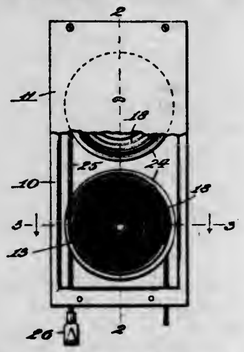
1,905,103. VALVE GUIDE CLEANER. LEONARD W. JOHNSON, Batavia, Ill. Filed Dec. 9, 1929. Serial No. 412,694. 8 Claims. (Cl. 104—19.)

1. A valve guide cleaner comprising in combination, a cleaner head having a plurality of spirally extending blades integrally formed with a collar portion, the said collar portion having flat faces adjacent the ends of the said blades, a stem having a plurality of flat faces formed thereon, and an end cap fitted over the free ends of the said blades and secured to said stem.

1,905,104. BEARING FOR INK ROLL DOCTORS. ARTHUR DUNLAP KERR, Holden, Mass., assignor to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 28, 1930. Serial No. 498,534. 8 Claims. (Cl. 308—6.)

1. A support for a doctor blade comprising a bracket stationarily mounted and having a hub thereon provided with an arcuate screw-thread, a split collar surrounding and supported by said hub, a screw extending through the collar from one side to the other and meshing with the thread on the hub for adjusting the collar circumferentially, means on the screw for tightening the collar on the hub, and a roller supported by the collar serving as a bearing for the journal of the doctor.

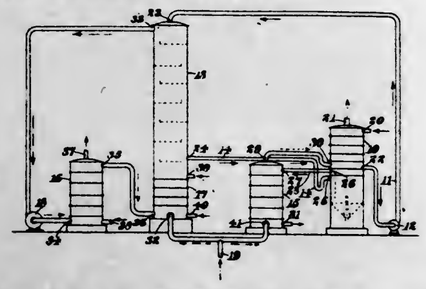
1,905,105. ELECTRODEPOSITION OF TIN-GOLD ALLOYS. HAROLD J. KERSTEN, Cincinnati, Ohio, assignor to Board of Directors of the University of Cincinnati, Cincinnati, Ohio. Filed Feb. 20, 1930. Serial No. 430,135. 6 Claims. (Cl. 204—2.)



6. An electrolyte for producing white gold deposits having substantially the following proportions:

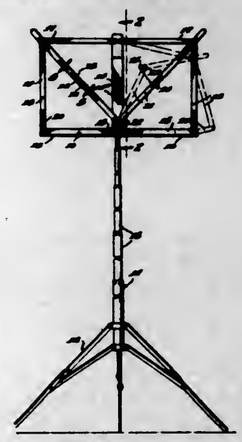
Gold potassium cyanide ($KAu(CN)_2$)	8 gm.
Potassium stannate $K_2SnO_3 : H_2O$	10 gm.
Water	1 liter

1,905,106. ELECTRODEPOSITION OF ZINC-GOLD ALLOYS. HAROLD J. KERSTEN, Cincinnati, Ohio, assignor to Board of Directors of the University of Cincinnati, Cincinnati, Ohio. Filed Feb. 20, 1930. Serial No. 430,136. 9 Claims. (Cl. 204—2.)



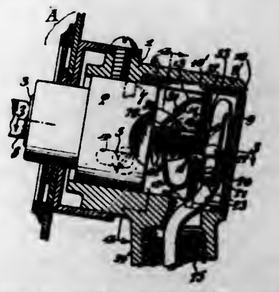
4. An electrodeposit of gold and zinc having a lilac color and comprising approximately 30% of zinc to 70% of gold, the said electrodeposit being dense and homogeneous and not subject to attack by concentrated and dilute nitric acid.

1,905,107. SASH BALANCE. ALBERT H. KERSTING, Los Angeles, Calif. Filed Oct. 19, 1931. Serial No. 569,575. 7 Claims. (Cl. 16—198.)



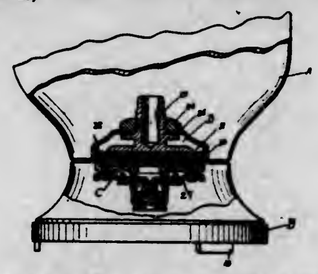
1. In a sash balance, a housing, a tubular axle secured to one of the walls of the housing a cable carrying drum arranged for rotation upon said axle, a spiral spring arranged within said drum, the inner end of which spring is connected to said axle, the outer end of which spring is connected to the peripheral portion of said drum and means for causing the inner convolutions of said spring to exert constant pressure against said drum.

1,905,108. DISTILLATION OF GAS LIQUOR. HEINRICH KOPPERS, Essen, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 16, 1931, Serial No. 523,101, and in Germany June 15, 1929. 3 Claims. (Cl. 23—193.)



1. A process for the distillation of gas liquor and recovery of by-products therefrom which process consists in bringing the hot gas liquor after distillation therefrom of free ammonia into intimate contact with steam, and thereafter treating it (for example with lime) and further distilling it for the recovery of fixed ammonia.

1,905,109. SHEET HOLDING RACK. MARIE WILLIAM KRAUTH, Hamilton, Ohio, assignor to Krauth & Benninghofen, Hamilton, Ohio, a Firm. Original application filed May 17, 1928, Serial No. 278,596. Divided and this application filed Aug. 28, 1930. Serial No. 477,273. 1 Claim. (Cl. 45—121.)

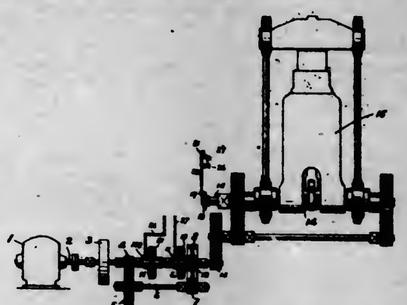


A foldable sheet holding rack comprising a center bar, a rest pivoted to the base of the center bar to move from a position parallel with said center strip to a position at right angles thereto, an upper bar pivotally connected to the top of the center bar and adapted to move in the same manner as the rest, a side bar, comprising, sections hinged together, said side bar pivotally connecting the respective outer end of the rest and top bar, a diagonal brace, comprising, sections hinged together, said brace pivotally connected to the lower end of the center bar and to the diagonally opposite connection of the upper bar and side bar, each of said hinged sections, making up the rack, being disposed in a different plane so as to swing freely on their pivots, and said center strip being centrally depressed so as to provide a portion also in a different plane.

1,905,110. ELECTRIC SWITCH LOCK. FREDERICK W. KULICKE, Philadelphia, Pa., assignor, by mesne assignments, to The Electrolock Manufacturing Company, Vicksburg, Miss., a Corporation of Mississippi. Filed Mar. 1, 1930. Serial No. 432,347. 2 Claims. (Cl. 200—44.)

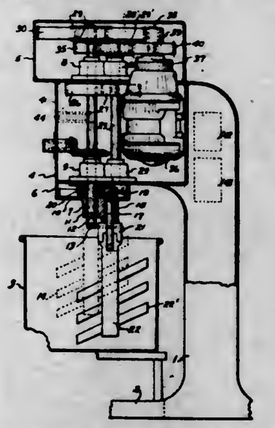
1. In an electric switch lock having a casing and a lock cylinder mounted therein movable longitudinally thereof from an unlocked position to a locked position and vice versa, the combination in a switch, of a closure for said casing mounted in the rear end thereof and two contact arms mounted on said closure and insulated from said casing, one of said arms being relatively rigid and the other of said arms being relatively flexible and normally being in circuit closing contact at its free end with the free end of said rigid arm, said rigid arm being at all times out of the path of the movement of said cylinder and said flexible arm being offset toward said cylinder and in the path of the movement of said cylinder and engaged by said cylinder as the latter nears its locked position and moved by said cylinder and held out of contact with said rigid arm by said cylinder and grounded by its contact with said cylinder and so long as said cylinder is in its locked position.

1,905,111. PERCOLATOR. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed May 26, 1930. Serial No. 455,486. 3 Claims. (Cl. 53—3.)



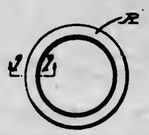
1. In an electrically heated cooking utensil of the character described, and in combination, a body member and a base member, said base member having a top wall and a cylindrical boss upstanding therefrom and defining a heating unit recess interiorly of the base member, said body member having a boss complemental to said first boss, the boss of the base member being snugly fitted in the boss of the body member whereby the cylindrical walls of the bosses are in close and constant intimate contacting engagement, and a heating unit having a top radiating member, said heating unit also having a bottom radiating member with a cylindrical flange snugly fitted in and in intimate contacting relation with the cylindrical wall of the boss on the base member, said heating unit also having a heating element interposed between and electrically insulated from said radiating members.

1,905,112. FRUIT PICKER'S STILT. GREGORY LANG, Yuba City, Calif. Filed May 12, 1930. Serial No. 451,555. 2 Claims. (Cl. 272—70.1.)



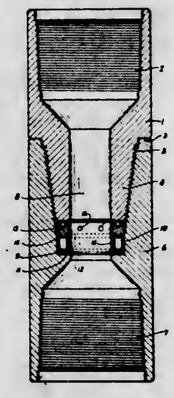
1. A stilt comprising a vertical frame topped by a foot plate, the frame including a cross bar below the foot plate and substantially parallel therewith, a pair of separate leg braces one pivoted on each side of the cross bar and extending upwardly along the side of and above the foot plate, a leg strap connecting the leg braces above the foot plate, a bracket on each side of the foot plate extending around one of the leg braces, the brackets being relatively longer than the width of the braces to allow the leg braces to rock on their pivot points on the cross bar with a slight fore and aft movement relative to the frame and foot plates.

1,905,113. OPERATING MEANS FOR A CRANK PRESS. CHARLES H. LASKER, Joliet, Ill. Filed May 5, 1932. Serial No. 609,365. 6 Claims. (Cl. 25—88.)



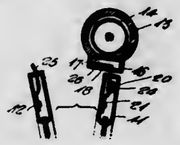
1. Operating means for a power press including in combination a motor, a power press driven by said motor, means for driving said press from said motor at high speed, means for driving said press from said motor at slow speed, and means for selecting one or other of said last mentioned means according to the position of said press.

1,905,114. VARIABLE-SPEED MIXING MACHINE. FRANK X. LAUTERBUR and EDWARD J. LAUTERBUR, Sidney, Ohio. Filed Apr. 14, 1931. Serial No. 529,976. 3 Claims. (Cl. 74—59.)



1. In a device of the character described, three parallel shafts, gear means fixed on one shaft, gears fixed on respective ones of the other two shafts, meshing together, gears rotatable on respective ones of these other two shafts, meshing with the gear means on the first shaft and constrained thereby both to rotate in the same direction, and means clutching the last mentioned gears to their respective shafts, one upon relative rotation of the shaft and gear in one direction only and the other upon relative rotation of the shaft and gear in the opposite direction only.

1,905,115. SEATING RING FOR PIPE COUPLINGS. PETER LOFGREN, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1931. Serial No. 514,018. 1 Claim. (Cl. 288—1.)

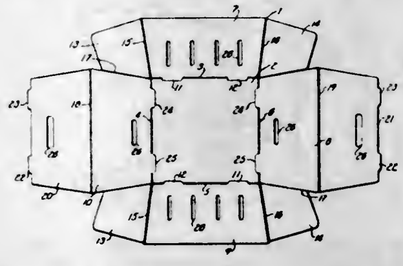


A seating ring for a pipe coupling member comprising a ring of non-corrosive metal adapted to be permanently embedded in the engaging face of said coupling member, said ring having a lip projecting substantially radially inward at its lower inner corner and having a bead projecting substantially radially outward at its upper outer corner and having substantially parallel conical upper and lower faces.

1,905,116. MOUNTING FOR ACID BOTTLES. ROBERT C. LUNSFORD, Jr., Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Nov. 25, 1930. Serial No. 497,982. 6 Claims. (Cl. 284—5.3.)

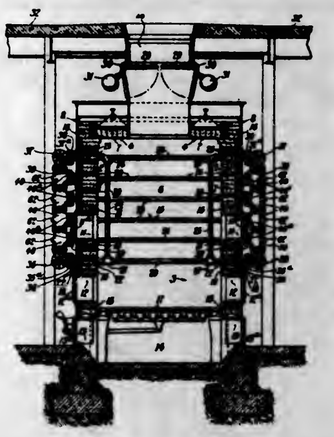
1. An acid bottle for declinometers comprising an annular container adapted to surround a tubular passage, and means to close the upper end of said bottle, acting also to fix said bottle in position.

1,905,117. FASTENER FOR HAND-BAGS. CHARLES MILLER, Long Island City, N. Y. Filed Nov. 23, 1931. Serial No. 576,906. 5 Claims. (Cl. 292—228.)



1. A fastener for a bag frame comprising two hinged sections, including a plate within one of said sections provided with a plurality of spaced eyelets, an operating member, a spring plate carried by said operating member having a plurality of spaced depending portions provided with eyelets in registry with said spaced eyelets, a flat torsion spring extending through all of said eyelets, said spring plate having an opening, and a catch on the other frame section engageable with said spring plate through the opening therein.

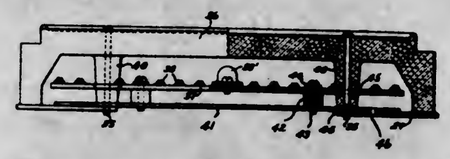
1,905,118. METHOD AND MEANS OF ERADICATING TYPEWRITTEN MATTER. AARON NADELL, Brooklyn, N. Y. Filed Jan. 8, 1927. Serial No. 159,982. 9 Claims. (Cl. 197—181.)



5. The combination comprising a strip of flexible material adapted to be placed in contact with typewritten matter, said strip being chemically treated with elements of a character to eradicate said typewritten matter and means on the typewriter for bringing the chemically treated portion in contact with the typewriting to be eradicated.

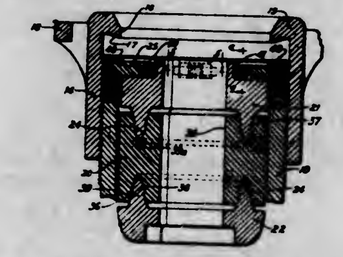
1,905,119. BERRY OR FRUIT BASKET OR BOX. EDWIN H. NEWTON, Kansas City, Mo., assignor to National Paper Box Co., Kansas City, Mo., a Corporation of Missouri. Filed Feb. 12, 1931. Serial No. 515,242. 5 Claims. (Cl. 229—34.)

1. A box of the character described including a bottom having tab-receiving openings, sides integral with the bottom, foot portions on the sides stamped from the bottom to form said openings, reinforcing wings on the sides, and tabs on the reinforcing wings received in said openings for locking said wings in functional position.



1,905,120. INCINERATOR. JOSEPH C. WOODMAN, Flushing, N. Y., assignor to Decarie Incinerator Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1928. Serial No. 313,058. 8 Claims. (Cl. 122—2.)

8. An incinerator comprising a chamber with side walls and ends, a basket grate comprising a series of hollow U-shaped sections, fluid containing means providing space for steam separation, and circulation connections between the fluid containing means and the basket grate including



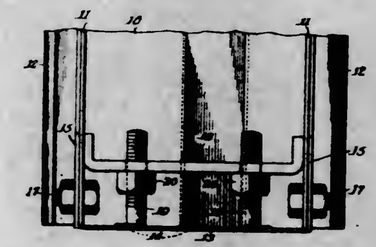
at each side of the chamber communicating upper and lower external headers individually connected with the tops and bottoms of said U-shaped sections and connected with the fluid containing means at different levels.

1,905,121. PANEL-BOARD SECTION. FREDERICK B. ADAM, St. Louis, Mo. Original application filed Dec. 26, 1925, Serial No. 77,682. Divided and this application filed Dec. 23, 1927. Serial No. 242,212. 7 Claims. (Cl. 175—360.)

1. A dead-front panelboard section including a plate adapted to accumulate a plurality of neutral connections, means for connecting the plate with the neutral side of the feeder, a removable unitary insulating body including a substantially imperforate cover portion, spaced outwardly of the plate to provide a space, for neutral conductors and their connections, between the plate and cover, and extending over substantially the greater part of the area of the section.

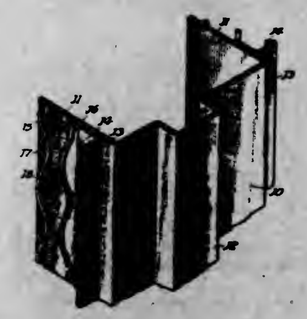
1,905,122. PACKING ASSEMBLY. LAWRENCE F. BAASH and ERWIN BURNS, Los Angeles, and GEORGE B. GARRARD, Long Beach, Calif. Filed July 7, 1930. Serial No. 465,818. 6 Claims. (Cl. 288—3.)

1. A packing assembly adapted to be used in a casing head having an opening to receive a packing device and having a packing actuating device with an inwardly projecting part which includes, a body of expansible packing adapted to be lowered into the opening, a rigid collar on the upper end of the packing, a latch pivoted in a recess in the collar and having an end part normally projecting from the periphery of the collar, the latch being adapted to be pivoted upwardly to pass the said projecting part when the assembly is lowered into the opening, and means for yieldingly holding the latch in a down position in the recess where it is entirely below the collar where its said end part projects from the periphery of the collar.



1,905,123. MOBILE ASH TRAY. EDGAR H. BARBE, Los Angeles, Calif., assignor to Rollodor Manufacturing Company, a Partnership composed of Amalia Earles and Edgar H. Barbe, Los Angeles, Calif. Filed Sept. 5, 1931. Serial No. 561,359. 4 Claims. (Cl. 131—51.)

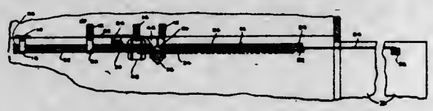
1. A mobile self righting standard structure comprising a base, said base being revolute, hollow and divided into three segments disposed side by side along the axis thereof, a weight detachably secured to the medial segment with its center of gravity on one side of the axis thereof and having a tapped socket on the opposite side, a standard threaded into said socket, an axially disposed shaft secured to said weight and extending from the ends of said medial segment, hub sleeves detachably and rotatably secured on the ends of said shaft, and wheels on said hub sleeves extending between adjacent segments with rims



overlying the junctures of said segments, the end segments being hollow and having threaded posts secured in said sleeves.

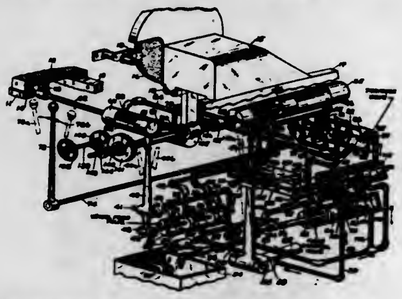
1,905,124. FOOTPLATE FOR DOOR FRAMES. ISAAC A. BAUM, Chicago, Ill. Filed Mar. 25, 1929. Serial No. 349,633. 4 Claims. (Cl. 189—46.)

8. In combination, a channel member constituting a buck of a door frame, a U-shaped floor plate having its flanges adjustably connected to said buck, a cross member connecting the flanges of the buck and means comprising a screw jack contacting with the floor plate and said cross member for elevating the door buck.



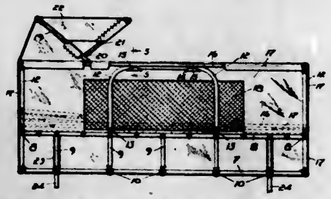
1,905,125. METAL JAMB CONSTRUCTION. ISAAC A. BAUM, Chicago, Ill. Filed Apr. 7, 1930. Serial No. 442,241. 4 Claims. (Cl. 72—98.)

8. In a metal jamb construction, a jamb member having a flange, an anchor comprising a plurality of alternately



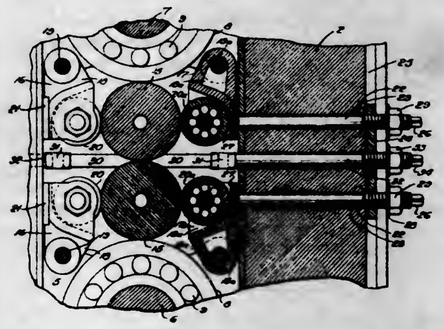
bent lengths of wire secured to said flange at alternate bends in the length thereof, the bends in the adjacent wires being secured to the flange in alternate relation each to the other.

1,905,126. ELECTRICAL DOOR OPERATING DEVICE. EDWIN R. BEEMAN, Minneapolis, Minn. Filed May 14, 1928. Serial No. 277,728. 5 Claims. (Cl. 268—63.)



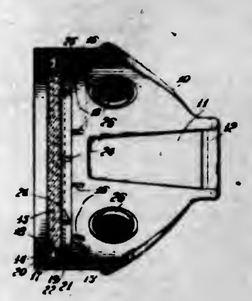
1. A door operating device comprising an overhead support, rounded guides extending downwardly from said support, an elongated cylindrical member slidably mounted in said guides, rack teeth carried by the underside of said member, a pinion meshing with said teeth, a motor adapted to drive said pinion in opposite directions for reciprocating said cylindrical member, and connections between said cylindrical member and the doors for opening and closing the latter.

1,905,127. HYDRAULICALLY OPERATED GRINDING MACHINE. ALBERT G. BELDEN and HERBERT A. SILVEN, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1929. Serial No. 353,531. 9 Claims. (Cl. 51—72.)



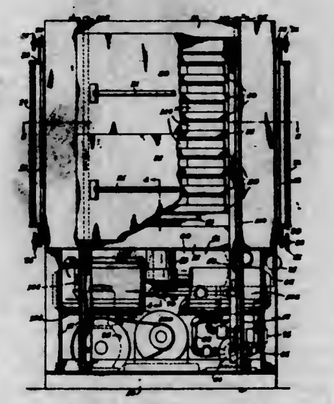
1. A grinding machine comprising a base, a work table slidably mounted thereon, a grinding wheel slide on said base, a rotatable grinding wheel on said slide, a cylinder and piston operatively connected to reciprocate said table, a second cylinder and piston connected to move said slide to feed the grinding wheel, a fluid pressure system including a pump to force fluid under pressure to said cylinders, a manually controlled valve mechanism to admit fluid to either of said cylinders while excluding it from the other, thereby preventing actuation of the slide and table simultaneously, and means for moving the slide independently of the fluid pressure actuated devices to adjust the position of the wheel relative to that of the work.

1,905,128. BABY'S FOLDING CRIB. PAMELIA F. BENSON, Long Beach, Calif. Filed Dec. 18, 1931. Serial No. 581,797. 4 Claims. (Cl. 5—98.)



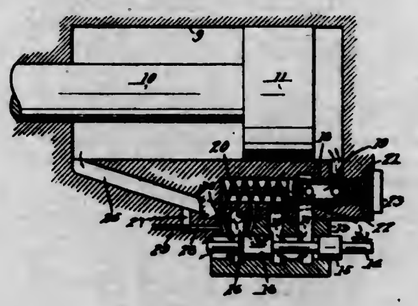
1. A folding crib having a body to receive a mattress, hinged sides and ends foldable inwardly upon said body, a surrounding top rail, a flexible and foldable covering attached at its upper edge to said top rail and sufficient in extent to form an enclosing wall above the mattress when said side and end members are elevated, said sides and ends being designed to underlie and support said top rail and said covering in their raised and operating positions.

1,905,129. ROLLING MILL. FLORENCE C. BIGGERT, Jr., Crafton, and LANE JOHNSON, Ingram, Pa., assignors to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 6, 1928. Serial No. 290,802. 7 Claims. (Cl. 80—38.)



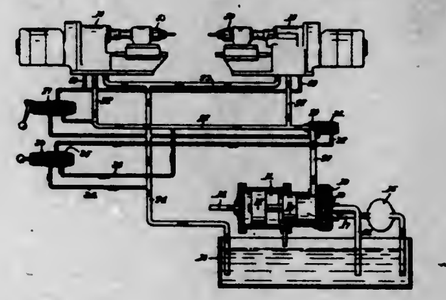
5. A rolling mill comprising a housing, a plurality of working rolls disposed in the housing, cases slidingly mounted in the housing, backing rolls for the working rolls journalled in the cases, brackets pivoted on the cases, and side rolls journalled in the brackets and disposed in engagement with the sides of the end portions of the working rolls for laterally supporting them.

1,905,130. GOGGLES. GEORGE A. BINDER, Chicago, Ill., assignor to Robert Malcom, Chicago, Ill. Filed Mar. 31, 1932. Serial No. 602,129. 11 Claims. (Cl. 2—14.)



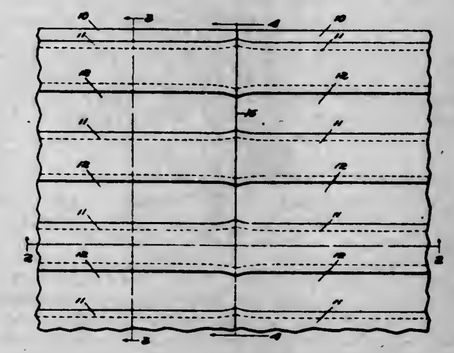
1. A goggle comprising a pair of eye-cups the outer ends whereof are each adapted to receive a lens; the inner wall of each cup at a distance removed from the outer end being inwardly enlarged and provided with circumferentially spaced air passages; a ring seatable on said enlargement adapted to provide a seat for the lens, said ring on its inner diameter and transversely of one annular face having a plurality of slots spaced circumferentially and adapted to register with said air passages in the eye-cup wall enlargement; the lens diameter being such that the peripheral edge of the lens rests at the inner peripheral edge of said ring and leaves the end of the slots in said ring uncovered; and means cooperating with the cup-wall whereby the lens will be maintained in the eye-cup and seated on said ring.

1,905,131. REFRIGERATING APPARATUS. CLARENCE BIRDSEYE and BICKNELL HALL, Gloucester, Mass., assignors to Frosted Foods Company, Inc., Dover, Del., a Corporation of Delaware. Filed Feb. 25, 1931. Serial No. 518,060. 30 Claims. (Cl. 62—114.)



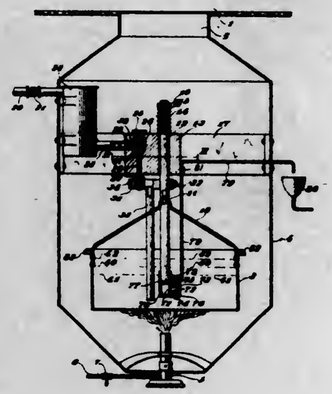
1. A refrigerating apparatus comprising a series of substantially horizontal heat-conductive plates movably disposed in substantially vertical alignment and adapted to receive thereon and therebetween products to be frozen, means for so connecting said plates as to maintain them equally spaced from each other, means for simultaneously varying the spacing thereof, and means for supplying cooling medium to the plates.

1,905,132. CONTROL FOR HYDRAULIC FEEDING MECHANISM. BENJAMIN S. T. BISHOP, Shrewsbury, and ERIC J. HERVONEN, Worcester, Mass., assignors to Leland-Gifford Company, a Corporation of Massachusetts. Filed Dec. 21, 1927. Serial No. 241,694. 10 Claims. (Cl. 121—45.)



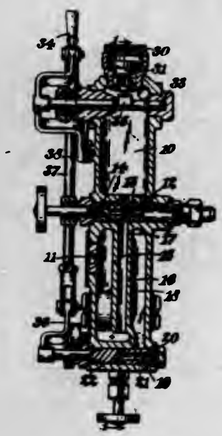
1. In a hydraulic actuating mechanism, the combination with a driving piston and cylinder, of means for introducing fluid under pressure into the cylinder on the driving side of the piston to advance it on a cutting stroke, a hollow valve for controlling said means having two sets of passages for normally allowing the fluid to flow freely into the cylinder, means for admitting a non-compressible fluid to the back side of the piston and allowing it to escape therefrom, a conduit connected with the back pressure side of the cylinder for introducing back pressure behind the valve and moving the valve to restrict the effective flow through the valve into the cylinder, and means for restricting the outflow of fluid from the back pressure side of the piston, on the cutting stroke.

1,905,133. HYDRAULIC FEED FOR MACHINERY. BENJAMIN S. T. BISHOP, Shrewsbury, and ERIC J. HERVONEN, Worcester, Mass., assignors to Leland-Gifford Company, a Corporation of Massachusetts. Filed Apr. 28, 1929. Serial No. 357,532. 10 Claims. (Cl. 60—52.)



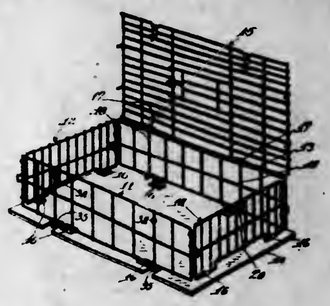
1. The combination with a machine comprising a reciprocable piston and a cylinder therefor, of a valve for admitting fluid under pressure to the high pressure side of the piston, means for automatically thereafter moving said valve by said piston into a position for restricting the flow of the pressure fluid to the cylinder to cause the piston to move more slowly, means for then moving said valve by said piston into a position for automatically cutting off the supply of fluid to the high pressure side of the cylinder and introducing it under pressure into the low pressure side to move the piston back and means for then moving said valve by said piston into a position for cutting off the supply of fluid to both sides of the piston for stopping the piston.

1,905,134. MOLD AND BONDING MEANS. JOHN L. BIXBY, Arlington, Mass., assignor to Ke-Bond Company, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1931. Serial No. 522,687. 6 Claims. (Cl. 72—70.)



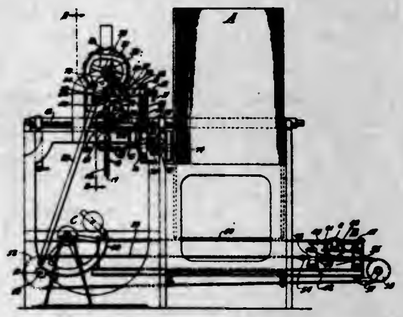
1. As a new article of manufacture, a bonding sheet comprising a plate having oppositely directed, hollow, dove-tail corrugations presenting grooves on opposite sides thereof, the corrugations on one side being closed along an edge which is transverse to said corrugations.

1,905,135. HUMIDIFYING APPARATUS. OSWALD H. BLACKWOOD, Pittsburgh, Pa., and LESTER F. BOSS, Woods Hole, Mass., assignors to The Koppers Company of Delaware, a Corporation of Delaware. Filed July 23, 1928. Serial No. 294,786. 5 Claims. (Cl. 126—350.)



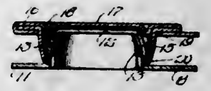
1. A humidifier comprising, in combination, a water supply conduit, a valve therein, an evaporating receptacle positioned to receive water from said conduit, means for intermittently removing small amounts of water from said receptacle, and means for heating said receptacle.

1,905,136. LUBRICATING DEVICE. JOHN BLISS, London, England, assignor to C. C. Wakefield & Company, Limited, London, England, a British Company. Filed Sept. 8, 1928, Serial No. 304,742, and in Great Britain Nov. 30, 1927. 10 Claims. (Cl. 184—50.)



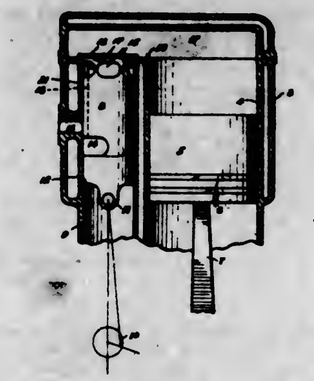
1. Lubricating apparatus of the kind specified comprising in combination a lubricant chamber, a steam chamber communicating therewith, means to pass condensate from the steam chamber to the lubricant chamber, a steam-inlet control valve for the steam chamber, an outlet control valve for the lubricant chamber, a single operating member, and a valve-timing operative connection between said member and both valves whereby the said steam-inlet control valve is opened prior to the outlet control valve of the lubri ant chamber.

1,905,137. COLLAPSIBLE SHIPPING CRATE. PER HJALMER BLOMBERG, Chicago, Ill. Filed Jan. 29, 1930. Serial No. 424,811. 18 Claims. (Cl. 220—6.)



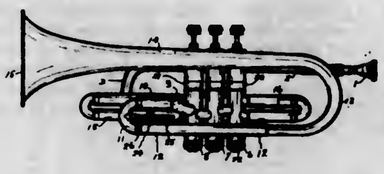
1. In a device of the character described, a base, side wall members mounted to pivot inwardly toward each other on said base, a top for engaging said side wall members in an extended condition, and guiding means extending across the width of one of said side wall members, said top slidably engaging said guiding means and detachably engaging the other of said side walls whereby said top need not extend beyond the confines of said side walls when said device is in a collapsed condition.

1,905,138. THREAD PRINTING APPARATUS. DANIEL BUTLER BONNER, Philadelphia, Pa. Filed Jan. 19, 1931. Serial No. 509,648. 9 Claims. (Cl. 91—12.01.)



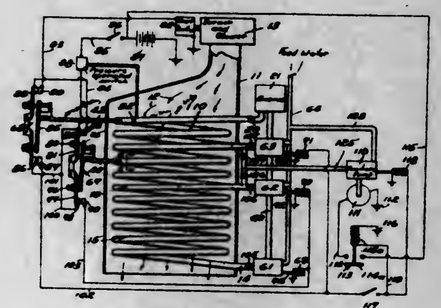
1. Thread printing apparatus comprising a rotatable thread carrying drum adapted to be rotated in steps of predetermined amplitude and in continuous rotation through distances of greater amplitude than such step movement; drive means for imparting such continuous rotation to the drum; drive means for imparting such step by step rotation to the drum including ratio changing means; and means for effecting rotation of the drum through the medium of either of said drive means.

1,905,139. SEAL. BRUCE BORLAND, Chicago, Ill. Filed Nov. 30, 1929. Serial No. 410,781. 1 Claim. (Cl. 292—322.)



A strip having an integrally formed hollow button provided with a plurality of resilient tongues with their free ends adjacent to the strip, said strip having a hollow projection adjacent to the end thereof and folded to form a closure for one end of said projection and folded again with the projection extending through a hole in the strip, said projection having an annular inwardly projecting flange adapted to fit closely over the button and to engage with the ends of the tongues when the parts are in fastened position.

1,905,140. VALVE FOR INTERNAL COMBUSTION ENGINES. WILLIAM FREDERICK BOYCE, Toronto, Ontario, Canada. Filed June 10, 1932, Serial No. 616,429, and in Canada May 12, 1932. 1 Claim. (Cl. 123—188.)



In a valve structure of the class described, an engine cylinder having a valve bore communicating with the head space and a port communicating with the bore, a cylindrical valve reciprocably disposed in said bore, said valve being chambered longitudinally and having openings at each end of its chamber communicating with its cylindrical surface, and an annular shoulder at the top of the valve for seating against a surface of the head space to seal off the bearing surface of the valve therefrom.

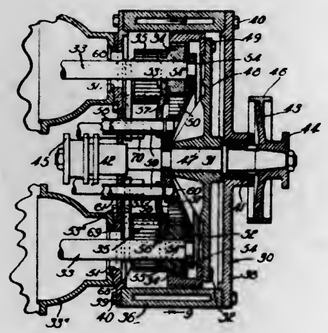
1,905,141. WIND MUSICAL INSTRUMENT. PHILIP J. BURELL, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Dec. 18, 1931. Serial No. 581,795. 4 Claims. (Cl. 84—379.)

3. An instrument of the class described, comprising in combination with a mouthpiece, valves and a bell, a pipe connecting said mouthpiece with one of said valves, and a pipe connecting another valve with the bell, a bent knuckle extending from a straight portion of the second named pipe directly into the said other valve, and twisted in direction towards the bottom of said last named valve.

1,905,142. BOILER WATER CONTROL. BRUCE BURNS and HOWARD B. LEWIS, Los Angeles, Calif., assignors to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed June 17, 1929. Serial No. 371,610. 4 Claims. (Cl. 122—448.)

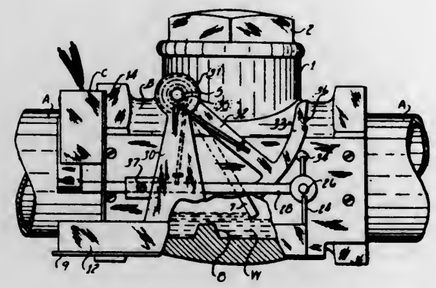
1. In combination: a boiler adapted to produce steam; a steam-operated pumping system actuated by the steam generated by said boiler for supplying feed-water to said boiler at a plurality of sections; and an auxiliary pumping system for supplying feed-water to only a portion of said sections.

1,905,143. ELECTRIC LIGHT STRIP. JAMES D. CARR, Detroit, Mich., assignor to Pittsburgh Reflector Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 18, 1928. Serial No. 284,961. 4 Claims. (Cl. 247—27.)



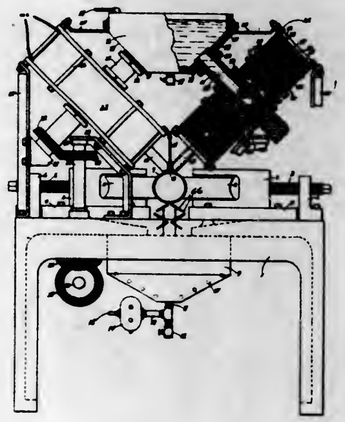
1. A combined electrical conduit and outlet unit comprising a pair of relatively long, continuously extending members adapted to be inter-engaged to form a wire conduit, one of the members constituting a base, the other member having knock-out plugs formed therein, and electrical outlet members in openings formed in the last-mentioned member, said member being effective for supporting and spacing the outlet members prior to positioning on the first-mentioned member.

1,905,144. METHOD FOR PRODUCING ESTERS. THOMAS S. CARSWELL, ERNEST T. STEHLEY, and NICOLAAS J. G. ALOSERIJ, St. Louis, Mo., assignors to Monsanto Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 6, 1928. Serial No. 297,858. 8 Claims. (Cl. 260—103.)



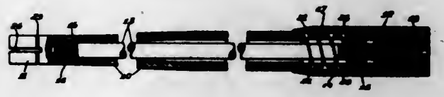
1. The method which comprises boiling a mixture of an aliphatic alcohol, whose boiling point is below 100° C. and which is soluble in water in all proportions, and a mono-carboxylic acid of the benzene series that is substantially non-volatile below 120° C. while avoiding a substantial excess of either of the ingredients, continuously fractionating the vapors, which consist of water and alcohol, to separate the water present therein and returning the alcohol to the boiling mixture.

1,905,145. TRANSMISSION. SAMUEL C. CARTER, Los Angeles, Calif. Filed Jan. 26, 1931. Serial No. 511,293. 17 Claims. (Cl. 74—7.)



1. In combination, two power units adapted to operate in synchronism, a low speed shaft, a high speed shaft driven by each power unit, and a transmission including a gear on the low speed shaft, a pinion on each of the high speed shafts, and means for shifting the pinions into and out of engagement with the gear.

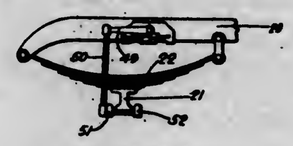
1,905,146. FLOW CONTROLLED SWITCH. FENTON G CHAPIN, East St. Louis, Ill., assignor of one-tenth to Walter A. Thum, St. Louis, Mo. Filed Dec. 8, 1930. Serial No. 500,893. 2 Claims. (Cl. 200—81.)



1. In combination, a standard, a bracket, a tubular valve-housing, a shaft mounted transversely upon the housing for rotatory movement, a valve fixed on the shaft for oscillation within the housing, an extension on the shaft supported by the standard, a lever pivotally mounted on the bracket for rocking movement, a lateral extension on the lever, an arm fixed at an end on the shaft-extension, an arcuate cam on the free end of the arm having both retaining and rocking engagement with the lever extension, and a spring coiled on the shaft-extension and having engagement with the standard and said arm for yieldingly retaining the valve and lever in normal position.

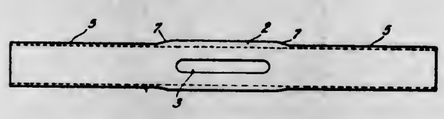
1,905,147. HOMOPOLAR ELECTRIC GENERATOR, DISTRIBUTOR, AND METHOD OF APPLICATION. EVERETT CHAPMAN, Cleveland Heights, Ohio. Filed June 27, 1929. Serial No. 374,161. 6 Claims. (Cl. 219—6.)

1. In a welding apparatus, a homopolar generator disposed adjacent the welding throat, and having a liquid tight casing and conduits associated therewith, fluid current conducting means within said casing and conduits, and means for moving said fluid means for carrying current to the work within said throat.



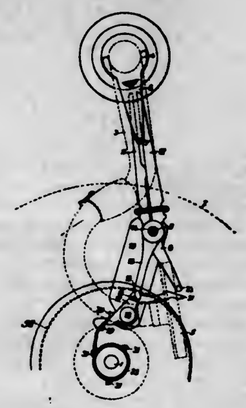
1,905,148. HAIR-CURLING DEVICE. ROBERT CHESTNUT, Grantwood, N. J., assignor to Aluminum Screw Machine Products Company, Edgewater, N. J., a Corporation of New Jersey. Filed June 27, 1932. Serial No. 619,547. 10 Claims. (Cl. 132—34.)

1. A hair-curling device comprising a tubular body member, a rotatable tip member mounted at one end thereof, a rotatable cap member mounted at the other end thereof, means connecting said cap and said tip whereby rotation is imparted to said tip by said cap, and means integral with said tubular body for permitting rotation of said cap and tip in one direction only.



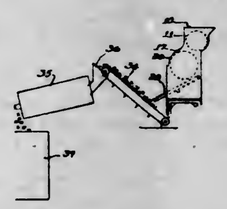
1,905,149. SHOCK ABSORBER VALVE. WILLIAM A. CHRIST, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 8, 1930. Serial No. 450,718. 6 Claims. (Cl. 251—120.)

8. A pressure release valve for controlling the flow of fluid through a port in a shock absorber comprising, in combination, a tubular valve having an annular flange adapted to engage the peripheral edge of the port; a valve stem slidably supporting said valve, said stem having two portions of different transverse dimensions separated by an annular groove, the larger diameter portion of the stem slidably fitting into the valve and having a longitudinal



passage; a disc secured to the smaller diameter end of the stem; and a spring about the stem between the valve and the disc.

1,905,150. METHOD OF MAKING AXLE HOUSINGS. EUGENE B. CLARK, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Apr. 9, 1928. Serial No. 268,508. 11 Claims. (Cl. 29—153.1.)



1. The method of making an axle housing from a piece of seamless tubing which consists in upsetting the central part of a length of tubing to increase the wall thickness thereof, slotting the central part of the blank for a suitable distance parallel with its axis and at diametrically opposite points substantially midway of its length, shrinking the ends of the blank to reduce the diameter thereof and to thicken the walls thereof, spreading the slotted portion into transverse tubular walls, expanding the central portion of said tube and folding over the edges thereof to form annular flanges substantially parallel to each other and to the longitudinal axis of the housing.

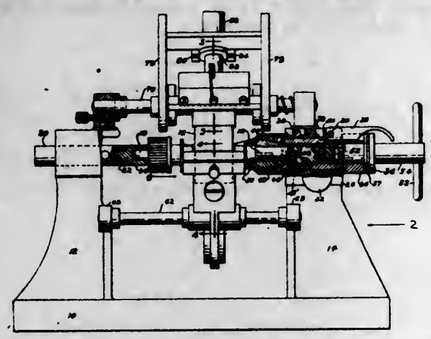
1,905,151. AUTOMATIC STOPPING DEVICE FOR TALKING MACHINES. GEORGE FREDERICK CLARK, West Drayton, England, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Apr. 27, 1929, Serial No. 358,653, and in Great Britain June 5, 1928. 15 Claims. (Cl. 192—124.)

4. Automatic stopping means for a talking machine comprising a pivoted stop member, a member movable in conjunction with the sound arm, and a second member having frictional engagement with said first member, said second member being adapted to move said stop member in one direction and said first member being adapted to move said stop member in the opposite direction as said sound arm is moved in one direction only.

1,905,152. MINERAL WOOL AND METHOD OF AND APPARATUS FOR GRANULATING SAME. CHARLES H. CLINTON, Hinsdale, and PAUL F. THEOBALD and ROGER H. STITT, Chicago, Ill., assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1931. Serial No. 531,982. 15 Claims. (Cl. 209—2.)

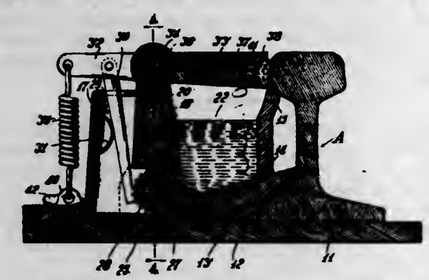
1. The method of granulating mineral wool which comprises subjecting pieces of wool to alternate granulating and screening actions so as to remove granules of mineral wool from the field of action substantially as soon as formed.

1,905,153. METHOD OF PRODUCING HIGH FREQUENCY LIGHT VARIATIONS. RAYMOND T. CLOUD, Chicago, Ill., assignor, by mesne assignments, to General Theatres Equipment, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1930. Serial No. 423,600. 4 Claims. (Cl. 176—123.)



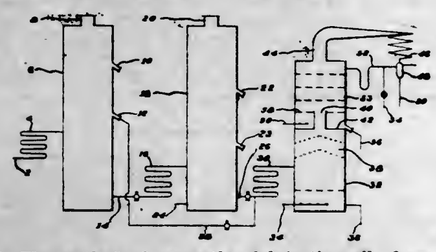
1. The method of producing high-frequency variations in light which comprises producing a small area of incandescence on one only of cooperating electrodes while limiting the production of materially effective light to that area, and varying the brightness of that area in accordance with high-frequency vibrations.

1,905,154. COIL POSITIONING MACHINE. EDWARD W. COLLINS, Detroit, Mich., assignor, by mesne assignments, to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Oct. 17, 1931. Serial No. 569,519. 4 Claims. (Cl. 29—34.)



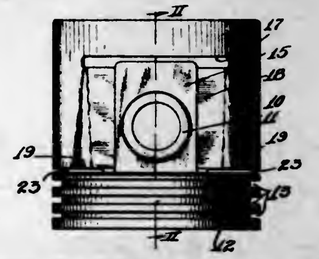
1. In a positioning machine of the class described, an axle, a plurality of arms journalled thereon, one of the arms having a movable blade in its end, a hammer on the other arm, and resilient means tending to separate the

arms and to resist movement of the hammer towards the blade to be depressed thereby, the resilient means including relatively telescoped tubes one of which is swivelly



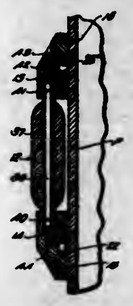
connected to the hammer, the other of which is swivelly connected to the blade arm, and a coiled compression spring in the tubes.

1,905,155. TRACK OILER. WILLIAM F. COORS, Tacoma, Wash. Filed Nov. 25, 1929. Serial No. 409,478. 10 Claims. (Cl. 184—3.)



2. A device of the character described comprising a casing adapted to be secured adjacent to the side of a track-rail and being provided with a lubricant holding chamber; a cover for said chamber adapted to be engaged by the flange of a wheel passing along the track-rail; lubricant directing means communicating with said chamber and adapted to discharge the lubricant at the side of the rail-head; and means, operable when said cover is engaged by a wheel-flange, whereby the lubricant is forced from said chamber and through said lubricant directing means.

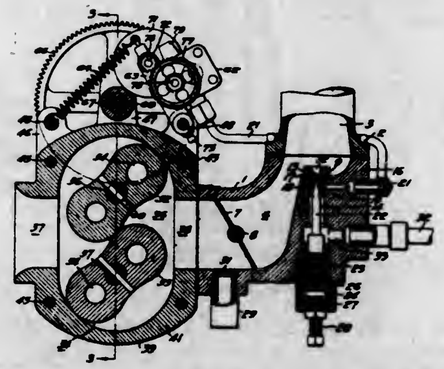
1,905,156. METHOD OF DIVIDING PETROLEUM BOTTOMS. GEORGE B. COURROUGH, Long Beach, Calif., assignor to The Lummus Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1932. Serial No. 597,513. 7 Claims. (Cl. 196—88.)



1. The method of separating lubricating oils from asphalt which consists in taking a starting mixture containing lubricating oils and non-volatile asphaltic residuum, adding thereto a diluent oil which is completely vaporizable under conditions at which vaporization of the starting material would be negligible, continuously subjecting all of the oils to flash vaporization from the asphaltic residuum by first heating the entire mixture in a confined stream under pressure and then releasing the mixture into a vaporizing zone maintained under a sufficient vacuum to vaporize the oils under the contained heat of the mixture, the temperature of heating being insufficient to crack any of the materials, condensing the vapors while preventing return of any condensate to the vaporizing zone, and withdrawing asphaltic residue.

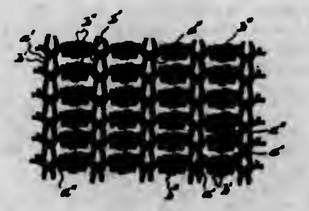
1,905,157. COMPOSITE PISTON. JOHN R. COX, Cleveland, Ohio, assignor to Thompson Products, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed May 20, 1931. Serial No. 538,695. 9 Claims. (Cl. 74—108.)

1. A composite piston comprising a head cast of light material subject to excessive expansion, and a cylindrical skirt having portions partially embedded in said head, said embedded portions being formed as flat indentations in the sides of the skirt and merging into the cylindrical surfaces of the skirt with intermediate beveled surfaces tapered from a wide surface adjacent the head to a narrow surface at the lower ends of the indented portions.



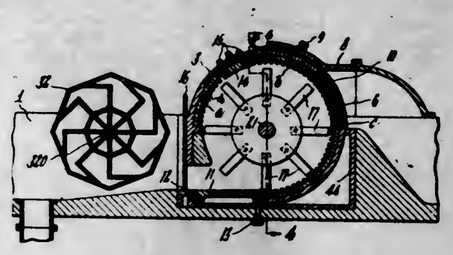
1,905,158. DRILL PIPE PROTECTOR. EDWARD CRAIG and WILLIAM O. COOPER, Brea, Calif. Filed Apr. 5, 1930. Serial No. 441,842. 13 Claims. (Cl. 308—6.)

1. A device of the character described adapted to be used in connection with a string of drill pipe, including, a cage adapted to be arranged on a length of drill pipe to surround the pipe, means for securing the cage on the drill pipe, and a yieldable bearing part carried by the cage to have its outer side projecting from the cage and its inner side adjacent the pipe so as to compress against the pipe when distorted.



5. A bearing device for a string of drill pipe including, a cage adapted to be arranged on the drill pipe, the cage including two vertically spaced rings, and a spacer rib connecting the rings, and a plurality of yielding rollers between the rings rotatable about vertical axes, the outer sides of the rollers projecting beyond the rings and the inner sides of the rollers being spaced a short distance from the drill pipe so as to engage the pipe when the rollers are distorted inwardly.

1,905,159. CARBURETING DEVICE. CLINTON DAVIDSON, San Francisco, Calif. Filed Jan. 11, 1930. Serial No. 420,084. 2 Claims. (Cl. 261—35.)



1. A carbureting device for use with an internal combustion engine including an intake manifold comprising a fuel nozzle in communication with said manifold, pressure responsive means in said nozzle, means in communication with said manifold for supplying air under pressure to said pressure responsive means, an air meter for air introduced into said manifold, and means regulated by said air meter for supplying fuel to said nozzle.

1,905,160. KNITTED METALLIC FABRIC. FREDERICK DE ANGELIS, West Orange, N. J., assignor to Metal Textile Corporation, a Corporation of Delaware. Filed Sept. 30, 1930. Serial No. 485,897. 3 Claims. (Cl. 66—202.)

1. A metallic fabric, comprising a carrier member having a gimping of metallic material spirally convolved in loose coils around and along the length of the same, said gimped carrier member being knitted to provide interengaged loop-formations each comprising a loop of the carrier member and a loop-portion contiguous thereto drawn out from a coil of said metallic gimping, substantially straight supporting carrier sections extending between horizontally adjacent loop-formations, upon which sections are carried groups of said loose coils, each coil group being segregated from adjacent groups by intervening knitted loop-formations, and said coil groups being anchored against longitudinal displacement from their respective carrier sections by the knitted interlocking engagement of the combined carrier member loops and associated loop-portions drawn from the coils of metallic gimping, all whereby the coil groups are exposed at one face of the fabric to form a raised curly nap thereon.

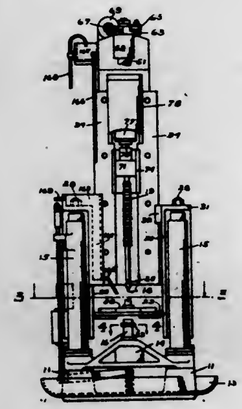
1,905,161. METHOD OF AND APPARATUS FOR HYDRATING CELLULOSE PULP. WILLIAM T. DOYLE, Dorchester, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1932. Serial No. 607,528. 8 Claims. (Cl. 92—20.)

1. A cyclic method of hydrating cellulose pulp stock for papermaking or the like, which comprises preparing and maintaining a supply of such stock as a thick aqueous suspension, progressively removing stock from said supply and feeding it into a casing having an outlet through which the water of said suspension may freely flow but designed to permit the accumulation of stock in said casing, subjecting the stock in said casing to a swift succession of hammering impacts under conditions to discharge forcefully only a portion of said stock through said openings, returning the discharged stock to said supply, and repeating the cycle until the degree of hydration desired for papermaking has been produced in the stock.

4. A cyclic method of hydrating pulp stock for papermaking or the like, which comprises preparing and maintaining a supply of such stock as a thick, aqueous suspension; progressively removing stock from said supply, thickening it, and feeding it into a casing having an outlet through which the water of said suspension may freely flow but designed to permit the accumulation of stock in said casing; subjecting the thickened stock in said casing to a swift succession of hammering impacts under conditions to discharge forcefully only a portion of said stock through said opening; returning the discharged stock to said supply; and repeating the cycle until the degree of hydration desired for papermaking has been produced in the stock.

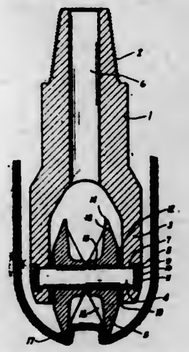
1,905,162. STERN PADDLE-WHEEL PROPULSION MECHANISM FOR BOATS. RAMON ENSENAT, Newark, N. J.; Edwin J. C. Joerg executor of said Ramon Ensenat, deceased. Filed Dec. 26, 1931. Serial No. 583,169. 2 Claims. (Cl. 115—49.)

1. The combination with the hull of a ship, of a beam at each side thereof and two beams each at one side of the longitudinal median line of the hull, all of said beams extending longitudinally of the hull and projecting from one end thereof, a paddle-wheel shaft journaled on the projecting ends of said beams transversely of said hull and having a paddle-wheel thereon, a prime mover mounted on said hull and having a shaft journaled paral-



iel to said paddle-wheel shaft, and a train of gears journaled on the second-mentioned two beams and located therebetween connecting said prime mover shaft to said paddle-wheel shaft.

1,905,163. CLEANING DEVICE. JOHN B. FARQUHAR, Chicago, Ill., assignor to Champion Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1931. Serial No. 545,718. 4 Claims. (Cl. 15—209.)

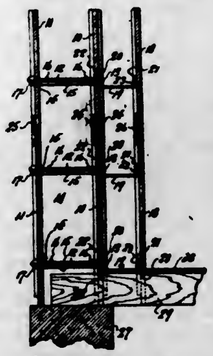


1. An article of the class described comprising a closed envelope, and a plurality of relatively long braided strands of absorbent material secured adjacent their central portions to opposite sides of said envelope.

1,905,164. BROACHING MACHINE. JOHN P. FERRIS, Whitefish Bay, and WALTER FERRIS, Milwaukee, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Dec. 18, 1929, Serial No. 414,905. Divided and this application filed Nov. 9, 1931. Serial No. 573,928. 20 Claims. (Cl. 90—33.)

1. In a broaching machine having a draw head, a work support, and power drive for producing relative reciprocation between said work support and said draw head, the combination of power means for securing a broaching tool to said draw head, and means responsive to the operation of said tool securing means for controlling said power drive.

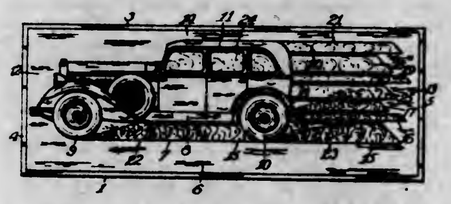
1,905,165. DISK BIT. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Mar. 17, 1930. Serial No. 436,335. 4 Claims. (Cl. 255—71.)



1. A drill head, a straight shaft supported thereon, disk-shaped cutters on said shaft, means to space said cutters apart in opposite relation on said shaft, and means on the inner faces of said cutters adapted to be acted upon by flushing fluid to rotate said cutters for the purpose stated.

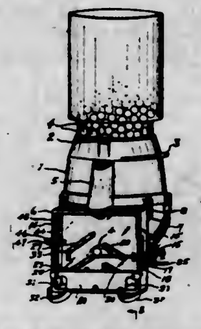
1,905,166. UPHOLSTERY EDGE. HARRY FOX, Lowell, Mass., assignor to The Fox Edge Co. Inc., Lowell, Mass., a Corporation of Massachusetts. Filed July 22, 1931. Serial No. 552,858. 2 Claims. (Cl. 155—184.)

1. An edge comprising a layer of felted material and a fabric folded to bring its marginal portions into lapping relation and secured together to form an attaching fin, a filler within the folded portion back from said fin to form with said folded portion a bead thicker than said fin, and stitching passed through said bead in position to shape said bead into elongated cross section and to hold said bead with its long cross sectional axis extended at an obtuse angle to said fin.



1,905,167. BUILDING WALL STRUCTURE. RUSSELL C. GRAEF, Westfield, N. J. Filed May 6, 1932. Serial No. 609,675. 11 Claims. (Cl. 72—30.)

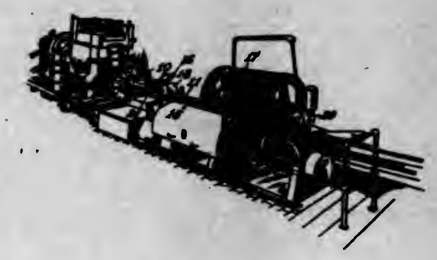
1. A building wall comprising a plurality of interjoined abutting wall form building units; each unit including a pair of laterally spaced panels and transverse means to



interconnect the same in spaced relation to provide a cast core wall mold, means to unite the meeting edges of panels of adjoining units in interlocking relation, combined suspension and spacing struts anchored to the inner panels of said units to project laterally therefrom, and interior finishing panels adapted to be supported by said struts in off-set spaced relation to said inner panels.

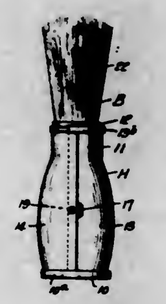
1,905,168. SIMULATION OF FAST-MOVING OBJECTS. FRANK A. GRITT, Indianapolis, Ind., assignor to Gritt Incorporated, Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 5, 1931. Serial No. 567,022. 11 Claims. (Cl. 40—132.)

1. A display sign including a front part having an opaque portion and separate horisontal translucent panels, the opaque portion bearing a representation of an object characterised for high speed, the panels representing visual effects suggestive of results of the high speed movement of the object represented, and a plurality of lamps with horisontal distorting reflectors and light-interrupters in groups arranged behind the front part.



1,905,169. VENDING MACHINE ATTACHMENT. JACOB E. HARTLE, Jr., Madison, N. J. Filed Apr. 11, 1931. Serial No. 529,315. 7 Claims. (Cl. 273—138.)

7. A vending machine attachment comprising, a casing having an article discharge opening and a transparent wall extending above said opening, a bodily movable spoon contained within said casing, said casing having a slot in the wall thereof through which the handle of said spoon projects, said handle enabling said spoon to be manually moved as a whole with respect to said casing, chute means for conveying an article vended from a vending machine onto said spoon, and article conveying members contained within said casing for conveying articles dropped from said spoon toward said discharge opening.

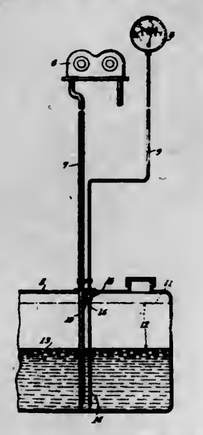


1,905,170. ORNAMENTAL BRICK AND METHOD OF PRODUCING SAME. EARL C. HERVEY, Indianapolis, Ind., assignor to Hydraulic-Press Brick Company, Indianapolis, Ind., a Corporation of Missouri. Filed Dec. 22, 1930. Serial No. 504,087. 6 Claims. (Cl. 25—156.)

1. The method of producing a rough-face brick which consists in ejecting a column of suitable material, separating a thin layer of said material from the upper face of the column, breaking said thin layer into comparatively narrow irregular strips, redepositing said strips upon the surface of the column from which the layer

was removed, breaking said strips into fragments and angularly displacing said fragments, re-adhering the fragments to the face of the column from which they were removed, and subjecting dimensioned portions of said column with its adhered fragments to a burning heat.

1,905,171. SHAVING BRUSH. HARRY FRANK HORNE, Los Angeles, Calif.; James Evans, jr., administrator of said Harry Frank Horne, deceased, assignor to Allen S. Evans. Filed Jan. 3, 1931, Serial No. 506,453. Renewed Aug. 2, 1932. 8 Claims. (Cl. 15—185.)

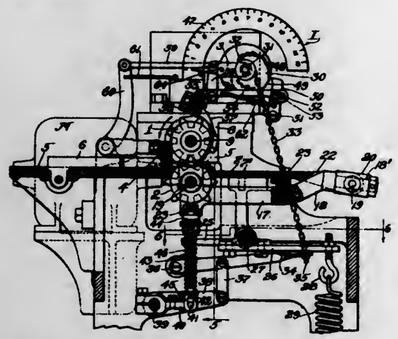


1. A shaving brush comprising a brushing element and a handle therefor including a pair of co-axially arranged sections relatively movable circumferentially to occupy open and closed positions, and means for mounting the brushing element on the handle for movment when the sections are open, to occupy a working position wherein the element projects from the handle and will be supported by the sections when closed, and to occupy a second position wherein the element will be enclosed by the sections when closed.

1,905,172. LIQUID GAUGE. CURTIS L. HOWSE, Detroit, Mich., assignor, by mesne assignments, to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed July 13, 1927. Serial No. 205,858. 6 Claims. (Cl. 73—54.)

1. In apparatus of the character disclosed, a liquid containing tank, a gauge of the vacuum type having a vacuum line entered in said tank and open at its lower end to the liquid in the tank, a pump having a suction line entered in the tank and open at its lower end to the liquid in the tank, and a restricted communication connection between said vacuum line and suction line sub-

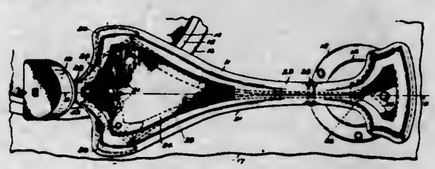
stantially at the maximum liquid level of the tank, said connection being sufficiently restricted to enable the pump to continue to function even though the gauge



be disconnected or the vacuum line be broken, and to obviate the necessity for maintaining any fixed vertical distance between said tank and said gauge.

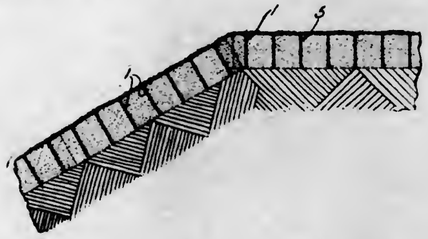
1,905,173. METHOD OF REFINING ROSIN. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 20, 1930. Serial No. 422,229. 22 Claims. (Cl. 87—2.)

2. The method of refining rosin by the removal of color bodies therefrom which includes subjecting rosin in solution in gasoline to treatment with an ether, having a capacity for selectively dissolving color bodies in the rosin and which is capable of immiscibility with gasoline, separating the ether and color bodies dissolved thereby from the rosin-gasoline solution and recovering refined rosin from the rosin-gasoline solution.



1,905,174. GRADING MACHINE. JAMES W. JOHNSTON, Manchester, N. H., assignor to Lacene Manufacturing Company, Manchester, N. H., a Corporation of Maine. Filed Mar. 3, 1931. Serial No. 519,747. 13 Claims. (Cl. 33—148.)

1. A grading machine of the kind having a pair of detecting rolls, one of which is movable toward and from the other, grading means and mechanism for adjusting the grading means in response to relative movements of the detecting rolls, comprising two arms on the free ends of which the ends of the movable detecting roll are journaled, said two arms being pivotally supported on the machine to turn about two axes, each common to said two arms, adapted to permit the movable detecting roll to be moved bodily toward and from the other roll and also to be canted out of parallelism with the other roll.



10. A grading machine of the kind described comprising a frame, a pair of detecting rolls, one of which is movable toward and from the other, a work supporting table removably mounted on the frame at the delivery side of the detecting rolls, and a support for said movable roll pivoted to the work table, whereby the work table, support and movable roll may be removed from or applied to the machine as an assembled unit.

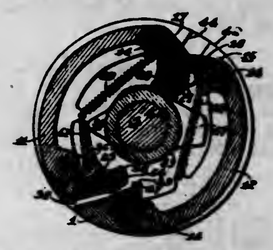
1,905,175. SOUND RECORDING AND REPRODUCING UNIT. JAMES M. KENDALL, Woodbury Heights, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1931. Serial No. 521,936. 20 Claims. (Cl. 274—1.)

1. In a sound recording and reproducing apparatus, a translating device, a suspension means therefor having a point of support in spaced relation to said device, a connection in said suspension means flexible about an axis extending through said device and said point of support and between said device and said support, and means connected with said device and located more adjacent thereto than said point of support providing a relatively high moment of inertia about said axis.

1,905,176. METHOD OF AND MEANS FOR PREPARING LAWNS. EDWIN F. KIECKHEFER, Wauwatosa, Wis. Filed June 13, 1932. Serial No. 616,795. 8 Claims. (Cl. 47—1.)

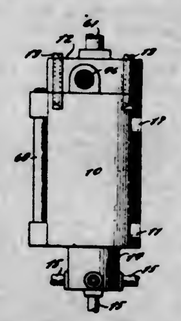
1. The hereindescribed method of preparing or building lawns which consists in suitably preparing the ground, laying on the surface of the ground, intersecting and interfitted strip-like members constituted of pulp board impregnated with fertilizer whereby to define a multiplicity of small compartments, scattering surface soil over the ground until said compartments are filled, seeding the surface soil, and finally wetting down the soil, whereby the strip-like members retain the surface soil and also absorb moisture and give it off gradually to the soil, the strip-like members being constituted of fertilizing impregnated pulp board serving to enrich the soil as they gradually disintegrate and become absorbed in the soil.

1,905,177. LOCK. HARRY R. KIRKWOOD, Pittsburgh, Pa., assignor of one-fourth to Reid C. Speer, Pittsburgh, Pa. Filed Sept. 9, 1932. Serial No. 632,329. 7 Claims. (Cl. 70—47.)



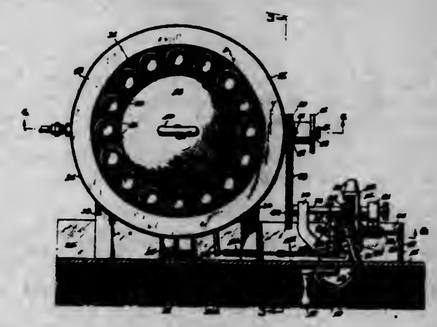
1. In combination in a lock, a case, a drum mounted for rotation in the case provided with a plurality of key

slots lengthwise of the drum and extending radially thereof, each adapted to receive a key which may be inserted and removed independently of each other key, a series of pin sockets in the case in alignment with each of the key slots when the drum is in locked position, corresponding



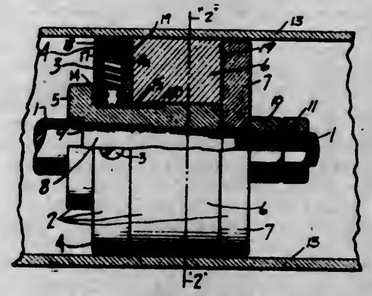
tumbler slots in the drum also in alignment with the sockets when the drum is in locked position, a tumbler in each tumbler slot, and a spring pressed locking pin in each of the sockets, all so arranged that each set of tumblers may be operated by its own key independently of the operation of the other sets of tumblers.

1,905,178. COLLAPSIBLE REEL. KURT P. KOHLER, Salem, Ohio, assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 13, 1930. Serial No. 481,703. 9 Claims. (Cl. 242—110.)



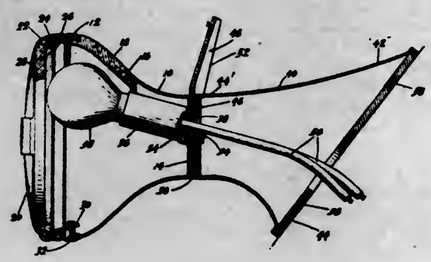
3. In a reel for winding strip material, in combination, a hub portion and a rim portion carried by the hub portion, said rim portion comprising a segment fixed to the hub portion, said rim portion comprising a segment fixed to the hub portion, two movable segments pivoted to the ends of the fixed segment, and a toggle mechanism constituting a collapsible segment joining the free ends of the movable segments.

1,905,179. LUBRICATING APPARATUS. SYLVANUS D. LOCKE, Bridgeport, CHARLES R. DOSCH, Stratford, and HENRY J. STEGEMAN, Fairfield, Conn., assignors, by mesne assignments, to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 13, 1922. Serial No. 567,906. 11 Claims. (Cl. 184—7.)



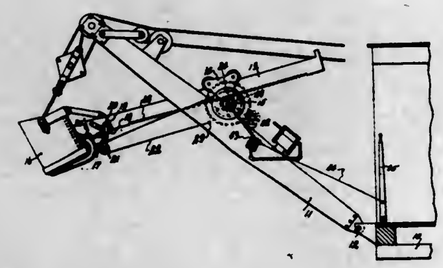
1. In a bearing lubricating system, a lubricant reservoir, a pipe leading therefrom to the bearing to be lubricated, a measuring mechanism in the pipe arranged to be operated by changes of pressure on the lubricant in the pipe to supply a quantity of lubricant to the bearing for each change of pressure, and a pump to produce pressure on the lubricant comprising a cylinder, a plunger therein, and means to reciprocate the plunger positively on its nonpressure stroke and under yielding pressure on its pressure stroke, the cubic contents of the cylinder which the plunger displaces in its pressure stroke being greatly in excess of the quantity of lubricant supplied by said measuring mechanism for each change of pressure, and said pump having provision to relieve the pressure in the cylinder before the non-pressure stroke begins, irrespective of the amount of lubricant passing into the delivery pipe.

1,905,180. DISPENSING MACHINE. LEONARD W. LOWTHER, Audubon, N. J., assignor to Horn & Hardart Baking Co., Philadelphia, Pa., a Corporation of New Jersey. Filed Mar. 20, 1928. Serial No. 263,100. 5 Claims. (Cl. 312—36.)



1. A dispensing device comprising a stationary container having a base plate, a spider rotatably mounted in said container on said base plate and means operable for rotating the spider, a chamber between said container and spider for retaining a plurality of articles to be dispensed, a recess in said container for dispensing said articles upon the rotation of said spider, and a stop spring actuated through the spider rotating means for limiting the rotation of said spider to the successive dispensing of a single article for each operation of the spider rotating means.

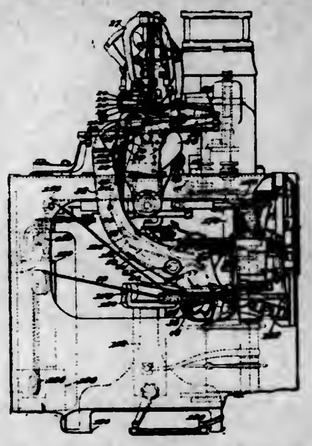
1,905,181. PUMP PISTON. WILLIAM FREDERICK McMAHON, Riverside, Calif. Filed Mar. 18, 1929. Serial No. 347,904. 5 Claims. (Cl. 74—109.)



1. In a mechanism adapted to create a pressure upon a fluid, a pump piston adapted to move in a reciprocating movement, a piston member and a piston follower adapted to be moved toward said member, a pliable packing between said member and follower, means for utilizing the fluid pressure to impart longitudinal movement to said follower to compress and expand the said packing and a ratchet mechanism adapted to hold the pliable packing in a compressed and expanded state without pulsating action on each reciprocating movement of the piston.

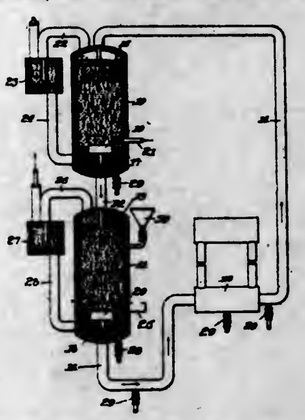
1,905,182. TAIL LAMP. HOWARD C. MEAD, Anderson, Ind., assignor to Guide Lamp Corporation, Anderson, Ind., a Corporation of Delaware. Filed July 29, 1932. Serial No. 625,775. 5 Claims. (Cl. 240—8.3.)

1. In a lamp for automobiles and the like, the combination of a pair of tubular stampings each having one end expanded, the opposite ends of the stampings being alined, means housed within said stampings for securing said ends together, a lamp socket mounted in one of said stampings, a lamp in the socket, a cover glass over the expanded end of said stamping, and a conductor connected to the socket and concealed within the stampings.



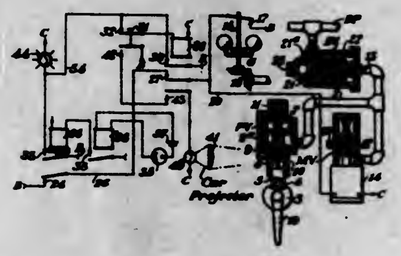
1,905,183. FLUID OPERATED DIPPER TRIP. GEORGE G. MORIN, Holyoke, Mass. Filed Feb. 26, 1931. Serial No. 518,436. 4 Claims. (Cl. 214—146.)

1. An excavating machine comprising a boom, a dipper stick rotatably and slidably mounted in the boom, a circular member rotatably mounted in the boom substantially at the intersection of the dipper stick and boom, the dipper stick being provided with means making rolling contact with the member, a dipper mounted at the end of the dipper stick and provided with a latched bottom, a drum having rotative coupling to the member and located concentrically therewith, said drum having an effective cable winding diameter equal to twice the effective diameter of the pinion, a pulley connected to the dipper latch, a cable secured to the boom, passing around the pulley, and wound upon the drum, and operator-controlled mechanism for rotating the drum relative to the pinion to cause the cable to be wound thereon and the dipper latch to be tripped.



1,905,184. SHOE SUPPORTING JACK. ALFRED R. MORRILL, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 23, 1927, Serial No. 235,869. Divided and this application filed July 8, 1931. Serial No. 549,377. 13 Claims. (Cl. 12—17.)

1. A machine for operating on shoes having, in combination, means for operating on a shoe, a work supporting horn arranged to extend within the shoe and a shoe supporting jack provided with heel and toe supports movable towards and from each other, clamping jaws mounted on the heel support arranged to receive the rear edge of

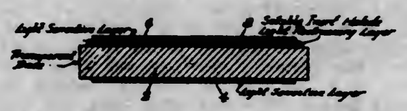


the shoe sole between them, and a rest on the toe support arranged to enter the crease between the upper and sole at the toe of the shoe.

1,905,185. HEAT TRANSFER. FRARING H. MORRIS, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Sept. 2, 1927. Serial No. 217,135. 2 Claims. (Cl. 122—31.)

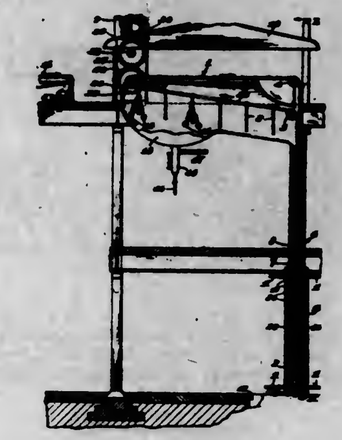
2. Apparatus for transferring heat from one independent fluid body to another comprising a pair of separate closed chambers, one of said chambers being adapted to contain a body of fluid to be cooled and the other a body of fluid to be heated, conduit means leading from the lower end of each of said chambers to the upper end of the other of said chambers, said chambers being otherwise independent and not in communication with each other, means for cyclically circulating a substantially immiscible heavier fluid heat transfer medium from the lower end of one chamber through one of said conduits into the upper end of the other of said chambers and from the lower end of the latter chamber through the other of said conduits and into the upper end of the first-named of said chambers, whereby heat contained by one fluid body is transferred to the other fluid body, and means for maintaining a body of said heat-transfer medium in the lower end of each of said chambers over the point of connection of the conduit leading to the upper end of the other of the said chambers, thereby preventing the said bodies of fluid being heat exchanged from becoming admixed with each other.

1,905,186. RAILWAY TRAFFIC CONTROLLING APPARATUS. BERNARD E. O'HAGAN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1932. Serial No. 605,653. 15 Claims. (Cl. 246—29.)



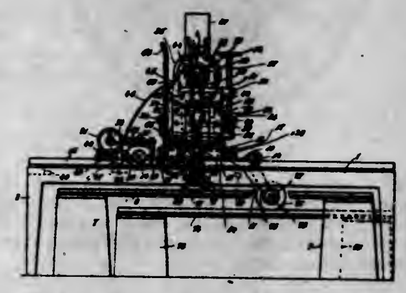
1. Railway traffic controlling apparatus comprising, a trackway trip arm movable to a non-tripping or a tripping position according as traffic conditions in advance are safe or unsafe, a car-carried brake applying trip arm arranged to be operated by the trackway trip arm when the latter is in its tripping position but not when it is in its non-tripping position, a car-carried source of light, manually controlled means adapted when actuated to illuminate said source of light, a light sensitive trackway element influenced by said light source to effect the movement of the trackway trip arm to its non-tripping position under unsafe traffic conditions, and car-carried speed governing means rendered active to establish a low speed restriction in response to such actuation of the manually controlled means.

1,905,187. MATERIAL FOR MAKING WATERPROOF MORTAR AND METHOD OF PRODUCING THE SAME. KNOTT C. RANKIN, Rockland, Me., assignor to Rockland & Rockport Lime Corporation, Rockland, Me., a Corporation of Maine. Filed Feb. 9, 1932. Serial No. 591,925. 11 Claims. (Cl. 106—24.)



2. A material for making mortar, comprising a mixture of crushed, granular or pulverized quicklime and a fat or oil of animal or vegetable origin in such proportions that when slaked with an excess of water to a wet paste or putty the heat and boiling of the slaking lime causes the fat or oil to be completely dispersed through and intimately mixed with the wet lime paste or putty in an attenuated state of suspended subdivision in the wet mass to produce when dry a water-repellent mass.

1,905,188. POSITIVE PHOTOGRAPHIC FILM. VIRGIL B. SHARE, Parlin, N. J., assignor to Du Pont Film Manufacturing Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1930. Serial No. 472,682. 11 Claims. (Cl. 95—2.)

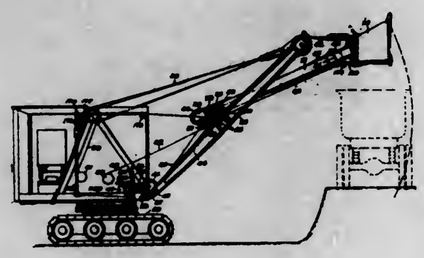


1. A positive photographic film having a base, a plurality of light sensitive emulsions, and a relatively light insensitive light restraining layer in a position to prevent the light from passing from one sensitive emulsion into another, said light restraining layer containing a suspension of a photographically inert salt which will be subsequently removed when said film is submitted to the usual developing, fixing, and finishing processes.

1,905,189. PROCESS AND APPARATUS FOR MAKING COMPOSITE GLASS. JAMES H. SHEETS, Brackenridge, Pa., assignor to Duplate Corporation, a Corporation of Delaware. Filed Aug. 11, 1930. Serial No. 474,376. 12 Claims. (Cl. 18—17.)

1. A process of compositing glass and a reinforcing sheet, which consists in assembling a pair of glass sheets with a reinforcing sheet therebetween with their opposing surfaces prepared for adhesion upon the application of heat and pressure, and moving the assembled sheets down into a heated bath of metal to a depth sufficient to composite the sheets by the pressure produced in the bath by gravity, the edges of the sheets being shielded from contact with the bath during such movement into the bath.

1,905,190. MARBLE WORKING MACHINE. THOMAS PAUL SILVESTER, New York, N. Y., assignor of one-third to Lisa Silvester and one-third to Vincent J. Silvester, New York, N. Y. Filed Nov. 24, 1928. Serial No. 321,674. 6 Claims. (Cl. 51—100.)



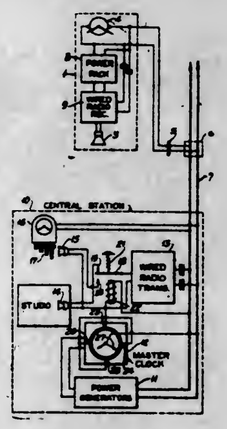
3. Apparatus for shaping and finishing marble comprising a frame mounted for movement in two directions at right angles to each other, and to swing about a pivot, a vertical shaft, bearings for said shaft at one end of the frame, a cutter on the shaft, means for vertically adjusting the shaft, and a motor on the frame to rotate the shaft.

1,905,191. EXCAVATOR. FREDERICK O. SNOW, Jr., Winchester, Mass., assignor to Mead-Morrison Manufacturing Company, East Boston, Mass., a Corporation of Maine. Filed June 25, 1931. Serial No. 546,783. 17 Claims. (Cl. 214—146.)

1. In an excavator, the combination of a scoop provided with a door, a latch for holding said door closed, a

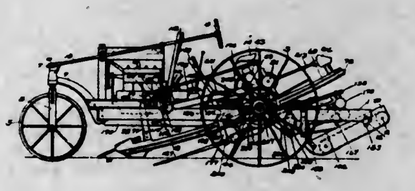
latch-tripping rope, a take-up for said rope, a guide for said take-up, a clamp carried by said take-up, means for moving said scoop, means consequent upon movement of said scoop to cause said rope to trip said latch, and means

controlled by the operator to cause said clamp to clamp said guide, thereby to hold said take-up fixed, thereby to predetermine the point in the movement of said scoop when said rope will trip said latch.



1,905,192. **REEL.** HOWARD H. TALBOT, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 11, 1929. Serial No. 377,382. 19 Claims. (Cl. 242—110.)

1. In a reel, the combination with a plurality of relatively movable sections, of pivoted gripping means cooperating with one of said sections, and a cam shaft for successively expanding said sections and turning said gripping means into operative position.

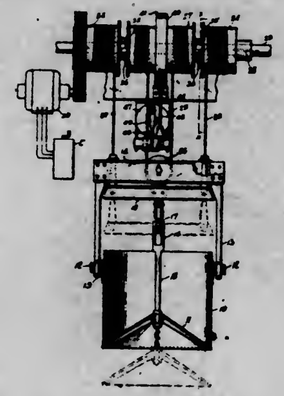


1,905,193. **COMBINED CLOCK AND RADIO SYSTEM.** ARTHUR M. TAGGNER, Maplewood, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 28, 1931. Serial No. 540,632. 4 Claims. (Cl. 179—2.5.)

1. A combined clock and radio system comprising, means for producing commercial alternating current, wire lines for conveying said alternating current, a regulator for controlling the frequency of said alternating current, a source of programs and a microphone associated therewith, a source of horological sound effects and a microphone associated therewith, a radio transmitting organization for transmitting carrier frequency energy over said wire lines, means under control of said regulator for selectively connecting said microphones to said transmitter at predetermined times, an electrically driven clock connected to said wire lines at a point removed from said source of horological sound effects, and means responsive to carrier

frequency energy connected to said wire lines for reproducing said programs and said horological sound effects in the vicinity of said electrically driven clock.

1,905,194. **HARVESTING MACHINE.** WILLIAM E. URSCHEL, Valparaiso, Ind. Filed Jan. 12, 1931. Serial No. 508,125. 11 Claims. (Cl. 55—108.)



1. A conveyor holding root crops by their leaves, a cutter in the path of said conveyor, and crop positioning means comprising paired chains in succession and in parallel planes intermediate said conveyor and said cutter.

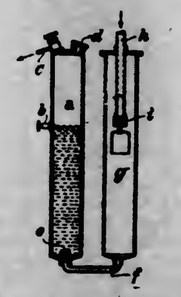
1,905,195. **CRANE TYPE CHARGER.** ROY J. WADD, Milwaukee, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 24, 1929. Serial No. 402,293. 2 Claims. (Cl. 214—116.)

1. A hoisting mechanism adapted for use with a bucket having a body and a drop bottom, said mechanism comprising raising and lowering drums for the bucket body and the drop bottom, respectively, individual cables connecting the bucket body and the drop bottom to their respective drums, said drums being mounted for relative rotation and disposed in axial alinement with their opposed ends in closely spaced relation, a power drive for one of the drums, lugs between the opposed ends of the drums and carried thereby, said lugs constituting the driving connection between the drums and disposed in eccentric relation to the common axis of rotation of the drums and in the path of each other whereby the drums may be rotated in unison through the power furnished to one of the drums for raising and lowering the bucket body and its drop bottom in closed relation or the power driven

drum may be rotated relatively to the other drum for raising and lowering the drop bottom independently of the bucket body when its drum is held against rotation, and a

manually controllable means for holding the last mentioned drum against rotation while the other drum is rotated with respect thereto.

1,905,196. **SIDE BEARING FOR RAILWAY CARS.** HENRY F. WARDWELL and WALTER C. BLADIN, Chicago, Ill. Filed Oct. 21, 1927. Serial No. 227,690. 1 Claim. (Cl. 308—226.)



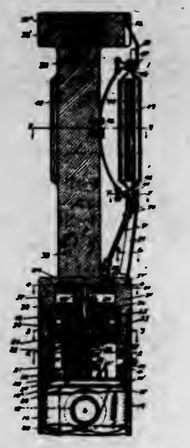
In a side bearing for railway cars, an elongated rectangular housing having bottom, side, and end walls, said bottom wall having a raised upper surface provided with a depression at its medial portion to form inclined runways terminating short of the ends of said bottom wall, and said runways having the margins thereof spaced from the side walls to afford drain grooves extending to the ends of said housing, said end walls being semi-cylindrical in horisoatal cross section and shaped to afford vertical spaced abutments lying beyond the ends of said runways, said end walls forming end chambers in said housing, and said abutments being reinforced by said semi-cylindrical walls, and projecting toward each other to a distance less than the width of said runways so as to lie in the path of a bearing member mounted on said runways, the bottom wall having apertures in said chambers for receiving fastening members, drain ports in said semi-cylindrical walls at the junction thereof with the bottom wall and in communication with said grooves, and a cylindrical bearing member riding on said raised upper surface and runways and limited in its travel by engagement of its cylindrical bearing surface with the vertical abutments formed adjacent to said end walls, engagement of said cylindrical member with said abutments by virtue of the termination of said runways and the position of said abutments being limited to relatively small areas of contact between the cylindrical member and said abutments for preventing the accumulation of moisture or ice adjacent thereto, tending to prevent free movement of said cylindrical bearing member.

1,905,197. **FLEXIBLE CABLE.** HARTWELL W. WEBB, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Feb. 6, 1929. Serial No. 337,064. 18 Claims. (Cl. 64—30.)

3. In a flexible driving shaft, a phosphor bronze core wire, a layer of phosphor bronze wire over said core wire, said core and layer being relatively immovable, two layers of hard steel wire over said layer, and an outermost layer of soft steel wire.

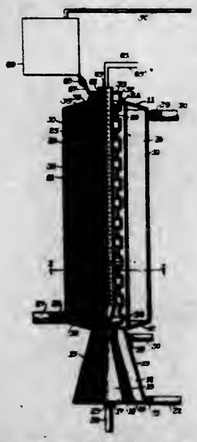
1,905,198. **WATER LOCK FOR ACETYLENE GENERATORS.** HEINZ WENDTLAND, Altona-on-the-Elbe, Germany. Filed Aug. 3, 1931, Serial No. 554,765, and in Germany Nov. 18, 1929. 7 Claims. (Cl. 48—56.)

1. A water lock for acetylene generators, comprising in combination: a closed container which is normally partly filled with water and is provided with a gas delivery port arranged above the water level, said container constituting the water lock proper; a second closed container which is normally empty; and a pipe connected at one end to the bottom of said first named container and at the other end to the bottom of said second container, said second container being provided with an inlet for gas and being adapted to receive water displaced by a back pressure from said first named container, substantially as described.



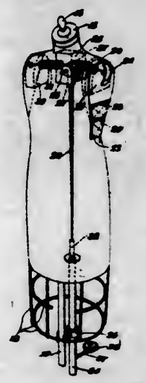
1,905,199. **FASTENING.** HARRY ALPHONSE WIDMER, London, England, assignor to Tuck-Tite Lock and Fastener Company Limited, London, England, a Company of Great Britain. Filed May 24, 1930, Serial No. 455,268, and in Great Britain Mar. 26, 1930. 14 Claims. (Cl. 24—211.)

1. A spring socket fastener comprising a spring grip mounted on the closing member of the article to be fastened and a stud comprising a cylinder with an element sliding in said cylinder mounted on the body of the article



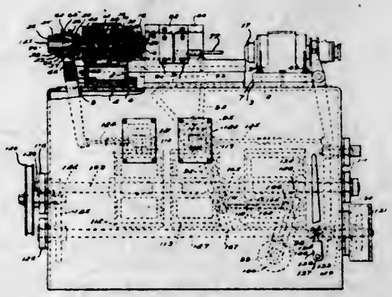
to be fastened and provided with a neck adapted to be positively engaged by said spring grip, a spring, and a sleeve in said element adapted to move the members of said grip outwardly to release said stud by pressure on said sleeve, said spring engaging the bottom of cylinder and the top of said sleeve.

1,905,200. MECHANISM FOR RECORDING ROTATION OF A WELL SURVEYING INSTRUMENT. WILLIAM J. WILLIAMS, South Gate, Calif., assignor of one-half to L. A. Wagner, Los Angeles, Calif. Filed Nov. 20, 1929. Serial No. 408,507. 9 Claims. (Cl. 234—5.8.)



1. In mechanism for indicating rotation in drill pipe as it moves into a well, contact elements carried thereby and positioned to engage the wall of the well, recording mechanism for recording rotating movement about a center, a receiving sheet carried thereby and turning therewith, and operating connections from said contact elements and said recording mechanism, whereby the movement of said contact elements operates said recording mechanism and records on said sheet said rotation.

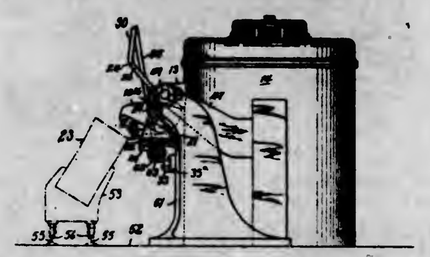
1,905,201. VACUUM DISTILLATION. ROBERT E. WILSON, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Jan. 2, 1930. Serial No. 417,889. 7 Claims. (Cl. 196—114.)



1. In vacuum distillation apparatus, a substantially vertical evaporating surface, means for heating said evaporating surface, means for flowing oil in a thin film over said surface, a condenser surface mounted close to said evaporating surface and substantially parallel thereto, and means interposed between said evaporating surface and said condenser surface for preventing excessive heat losses to the condenser.

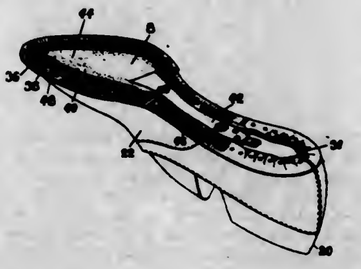
1,905,202. COLLAPSIBLE DRESS FORM. SIMON WOLF, Bronx, N. Y. Filed Aug. 27, 1931. Serial No. 559,697. 8 Claims. (Cl. 223—18.)

1. In a dress form, a body having openings at the shoulders, closures for the openings, hinges connecting said closures at their bottoms to said body and resilient means to normally press said closures outwardly.



1,905,203. METAL WORKING MACHINE. GEORGE F. YAGER, Toledo, Ohio, assignor to The Bunting Brass & Bronze Company, Toledo, Ohio, a Corporation of Ohio. Filed July 14, 1930. Serial No. 467,907. 4 Claims. (Cl. 77—21.)

1. In a machine of the class described, a head, a spindle mounted to turn in said head, a cap carried by the spindle, work gripping means including a collet movable longitudinally of the spindle and operable upon engagement with the cap to grip the work, and actuating means for the collet including a work receiving member movable in the head as a follower for the collet, said longitudinally movable member having inclined means for deflecting toward said collet chips and other particles removed from the work while gripped by said collet, and said collet and cap having registering openings permitting said chips and other particles to be discharged laterally outwardly therefrom.



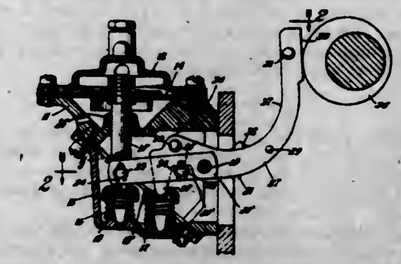
4. In a machine of the class described, a pair of spaced heads, work-gripping means carried by said heads, a reciprocating carriage, between said heads, tools projecting from opposite ends of said carriage for engagement with work in said gripping means, a rotary cam, and a driving connection between the cam and carriage adjustable to vary the movements of the carriage and tools relative to the heads and work-gripping means including a rack rigid with the carriage, a gear sector engaging the rack, a lever rigid with the sector, a lever adjacent the lever just mentioned and operatively connected to the cam, and a slidable connection between said levers.

1,905,204. APPARATUS FOR POURING MOLTEN METAL. FRANK D. ZINNO, Waterbury, Conn., assignor to The Chase Companies, Incorporated, Waterbury, Conn., a Corporation. Filed Dec. 30, 1929. Serial No. 417,383. 4 Claims. (Cl. 22—79.)

1. In apparatus for pouring molten metal, in combination, a tiltable melting furnace having a discharge opening, and a delivery container arranged in position to receive molten metal from said discharge opening and supported in fixed position laterally of the axis of said opening, the support for said delivery container including means whereby said container may be moved toward and away from said discharge opening to accommodate the position of said container to said opening upon tilting of the furnace, means whereby said container may be tilted upon a substantially horizontal axis to pour the molten metal therefrom, and means whereby said container may be swung upon a substantially vertical axis to position it for pouring as desired.

1,905,205. SHOE AND THE MANUFACTURE THEREOF. OSCAR C. ADAMS, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 13, 1931, Serial No. 574,828. Renewed Jan. 28, 1933. 5 Claims. (Cl. 12—142.)

1. A shoe having its upper secured in lasted relation to its insole at its shank portion by staples driven through the marginal portion of the upper materials and into the insole in such a manner that the legs of the staples are deflected without passing entirely through the insole, and having its upper at the forepart held in lasted relation to the insole by stitching passing through a welt extending about the forepart of the shoe and through the marginal portion of the shoe upper and the between substance of the insole, the outsole of the shoe being secured to the marginal portion of the shoe upper at the shank and to the welting extending about the forepart of the shoe upper as well as to the adjacent portion of the shoe bottom by pyroxylin cement.



3. That improvement in methods of manufacturing shoes which comprises mounting upon the bottom of a last an insole the forepart of which is provided with a peripherally extending lip located a short distance from the margin of the insole, working the marginal portion of the shoe upper into lasted relation to the insole, securing it in lasted relation flat against the shank portion of the insole with permanent fastenings and against the lip at the forepart of the insole, stitching a welt to the marginal portion of the lasted shoe upper and to the lip at the forepart of the insole, trimming the surplus upper, welt and insole-lip material from the shoe bottom, and attaching an outsole to the shoe bottom with pyroxylin cement.

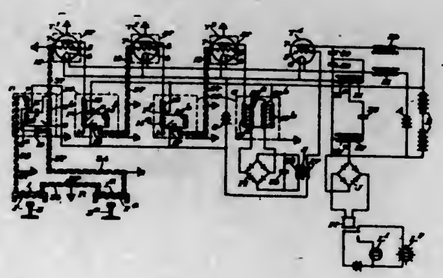
1,905,206. TOWEL CABINET AND TOWEL PACK THEREFOR. ALEXANDER ALLEN, Providence, R. I. Filed Dec. 9, 1931. Serial No. 579,898. 9 Claims. (Cl. 312—37.)

6. A towel cabinet comprising a casing, a partition in said casing dividing said casing into upper and lower compartments, said partition being adapted to support a pack of towels thereon in the upper compartment and means secured adjacent the front edge of said partition for securing the towels together at their center and the pack to said partition, said towels being adapted to hang down into the lower compartment when used.

1,905,207. FUEL PUMP OPERATING MEANS. ABRAHAM M. BABITCH and MILES G. HANSON, Flint, Mich. Filed Dec. 12, 1929. Serial No. 413,650. 1 Claim. (Cl. 103—215.)

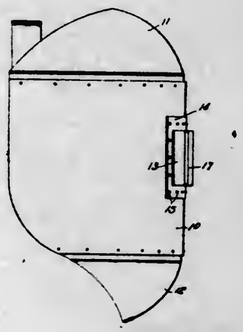
In a fuel pump, a sectional actuating lever comprising: an inner lever section formed of separate stampings spaced apart sufficiently to permit the interposition of an

outer lever section therebetween; an outer lever section, also formed of separate stampings, movable therebetween; a pivot common to said sections; and a cam pin carried by one of said sections and conditionally engaging cam surfaces provided by edges of the stampings of the other of said sections,—said outer section including three stampings which are secured together by rivets near the respective ends thereof and the intermediate stamping being different in outline from the adjacent stamping to provide a head engageable by resilient means to hold said outer section in engagement with means for imparting reciprocatory movement thereto.



1,905,208. SAND TESTER. JAMES L. BADGETT, Boling, Tex., assignor of one-fourth to W. C. McMasters and one-fourth to J. E. Pomeroy, Pasadena, Tex. Filed Aug. 18, 1930. Serial No. 475,976. 8 Claims. (Cl. 166—1.)

1. A tool of the character described comprising a barrel, a tubular operating stem to the lower end of which the barrel is attached, a test stem having upper and lower openings and having a releasable, threaded connection with and extending beneath the barrel and whose lower end is formed into a probe adapted to be inserted into strata to be tested in a well bore and whose upper end has a sample chamber, sealing means between the test stem and barrel, said test stem upon release of said connection being movable into one position, relative to the barrel, to carry said sealing means beneath the openings to block said openings and to thereby effect the closing of said chamber to said strata and into another position to carry the sealing means between the openings to open said openings and chamber to said strata to permit fluid to flow from said strata into said chamber.

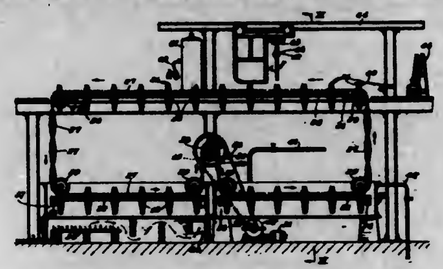


1,905,209. ELECTRICAL AMPLIFIER. PAUL N. BOSSART, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 25, 1930. Serial No. 431,085. 4 Claims. (Cl. 179—171.)

1. An electrical amplifier comprising an electron tube having a grid, a plate, and a filament; a grid circuit for said tube including a source of alternating current, a source of unidirectional current connected between the plate and the filament of said first tube, a capacity connected between the plate and filament of said tube, a first reactance connected across a portion of said capacity, a second reactance, a condenser; a second circuit including said condenser, said second reactance, and a portion of

said first reactance and tuned to resonance at the frequency of said source of alternating current; and a signaling device responsive to current in said second circuit.

1,905,210. WELDER'S MASK. FREDERICK M. BOWERS, Chester, Pa. Filed Dec. 4, 1931. Serial No. 578,894. 8 Claims. (Cl. 2—8.)

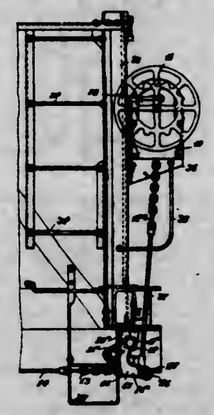


1. A welder's mask comprising an arcuate body, a housing fitted to the arcuate body and provided at one end with a slot, a sheet of transparent material within the housing, a tray, within the housing bearing upon said transparent sheet and covering the slot, a second subtransparent sheet within the tray, and spring pressed means for maintaining the said sheets and tray in position.

1,905,211. PROCESS AND APPARATUS FOR MAKING COMPOSITE GLASS OR OTHER COMPOSITE ARTICLES. VERN K. BOYNTON, Milwaukee, Wis., assignor to Duplate Corporation, a Corporation of Delaware. Filed June 25, 1928. Serial No. 288,126. 10 Claims. (Cl. 18—17.)

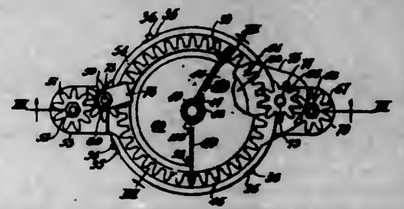
3. A process of applying heat and pressure to members to be joined together, which consists in enclosing the members in a container in a body of fluid with the surfaces to be joined in contact, shielding the line of joinder of

the members at the periphery thereof against fluid pressure, passing the container through a heated area so as to develop in the confined fluid the pressure necessary to



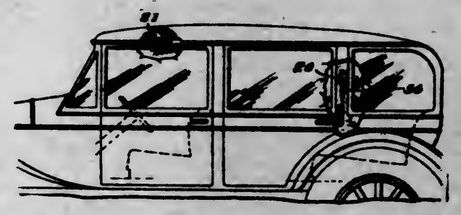
secure a joinder of the members, and then passing the container through a cooled area to reduce its temperature and that of its contents.

1,905,212. PROCESS OF WATER-PROOFING MATERIALS WITH AQUEOUS EMULSIONS. CARL ALFRED BRAUN, Munich, Germany, assignor to International Bitumen Emulsions Corporation, San Francisco, Calif., a Corporation of Delaware. Filed Apr. 21, 1930, Serial No. 446,169, and in Germany Apr. 7, 1928. 4 Claims. (Cl. 92—21.)



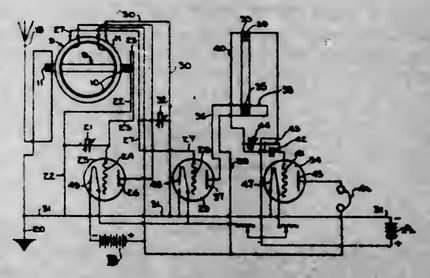
1. A process of waterproofing materials with aqueous emulsion of waterproofing agents which comprises pretreating the materials to be waterproofed with a solution of emulsion stabiliser, then mixing the materials with a quick-breaking aqueous emulsion of waterproofing agent substantially free from colloidal powders, and finally adding an electrolite to break the emulsion.

1,905,213. SIDE HAND BRAKE FOR RAILWAY CARS. RICHARD W. BURNETT, Chicago, Ill. Filed Sept. 11, 1930. Serial No. 481,222. 2 Claims. (Cl. 74—112.)



1. In combination with a brake rigging and the corner post construction of a railway car, a bracket secured to said corner post to project outwardly therefrom in a plane parallel to the side of the car, a hand power mechanism secured to said bracket and including a vertically disposed hand wheel operable in a plane parallel to the side of the car, and means for transmitting power from said power mechanism to the brake rigging comprising a connector connecting said brake rigging and movable beneath the car, a shaft extending transversely of the car, a rocking member secured to said shaft in alignment with said connector and to which said connector is attached, an operating lever secured to said shaft, and a vertically disposed connector connecting said lever with said power mechanism.

1,905,214. RADIO CLOCK. LEMOY F. BUSH, Edwardsville, Kans. Filed Mar. 5, 1928. Serial No. 259,695. 5 Claims. (Cl. 200—36.)

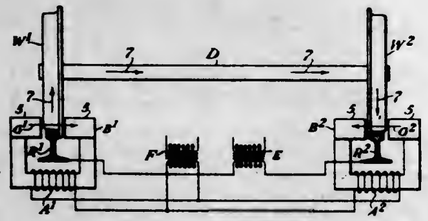


1. In a time controlled circuit breaking device, the combination of a circuit making and breaking device including a pair of cooperative and relatively movable elements adapted to expose varying amounts of conductive material, a brush traversing said elements, a clock provided with connections for actuating said brush, separate means for selectively positioning said elements for different time intervals, and indicators on the face of the clock and actuated by said positioning means for registering the respective starting and stopping points of the corresponding time interval.

1,905,215. TELEPHONE SYSTEM AND APPARATUS. JOSEPH O. CADIEUX, Meriden, Conn., assignor to Connecticut Telephone & Electric Corporation, Meriden, Conn., a Corporation of Delaware. Filed June 20, 1930. Serial No. 462,552. 6 Claims. (Cl. 179—1.)

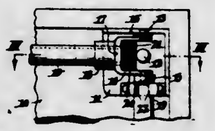
1. A combination lamp and loud speaker comprising a casing having an outer flange adapted to be secured to the roof of a car, a lamp socket mounted therein, a conical diaphragm having a rim, a glass, and a frame supporting the glass and the rim of the diaphragm in the casing and a magnetic system adjacent the socket consisting of a coil and a core for actuating the diaphragm.

1,905,216. RADIO RECEIVING APPARATUS. FRANK L. CAPPS, Milford, Conn. Filed July 10, 1928. Serial No. 291,518. 9 Claims. (Cl. 179—171.)



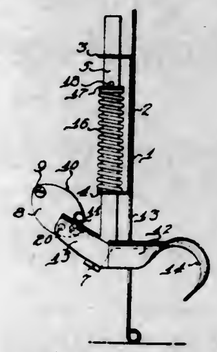
1. A radio receiving apparatus comprising a couple of radio frequency transformers supported with their geometrical centers coincident with each other and said transformers being fixed relatively in non-inductive relation to each other.

1,905,217. MECHANICAL ASSORTING DEVICE. CHARLES E. CONSTABLE and HENRY F. KUNOLD, Cincinnati, Ohio. Filed Sept. 30, 1929. Serial No. 396,346. 4 Claims. (Cl. 214—11.)



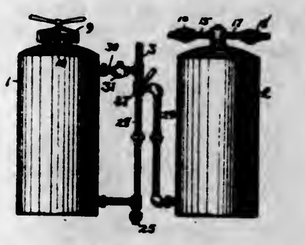
1. A mechanical assorting device comprising an endless conveying means having a series of horizontally arranged and spaced conveying platforms, means for driving said conveying means, a series of pivoted rake devices adapted to swing from an inoperative horizontal position above said conveying platforms to a vertical operative position adjacent to the upper surface of the corresponding conveying platforms, whereby material on said platform will be raked therefrom through the space between the conveying platforms as the conveying means is advanced, locking means for holding each of said rake devices in an inoperative elevated position, a key for each of said rake devices, and means carried by each of said platforms whereby the depression of one of said keys will cause the locking device of the corresponding rake device to be actuated and the rake device lowered into position in operative relation with said platform as the conveying means is advanced.

1,905,218. RAILWAY CAR RETARDER. PAUL H. CRAGO, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1932. Serial No. 587,076. 4 Claims. (Cl. 188—62.)



1. A railway car retarder comprising means for passing magnetic flux through a car wheel in a direction parallel to the axle, and means for passing electric current through said wheel in a path perpendicular to the path of such flux and in such direction as to coact with the flux to retard the movement of the car.

1,905,219. FOLDING TABLE. JAMES V. CRICHTON, Philadelphia, Pa. Filed Feb. 25, 1931. Serial No. 518,127. 6 Claims. (Cl. 45—11.)

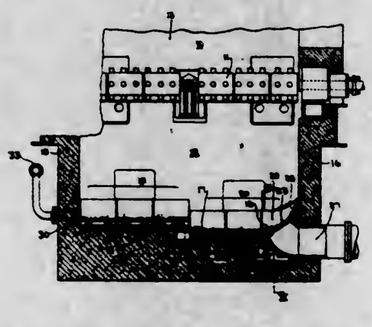


1. In a folding table, the combination with the top of an angularly-flanged corner piece embodying a depending stud, means integral with said corner piece affording pivotal support for a yoke member having a tubular boss, and a leg having sliding guidance in said boss with capacity to engage over or be restrained in contact with the side of the stud aforesaid.

1,905,220. HOOD FASTENER. STEPHEN DE ORLOW, East Lansing, Mich., assignor to Terastedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 7, 1930. Serial No. 465,936. 10 Claims. (Cl. 292—66.)

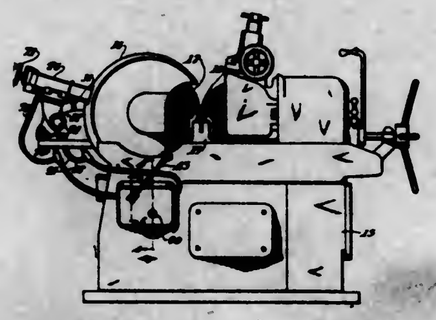
1. In a latch for the hoods of automotive vehicles, a keeper secured inside the hood to a stationary part of the vehicle, means mounted on the inside of the hood for slidable movement only, a foot on said means capable of being pushed under the keeper when the hood is latched, said foot having no contact with said keeper, a hook pivoted to said foot, said hook having a handle extending outside the hood and operating said hook to cause it to become engaged with or disengaged from the keeper.

1,905,221. WATER SOFTENING APPARATUS. RALPH C. DUNKELBERG, Fort Wayne, Ind. Filed Aug. 14, 1929. Serial No. 385,754. 1 Claim. (Cl. 210—24.)



Water softening apparatus having a closed brine tank provided with a check-valve controlled water intake pipe at its top and a discharge pipe at its bottom; a water softening tank having an outlet at its top and an intake pipe connected with its bottom; and a water supply pipe communicating with the intake pipe for the brine tank and provided with a valve which valve has connections with the brine discharge pipe and the intake pipe for the softening tank, said valve being so disposed as to establish communication between the supply pipe and the softening tank or between said brine tank and the water softening tank, accordingly as said valve is adjusted.

1,905,222. FIREPROOF BODIES AND PROCESS FOR MAKING THE SAME. GEORGE H. ELLIS, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 19, 1930. Serial No. 469,249. 9 Claims. (Cl. 18—47.5.)

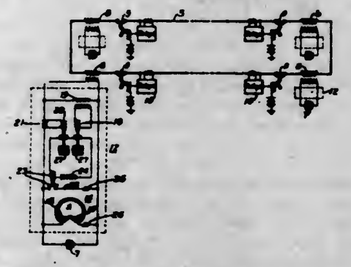


1. A process for producing fire-resistant bodies, which have a tensile strength ranging from thirty-four hundred to four thousand pounds per square inch and a specific gravity of approximately one, which consists in adding a protein-containing body to a woody pulped material in proportion within the range of fifteen to forty per cent by weight of the finished product, mixing the resulting mass, forming a sheet, and then simultaneously pressing and heating the sheet to temperatures within the range of from three hundred to four hundred degrees Fahrenheit, and at pressures within the range of four hundred to four hundred fifty pounds per square inch, and maintaining heat and pressure from twenty-five to forty minutes.

1,905,223. ASH DISPOSAL APPARATUS. ROBERT A. FORESMAN, Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1931. Serial No. 575,081. 8 Claims. (Cl. 110—171.)

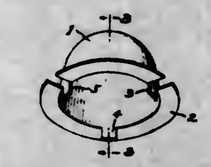
1. In ash disposal apparatus, the combination of a pit for receiving and storing ash and comprising side walls, end walls and a bottom wall having a discharge opening therein adjacent one of the end walls, that portion of the bottom wall between said one end wall and the opening being inclined upwardly and toward said end wall, and means providing for the movement of ash along the bottom wall and towards the discharge opening.

1,905,224. GRINDING MACHINERY. FREDERICK S. HAAS and CLEMENT BOOTH, Cincinnati, Ohio, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 27, 1929. Serial No. 395,703. 15 Claims. (Cl. 125—11.)



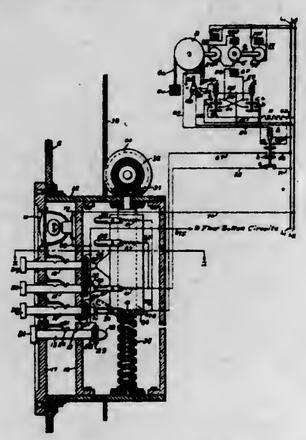
1. A mechanism of the nature described including a support, a slide movable traversely of the support, a tool holder movable transversely of the slide, a piston for actuation of the slide, a second piston for actuation of the tool holder, respective cylinders operatively supporting the pistons, a source of hydraulic power, and means for simultaneously coupling the source of power with one end or the other of each of the cylinders for simultaneous actuation of the feed and traverse controlling pistons whereby the tool is incremently fed toward a grinding wheel at the initiation of the movement of the slide.

1,905,225. ART OF COMPRESSED LAMINATED PRODUCTS. ADOLF HAWERLANDER, New York, N. Y., assignor to Halisite Corporation, New York, N. Y., a Corporation of New York. Original application filed Mar. 18, 1929, Serial No. 346,811, and in Great Britain Sept. 20, 1929. Divided and this application filed July 10, 1930. Serial No. 467,135. 2 Claims. (Cl. 154—2.)



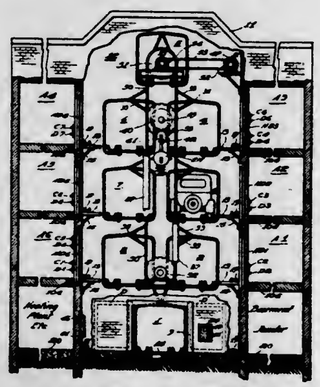
1. The process of making compressed fibrous products which comprises applying a film of gasoline to the surface sheets of veneer, covering the thus treated sheets with a liquid binder constituted of a phenolic condensation product, interposing a fibrous mass between two of said sheets of veneer, subjecting said composite mass to a temperature of approximately 400° F. and applying pressure to said composite mass while in a heated condition to compress the mass to a stable condition and to effect in conjunction with said heat the hardening of said binder.

1,905,226. SERIES CAPACITOR WITH COMBINATION PROTECTIVE EQUIPMENT. BERT V. HOARD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 5, 1931. Serial No. 542,338. 19 Claims. (Cl. 175—294.)



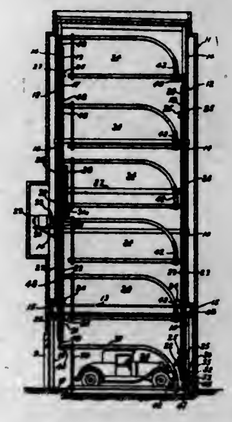
1. A synchronous-synchronous transmission system comprising a plurality of line sections, with high-speed fault-clearing relaying and circuit-interrupter means in each line-section, characterized by a series capacitor connected in series relation to a line-section, excess-voltage flash-over means in parallel relation to the series capacitor in said line-section, said flash-over means being of a type which is capable of carrying the current which would otherwise have passed through the capacitor, in the event of a fault on the transmission system, for a time longer than that necessary for the high-speed fault clearing relaying and circuit-interrupter means to clear the fault and being self-extinguishing when the voltage across itself returns to normal, whereby the series capacitor is automatically re-inserted in its line-section immediately after the clearance of a fault in another line-section.

1,905,227. COOKING UTENSIL. LEOPOLDINE HIESNAY, Ithaca, N. Y., and RUDOLF AMANN, Brookline, Mass. Filed Apr. 25, 1930. Serial No. 447,256. 1 Claim. (Cl. 53—6.)



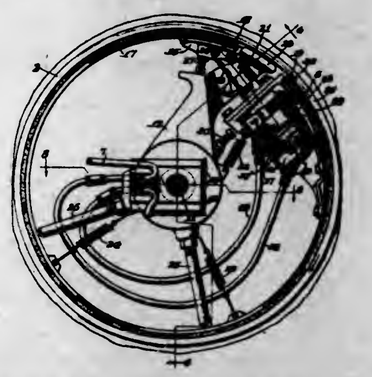
A cooking utensil comprising a shell of the shape of an inverted vessel, a rim surrounding the edge of said shell and feet supporting said shell and said rim, said shell and said feet being integrally stamped of a blank of sheet material.

1,905,228. SIGNALING SYSTEM FOR ELEVATORS. HENRY D. JAMES, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 14, 1929. Serial No. 385,944. 2 Claims. (Cl. 177—336.)



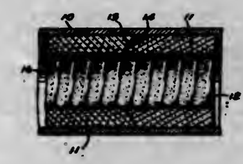
1. A signaling system for an elevator car operable past a plurality of floors comprising a signal device on the elevator car common to all of said floors for indicating to an attendant when stops are to be made at the floors, a plurality of circuits for operating said signal device, one for each floor, each of said circuits having a single opening therein, a plurality of floor contact members, one for each circuit, manually-operated means for selectively moving said contact members into active position and a cooperating traveling contact member, said contact members and said manually operated means being disposed on said elevator car, and means operable correspondingly to movements of the car for moving said traveling contact member into engagement with the operated floor contact members to successively close the openings in the circuits corresponding to the floors at which stops are to be made.

1,905,229. CIRCUITOUS ELEVATOR. HENRY D. JAMES, Edgewood, Pa., and GILBERT D. FISH, Pelham, N. Y., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 12, 1931. Serial No. 508,054. 36 Claims. (Cl. 187—16.)



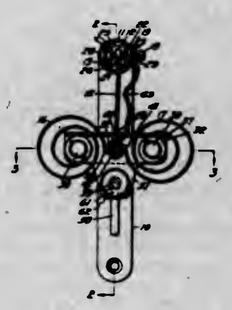
1. In an automobile-storage device, a plurality of automobile movers, movable in an endless path, and means including means on each mover cooperating with the doors of an automobile disposed on the corresponding mover, for preventing the movement of all the automobile movers when an automobile door is open outwardly more than a predetermined amount.

1,905,230. CIRCUITOUS ELEVATOR. HENRY D. JAMES, Edgewood, and GILBERT CURRIE, Forest Hills, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 30, 1931. Serial No. 512,291. 7 Claims. (Cl. 214—16.1.)



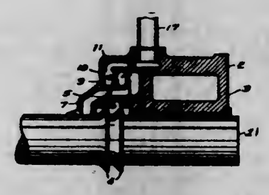
1. In a conveyor, a plurality of load-carrying slings movable in an endless path, each of said slings comprising a horizontally disposed platform, a trunnion bar for supporting said platform extending horizontally for a portion of its length parallel to said platform and for the remainder of its length bent through an arc to intersect said platform adjacent one end thereof to support it at one end, a substantially rectangular frame at the other end of said platform for permitting the entrance or exit of loads to and from said sling, and means for securing the respective ends of said trunnion bar to said platform and frame.

1,905,231. BRAKE MECHANISM. GEORGE C. JETT, Milwaukee, Wis., assignor of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Filed Aug. 23, 1928. Serial No. 301,454. 4 Claims. (Cl. 188—152.)



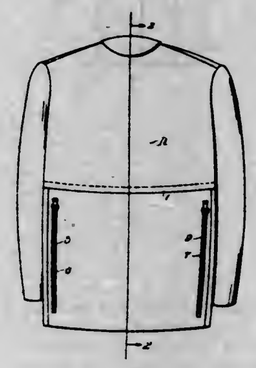
2. In a brake mechanism, a rotatable wheel, a frame for carrying said rotatable wheel, a brake drum secured to the wheel and having an open side, a dust proof cover adapted to close said open side to seal the interior of the drum from the surrounding atmosphere, an expansible brake band disposed within said drum, said cover having a central opening through which extends an axle from the wheel means for sealing said opening around said axle and a band torque arm, the arm and axle being secured to said frame, means connected with said arm for retaining the brake band free from the drum when contracted, brake band expanding means housed within the drum, the torque arm being adapted to limit the rotative movement of said brake band said cover being diametrically split and provided with means for clamping its two halves together with their perimeters sealed upon the outside of the brake drum so that the cover may be split and removed readily.

1,905,232. ELECTRICAL HEATING ELEMENT AND METHOD OF MANUFACTURE. ARTHUR J. KERCHER, Berkeley, and WILLIAM WESLEY HICKS, San Francisco, Calif., assignors to Wesix National Company, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 17, 1928. Serial No. 326,531. 5 Claims. (Cl. 201—67.)



5. The method of constructing an electrical heating element making use of a helical resistance conductor and refractory tubular insulation which method comprises inserting the helical conductor into the bore of the tubular insulation, pouring fluid insulating cement into the bore to cover the resistance conductor with an adherent coating of the cement, allowing the portion of the cement which does not adhere to drain off and leave a restricted bore through the heating element, and then causing the adherent coating of cement to harden.

1,905,233. THERMOSTAT. ARTHUR J. KERCHER, Berkeley, Calif. Filed July 29, 1930, Serial No. 471,503. Renewed Aug. 15, 1932. 5 Claims. (Cl. 200—139.)

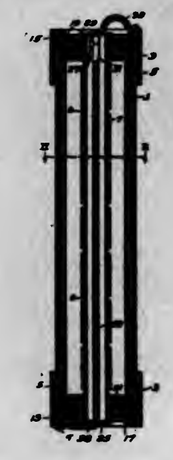


1. In an electrical control thermostat, a stationary contact, a movable contact movable between open and closed positions with respect to the stationary contact, a pair of bimetallic strips, a mounting to which an end of each strip is fixed, pivot pins serving as a connection between the free ends of the strips, said strips being normally tensioned to urge the free ends of said strips together, a member connecting said pivot pins with the movable contact, said strips being arranged to flex opposite responsive to like temperature changes, and means for adjustably rocking said mounting about an axis intersecting the center line of said pivot pins, whereby both of said bimetallic strips and the movable contact carrying member can be conditioned to effect closure of the contacts at a different temperature.

1,905,234. MEANS FOR PREVENTING OIL LEAKAGE FROM BEARINGS. JOHN M. LARRERTON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1929. Serial No. 415,478. 4 Claims. (Cl. 308—134.)

1. In connection with a suction-ventilated machine having a bearing subject to the suction, said bearing having an oil-collecting chamber, means to create the ventilating-suction, exhaust means for the suction-creating means, and a duct leading from the said exhaust means to the said oil-collecting chamber.

1,905,235. HUNTING COAT WITH DETACHABLE POCKET. CHARLES L. MANDELERT, Chippewa Falls, Wis. Filed May 2, 1931. Serial No. 534,485. 2 Claims. (Cl. 2—94.)

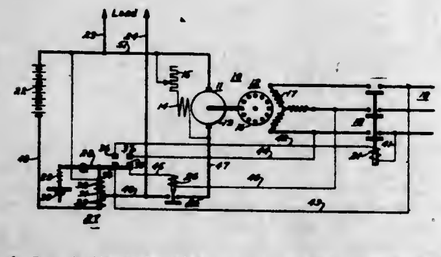


1. A hunting and outing jacket, comprising a jacket, a pocket removably secured to the outer rear portion thereof, the upper edge of said pocket being removable from engagement with said jacket to permit the said pocket to hand below the lower rear portion of said jacket to form a seat pad.

1,905,236. EXPULSION FUSE. GEORGE B. MANGAN, Washington, D. C., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 15, 1931. Serial No. 562,842. 6 Claims. (Cl. 200—127.)

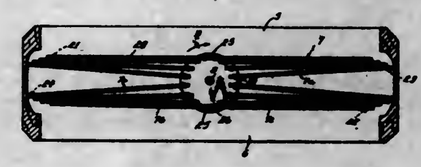
1. In combination with an expulsion fuse having an insulating outer casing and a fuse element therein adapted to rupture under a predetermined current value, of an insulating inner container having closed ends, the fasten-

ing of one of the ends being weaker than that of the other end, said inner container being provided with weakened side-wall portions stronger than the fastening of said ends,



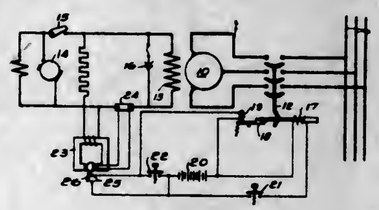
said inner container being held in said outer casing by fastenings which are stronger than said weakened portions of said inner container.

1,905,237. CHAIN FOR AUTOMOBILE TIRES. EDGAR J. MARTEL, Laconia, N. H. Filed Mar. 20, 1929. Serial No. 348,555. 5 Claims. (Cl. 152—14.)



1. An anti-skid chain for tires, comprising a pair of flexible side members, a series of cross links connecting said side members at intervals, a flexible extension on one end of one of said side members having a free end, means on the other end of the same side member for slidably engaging said extension, and means for attaching the free end of said extension to the other said side member.

1,905,238. CONTROL SYSTEM. ARTHUR S. MARTHENS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 27, 1931. Serial No. 525,730. 10 Claims. (Cl. 171—314.)

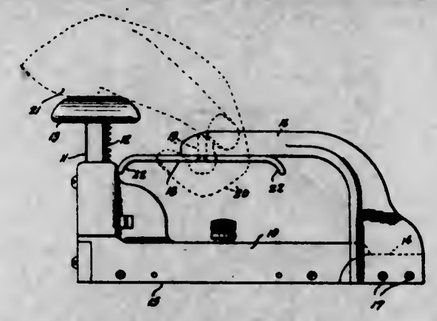


1. In a battery-charging control system, in combination, a storage battery, a source of electrical energy for charging the battery, switching means for connecting the charging source to the battery, and unitary means responsive to the terminal voltage and the charging current of the battery for controlling the switching means to cause the battery to be disconnected from the charging source when the battery is in a predetermined condition of charge.

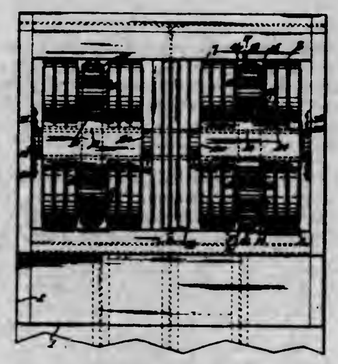
1,905,239. ADVERTISING DEVICE. WILLIAM H. MCDONALD, Overton, Nev. Filed Sept. 9, 1930, Serial No. 480,696. Renewed Aug. 27, 1932. 12 Claims. (Cl. 40—35.)

1. In an advertising device of the kind described, the combination of a frame, a plurality of advertising cards mounted for rotation about a common axis so that two cards can be displayed simultaneously with their adjacent edges abutting against each other adjacent the axis of rotation, a disc having a plurality of openings corresponding to the cards, a pivot corresponding to each card rotatably mounted in its corresponding opening, means for rotating the disc with a step-by-step movement, means for subjecting the pivots to a torsional stress, and means located at each side of the said axis of rotation, and in the path of the cards to arrest the same in their displaying position.

1,905,240. PROTECTIVE SYSTEM FOR GENERATOR FIELD CIRCUITS. ALFRED J. A. PETERSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1928. Serial No. 310,691. 7 Claims. (Cl. 175—294.)



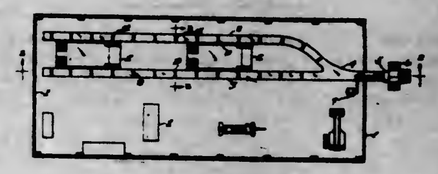
1. The combination with a generator, a load adapted to be supplied by said generator and a switch provided with tripping means for connecting said load to said generator, of a galvanometer relay having a moving coil adapted to be connected to a shunt in circuit with the generator field and contacts controlled by said moving coil for controlling the tripping means, said contacts being maintained disengaged as long as normal current flows in the field circuit and operatively engaged when the field current is interrupted to effect the substantially instantaneous operation of the tripping means to open the switch, and a lightning arrester connected in shunt-circuit relation with the field winding to absorb the self-induced voltage in said winding when the current therethrough is interrupted.



1,905,241. TACKING MACHINE. FRIDOLIN POLZER, South Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Apr. 19, 1930. Serial No. 445,751. 3 Claims. (Cl. 1—48.)

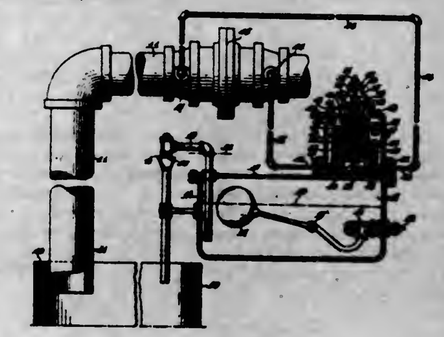
1. In a tacking machine or the like, a housing, a movable plunger having a knob for hand operation thereof,

and a handle secured to the housing and extending to a position adjacent said knob and including a finger grip adjacent said knob pivoted so that it may occupy a position transversely the plane of the housing and may also be swung to a position in substantially the plane of the housing.



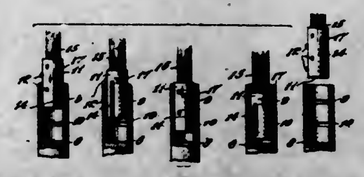
1,905,242. HEAVY DUTY VEHICLE. CHARLES A. ROGERS, LOUIS J. ROGERS and HUGH L. ROGERS, Albion, Pa. Filed Aug. 4, 1930. Serial No. 472,808. 12 Claims. (Cl. 280—81.)

8. In a heavy duty vehicle including a floor supporting a frame, a supporting truck therefor, said truck comprising a member rockably secured to said frame by a transversely extending pivot, wheels carried by said member and positioned in front and in the rear of said transverse pivot, a table carried on said members and lying close to the floor level of the vehicle and forming part of the floor thereof, said table being rockable with said member, whereby the wheels may rock about the transverse pivot without striking that portion of the floor formed by the table.



1,905,243. METHOD OF AND APPARATUS FOR REMOVING FUMES FROM BUILDINGS. LOUIS J. ROGERS, Albion, Pa. Filed Aug. 21, 1930. Serial No. 476,766. 5 Claims. (Cl. 98—48.)

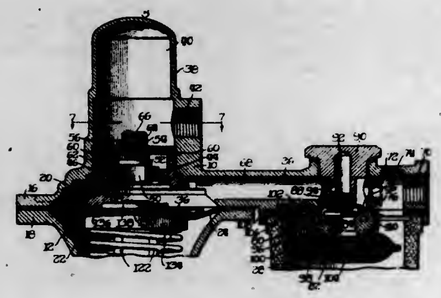
3. The combination with a general workshop in which apparatus is to be spray painted unenclosed from the remainder of the shop, of a ventilating system for said shop for removing the paint fumes therefrom including a plurality of comparatively large tunnels having the upper surface of their walls near the floor level and below the level of the apparatus being painted the top walls of said tunnels having spaced openings communicating with the inside of said tunnels respectively and being large in proportion to said tunnels, said tunnels being spaced apart laterally for receiving in the space therebetween the apparatus to be painted, means to introduce air into said shop remote from said openings and means to withdraw the air from said apparatus and from said tunnels and exhaust it outside of said rooms, said means including a fan capable of discharging at slow speed a quantity of air



equal to the cubic content of said entire shop in a comparatively short time whereby a slow gradual movement of all the air in said shop past the apparatus being painted is obtained.

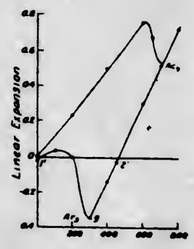
1,905,244. APPARATUS FOR CONTROLLING RATE OF FLOW OF A LIQUID. VICTOR A. ROMLIN, Philadelphia, Pa., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 28, 1929. Serial No. 402,919. 9 Claims. (Cl. 210—31.)

1. In apparatus of the character described, a closed container, means operable to provide for supply of liquid to said container and maintenance of the liquid contents at substantially a predetermined level, a fluid-pressure supply connection communicating with said container, valve means operable to control fluid pressure conditions in said container, and means responsive to fluid-pressure conditions in said container and operable in accordance with such conditions to control operating action of said valve means.



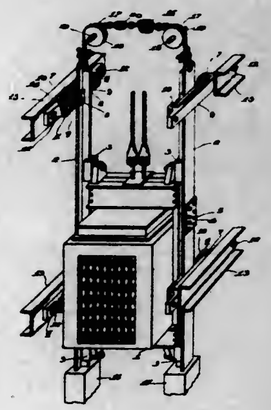
1,905,245. CABLE TERMINAL. CHARLES A. ROWLEY, East Orange, N. J. Filed Feb. 1, 1932. Serial No. 590,055. 5 Claims. (Cl. 173—269.)

1. A cable terminal for use with a tubular terminal having spaced internal annular grooves, comprising a metal cylindrical member having a plurality of staggeredly ar-



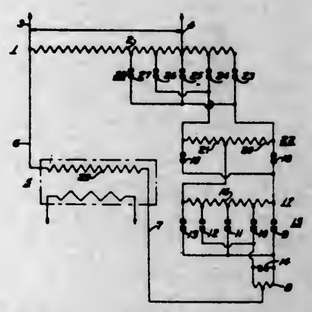
ranged bosses arranged longitudinally of the member and oppositely disposed longitudinal slots, said member having a section intermediate its length adapted to be forced into the insulation of a cable to hold the terminal in position.

1,905,246. MECHANICAL FUEL PUMP. FRED G. SCHWEISTHAL, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 21, 1931. Serial No. 582,226. 3 Claims. (Cl. 103—150.)



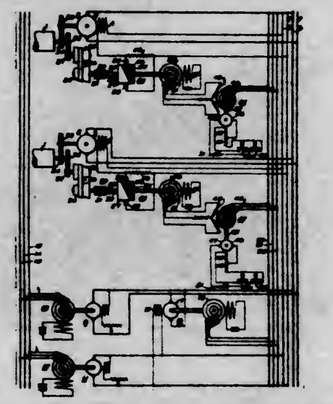
1. In a fuel pump of the diaphragm type, a pump casing member adapted to be secured to the upper side of the pumping diaphragm, said casing member having a recessed chamber on its lower side adapted to form a pumping chamber, an integral vapor dome chamber extending upwardly from said pumping chamber, and an outlet check valve assembly removably secured to the under side of said casing member to separate the pumping chamber from the vapor dome chamber.

1,905,247. WELDING ELECTRODE. HOWARD SCOTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 8, 1931. Serial No. 528,475. 10 Claims. (Cl. 219—8.)



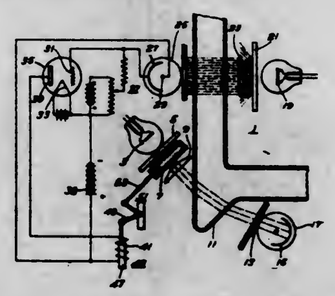
1. A welding electrode comprising iron as a major constituent and nickel and manganese as minor constituents, said electrode having an Ar_3 transformation occurring at some temperature between 550° and 200° C. carbon being less than about 0.3%.

1,905,248. ELEVATOR GUIDE SYSTEM. ARTHUR F. SKAIFE, Berkeley, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 3, 1929. Serial No. 411,278. 18 Claims. (Cl. 187—95.)



1. An alignment device for guide rails of an elevator car comprising bearing means secured to said rails, and means engaging said bearing members to permit movement of the guide rails only in the direction of travel of the elevator car.

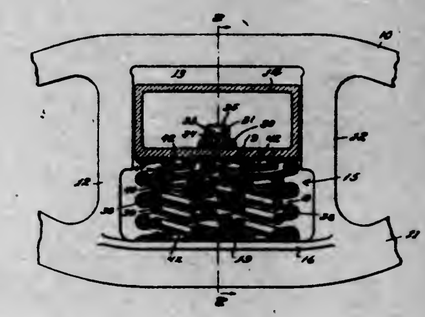
1,905,249. TAP-CHANGING-UNDERLOAD EQUIPMENT. FRANKLIN L. SNYDER, Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 12, 1930. Serial No. 501,871. 3 Claims. (Cl. 171—119.)



1. In a tap-changing system for transformers, a primary power circuit comprising a pair of conductors, a transformer winding energized from said power circuit and provided with a plurality of tap connections, an intermediate transformer energized from said first-named winding, and a tap-changing transformer energized from said intermediate transformer, tap-changing switches for varying the connection of said intermediate transformer to said first-named winding, reversing means for changing the connection of tap-changing transformer to said intermediate transformer, and a plurality of tap-changing switches for varying the connection of said tap-changing transformer to a power-circuit conductor.

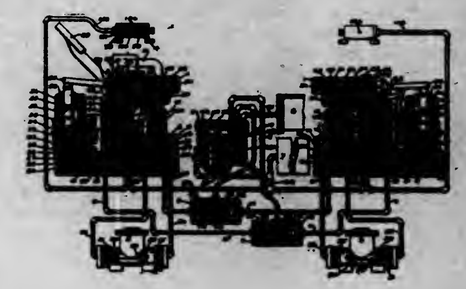
1,905,250. MEANS FOR TAKING UP SLACK. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1929. Serial No. 354,382. 7 Claims. (Cl. 172—293.)

7. In a system of motor drives for operating a machine having a plurality of rotatable members through which a sheet of thin material is passed, a plurality of direct-current motors for driving said members, a regulator unit associated with each direct-current motor and including a pilot motor, means for simultaneously actuating said several pilot motors to maintain a predetermined speed ratio between said direct-current motors, and means for temporarily modifying the action of selected regulator units to temporarily vary the speed of the associated direct-current motors from the predetermined relation to thereby remove the slack in said sheet between adjacent members.



1,905,251. SELF COMPENSATING LIGHT CONTROL. CHARLES A. STITES, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 27, 1931. Serial No. 547,446. 4 Claims. (Cl. 23—253.)

1. In apparatus for detecting the variation in properties of fluids by measuring the variation of the optical properties of said fluids, photo-sensitive means for compensating for the vitiating influence of impurities in said fluids.

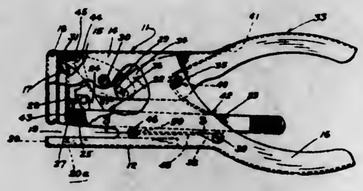


1,905,252. RAILWAY CAR TRUCK SPRINGS. THOMAS H. SYMINGTON, Baltimore, Md., assignor to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed July 6, 1931. Serial No. 549,050. 18 Claims. (Cl. 267—4.)

1. A car truck including a side frame having a window opening, a bolster extending into the opening, and a spring assembly within the opening for supporting the bolster, said assembly including a plurality of units certain of which are operable in sequence with respect to the

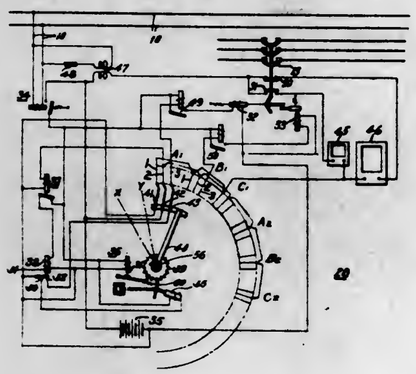
others, and means connecting the side frame and the bolster for maintaining the first operating ones of the units under initial compression.

1,905,253. SAFETY CAR EQUIPMENT. THOMAS H. THOMAS, deceased, Edgewood, Pa., by Mable M. Thomas, executrix, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 2, 1930. Serial No. 417,885. 26 Claims. (Cl. 303—6.1.)



1. In a fluid pressure brake, the combination with a brake valve device comprising a valve mechanism operative to normally control the application and release of the brakes and valve means operative to initiate an emergency application of the brakes, of a plurality of rotatable shafts operative to control the operation of said valve mechanism and valve means, means for rotating one of said shafts, and resilient means operatively connecting said shafts, said resilient means rendering said brake valve device self-lapping.

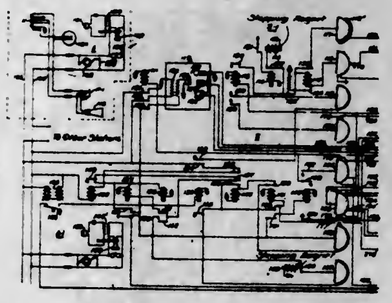
1,905,254. STAPLING MACHINE. MAX VOGEL, Frankfort-on-the-Main, Germany, assignor to The H. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed July 15, 1932. Serial No. 622,584. 10 Claims. (Cl. 1—49.)



1. In a stapling machine, a main housing including an anvil-portion, a housing pivoted in said main housing and including a head having a raceway therein, a plunger operable in said raceway toward and from the anvil to drive staples through the raceway, means to operate the plunger to drive a staple, means whereby the initial movement of said operating means permits rocking of the

pivoted housing in a direction to carry its head and the raceway toward the anvil, and means shiftable to limit movement of said pivoted housing to permit of operation

of the plunger to eject a clogged staple from the raceway while the head of the pivoted housing is spaced from the anvil.

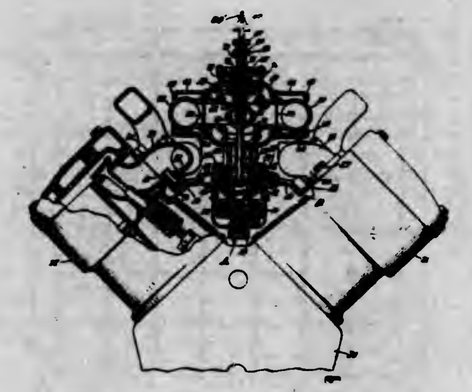


1,905,255. REMOTE CONTROL SYSTEM. ROY J. WENSLEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 5, 1922. Serial No. 565,976. 12 Claims. (Cl. 177—353.)

3. In an electrical control system, the combination with a control office, and apparatus units remotely disposed with respect thereto, of a signalling device at said office, means including a selector switch for selecting one of said units, means responsive to such selection for operating said signalling device to indicate the condition of said unit, and means for then operating said unit while said switch is maintained in selecting position.

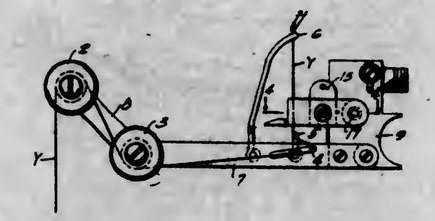
1,905,256. CONTROL SYSTEM. THOMAS U. WHITE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1925. Serial No. 39,069. 6 Claims. (Cl. 177—353.)

4. In combination, a central station, a remote station, a circuit connecting said stations, a plurality of devices at the remote station movable to two positions, a pair of devices at the remote station associated with said circuit for impressing current variations of different character on said circuit, an audible signal device at the central station responsive to the current variations of different character, selecting means at the remote station controlled from the central station over said circuit for selecting one of said first mentioned devices, a circuit closed by the selecting means and including one or the other of the second mentioned devices depending upon the position of the selected device, means including said selecting means for operating the first mentioned devices from the central station, means whereby the first mentioned de-



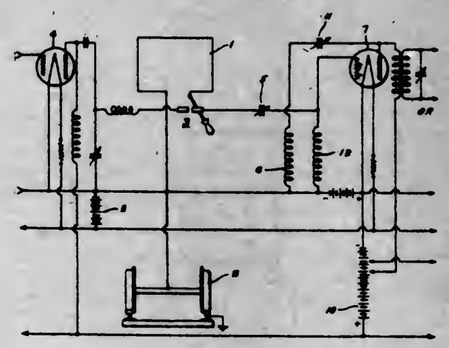
vices may be operated at the remote station independent of the central station, means whereby upon such operation one of the second mentioned devices is rendered active to continuously impress current variations on said first circuit independent of the selecting means, and means including said selecting means for discontinuing such activity of said one second mentioned device.

1,905,257. THERMOSTAT RADIATOR SHUTTER CONTROL. JOHN B. WHITTED, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 25, 1931. Serial No. 553,219. 12 Claims. (Cl. 236—35.)



1. Controlling mechanism for a radiator shutter of a motor vehicle comprising a fixed cylinder, a piston movable in said cylinder, dividing said cylinder into a fluid reserve chamber and a fluid pressure chamber, means connecting said piston to said shutter, pumping means for delivering fluid from said reserve chamber into said pressure chamber to move said piston and shutter in one direction, resilient means for returning said piston and said shutter in the opposite direction and means restricting the return flow of the fluid from the pressure chamber to the reserve chamber to permit a slow return movement of said piston under the action of said resilient means.

1,905,258. CARBURETOR. CHARLES B. WILLIAMS, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 12, 1928. Serial No. 277,277. 19 Claims. (Cl. 123—52.)

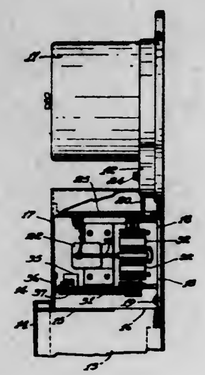


1. A charge forming device for an internal combustion engine having a plurality of cylinders and a separate intake port for each cylinder, including a primary mixing chamber and a secondary air chamber, a manifold opening into the secondary air chamber and including a separate branch opening into each of the intake ports, a plurality of conduits, in number equal to the number of cylinders of the engine, all opening at one end into the primary mixing chamber and each opening at its opposite end into the manifold one adjacent each intake port.

1,905,259. SLUB DETECTOR, CATCHER, OR BREAKER. EDWARD J. ABBOTT, Wilton, N. H., assignor to Abbott Machine Company, Wilton, N. H., a Corporation of New Hampshire. Filed Sept. 29, 1930. Serial No. 484,998. 15 Claims. (Cl. 28—70.)

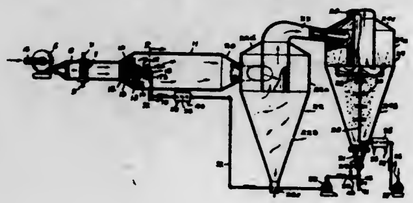
1. Slub detecting mechanism comprising a pair of detector elements, each having a yarn-engaging part and a supporting arm disposed substantially at right angles to the yarn-engaging parts of the two elements being normally parallel and spaced to provide a throat for the passage of the yarn, a pivot for one arm, the other arm having an opening through which said pivot loosely passes, stop means limiting movement of the arms, said stop means being arranged to permit greater pivotal movement of the pivoted arm than of the other arm, the pivoted arm having an elongate slot therein and a pin projecting from the other arm into said slot.

1,905,260. RADIO RECEIVING SYSTEM. JAMES P. BARTON, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 5, 1930. Serial No. 433,294. 2 Claims. (Cl. 250—20.)



1. In a signaling system, a thermionic amplifier having a cathode, a control-electrode and an anode, an input inductor connected between the control-electrode and the cathode, a loop antenna one terminal of which is connected to the cathode and the other terminal of which is connected, through a tuning condenser, to the control-electrode, and a feed-back inductor and a condenser serially connected between said anode and said cathode, said feed-back inductor and said input conductor being inductively coupled in the sense to oppose the generation of oscillations in said amplifier.

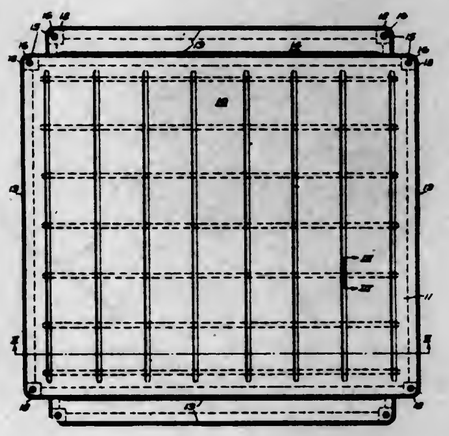
1,905,261. SPEED INDICATOR. SETH FREDRIK BERNSTRÖM, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed June 5, 1931, Serial No. 542,302, and in Sweden June 20, 1930. 8 Claims. (Cl. 116—74.)



1. In a speed indicator, the combination, with a shaft and a bell, of means providing a channel rigidly connected to and turning with the shaft, and a member adapted to travel back and forth in said channel, said channel comprising two straight borings in divergent relation, the free end of one of said borings being in such relation to the bell that the traveling member is adapted, when it reaches said free end, to strike the bell at each rotation of the speed indicator whenever the rotation speed of the shaft is less than a predetermined speed.

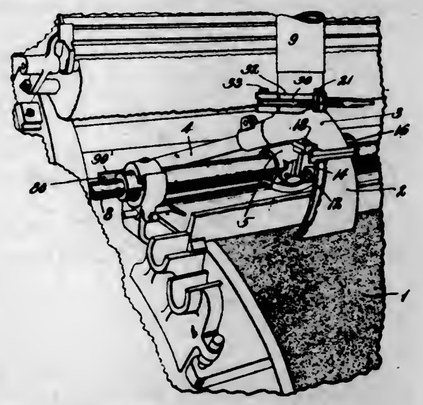
1,905,262. AUXILIARY METER ATTACHMENT FOR WATTHOUR METERS. WILLIAM M. BRADSHAW, Summit, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 17, 1931. Serial No. 551,357. 9 Claims. (Cl. 171—84.)

5. In combination, a meter, a switch box and an auxiliary meter comprising conduit means for interconnecting the first named meter and the switch box.



1,905,263. PROCESS AND APPARATUS FOR PRODUCING DEHYDRATED PRODUCTS. JAMES A. BURNER, Minneapolis, Minn., assignor to Air Systems Incorporated, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 2, 1930. Serial No. 485,904. 3 Claims. (Cl. 159—4.)

2. The process of producing a dehydrated product which consists in passing air in a whirling stream through a drum and at the same time rotating a body of liquid product to break it up into a stream having a multiplicity of small particles moving under centrifugal force tangentially relative to a central longitudinal axis and introducing said particles into said drum in inner concentric relation to said air stream in such manner that the product particle stream is projected in the same general longitudinal direction through the drum as the air stream but the general centrifugal direction of the movement of the particle stream is opposed to the direction of whirl of the air stream thereby causing the air stream to act as an envelope to confine the hydrated particles of the product to prevent contact between the same and the sides of the drum until the particles have been completely dehydrated.



3. A dehydrating apparatus having in combination a drum, means for introducing air in a whirling forwardly moving stream into the rear end of said drum, a divider centrally disposed in said drum adjacent its rear end and deflecting the air to divide the same into an annular stream, and means for introducing a forwardly moving oppositely whirling stream of small particles of the product to be dehydrated into the drum ahead of said divider, and a collector connected to the forward end of said drum.

1,905,264. BUILT-UP CONDENSER PLATE. WALTER H. CAMPBELL, Springfield, and WILLIAM C. ELLSWORTH and CARL J. MADSEN, Chicopee Falls, Mass., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 26, 1930. Serial No. 498,882. 6 Claims. (Cl. 175—41.)

1. A condenser plate comprising two metallic plates having depressions therein, said metallic plates being positioned with the depressions of one metallic plate in contact with the depressions of the other metallic plate, and a rounded conducting surface connecting the edges of said metallic plates.

1,905,265. PNEUMATIC STRIPPER FOR CARDING ENGINES. ERNEST CLARK, Abington, Mass., assignor to Abington Textile Machinery Works, Boston, Mass., a Trust of Massachusetts. Filed Apr. 30, 1930. Serial No. 448,575. 17 Claims. (Cl. 19—109.)

1. A pneumatic stripper attachment for the cylinders of a carding engine having, in combination, a traversing carriage, a nozzle, a seat extending at each side of said nozzle, a surface upon the traversing carriage upon which said seat fits, and screw means holding the seat to the surface with capacity for easy removal and permitting replacement of the nozzle upon the carriage after removal without change in the spaced relation established between the nozzle and the cylinder before removal.

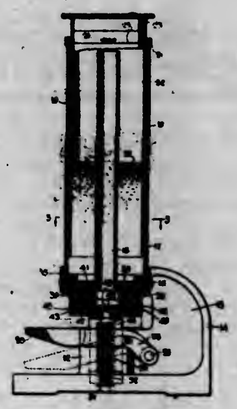
1,905,266. LOOM SHUTTLE. JOSEPH COLDWELL, Fall River, Mass. Filed Feb. 24, 1931. Serial No. 517,794. 5 Claims. (Cl. 139—214.)

1. A loom shuttle embracing in its construction, a shuttle body provided with a bobbin-receiving chamber intermediate its forepart and rear part, the forepart being provided with a passage way for the yarn as it unwinds from the bobbin in said chamber, the shuttle body also being provided with a return passage for carrying the yarn from the forepart to the interior of said bobbin chamber, the lateral wall of said bobbin chamber being provided with an outlet opening to receive the yarn from said return passage, and means interposed between the forwardly moving and rearwardly moving stretches of yarn preventing said stretches of yarn from being entangled with each other.

1,905,267. DIRECTION-INDICATING BEACON. FLOURNOY COREY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1927. Serial No. 209,448. 3 Claims. (Cl. 177—352.)

2. In a direction-indicating beacon, a base, a cam surface thereon, a projector thereabove, a plurality of coaxial interfitting tubes, one of which is supported by the base and supports the projector, the lower end of the second tube having a follower engaging the cam surface and upper end thereof operatively engaging the projector at points spaced from those at which the first tube engages the projector.

1,905,268. METHOD OF DRAFTING TEXTILE FIBERS. LOUIS M. COTCHETT, Brookline, Mass., assignor to Textile Patent & Process Co. Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 5, 1930, Serial No. 493,680. Renewed Aug. 18, 1932. 3 Claims. (Cl. 19—130.)

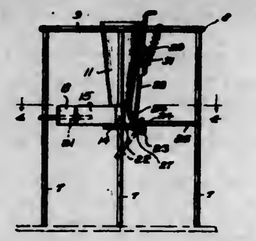


1. The method of preparing cotton for spinning which consists in laying individual fibers in approximate parallelism and overlapping relationship to produce a roving or sliver strand, subjecting the strand to a bath of liquid of sufficiently low surface tension to so thoroughly wet the strand that it becomes a coherent strand of mutually adhering wet fibers, and attenuating the wet strand by passing it between successive sets of rolls or the like.

1,905,269. PROCESS OF PRODUCING EXPANDED RUBBER MATERIAL. GEOFFREY PRICE DENTON, Rickmansworth, England. Filed Jan. 21, 1931, Serial No. 510,332, and in Great Britain May 14, 1930. 11 Claims. (Cl. 18—53.)

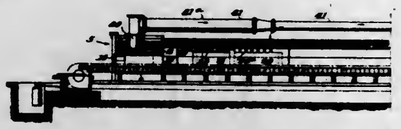
1. The process of producing expanded rubber material which consists in subjecting the dough to gas under high pressure, effecting partial vulcanization of the dough by heat whilst the dough is in the said gas under high pressure, cooling the dough, releasing the said pressure, and subsequently completing vulcanization and simultaneously expanding the dough by reheating it.

1,905,270. TESTING MACHINE. WILLARD L. EGY, Troy, N. Y., assignor to W. & L. E. Gurley, Troy, N. Y., a Corporation of New York. Filed June 4, 1930. Serial No. 459,204. 3 Claims. (Cl. 73—51.)



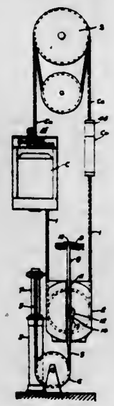
3. In a testing machine the combination with means for displacing air, and a conduit through which such air is displaced, of means for sustaining a specimen sheet in the path of air flowing through said conduit, said means including apertured clamping members, supporting means for said members adapted to guide one member in motion toward and from the other; yielding means for urging the movable member toward said other member; and a thrust transmitting means interposed between said movable clamping member and said yielding means and comprising a member provided with cylindrical thrust surfaces, the axes of said cylindrical surfaces being substantially at right angles with each other, one being in rolling contact with the yielding means and the other in rolling contact with the movable clamping member.

1,905,271. COMBINED CIGARETTE EXTINGUISHER AND ASH RECEPTACLE. LLOYD W. DICKINSON, Stone Lake, Wis., assignor of one-half to Merton K. Arford, Stone Lake, Wis. Filed Jan. 12, 1932. Serial No. 586,206. 5 Claims. (Cl. 131—51.)



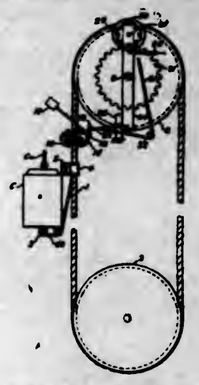
1. In a device of the character described, a support, a tube arranged thereon for receiving ashes and lit cigarettes, a movable gate arranged near and beneath the lower open end of the tube, and a pair of generally

straight blades arranged between the gate and the lower open end of the tube, one blade being movable from an open position to a shut position in approximate contact



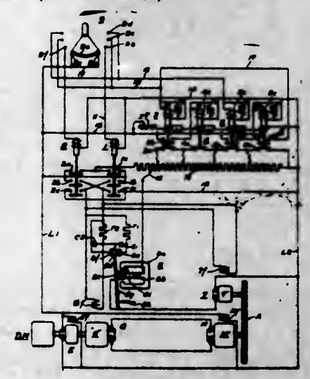
with the other blade, so that a lit cigarette supported by the gate between the blades may be squeezed by the blades and extinguished.

1,905,272. HEAT TREATING PROCESS. HENRY A. DREFFEIN, Chicago, Ill. Original application filed Nov. 28, 1930, Serial No. 498,669. Divided and this application filed July 13, 1931. Serial No. 550,529. 13 Claims. (Cl. 148—21.5.)



9. A process of treating metal sheets consisting of first passing the same through a heating chamber against the flow of heating gases and thereafter into a cooling chamber against the flow of cooled products of combustion.

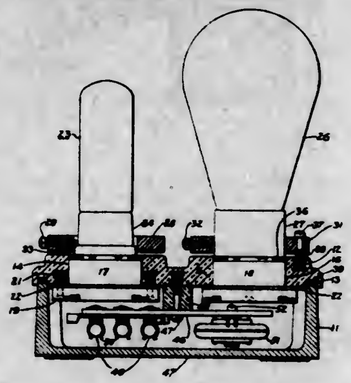
1,905,273. BUFFER SAFETY STOP. JAMES DUNLOP, Park Ridge, Ill., assignor to Westinghouse Electric Elevator Company, a Corporation of Illinois. Filed Aug. 8, 1930. Serial No. 473,916. 2 Claims. (Cl. 187—22.)



1. The combination with an elevator system comprising an elevator car, a counterweight, a hoist cable connected between the car and the counterweight and passing over a hoist sheave above the hatchway, a compensating cable connected between the car and the counterweight and passing through a compensating sheave suspended on the compensator cable at the bottom of the hatchway, and a buffer mounted on the bottom of the hatchway, of a buffer cable connected to the compensator sheave and to the plunger of the buffer, and a rigidly mounted idler pulley mounted on the bottom of the hatchway for receiving the cable as it passes from the compensator to the buffer, whereby an upward movement of the compensating sheave will cause a corresponding downward movement of the buffer plunger.

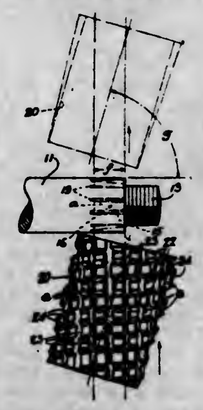
1,905,274. ELEVATOR GOVERNOR. JAMES DUNLOP, Park Ridge, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1930. Serial No. 505,117. 5 Claims. (Cl. 187—78.)

1. In a combined overspeed and acceleration governor for elevators, an overspeed governor, an inertia governor, means for driving said governors in accordance with the speed of the elevator car, rope-gripping jaws, and means for actuating the jaws to rope-gripping position, said means being responsive to either governor, irrespective of the position of the other.



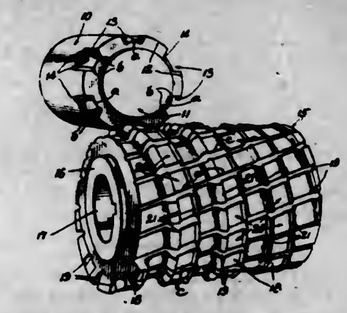
1,905,275. MOTOR CONTROL SYSTEM. WILLIAM F. EAMES, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1930. Serial No. 428,650. 12 Claims. (Cl. 172—239.)

1. In a motor control system, a motor, a generator, means for driving said generator, electrical connections between the armatures of said motor and said generator, means for impressing a voltage upon a field winding of said generator, means for regulating said voltage to cause the speed of said motor to be independent of load and for temporarily increasing said voltage above its final value while the motor is accelerating to a corresponding speed, and means for controlling said last mentioned means to cause the speed of said motor to have successively higher values at the expiration of successive intervals of time.



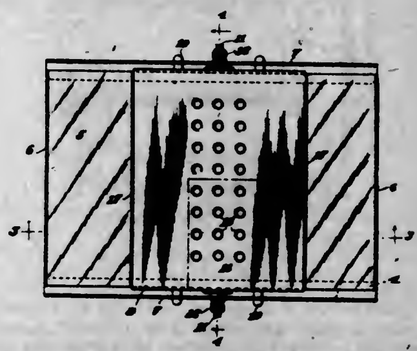
4. In a motor control system, a motor, a generator, means for driving said generator, electrical connections between the armatures of said motor and said generator, an auxiliary voltage supply, means for causing the voltage of said auxiliary supply to have successively higher values at the expiration of successive intervals of time, means for producing a voltage proportional to the speed of said motor, and means responsive to the algebraic sum of the voltage of said auxiliary supply and said last mentioned means for controlling the excitation of said generator to maintain said sum at a predetermined value.

1,905,276. PHOTOCELL AMPLIFIER UNIT. ELLIS O. ERICKSON, Pasadena, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 11, 1930. Serial No. 427,462. 2 Claims. (Cl. 250—41.5.)



1. In a control-unit assembly including an open-end box, a grooved cover thereon, a pair of sockets in said grooved cover on the outside surface thereof, a photocell and an amplifier tube in the respective sockets and control elements located in said box and supported from said cover, means for hermetically sealing the control elements in said box, said means including resilient-material wax-treated stripe in the groove of the cover and operatively engaging the edge of the box and additional resilient-material wax-treated strips between the sockets and the photocell and the amplifier tube, and means for tightly clamping the treated strips in their respective operative positions.

1,905,277. METHOD OF MAKING SPLINE COUPLINGS. OTTO F. EWERT, Genoa City, Wis. Filed Aug. 3, 1931. Serial No. 554,625. 15 Claims. (Cl. 90—4.)

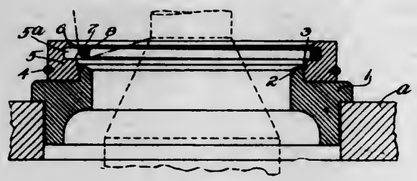


1. The method of hobbing an inside member of a spline coupling which comprises positioning the member and the hob in operative relation with the hob axially inclined to the perpendicular to the member, rotating the member and the hob in timed relation, and feeding the hob relatively across the axis of said member in a path at an angle to the hob axis during said rotation through cutting engagement.

1,905,278. METHOD OF MAKING SPLINE COUPLINGS. JOHN EDGAR, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 3, 1931. Serial No. 554,645. 11 Claims. (Cl. 90—4.)

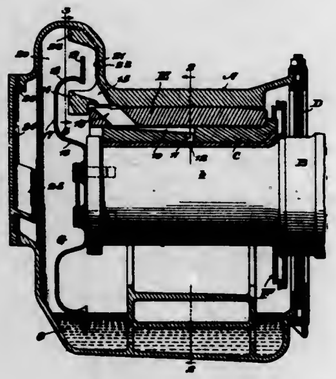
1. The method of hobbing a spline shaft section comprising rotating the section and a hob having a longitudinally tapered thread in timed relation, with the hob inclined longitudinally to the section, and moving the hob relatively across the section along a diagonal line inclined to the hob axis during said rotation through cutting engagement.

1,905,279. CAPSULE FILLING MACHINE. ELBERT L. FITCH, Newburgh, N. Y. Filed July 3, 1931. Serial No. 548,638. 3 Claims. (Cl. 226—40.)



1. A capsule filling machine comprising a horizontal top, side supporting walls for the top, a capsule supporting plate disposed over the top and provided with openings to receive capsules resting on the top, side portions on the plate and having inclined lower edges, and inclined tracks on the supporting walls and engaged by the lower edges of the side portions to move the plate towards and from the top by sliding the plate relative to said top.

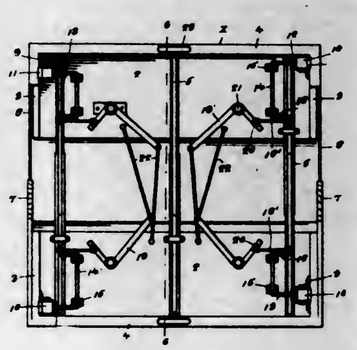
1,905,280. DEVICE FOR SPINNING AND TWISTING TEXTILE FIBERS. GEORGE N. GODDARD, Newton, Mass. Filed June 30, 1927. Serial No. 202,680. 9 Claims. (Cl. 118—59.)



1. In a device for spinning and twisting textile fibers, the combination of an outer holding member provided with an annual interior ring-receiving groove, an inner flat-top copping ring over which the yarn has circumferential

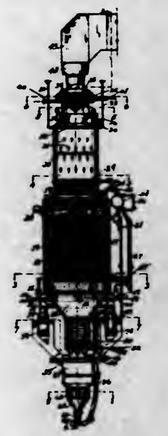
slipping engagement sufficient to eliminate any dragging of the ring by the yarn, thus permitting reverse rotation of the ring, both members being proportioned to provide a crescent-like lateral clearance between them on one side

sufficiently wide to prevent contact of the yarn with the upper edge of said groove when the ring is pressed to the opposite side of the lateral thrust of the yarn, substantially as described.



1,905,281. MEANS FOR COLLECTING AND FEEDING OIL TO JOURNAL BEARINGS. GEORGES GRANDJEAN, New York, N. Y., assignor to Isothermos Corporation, New York, N. Y., a Corporation of Delaware. Filed July 24, 1930. Serial No. 470,522. 1 Claim. (Cl. 308—86.)

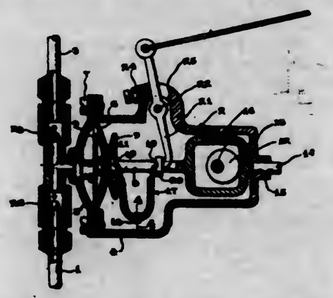
In combination, a journal box, a bearing therein, an axle journaled against said bearing, a shelf formed on the box above said bearing and extending outwardly beyond the end of the latter, a paddle carried by said axle to dip into oil contained in the bottom of the box and to deliver it to said shelf, said paddle having an end portion arranged to pass over said shelf, and means for conducting oil from said shelf to said bearing.



1,905,282. FOLDING TABLE. FLOYD H. HATFIELD, Rawlins, Wyo., assignor of one-tenth to Nathan R. Greenfield, one-tenth to Thomas W. Craig, and one one-hundredth to George M. Bergen, Rawlins, Wyo. Filed June 24, 1931. Serial No. 546,543. 5 Claims. (Cl. 45—116.)

2. A folding table comprising a sectional top, said sections having telescopic relation, legs pivoted to the sections, operating rods journalled to the sections, brace arms carried by said rods and slidably secured to the legs, bell crank levers pivoted to the sections and having one of their ends connected to the operating rods and their other ends pivoted to a section other than the section to which said bell crank levers are pivoed to cause the legs to move

into folding position when the sections of the top are collapsed and to move the legs into supporting position when the sections of the top are extended.



1,905,283. PROCESS AND APPARATUS FOR GENERATING VAPORS. HERMAN C. HEATON, Chicago, Ill. Filed Jan. 14, 1927, Serial No. 161,053. Renewed July 12, 1932. 25 Claims. (Cl. 122—235.)

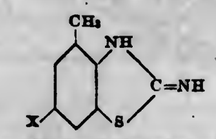
, 1. In a vapor generator, a combustion chamber, steam generating surfaces around said chamber, means for passing hot products of combustion upwardly through said chamber and segregated particles of heat absorbent non-combustible solid material downwardly through said chamber in contact with said hot products of combustion, and means for utilizing the heat absorbed by said particles from said hot products of combustion after said particles have passed out of said chamber for heating the liquid for said vapor generator.

21. The process which comprises passing non-combustible solid material in segregated particles and hot gas into contact with each other in countercurrent direction and generating vapor by radiant heat from said solid material while in contact with said hot gas and also after said gas has left the vapor generating zone.

1,905,284. PUMP. FRANK H. HEITGER, Flint, Mich.; Mattie G. Heitger, Flint, Mich., administratrix of said Frank H. Heitger, deceased. Filed Sept. 27, 1928. Serial No. 308,609. 8 Claims. (Cl. 103—37.)

1. A fuel pump having a flexible forcing member and a resilient element for actuating the same for its discharge stroke, and means including a thermostatic element for increasing the force of said resilient element.

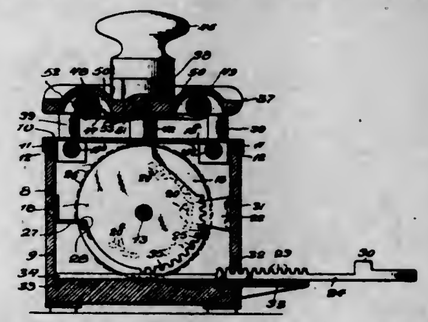
1,905,285. PROCESS OF BROMINATING ANTHANTHRONE. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1926, Serial No. 145,697, and in Germany Nov. 7, 1925. Divided and this application filed Dec. 11, 1929. Serial No. 413,418. 1 Claim. (Cl. 260—61.)



The process which comprises reacting upon 1 part of anthanthrone in the presence of about 20 parts of nitrobenzene with 3 parts of bromine at a temperature of from 160° to the boiling point of the liquid.

1,905,286. PROCESS FOR CHLORINATING ANTHANTHRONE. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1926, Serial No. 145,697, and in Germany Nov. 7, 1925. Divided and this application filed Dec. 11, 1929. Serial No. 413,419. 1 Claim. (Cl. 260—61.)

The process which comprises reacting at room temperature upon 15 parts of anthanthrone with 16 to 20 parts of chlorine in the presence of 200 parts of chlorosulfonic acid and 0.2 parts of iodine.



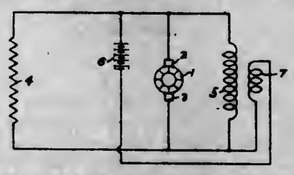
1,905,287. PROCESS FOR MANUFACTURING NUCLEAR HALOGENATED DERIVATIVES OF ARYLAMINOTHIAZOLE COMPOUNDS. RICHARD HERZ, Frankfort-on-the-Main, and MAX SCHUBERT, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1930, Serial No. 423,257, and in Germany Jan. 26, 1929. 3 Claims. (Cl. 260—44.)

1. A process for manufacturing compounds of the probable formula:

wherein X means chlorine or bromine, which process comprises acting with sulfurylchloride at 30–50° C. on a suspension of o-tolyl-thiourea in an aromatic high-boiling diluent, adding methanol to the reaction mass and acting finally with the theoretical amount of a halogen of the group consisting of chlorine and bromine calculated for the introduction of one halogen atom.

1,905,288. KEY CONTROLLED PRINTING MACHINE. MORRIS J. HOFFMAN, Chicago, Ill., assignor to The Tabulating Machine Company, New York, N. Y., a Corporation of New Jersey. Filed June 28, 1931. Serial No. 546,306. 20 Claims. (Cl. 101—96.)

1. A key controlled printing machine comprising in combination type members having type faces thereon for printing fixed data, said type members being locked against unauthorized manipulation in selected printing position, workmen's keys and other type members cooperating with said keys and bearing type faces selectively controlled and operated by said workmen's keys for printing data in connection with the fixed data printed by said locked type members.

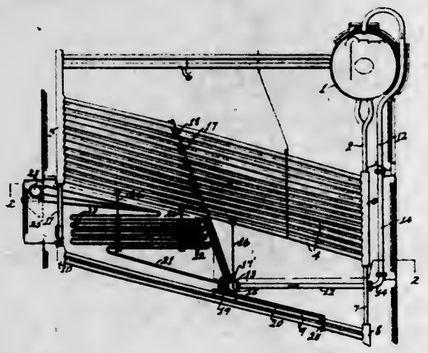


1,905,289. EXPLOSIVE. WALTER C. HOLMES, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 31, 1929. Serial No. 389,867. 12 Claims. (Cl. 52—5.)

3. An explosive composition comprising a liquid explosive containing a nitrated aliphatic compound having more nitrate groups than nitroglycerin, and magnesium oxide.

1,905,290. PRODUCTION OF ALDOL. GEORGE FREDERICK HORSLEY, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited, London, England, a British Company. Filed Jan. 29, 1929, Serial No. 336,016, and in Great Britain Feb. 6, 1928. 8 Claims. (Cl. 260—140.)

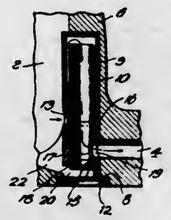
1. Process of producing aldol which consists in condensing acetaldehyde in neutral solution, while excluding oxygen.



1,905,291. DIRECT CURRENT GENERATOR VOLTAGE REGULATOR. LAWRENCE A. HYLAND, Washington, D. C. Filed Jan. 6, 1932. Serial No. 585,014. 1 Claim. (Cl. 171—223.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757).

In combination with the commutator of a direct current generator, brushes contacting said commutator and adapt-

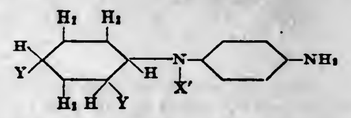
ed to be connected to a load circuit, a main field circuit connected to said brushes, and a dry electrolytic rectifier and a differential field circuit connected in series across said brushes, said differential field circuit being wound in the opposite sense to the said main field circuit.



1,905,292. INTERDECK SUPERHEATER FOR WATER TUBE BOILERS. DAVID S. JACOBUS, Montclair, and JOHN E. BLACK, Rumson, N. J., assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Jan. 29, 1929. Serial No. 335,864. 17 Claims. (Cl. 122—476.)

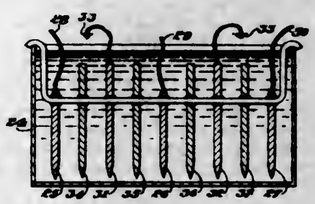
7. In a water tube steam boiler, a boiler setting, a bank of steam generating tubes within the setting, a steam and water drum, a row of tubes connected into the boiler circulation through the drum and generating tubes and located along a wall of the setting, a superheater within the setting, and a second row of tubes connected to the superheater and extending between and across the tubes of the first row to a steam chamber, the tubes of one of said rows being so bent that they form a plurality of rows transversely related to their original row at the positions wherein they cross the tubes of the other row.

16. In a superheater and boiler organization, a boiler section adapted to be supported by a framework so that its parts may move in response to temperature changes, a superheater having coils supported entirely by the steam generating tubes of the boiler section, an outlet header, means secured to the framework for supporting the header independently of the movable parts of the boiler section, and relatively flexibly arranged tubes connecting the superheater coils to the header.



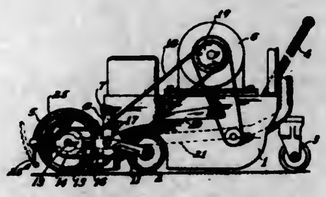
1,905,293. TOBACCO PIPE. JESSE M. JENKINS, Summit, N. J. Filed Oct. 15, 1930. Serial No. 488,749. 6 Claims. (Cl. 131—12.)

1. In a tobacco pipe, the combination of a bowl, a stem having a bore leading to the bowl, a vertical tubular shell and a tube therein located between the bowl and the bore of said stem and connected respectively thereto by openings in the walls of said tube and said shell, whereby the smoke is forced to travel substantially the length of both the shell and the tube in passing from the bowl to the bore of the stem, the said tube having a small orifice at its lower end and a base member having a chamber below said orifice, said chamber being in communication with said bowl.



1,905,294. AZO DYESTUFFS AND PROCESS OF MAKING SAME. GEORG KALISCHER, Frankfort-on-the-Main, and RICHARD FLEISCHHAUER, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 10, 1930, Serial No. 467,123, and in Germany Aug. 3, 1929. 7 Claims. (Cl. 260—92.)

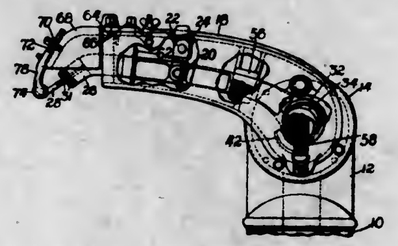
1. Process which comprises diazotising a 1-(N-acyl-cyclohexyl-amino)-4-amino benzene corresponding to the general formula:



(wherein X' means an acyl-group which may contain an amino-group capable of being diazotised and the Y's mean hydrogen or one Y hydrogen and the other methyl) and combining the diazo-compounds thus obtained with azo components of the benzene, naphthalene or pyrazolone series containing sulfonic or carboxylic groups.

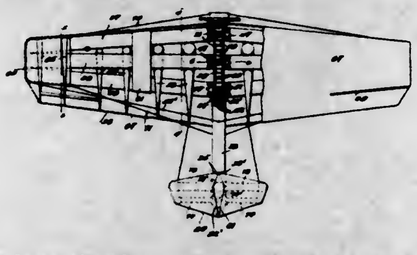
1,905,295. APPARATUS FOR TREATING SUGAR CONTAINING LIQUID. ALFRED LIMA, Jr., Los Angeles, Calif., assignor to Electrified Sugar Company, Los Angeles, Calif., a Corporation of Delaware. Filed Sept. 9, 1931. Serial No. 561,840. 6 Claims. (Cl. 204—5.)

1. In apparatus for treating sugar containing liquid, a tank for such liquid, means for subjecting such liquid in said tank to an electrolytic action, comprising aluminum electrodes at least one of which is unconnected with the source of electrical energy for the other of said electrodes, except through the conductivity of the electrolyte during the electrolytic action, and means for grounding said unconnected electrode.



1,905,296. FLOOR SANDER. HENDRICK W. LUNDQUIST, Los Angeles, Calif. Filed July 26, 1929. Serial No. 381,196. 3 Claims. (Cl. 51—176.)

1. In an attachment of the class described for sanding machines, the combination with a portable frame having supporting wheels, a sanding drum, and a motor on the frame for driving said drum, of a pair of arms positioned

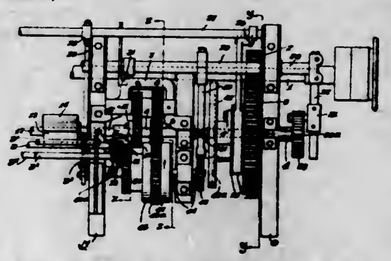


at the opposite sides of the forward end of the frame and secured at their upper ends thereto, a pair of drum supporting arms pivotally mounted intermediate their ends at the lower ends at the outer sides of said first arms, said drum being rotatably mounted on said drum supporting arms forwardly of said frame, means at the rear ends of said drum supporting arms for supporting said drum from and resiliently on the floor, means operatively connecting said motor to said drum, and straps rigidly connecting the lower end of the first arm to the pivotal axes of the supporting wheels of the frame.

1,905,297. FASTENING-PULLING MACHINE. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 26, 1930. Serial No. 477,934. 16 Claims. (Cl. 12—16.)

1. In a machine of the class described, a movable fastening-pulling member, and gage members at the opposite sides of the path of the pulling member and beyond which said pulling member is movable into engagement with the work, one of said gage members being farther removed than is the other from the point of engagement of the pulling member with the work.

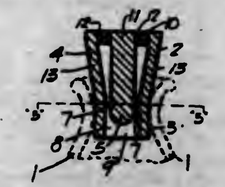
1,905,298. FLYING MACHINE. TAYLOR MCDANIEL, Washington, D. C., assignor to McDaniel Glider Incorporated, Washington, D. C., a Corporation of Maryland. Filed Aug. 13, 1930. Serial No. 475,092. 21 Claims. (Cl. 244—12.)



6. In an aircraft, a relatively rigid fuselage section, an inflated fuselage section tube engaging the rear end of the rigid fuselage section, an air-foil embodying inflated tubes engaging the opposite sides of the relatively rigid fuselage section, and means for increasing the degree of compression within all of said tubes by exerting a longitudinal pull upon the tubes.

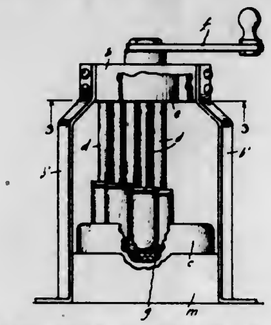
1,905,299. INSTRUMENT FOR RECORDING INCLINATION. WILLIAM I. MCLAUGHLIN, Piedmont, and RUPERT G. WEDEMEYER, Palo Alto, Calif.; said Wedemeyer assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Nov. 3, 1930. Serial No. 493,056. 27 Claims. (Cl. 234—1.)

1. An instrument for measuring inclination including the combination of a pivotally mounted plumb-bob, a recording disc, a piston slidable to uncover a fluid passage, a spring means opposed to said piston, and means associated with said piston for yieldingly forcing said bob and disc to and from recording engagement.



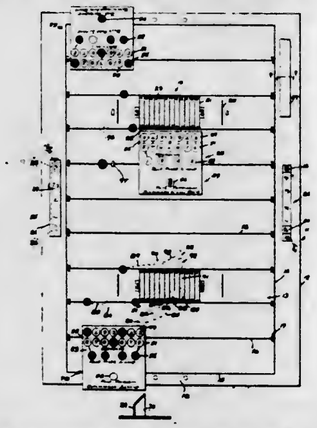
1,905,300. MACHINE FOR COMBING TEXTILE FIBERS. MANUEL P. MELLO, Fall River, Mass. Filed Mar. 20, 1931. Serial No. 524,058. 2 Claims. (Cl. 19—121.)

1. A driving head for a comber embracing in combination a driving and controlling shaft, a separate revoluble comb cylinder shaft carrying pairs of diametrically opposed half-laps, a gear connection between said shafts for driving the latter shaft one-half revolution for each revolution of the former, a differential speed transmission comprising a continuously revolving member rotated at constant speed by connection with the driving shaft, and an oscillatory variable speed member continuously and positively controlled by a lever and cam actuating connection with said driving shaft for positively controlling and producing forward and back rotation at different speeds, of piecing and detaching rolls, and means controlled and actuated by said drive shaft to operate lap feeding and nipping means through a complete cycle at each revolution of the drive shaft.



1,905,301. BOTTLE STOPPER AND THE LIKE. WALTER HENRY NASH, Arlington, Calif. Filed Mar. 16, 1932. Serial No. 599,211. 2 Claims. (Cl. 215—47.)

1. In a bottle stopper adapted to be moved in a longitudinal direction and comprising a pliable valve formed



integral and concentric with a pliable valve seat, said pliable valve seat forming the bottle stopper body and surrounding said pliable valve and containing a fluid passageway adapted to be opened or closed by the longitudinal movement of said bottle stopper.

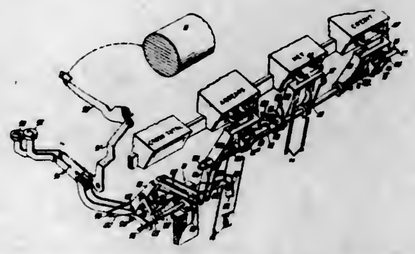
1,905,302. AMALGAM MIXING DEVICE. ERNEST V. PARKIN, Tacoma, Wash. Filed Feb. 21, 1931. Serial No. 517,491. 2 Claims. (Cl. 259—102.)

1. In a mixing device, a mortar having a concaved working face, a straddle frame adapted to be mounted over said mortar, an eccentric pestle element mounted in said frame for rotation about the axis of the mortar, said pestle element comprising a group of individual, non-rotating, longitudinally yielding spring controlled members of such length as to bear on the concave surface of said mortar with a predetermined pressure.

1,905,303. TABLE FOOTBALL GAME. THOMAS R. POTTER, Los Angeles, Calif. Filed Feb. 13, 1929. Serial No. 339,577. 22 Claims. (Cl. 273—94.)

1. A game comprising in combination a field board with suitable markings indicating distance, a series of pawns, each pawn having a rotatable element engaging the field board, such element in rotation causing a movement of the pawn indicating to the player a stride or series of strides of the pawn.

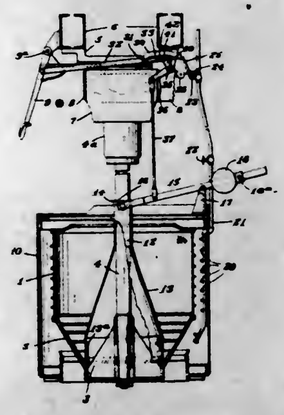
1,905,304. CYANIDE PROCESS. EDWARD J. PRANKE, Bayside, N. Y. Filed Nov. 29, 1929. Serial No. 410,654. 10 Claims. (Cl. 23—79.)



1. The process of producing cyanide which comprises intermingling elementary alkali metal with crude calcium cyanamid and heating the mixture above a red heat.

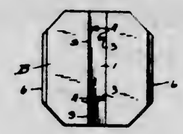
3. The process of producing sodium cyanide which consists in intermingling elementary sodium with crude calcium cyanamid, heating the mixture to above a red heat, cooling, extracting sodium cyanid with a suitable solvent, and removing the solvent from the contained sodium cyanid.

6. The process of producing cyanide which comprises heating crude calcium cyanamid above a red heat and substantially uniformly permeating the same at such temperature with elementary alkali metal vapors.



7. The process of producing cyanide which comprises intermingling elemeutary sodium with calcium cyanamid and carbon and heating the mixture above a red heat.

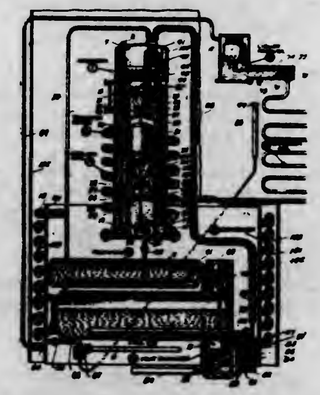
1,905,305. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY RESCH, Bayonne, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 27, 1928. Serial No. 273,178. 31 Claims. (Cl. 235—60.)



26. In a combined typewriting and computing machine, the combination with three registers, of two keys, each operating an individual proof type, means to enable one of said keys to select one of said registers and print the type therefor, means to enable the other of said keys to select the other of said registers and print the type therefor, and means to enable each key to control the remaining register.

1,905,306. CENTRIFUGAL APPARATUS. EUGENE ROBERTS, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Apr. 10, 1928. Serial No. 268,925. 13 Claims. (Cl. 210—74.)

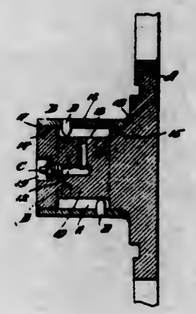
1. In a sugar centrifugal apparatus the combination with a suspended gyratory centrifugal whose basket has a frusto-conical bottom with a central discharge opening, a bottom closing valve slidably mounted on the basket suspending shaft, and self-acting means for lifting said valve from bottom closing position when the centrifugal has slowed down to a predetermined speed.



1,905,307. STEEL WOOL HOLDER. SAUL SCHULHOFF, Baltimore, Md. Filed Apr. 17, 1931. Serial No. 530,950. 2 Claims. (Cl. 15—209.)

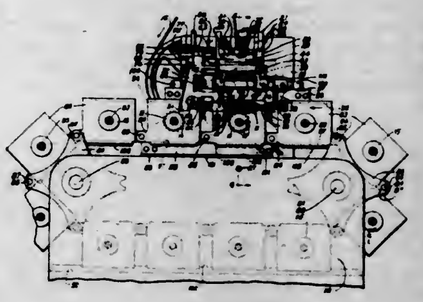
1. A holder of the class described comprising a flexible body member having a groove on one face, material engaging fingers projecting from the side walls of said groove, the fingers on the two walls being offset from each other and the combined lengths of a finger on one wall of the groove and a finger on the other wall being greater than the width of the groove.

2. A holder of the class described comprising a flexible body member having a groove on one face, and headed material engaging fingers projecting from the side walls of said groove.



1,905,308. REFRIGERATING SYSTEM. RALPH E. SCHURTZ, Kansas City, Mo., assignor, by mesne assignments, of one-half to R. W. Bailey and C. T. Jobes, Kansas City, Mo. Filed Apr. 28, 1923. Serial No. 635,240. 9 Claims. (Cl. 62—5.)

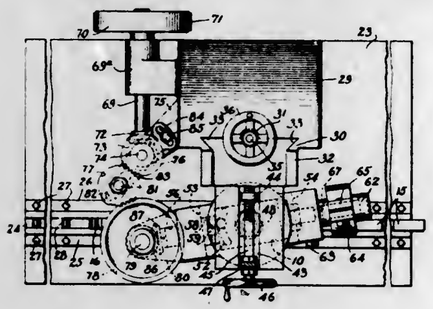
1. In an absorption system of refrigeration including an absorber, a still, a condenser and an evaporator, a transfer device for transferring liquor from the absorber into the still, the transfer device including a tank having an inlet communicating with the absorber and an outlet communicating with the still, float-actuated means for opening the outlet and closing the inlet when a predetermined amount of liquor has flowed into the transfer device from the absorber, and a valve for opening and closing a pressure relief port at the top of the transfer device to maintain the port open while the liquor is flowing from the absorber into the transfer device.



1,905,309. TRUNNION FOR LOCOMOTIVE VALVE MOTIONS. JOHN CESSNA SHARP, Chattanooga, Tenn., assignor to Nathan Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1930. Serial No. 432,897. 10 Claims. (Cl. 308—104.)

1. A trunnion comprising two members located one within the other and relatively formed to provide an oil reservoir between their confronting surfaces, the inner of said members having a passageway extending from an end of said member to said reservoir and through which oil is supplied to the latter, and a plurality of oil attracting and conducting wooden plugs whose inner ends

are immersed in the oil in said reservoir and whose outer ends extend through the outer member of the trunnion and are rigidly secured to the latter and terminate substantially flush with the outer surface of the trunnion.



1,905,310. METHOD OF AND MACHINE FOR HOBBING GEARS AND THE LIKE. JOHN B. SINDERSON, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed May 9, 1928. Serial No. 276,208. 23 Claims. (Cl. 90—4.)

1. The method of hobbing gears comprising moving a gear blank relatively along a rotating hob, the hob being inclined longitudinally to the direction of said movement so that the effective length of the hub extends diagonally completely across the blank.

9. A machine for hobbing gears comprising, in combination, a base, a continuous work carrier mounted for movement over and through said base, said carrier comprising a plurality of carriages, each carriage having a work spindle for a gear blank, means for adjustably mounting a hob over said carrier in position to engage said blanks, said hob being adapted to be inclined longitudinally at an angle to the direction of movement of said blanks, means for continuously rotating said hob, means for guiding said carriages so as to constrain each work blank to be moved in the plane of the pitch outline of the teeth on the hob, each carriage being formed with a gear rack along its inner edge, and a feed worm adapted to mesh with said racks to drive said carrier, said feed worm being of such length that the succeeding carriage is engaged before the preceding carriage is disengaged.

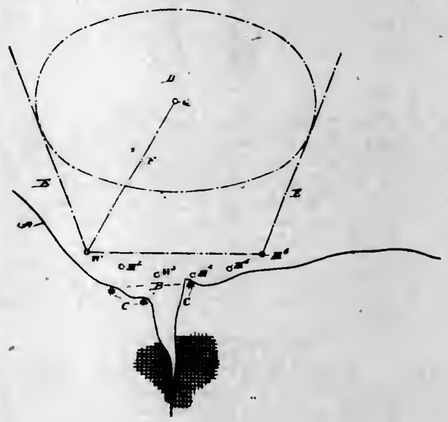
1,905,311. METHOD OF AND MACHINE FOR HOBBING GEAR TEETH. JOHN B. SINDERSON, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 2, 1928. Serial No. 266,611. 19 Claims. (Cl. 90—4.)

1. The method of hobbing gear racks with a hob having a cylindrical portion of uniform pitch comprising positioning the hob and the rack blank in operative relation to cut the rock blank upon relative movement therebetween longitudinally of the rack blank, the hob being inclined longitudinally to the rack blank to extend diagonally completely across the rack blank, and causing said relative movement with the hob in rotation.

12. A machine for hobbing racks having, in combination, a base having a vertical standard, a guideway formed on said base for a rack blank, said guideway having a roller table to facilitate the longitudinal movement of the blank, a head vertically adjustable on said standard and extending over said guideway, a slide horizontally adjustable on said head over said guideway, a hob, a saddle pivotally adjustable on the underside of said slide and having means for rotatably supporting the hob, and means for rotating the hob, the cutting action serving to effect a longitudinal movement of the blank on said table along the hob.

1,905,312. BERYLLIUM ALUMINUM ALLOY. JOSEPH KENT SMITH, Detroit, Mich., assignor to Beryllium Development Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1931. Serial No. 582,653. 2 Claims. (Cl. 75—1.)

1. A beryllium-aluminum alloy of approximately the following composition: beryllium from 55% to 70%, aluminum from 25% to 40%, and manganese molybdenum and vanadium from about ½% to 2½% each.



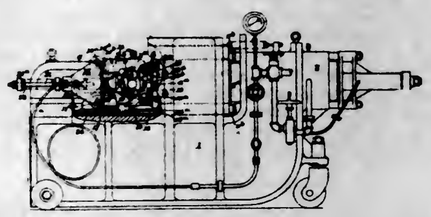
1,905,313 BERYLLIUM-ALUMINUM ALLOY. JOSEPH KENT SMITH, Detroit, Mich., assignor to Beryllium Development Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1931. Serial No. 582,657. 2 Claims. (Cl. 75—1.)

1. A beryllium-alnminum alloy of approximately the following composition: beryllium from about 55% to about 70%, aluminum from about 25% to about 40% and manganese, molybdenum and zirconium in approximately equal amounts from about ½% to about 2½% each.

1,905,314. COPPER ALLOY. JOSEPH KENT SMITH, Detroit, Mich., assignor to Beryllium Development Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1931. Serial No. 582,662. 2 Claims. (Cl. 75—1.)

1. An alloy approximately consisting of copper 70 to 90%, nickle 10 to 30%, beryllium 0.1 to 2.0%, and manganese 0.1 to 2.0%.

1,905,315. SUBAQUEOUS SYSTEM OF ARTILLERY FIRE ADJUSTMENT. EDWARD B. STEPHENSON, Washington, D. C. Filed Jan. 9, 1925. Serial No. 1,510. 34 Claims. (Cl. 181—26.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 870 O. G. 757.)

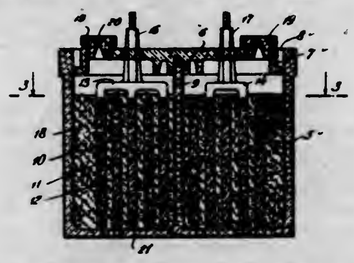


1. A method of subaqueous artillery fire adjustment comprising utilization of the pulse generated by a projectile striking a fluid medium, to determine the point of projectile impact.

1,905,316. WATER-SOLUBLE COMPLEX COMPOUNDS OF HEAVY METALS WITH 3.4-DIHYDROXYBENZENE ARSONIC ACID. KARL STREITWOLF, Frankfort-on-the-Main, ALFRED FEHRLE, Bad-Soden-on-the-Taunus, HANS HILMER, Frankfort-on-the-Main, and HANS SCHMIDT, Wuppertal-Vohwinkel, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 18, 1931, Serial No. 557,946, and in Germany Oct. 17, 1930. 4 Claims. (Cl. 260—14.)

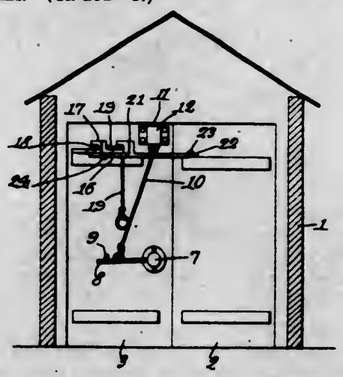
1. Complex heavy metal salts of 3.4-dihydroxybenzene-1-arsonic acid, being therapeutically valuable, water-soluble powders.

1,905,317. CABLE SHEARING MECHANISM. HENRY A. STRINGFELLOW, Philadelphia, Pa., assignor to Southwark Foundry & Machine Company, Eddystone, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1930. Serial No. 505,838. 15 Claims. (Cl. 164—56.)



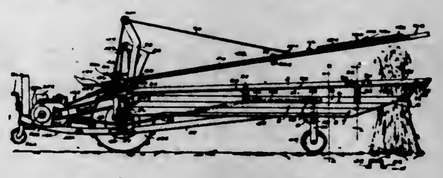
1. In shearing mechanism for wire rope or cable, the combination of a fixed shear blade suitably supported, a movable shear blade, means for moving the same with respect to the fixed shear blade, fixed clamping means for the rope or cable to be sheared disposed on one side of said shear blades, and movable clamping means on the opposite side of said shear blades.

1,905,318. SHOULDER STRAP MAINTENANCE DEVICE. HAROLD V. STUART, Milwaukee, Wis. Filed Nov. 18, 1932. Serial No. 643,261. 3 Claims. (Cl. 24—73.)



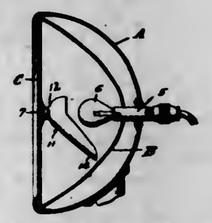
1. As a new article of manufacture, a shoulder strap retaining device comprising a resilient carrier strip, an attaching ribbon connected thereto, said ribbon having its opposite ends arranged to permit sewing of said ends to the dress, a retaining ribbon secured to said strip at one end, and separable fastening means on the free end of said second ribbon and corresponding end of said strip.

1,905,319. STORAGE BATTERY. NORMAN DEXTER STURGES, New York, N. Y. Filed Feb. 4, 1932. Serial No. 590,808. 1 Claim. (Cl. 136—144.)



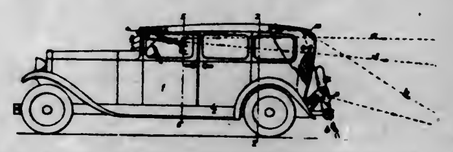
A lead storage battery comprising a container, positive and negative plates within the container having terminals connected thereto, a filling surrounding and interposed between the plates consisting of bagasse fibres partially cooked to loosen the encrusting casing and containing a substantial portion of the pith naturally present in the fibres, and an electrolyte absorbed in the filling material.

1,905,320. CLOSURE FASTENER. WALTER B. TRUEMAN, Mattoon, Ill. Filed Aug. 21, 1930. Serial No. 476,928. 2 Claims. (Cl. 292—5.)



1. In a device of the class described, first and second doors mounted for swinging movement, a latch member on the second door, a shaft mounted to rock on the second door, an arm on the shaft, a connection between the arm and the latch member, a latch arm on the shaft, a keeper on the first door and held by the latch arm when the doors are closed, and spring means for moving the latch member to latched position, and for moving the latch arm into holding relation with respect to the keeper when the doors are closed, the keeper being of such length as to engage the edge of the latch arm to hold the latch member retracted, against the action of the spring means, as the doors move toward closed position.

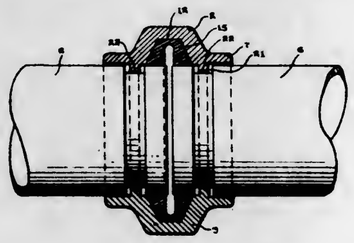
1,905,321. SHOCK HANDLING MACHINE. LUTHER T. VELEN, Cheswold, Del. Filed July 6, 1929. Serial No. 376,468. 39 Claims. (Cl. 214—65.)



1. In a shock handling machine having a shock piercing and supporting beam, a framework upon which the beam is movably mounted, a carrier wheel having an arm movably connected with the beam, actuating means to move the arm in reference to the beam and thus move the beam in reference to the ground and framework; means associated with the actuating means for limiting the movements of the arm in opposite directions thus limiting the movement of the beam in opposite directions.

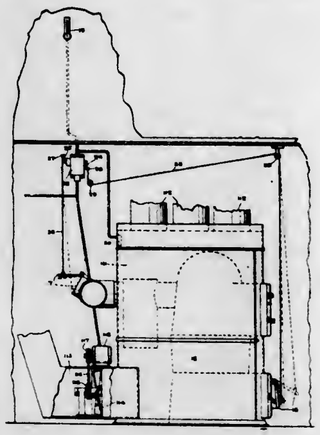
1,905,322. ANTIGLARE DEVICE. JOHN S. WALKER, Pittsburgh, Pa., assignor to Kant-Glare Manufacturing Company, Incorporated, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 29, 1932. Serial No. 595,948. 1 Claim. (Cl. 40—428.4.)

The combination with a headlamp casing having a reflector, a front glass, an electric light bulb arranged between said reflector and glass, of an anti-glare device comprising a resilient vacuum cup body adapted to be engaged with the inner face of the front glass in alignment with the electric light bulb and having a central stud, a bolt embedded in the stud centrally thereof and projected a distance therefrom a scoop-like reflector having its apex engaged upon the bolt and contacting with the stud, and a nut forming a head for the bolt and threaded thereon to fasten the scoop-like reflector thereto and seated against the stud of the cup, said scoop-like reflector at that portion below its apex being inclined rearwardly with respect to the casing and terminating close to the reflector in said casing.



1,905,323. ATTACHMENT FOR VEHICLES. EDWARD WALLACE, Cleveland Heights, Ohio. Filed Apr. 27, 1931. Serial No. 533,174. 12 Claims. (Cl. 45—97.)

1. In a vehicle, the combination with a wheel mounted body having a rear window, a top and a driver's seat, of a



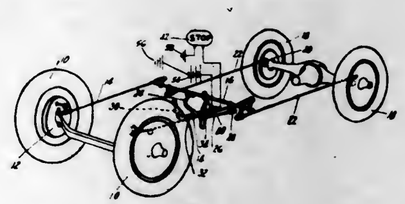
rear view reflector mounted in front of and in reflecting relation to the eye of a person seated in the driver's seat, and a ground view reflector mounted within said body above said rear window and adjacent thereto, said ground view reflector being curved on lines extending transversely of said body and arranged to reflect converging light rays passing through said window to said rear view reflector for reflection to the eye of a person seated in said seat.

1,905,324. PIPE COUPLING. MILLARD F. WATERS, Tulsa, Okla., assignor to Hanlon-Waters, Inc., Tulsa, Okla. Filed May 9, 1930. Serial No. 450,998. 4 Claims. (Cl. 285—193.)

3. A pipe coupling comprising a sectional housing provided with a centrally located annular cavity adapted to receive a leak-proof ring, a resilient leak-proof ring enclosed in said cavity and adapted to bridge the junction of two pipe sections arranged in end to end relation, said ring adapted to snugly engage the peripheries of the adjacent ends of said pipe sections, the opposite end walls of said housing being extended longitudinally of said pipe sections beyond the extremities of said leak-proof ring, to form substantially elongated annular stop collars, the inner peripheries of said collars being spaced a predetermined distance from the peripheries of the respective pipe sections, said intervening space being unobstructed to permit a limited relative movement of said pipe sections without undue strain on the coupling, ring or sections.

1,905,325. REMOTE CONTROL REGULATOR MOTOR. EVERETT H. WHITE, St. Paul, Minn. Filed Mar. 6, 1931. Serial No. 520,758. 20 Claims. (Cl. 236—9.)

1. In an electrically operated mechanism for the remote control of a device requiring motive power to effect its operation, a motor for regulating said device, an operating electrical circuit for said motor, a remotely controlled electrical circuit including a plurality of thermostatically actuated instruments each adapted to separately make said remotely controlled electrical circuit, and means in said remotely controlled electrical circuit for controlling said motor operating circuit.

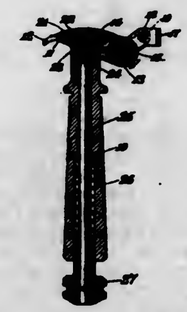


1,905,326. PROCESS OF PRODUCING MIXTURES OF CARBON MONOXIDE AND HYDROGEN. WILLIAM D. WILCOX, Lawrence, Kans. Filed June 28, 1930. Serial No. 464,689. 6 Claims. (Cl. 48—196.)

1. The process of converting hydrocarbon gases and vapors into a mixture of carbon monoxide and hydrogen in the volumetric proportions of one and two which comprises adding to the hydrocarbon vapors a volume of steam more than sufficient to oxidize the carbon content of the gases to monoxide, passing the mixture through a conduit heated externally to a temperature in excess of 1,800° F. and continuing the heating until a dissociation approaching 80% has been effected; adding to the mixture of gases a volume of oxygen sufficient to oxidise the carbon in the undecomposed residue of hydrocarbon gases to carbon monoxide and to convert to water vapor all hydrogen in excess of twice the volume of carbon monoxide.

1,905,327. METHOD AND COMPOSITION FOR PRESERVING WOOD. JOHN H. ZUMWALT, Tacoma, Wash. Filed Jan. 8, 1930. Serial No. 419,460. 2 Claims. (Cl. 99—12.)

1. The process of treating wood and similar materials which consists in impregnating it with a solution of sodium silicate and sodium arsenate, and then subjecting the impregnated wood to the action of an acid to precipitate the silica and sodium arsenate and enclose the sodium arsenate in the hydrated silicic acid.



1,905,328. CONTROLLING MEANS. WILLIAM J. ANDRES, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 6, 1927. Serial No. 189,280. 15 Claims. (Cl. 177—339.)

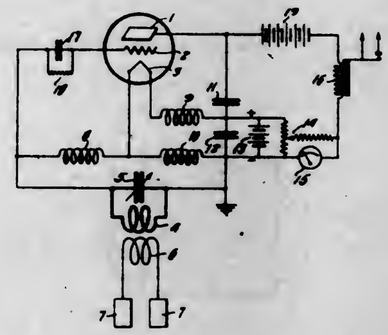
1. A vehicle having, in combination, brakes, a pedal, a supplemental brake operating member, means whereby either said pedal or said operating member may apply the brakes, a stop-light, and means whereby said stop-light may be lighted only by actuation of the brakes by said pedal.

15. A vehicle having, in combination, brake mechanism, a pedal, a hand lever, means whereby said pedal may operate said mechanism, means whereby said hand lever may operate said mechanism and depress said pedal, said last mentioned means comprising a lost motion device having a part positively connected for movement with the hand lever and a second part positively connected for movement with the brake mechanism, a brake signal, a switch for operating said signal carried by one of the parts of said lost motion device and connected to the other of said parts, whereby upon relative motion of the parts of the lost motion device the switch will be closed and the brake signal actuated.

1,905,329. COMBINED SAFETY RAZOR AND SHARPENING DEVICE. LOUIS V. ARONSON, Newark, N. J., assignor to Art Metal Works, Inc., a Corporation of New Jersey. Filed May 21, 1931. Serial No. 538,936. 12 Claims. (Cl. 30—12.)

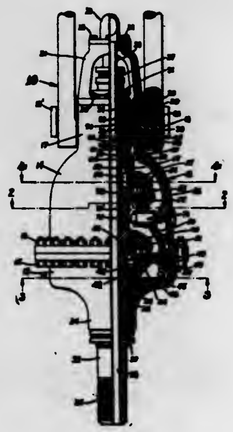
10. The combination in a razor, of a razor head, means for holding a razor blade on said head in position for shaving, a sharpening device, and means supporting said sharpening device providing for movement of said sharpening device for cooperative engagement with either face of said razor blade while said razor blade remains held stationary on said head by said blade holding means.

1,905,330. COMBINED SAFETY RAZOR AND SHARPENING DEVICE. LOUIS V. ARONSON, Newark, N. J., assignor to Art Metal Works, Inc., a Corporation of New Jersey. Filed June 4, 1931. Serial No. 541,977. 9 Claims. (Cl. 30—12.)



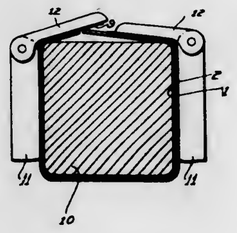
7. In a combined safety razor and sharpening device, a plate seat for supporting a razor blade, a handle rigidly secured to said seat, a sharpening device, a carriage on which said sharpening device is supported, means for supporting said carriage on said plate seat for sliding and pivoting movements respectively parallel and transverse with respect to the plane of a blade on said seat, and guiding means for controlling said sliding movement to cause proper cooperative engagement between a razor blade on said seat and said sharpening device.

1,905,331. COMBINED SAFETY RAZOR AND SHARPENING DEVICE. LOUIS V. ARONSON, Newark, N. J., assignor to Art Metal Works, Inc., a Corporation of New Jersey. Filed June 9, 1931. Serial No. 543,075. 14 Claims. (Cl. 30—12.)



1. In a combined safety razor and sharpening device, a handle, razor blade supporting means pivoted on said handle for bodily transverse movement of the blade, and a sharpening device pivoted on said handle for movement into position to cooperate with either face of an edge of a razor blade supported by said supporting means.

1,905,332. CAPACITY CONTROLLED RELAY. CONSTANTIN D. BARBULESCO, Dayton, Ohio, assignor to Paul S. Edwards, Dayton, Ohio. Filed Sept. 18, 1928. Serial No. 305,754. 19 Claims. (Cl. 250—36.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

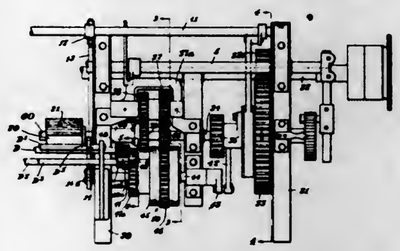


1. In combination, a self-modulated high frequency oscillator of the electron tube type comprising a vacuum tube having a filament, grid and plate, a tank circuit comprising a low inductance, large capacitance and low losses connected across the grid and plate, a coil between the filament and the grid and a second coil between the filament and plate of the tube.

1,905,333. ANTIFRICTION EQUALIZING BEARING. RAY W. BARRETT, Torrance, Calif. Filed July 14, 1930. Serial No. 467,853. 6 Claims. (Cl. 308—160.)

1. In combination with a shaft, a member surrounding said shaft, an antifriction bearing including spaced raceways surrounding said shaft, means whereby one of said raceways is connected to said shaft, a ring surrounding said shaft, said other raceway engaging said ring, said ring including an inclined outer face, a plurality of independent, spaced, circumferentially arranged segmental members surrounding said shaft and supported by a portion of said member, said segments including inner and outer inclined faces, said inner inclined faces of said segments engaging said outer inclined face of said ring, a second ring surrounding said first ring, said second ring including an inner inclined face engaging said outer inclined faces of said segments, a floating collar surrounding said shaft, said floating collar being supported on said second ring and means to connect said floating collar to said shaft.

1,905,334. PAPER RECEPTACLE AND METHOD OF MAKING THE SAME. EDGAR B. BICKER, St. Louis, Mo. Filed May 2, 1931. Serial No. 534,577. 10 Claims. (Cl. 93—36.)

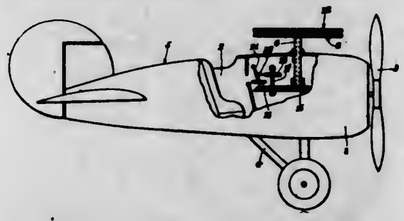


1. A paper box having inner and outer side walls secured together below the top edges and free of securement from said top edges to a predetermined spaced distance therebelow; and a top over the open top of said box and secured to the outer surface of said upper portion of the outer sheet whereby said upper portion of the outer sheet may be detached from the main body portion of the latter to form a flanged cover unitary together with said top.

1,905,335. CHASSIS LUBRICATING INSTALLATION AND THE FLOW CONTROL ELEMENTS THEREOF. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Original application filed Aug. 9, 1922, Serial No. 580,668. Divided and this application filed Jan. 7, 1929. Serial No. 330,720. 24 Claims. (Cl. 184—7.)

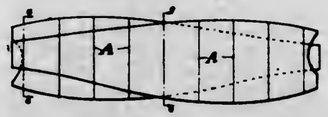
1. In a central distributing installation of the type comprising a source of liquid, and a conduit system supplied therefrom having an inlet; the combination therewith of a plurality of outlet branches connected in multiple thereto, each of said branches having a permeable flow obstructing filler retained therein and of substantial length compared to the bore of the pipe and each of said fillers, preventing substantial gravity flow through the system, being of resistance so high compared to the resistance of the conduit system that it will itself determine the proportionate rate of flow through the outlet branch, and being securely clamped in a conduit element positioned closely adjacent to the bearing and forming part of said branch.

1,905,336. MACHINE FOR COMBING TEXTILE FIBERS. FREDERICK C. BLANCHARD, Boston, Mass. Filed Oct. 12, 1929. Serial No. 399,198. 2 Claims. (Cl. 19—121.)



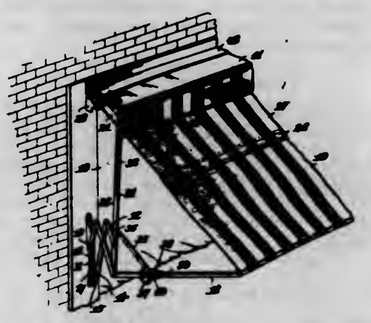
1. A driving mechanism for a combing machine embracing in combination a revoluble combing cylinder, plural half-laps peripherally secured thereto in symmetrical relation, a main control shaft, a speed reducing gearing forming a drive connection between the control shaft and the cylinder for driving the cylinder at reduced speed, coordinated lap-feeding means, nipper mechanism and detaching and piecing rolls driven by connections from said control shaft, the driving connection for said rolls embracing a reversible transmission uninterruptedly and positively maintaining a driving connection from the control shaft to said rolls and causing rotation of the detaching rolls forward and backward with predetermined intervals of pause whereby the action of the detaching rolls is positively coordinated with each half lap in succession without lost motion.

1,905,337. SAFETY ATTACHMENT FOR AEROPLANES. CLARENCE A. BOLCOM, Ionia, Mich. Filed Aug. 8, 1931. Serial No. 554,867. 2 Claims. (Cl. 244—19.)



1. A safety attachment for aeroplanes comprising an inner and an outer rotatable shaft, the former extending above the latter, an atmospheric pressure revoluble retarder element fixed to the upper end of each of said shafts, said shafts having automatically operable co-

acting means intermediate their ends for normally latching said shafts from movement to maintain said elements in superposed parallel stationary relation, rotatable means operatively engaging with the lower end of said inner shaft for initially rotating such shaft to position the retarder element carried thereby transversely across and

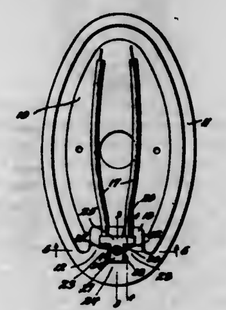


at right angles to the other of said elements whereby said elements are positioned to be revolved by atmospheric pressure, and the upper end of said inner shaft and central portion of that element carried by the outer shaft having coacting means to provide for said shafts operating in unison on the revolving of said elements and for retaining said elements at right angles to each other.

1,905,338. CANNED FISH PACKAGE AND PROCESS OF PREPARING THE SAME. BENJAMIN R. BRIERLY, Seattle, Wash. Filed Oct. 20, 1928. Serial No. 313,720. 7 Claims. (Cl. 99—8.)

1. The process of preparing fish for canning which consists in slitting the fish lengthwise, placing the parts produced by said slitting alongside each other in lengthwise reversed relation, and cutting said assembled parts transversely into lengths suited to the depth of the cans.

1,905,339. SKYLIGHT AWNING. FRANK BROWN, New York, N. Y. Filed Apr. 27, 1931. Serial No. 533,283. 10 Claims. (Cl. 156—44.)



7. A skylight-awning comprising a transparent piece of material adapted to extend outwardly from the top of a window across the same, and an awning adapted to be folded in relation to said window and piece of material to exclude the direct rays of the sun, but allowing daylight to enter the window through said piece of material when the awning is down.

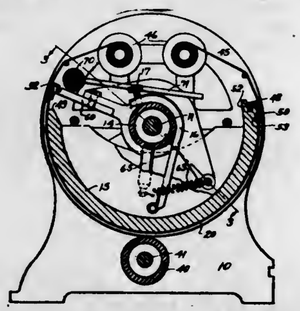
1,905,340. METHOD OF CONCENTRATING BERYLLIUM OXIDE OCCURRING IN MATERIALS CONTAINING BERYLLIUM SILICATE OR SILICATES. LOUIS BURGESS, New York, N. Y. Filed Jan. 16, 1932. Serial No. 587,125. 16 Claims. (Cl. 23—16.)

1. Process of concentrating beryllium oxide occurring in materials containing beryllium silicate, which comprises admixing such a material with sufficient carbon to reduce to silicon at least a part of the silicon oxide in said material, subjecting the mixture to heat sufficient to cause the admixed carbon to reduce at least a part of the said silicon oxide, thereby producing silicon and unreduced oxide, and separating the said silicon from the oxide.

1,905,341. CONVENIENCE OUTLET FOR CANOPIES. PETER E. BURNS, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 11, 1928. Serial No. 246,048. 7 Claims. (Cl. 173—334.)

3. In an electric fixture, in combination, a canopy of moulded material, said canopy having a slot to receive the blade of an attachment plug, said slot being enlarged into a contact receiving recess at the back of said canopy, a contact loose in said recess, a block adapted to cover said recess and to retain said contact in position, means on said canopy engaging said block to prevent movement thereof except in one direction and means on said block adapted to engage said canopy to prevent movement of said block in that direction.

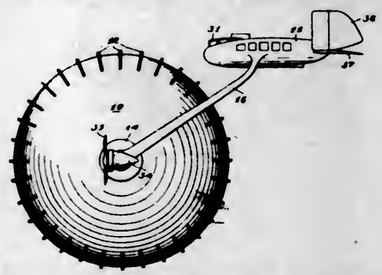
1,905,342. MECHANICAL STOKER. WARREN DEAN BURTON, Oak Park, Ill., assignor to Combustioneer, Inc., Cicero, Ill., a Corporation of Illinois. Filed Jan. 2, 1929. Serial No. 329,793. 14 Claims. (Cl. 198—64.)



1. A stoker comprising, in combination, a hopper having a discharge opening, a discharge duct in communication at one end with said opening, said opening being enlarged at one side to extend beyond the adjacent portion of said duct, a screw conveyer extending from said hopper through said opening into said duct, means opposite the enlarged portion of said opening for securing said duct to said hopper, a removable closure engaging said duct and closing said enlarged portion of said opening, and means for driving said conveyer, said means including a separable connection operable to open automatically upon the application of an excessive load to said conveyer.

1,905,,348. FLUID TEMPERATURE MAINTAINER. WEBSTER I. CARPENTER, Norfolk, Va. Filed July 25, 1930. Serial No. 470,747. 4 Claims. (Cl. 219—39.)

1. A fluid temperature maintainer comprising, a flexible conduit adapted to be positioned between a dental syringe and a source of warm fluid supply, a pair of spaced electric terminals carried by the conduit, a flexible conductor connected with one of said terminals, said conductor extending longitudinally of the conduit and having its opposite end free of connection therewith, a flexible insulating member for the conductor, and a flexible resistance coil supported on the insulating member and having its respective ends connected wtih the other of said terminals and the free end of said conductor.



1,905,344. PRINTING APPARATUS. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to Multigraph Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 22, 1930. Serial No. 503,872. 16 Claims. (Cl. 101—415.1.)

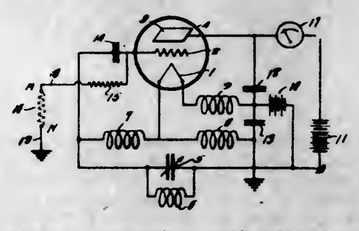
1. The combination with a segment having a groove in one edge, of a galley adapted to carry printing members and having a hook adapted to engage said groove and means on the galley adjacent the hook adapted to form an engagement with the segment to lock that end of the galley thereto.

1,905,345. MARINE VESSEL. ALESSANDRO O. DANDINI, San Francisco, Calif. Filed Mar. 1, 1932. Serial No. 596,013. 9 Claims. (Cl. 115—20.)

1. In a marine vessel, a spherical supporting surface having internal annular tracks therein, a shaft turnably mounted in the horizontal poles of said sphere having a passageway therein, a frame carried by said shaft and rigidly fixed thereto, propulsion machinery including motor trucks carried by said frame, said trucks adapted to engage and cooperate with said tracks for revolving said sphere, motor driven air propellers mounted on each end of said shaft for assisting in the maneuvering and propulsion of said vessel, a cabin removed from said sphere, and

means for supporting said cabin, including a hollow support having a passageway therein, said support having its upper end rigidly fixed to said cabin and its lower end rigidly fixed to said shaft, the passageway in said support adapted to communicate with the passageway in said shaft.

1,905,346. DISCHARGE PRINTING AND FABRIC PRODUCED THEREBY. CAMILLE DREYFUS, New York, N. Y., and GEORGE SCHNEIDER, East Orange, N. J., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed July 6, 1928. Serial No. 290,883. 11 Claims. (Cl. 8—5.)

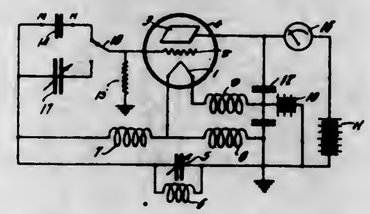


1. Method of discharge printing a fabric containing organic derivatives of cellulose, which fabric has applied thereto an anthraquinone dye in the unreduced state, comprising locally applying thereto an oxidising agent.

11. A discharge printed fabric containing cellulose acetate having differential color effects produced by the discharge printing of the fabric which has been dyed with an anthraquinone dye in the unreduced state, with an oxidising agent.

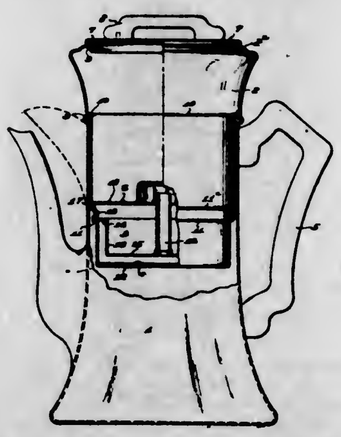
1,905,347. DISCHARGE PRINTING AND FABRIC PRODUCED THEREBY. CAMILLE DREYFUS, New York, N. Y., and GEORGE SCHNEIDER, Montclair, N. J., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed May 6, 1930. Serial No. 450,309. 4 Claims. (Cl. 8—5.)

1. Method of discharge printing a fabric containing organic derivatives of cellulose, which fabric has applied thereto an anthraquinone dye in the unreduced state, comprising locally applying thereto an oxidising agent comprising a chromate and an acid.



1,905,348. DIRECT READING OHMMETER. PAUL S. EDWARDS and CONSTANTIN D. BARBULESCO, Dayton, Ohio. Filed June 7, 1929. Serial No. 369,281. 7 Claims. (Cl. 175—183.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

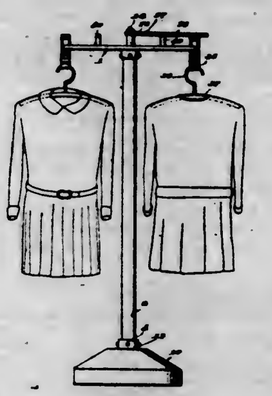
1. An ohmmeter comprising a self-modulated oscillator including a vacuum tube and an associated low loss tank



circuit, a resistance connected in the grid circuit of the tube and a current meter connected in the plate circuit of the tube and responsive to changes in the value of said resistance.

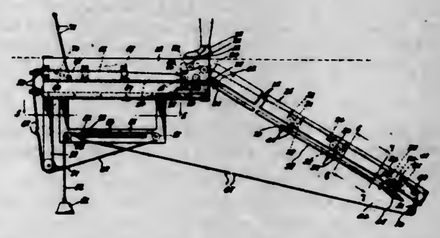
1,905,349. DIRECT READING CAPACIOMETER. PAUL S. EDWARDS and CONSTANTIN D. BARBULESCO, Dayton, Ohio. Filed June 7, 1929. Serial No. 369,282. 9 Claims. (Cl. 175—183.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

.1 A capaciometer comprising a vacuum tube oscillator, means to connect a capacitor to be tested in the grid circuit of the oscillator, and means to directly indicate the value of the capacitor comprising a meter connected in the plate circuit of the tube.



1,905,350. DRIP COFFEE MAKER. CHARLES E. PAGE, Los Angeles, Calif. Filed July 16, 1932. Serial No. 622,970. 8 Claims. (Cl. 53—3.)

1. A drip coffee maker including, a receptacle member, a casing disposed thereon, and provided with a foraminous bottom portion, a ground coffee container disposed within said casing, said container provided with a foraminous bottom portion, a filtering element disposed between the bottom of said casing and said container and a baffle member arranged to fit within and engage said casing, said baffle member also being engageable with said container for securing said container in place.



1,905,351. AUTOMATIC MERCHANDISE DISPLAYING DEVICE. ALBERT PERLING, Paris, Ky. Filed May 29, 1930. Serial No. 457,102. 4 Claims. (Cl. 211—1.5.)

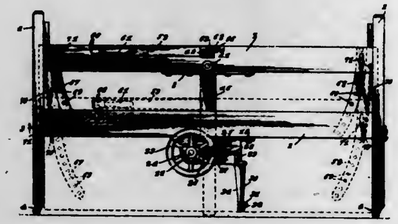
3. A display rack comprising a base, a continous horisoutal trackway, a support upstanding from said base, a plurality of supporting arms radiating from said support and rigidly connected to the inner sides of said trackway, cams mounted upon certain of said arms and projecting above said trackway, a series of display units movably mounted on said trackway, each of said display units having abutment surfaces, a rotatable means including

a vertically movable arm, said arms adapted to engage said cams for movement thereof into and out of engagement with the abutments of said display units.

1,905,352. PUNTING MACHINE. DAVID M. PORTER, Hopkinsville, Ky. Filed May 22, 1931. Serial No. 539,373. 8 Claims. (Cl. 272—57.)

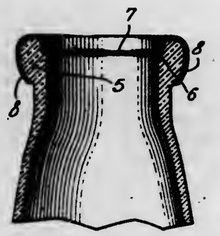
1. In a machine for practicing punting in the game of football, a foot engaging element, resistance means for the element during the initial forward kicking of the foot, means for increasing said resistance means during the subsequent movement of the foot, and additional means for further increasing the resistance means during the final movement of the foot.

1,905,353. ATTENUATION UNIT. RALPH K. POTTER, Landing, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 18, 1931. Serial No. 545,358. 5 Claims. (Cl. 178—44.)



1. An attenuation network comprising a tube of electrically conductive material, a plurality of discs inserted therein said discs being composed of graphitic material, and a plurality of graphitic rods each having its ends supported by adjacent discs, the said rods being concentrically located within the said metallic tube.

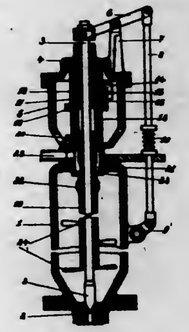
1,905,354. DIAZO-COMPOUND OF 2-AMINO-CHLORO-1-OXY-3-SULPHOBENZENE AND ITS PRODUCTION. ERNEST SACK, Neuilly, France, assignor to Compagnie Nationale de Matieres Colorantes et Manufactures de Produits Chimiques du Nord Reunies, Etablissements Kuhlmann, Paris, France, a Corporation of France. Filed Aug. 1, 1928, Serial No. 296,864, and in France Aug. 5, 1927. 2 Claims. (Cl. 260—69.)



2. The herein described 5 chloro-3 sulpho-2 diazobenzene-1 oxide.

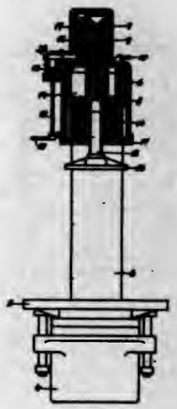
1,905,355. HOSPITAL BED. CHARLES L. SHULTZ, Brookline, Pa. Filed Apr. 21, 1931. Serial No. 531,808. 5 Claims. (Cl. 5—60.)

1. A hospital bed including a bedstead having its posts grooved longitudinally, a frame having its corners guided in the grooves, a sectional bottom pivotally supported in the frame, means for raising or lowering the frame, means for holding the frame raised or lowered, means for swinging the bottom in the frame, means holding the bottom when thus swung and means for swinging and sustaining the bottom sections in angular relation with respect to each other or in alinement.



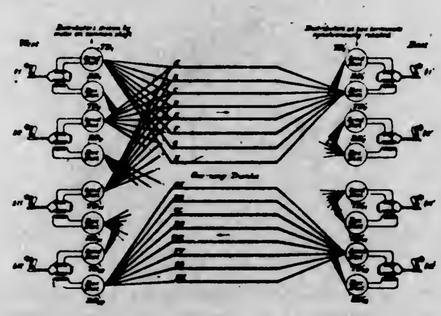
1,905,356. CAP FOR CONTAINERS. GEORGE E. WEST, Washington, D. C. Filed Jan. 2, 1932. Serial No. 584,483. 1 Claim. (Cl. 226—83.)

A method of applying a closure, composed solely of a cellulose acetate compound in thin sheet form, to a container, which comprises heating the outer surface of the closure and contracting the same, in a heated state, about the container, to bring the inner surface of the closure into direct contact with the container.



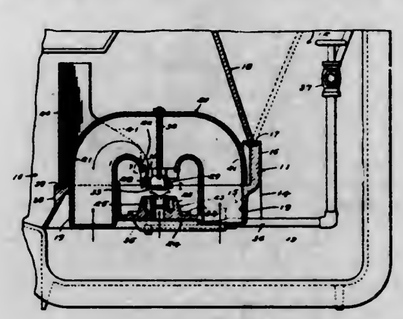
1,905,357. MOLDING APPARATUS. GUSTAV ZIMMERMANN, Dusseldorf, Germany. Filed Jan. 28, 1931, Serial No. 510,803, and in Germany Jan. 28, 1930. 10 Claims. (Cl. 22—36.)

1. The combination in a sand molding machine of a closed receptacle for molding sand, having a discharge opening in the bottom, means for feeding compressed air into said receptacle, and a solid bar above the opening



reciprocable vertically and when in its lowermost position adapted to close the opening and prevent the discharge of sand and air from the receptacle.

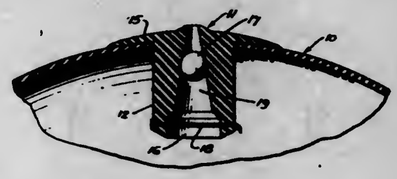
1,905,358. LOWERING DEVICE IN MOLDING MACHINES. GUSTAV ZIMMERMANN, Dusseldorf, Germany. Filed Mar. 3, 1931, Serial No. 519,909, and in Germany June 4, 1930. 8 Claims. (Cl. 22—82.)



1. In a molding machine a supporting element, means by which said element is mounted for angular movement in a vertical plane, a molding table at one end of said element, a pair of cylinders at the other end of said element arranged in line with each other and one at its outer end communicating with the inner end of the other, a piston in the last named cylinder having a chamber to receive a liquid, said chamber communicating with said last named cylinder, a piston movable with the first named piston and movable in the first named cylinder and provided with a duct of restricted capacity establishing communication between the cylinders, a by-pass duct connecting the inner ends of the cylinders, a valve to control the passage of liquid through said duct from one cylinder to the other, means to supply motor fluid under pressure to the second named cylinder to impart outstroke to both of the pistons when the cylinders and pistons are in raised position, a pressure plate secured to and movable by the piston and means independent of the cylinders to impart instroke to the pistons.

1,905,359. CHANNEL SELECTION. HERMAN A. AFFEL, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 14, 1931. Serial No. 575,124. 24 Claims. (Cl. 179—1.)

1. In a signaling system, a pair of switching stations, trunks extending between said stations, a signaling terminal at one station, and means responsive to sound currents incoming from said terminal to select and connect thereto an idle trunk.



1,905,360. OIL BURNER. SQUIRE E. NOLES, Spring Valley, Ill., assignor to The Mundle Manufacturing Co., Peru, Ill., a Corporation of Illinois. Filed Sept. 11, 1930. Serial No. 481,256. 2 Claims. (Cl. 158—91.)

1. An oil burner comprising a base having spaced passages therethrough, a manifold extending above the base and engaging in said passages, an air discharge means in said manifold above the base, an oil well disposed below the discharge means and having a central opening to permit air to pass upwardly in the direction of the manifold discharge means and opposing the downward draft of air from the manifold, means for supplying oil to the well and a spreader interposed between the well and the discharge means and the upward draft of air from the central opening, the axis of the spreader being coaxial with the center of the discharge means and the central opening to evenly direct the opposing air currents in an outward direction, said air currents maintaining the flame from the oil away from the entire surface of the spreader.

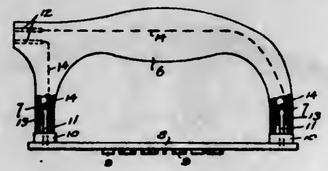
1,905,361. CHECK VALVE FOR RUBBER BALLS. ROBERT H. BACON, Oakland, Calif. Filed July 1, 1929. Serial No. 375,148. 5 Claims. (Cl. 273—65.)

1. A check valve structure including a valve body formed of resilient material, a tapered valve chamber extending through the valve body, a ball valve in the chamber, the lower end of said chamber being of a diameter greater than the diameter of the ball valve, the upper end of said chamber being of a diameter smaller than the diameter of the ball valve, the chamber being so

gradually tapered that the ball valve may embed itself in the walls of the chamber and be held in place by the resiliency of the walls.

1,905,362. AMPOULE. ABRAHAM J. BLAIVAS, Brooklyn, N. Y. Filed Dec. 23, 1932. Serial No. 648,697. 1 Claim. (Cl. 128—272.)

A normally sealed ampoule comprising an elongated tubular glass container having an integral hook at its upper end, said hook and said elongated container being constructed and arranged to permit said ampoule to be suspended from a support, said hook having a passage in communication with the interior of said container and provided with a breakable seal, and a straight tubular stem integral with said container adapted to receive a flexible tube and extending from the bottom thereof, said stem having a breakable seal whereby the contents of said container can flow freely by gravity through said stem when the seals of said stem and said hook are broken.



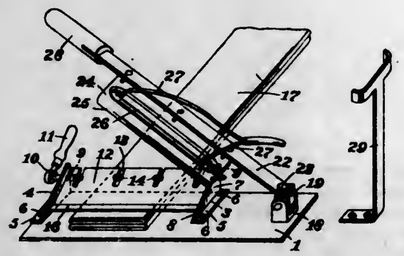
1,905,363. RUBBER ARTICLES OF EVERY KIND. OLOF GUSTAV BOHLIN, Helsingborg, Sweden, assignor to Helsingborgs Gummifabriks Aktiebolag, Helsingborg, Sweden. Filed Jan. 21, 1930, Serial No. 422,496, and in Germany Dec. 20, 1929. 5 Claims. (Cl. 91—68.)

1. An article of manufacture comprising a foundation layer of rubber and a nap upon said layer of fibers of prepared wood pulp cellulose.

1,905,364. ELECTRIC BRANDING IRON. RALPH BRINDLEY, Tacoma, Wash. Filed Oct. 6, 1931. Serial No. 567,165. 2 Claims. (Cl. 219—20.)

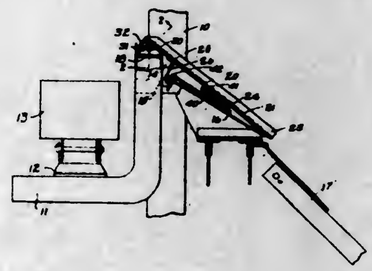
1. In an electric branding iron, the combination of an insulated manipulating handle having two separated legs; a unitary metallic branding iron formed of a high resistance material and adapted to be heated to branding temperature by an electric current passing from end to

end thereof; electric contact plugs extending from one side of said plate and adapted to enter sockets formed in the legs of said manipulating handle; means connecting



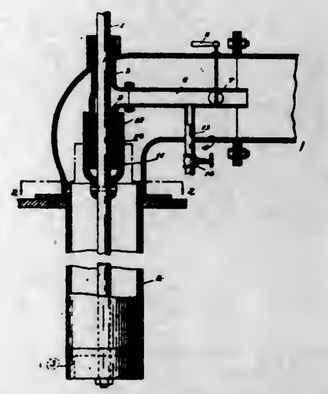
said sockets with a source of electric energy; and branding marks formed integral with said plate and extending from the opposite side of said plate and heated therewith.

1,905,365. METHOD OF MAKING INNER TUBES. JAMES C. CARLIN, Norristown, Pa., assignor to Lee Rubber and Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Sept. 24, 1932. Serial No. 634,730. 9 Claims. (Cl. 154—14.)



1. A method for forming inner tubes and the like which consists in cutting rubber tubing stock to desired lengths, folding the tube centrally whereby the free ends will coincide, bevelling the free ends in parallel relationship, treating the ends, refolding and matching the said ends, preliminarily holding the ends together and then vulcanizing the said tube.

1,905,366. MACHINE FOR CUTTING RUBBER STOCK. JAMES C. CARLIN, Norristown, Pa., assignor to Lee Rubber and Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Sept. 27, 1932. Serial No. 635,108. 7 Claims. (Cl. 164—45.)

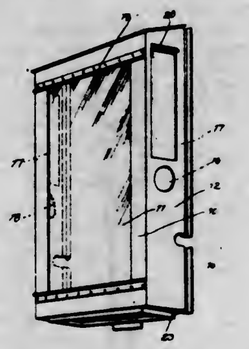


2. A machine for cutting rubber stock consisting of a base, an adjustable clamp for holding the stock, means for operating the clamp, triangularly formed guide plates presenting surfaces extending substantially at a thirty-five degree angle to the base, an arm pivotally mounted at its one end and capable of being lowered along an angle corresponding to the angle of the guide plates, a knife carried by said arm and adapted to contact with and be guided in its downward movement by said guide plates, means for heating the knife whereby the rubber stock will be cut at an angle of thirty-five degrees, and the severed walls also left in a semi-plastic condition.

1,905,367. APRON FOR CAR DUMPERS. ORLANDO M. CARAS, Maple Heights, Ohio. Filed May 5, 1930. Serial No. 449,788. 3 Claims. (Cl. 214—128.)

1. In a car dumper, the combination with a frame, of a cradle adapted to be elevated and tilted therein, a hinge member mounted upon the cradle, a material conveying apron disposed within the frame and overhanging the path of travel of the cradle, and means on the apron adapted to be engaged and raised by the hinged member and held in cooperative contact therewith during the tilting movement of the cradle.

1,905,368. PACKLESS TURBINE PUMP SHAFT. GEORGE S. COATS, Visalia, Calif. Filed Apr. 21, 1931. Serial No. 531,831. 4 Claims. (Cl. 103—102.)

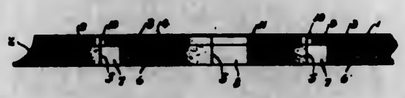


1. The combination with a motor driven shaft, a pump runner connected to the shaft, and a well casing for carrying water, the shaft being received in the casing and passing through a portion thereof, of a packless bearing disposed on the shaft at the place where the shaft passes through the portion of the casing, said casing carrying the water, having a water discharge outlet, a water outlet leading from the bearing and terminating in the casing discharge outlet, whereby water flowing through the casing outlet will entrain any water in the bearing outlet.

1,905,369. CLOSURE FOR LOCOMOTIVE CAB WINDOWS. THOMAS C. CRAVEN, Dumont, N. J. Filed Aug. 22, 1931. Serial No. 558,786. 1 Claim. (Cl. 20—40.)

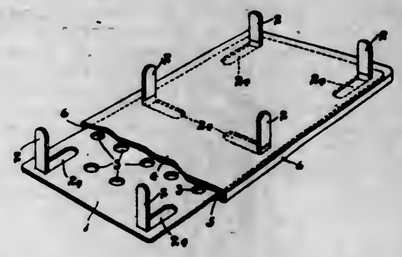
In a closure for window openings, a main frame member, sides hinged to the vertical edges of said main frame member and having the inner longitudinal edge portions thereof provided with channels for the snug reception of

the vertical edge portions of the walls of a window opening, a bottom member hinged to the main frame and movable into engagement with the side members and means



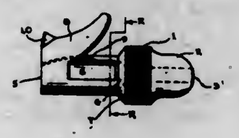
carried by said bottom member for engagement with the bottom of the window opening to aid in securing the closure in position.

1,905,370. HAIR PROTECTING HEADBAND. JOHN J. DORSEY and DOROTHY DORSEY, New York, N. Y. Filed Jan. 20, 1932. Serial No. 587,728. 10 Claims. (Cl. 2—174.)



1. A head band formed of a strip of waterproof elastic material having saw teeth along the top edge and being reinforced at the bottom edge and shaped with a central projection, cut away parts for the ears, the flaps forming the front of the ear parts being stiffened, and spreaders at the ends, one including a hook and the other an eye, there being a tongue extending from under one end under its hook.

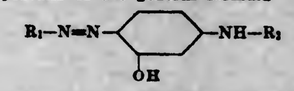
1,905,371. MAT. JAMES F. DUFFY, Holland, Mich., assignor to Duffy Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed July 29, 1929. Serial No. 381,990. 4 Claims. (Cl. 154—49.)



1. A mat comprising a relatively thin cover or top of flexible wear resisting material having depending border sections at the edges thereof, thereby providing a recess at the underside of the mat substantially co-extensive with said top or cover, said cover or top having openings therethrough and a flexible heat insulating filler permanently secured in said recess of the mat with its underside and the under edges of said border sections located in the same horizontal plane, said filler extending into and filling the openings in said cover, and having smaller openings therethrough at the places where it fills the openings in the cover.

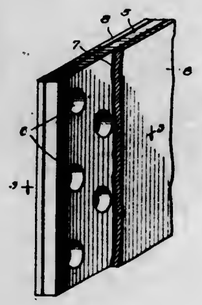
1,905,372. PLATE COVERING AND ATTACHMENT. JAMES FRANCIS DUFFY, Holland, Mich., assignor to Duffy Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Sept. 16, 1929. Serial No. 392,777. 4 Claims. (Cl. 280—169.)

1. In a construction of the class described, a flat plate of sheet metal having integral elongated tongues struck therefrom and bent outwardly at substantially right angles, thereby providing openings through the plate at the places where the tongues are struck therefrom, said plate having a plurality of additional openings therethrough spaced from each other, and a rubber covering at both sides and around the edges of said plate, the opposite sides of the rubber covering having integral connecting portions extending through the openings in the plate.



1,905,373. PERMANENT WAVE WINDER. STEPHEN JOHN DURANEY, Johnstown, Pa., assignor of one-half to Samuel Richard Block, Johnstown, Pa. Filed July 1, 1929. Serial No. 375,068. 4 Claims. (Cl. 132—38.)

1. A device for winding hair or the like on a rod, comprising a chamber having an opening therein and a slot communicating with said opening for admitting the hair thereinto, the walls of the chamber forming said slot being in overlapping relationship, whereby to facilitate entry of hair thereinto.

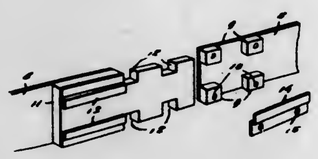


1,905,374. AZO-DYESTUFFS AND PROCESS OF MAKING SAME. FRIEDRICH FELIX and WILHELM HUBER, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 30, 1932, Serial No. 645,134, and in Switzerland Dec. 21, 1931. 9 Claims. (Cl. 260—97.)

5. The dyestuffs of the general formula

wherein R_1 means a benzene nucleus which contains no substituents capable of bringing about solubility in dilute aqueous caustic alkalies, and R_2 the residue of an aliphatic carboxylic acid of low molecular weight, which products constitute yellow to red powders which dissolve in acetic ester to yellow to orange solutions, and dye acetate silk in aqueous suspensions fast yellow to orange tints.

1,905,375. CONSTRUCTIONAL UNIT. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed July 29, 1926. Serial No. 125,738. 13 Claims. (Cl. 94—18.)



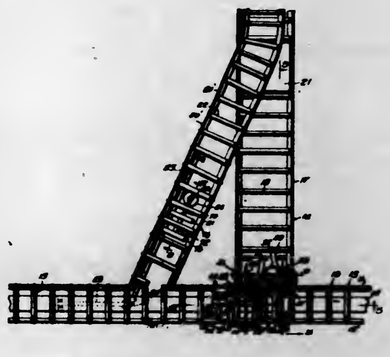
1. Constructional material embodying in its construction an intermediate perforated sheet, surfaced with sealing sheets closing said perforations.

1,905,376. ROOFING MASTIC. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 4, 1920. Serial No. 386,609. 2 Claims. (Cl. 106—31.)

2. A mastic material comprising a bituminous base, an adhesive ingredient incorporated with said base, and a glycerine constituent combined with said adhesive to prolong the setting thereof.

1,905,377. HIGHWAY GUARD RAIL. SAMUEL R. GARNER, Mercer, Pa. Filed Apr. 12, 1932. Serial No. 604,825. 2 Claims. (Cl. 287—103.)

1. A highway guard structure comprising a pair of rail sections, and means for connecting said sections together, said means including lugs on one of the sections, a plate mounted on the other section and having notches therein for the reception of lugs, and elements mounted on the lugs and engaged with the plate for preventing disengagement of said plate from the lugs.

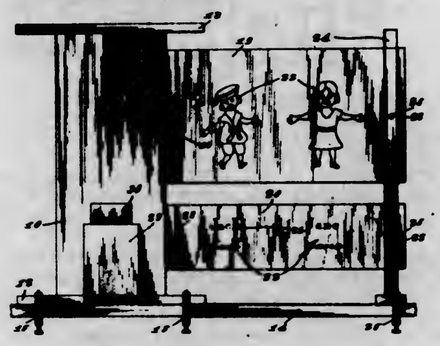


1,905,378. TRAFFIC REGULATING DEVICE. HERMAN J. GECHTER, Cleveland, Ohio. Filed July 5, 1929. Serial No. 375,937. 14 Claims. (Cl. 177—327.)

11. In a traffic regulating device, a pointer, means for slowly rotating said pointer, electrical illuminating means mounted on said pointer and illuminating substantially its entire extent for the routine control of traffic when

energized and means for cyclically energizing said illuminating means during predetermined extents of angular movements of said pointer.

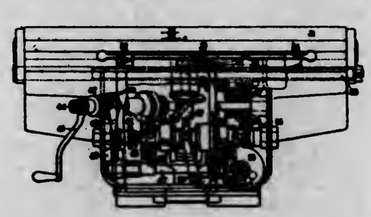
1,905,379. CONVEYING SYSTEM. HENRY R. GOTTHARDT, Louisville, Ky., and WILLIAM E. CAIN, Jeffersonville, Ind., assignors to Logan Co. Inc., Louisville, Ky., a Corporation of Kentucky. Filed July 13, 1931. Serial No. 550,546. 11 Claims. (Cl. 198—33.)



2. A conveying system comprising a main conveyor, a pusher member arranged substantially parallel to said main conveyor and movable substantially horizontally transversely thereof to remove articles therefrom, and means movable substantially horizontally transversely of the main conveyor and operative in advance of said pusher member for engaging and turning an article transversely prior to the removal thereof by said pusher member.

1,905,380. ANTIFREEZE COMPOUND FOR RADIATORS. OLIVER P. GREENSTREET, Owensville, Mo. Filed June 25, 1931. Serial No. 546,925. 6 Claims. (Cl. 252—5.)

1. An anti-freezing mixture consisting approximately of kerosene three gallons, oil of mirbane six ounces, sulphonated bitumen six ounces, glycerine three ounces, flax seed one-half ounce, and zinc oxide one-half ounce.



2. A compound of the character described, consisting of sulphonated bitumen four to eight ounces, glycerine two to four ounces, oil of mirbane four to eight ounces, flax seed one quarter to one ounce, and zinc oxide one quarter to one ounce.

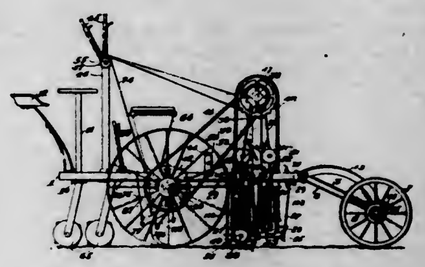
1,905,381. EDUCATIONAL DEVICE. ADELLA VALLIANT GRIFFIN, San Diego, Calif. Filed July 29, 1932. Serial No. 626,025. 2 Claims. (Cl. 35—9.)

1. An educational device of the character described comprising a reversible housing, end pieces forming rest for the housing, spaced movable strips normally within the housing and bearing educational matter and adapted to be drawn laterally outward from said housing for display purposes one above the other, and a post removably supported spaced from the housing and detachably engaged by the strips on extension thereof from the housing.

1,905,382. MILLING OR CUTTING MACHINE. OSCAR HOPPE, Rorschach, Switzerland. Filed May 12, 1927, Serial No. 190,898, and in Germany Feb. 11, 1927. 7 Claims. (Cl. 90—58.)

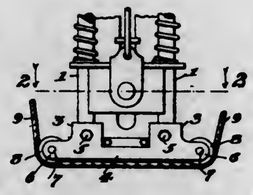
1. In a milling machine, a vertically movable frame, a work table movable longitudinally on said frame, a vertical screw shaft to raise and lower the frame and hence also the table, a shaft geared to the screw shaft, a member on the last named shaft to partly turn the latter, a controlling shaft having a cam to operate said member, a controlling bolt geared to the controlling shaft and having a head, and spaced cams on the longitudinally movable work table, in the path of which the head of the controlling bolt is arranged, said cams coacting with the head to move the bolt upwardly or downwardly according to the direction of longitudinal movement of the table and thereby cause the table to be raised or lowered, a manually operable lever by which the controlling shaft may be manually operated and positive positioning means to releasably hold the controlling shaft in adjusted position.

1,905,383. METHOD FOR HYDROGENATING OR DEHYDROGENATING HYDROCARBONS. WALTER F. HUPPKE and FREDERICK E. FENY, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla. Filed July 22, 1930. Serial No. 469,915. 16 Claims. (Cl. 260—169.)



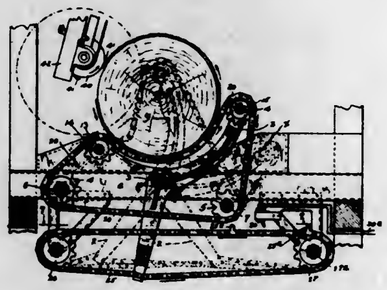
1. In the catalytic treatment of aliphatic hydrocarbons at elevated temperature to change the carbon-hydrogen ratio thereof, the step which includes passing the hydrocarbon into contact with a chromic oxide gel, which is stable at such temperature.

1,905,384. PULVERIZING ROLLER. CARL JABS, Horicon, Wis. Filed Feb. 4, 1932. Serial No. 590,953. 1 Claim. (Cl. 97—216.)



In a device of the class described, the combination of a drum provided with comparatively thick end discs, a separate shaft extending through each end disc, a pin extending from opposite sides of said shaft and entirely embedded in said thick end disc, each shaft provided with a head at its inner end engaging an end disc and partly countersunk in the engaged disc, and spring pressed teeth on said drum, substantially as shown and described.

1,905,385. CONTROL MEANS FOR EARTH PULVERIZING MACHINES. CARL JABS, Horicon, Wis. Filed Mar. 8, 1932. Serial No. 596,622. 8 Claims. (Cl. 97—40.)

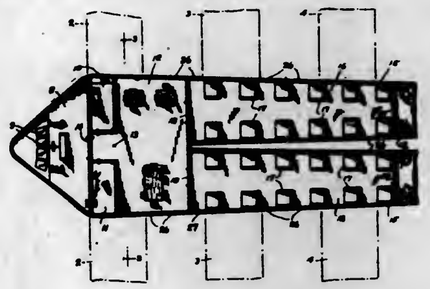


1. In a mechanism of the class described, the combination with a frame, of a plurality of bearing devices on said frame, each bearing device comprising a bracket attached to said frame, rods extending through said bracket, a bearing slidably mounted on said rods, springs engaging said rods and exerting pressure on said bearing, and an axle journalled in said bearing.

1,905,386. EARTH PULVERIZING MACHINE. CARL JASS, Horicon, Wis. Filed June 27, 1932. Serial No. 619,578. 4 Claims. (Cl. 97—40.)

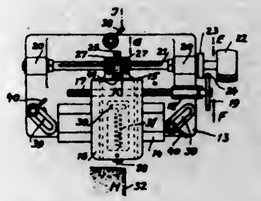
1. In a device of the class described, the combination with a support, of a pair of rods carried by said support, a bracket attached to said rod, pulleys carried by said bracket, a cable fastened firmly at one end to said support and passed under said pulleys, and means for manually adjusting said cable on said support.

1,905,387. DEBARKING MACHINE. ARTHUR M. KIRKWOOD, Portland, Oreg. Filed July 13, 1931. Serial No. 550,530. 14 Claims. (Cl. 144—208.)



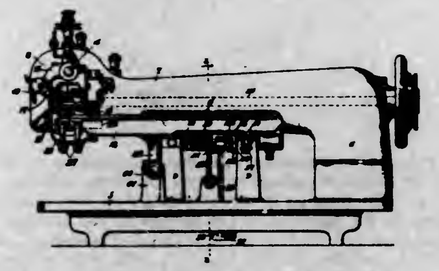
1. In a log turner, a log supporting means comprising a chain having means for supporting a section thereof at spaced points with a slack in said section on which the log may be received, means for lowering only one of the points for allowing the log to be rolled thereover and means for imparting endwise movement to the chain.

1,905,388. UNIVERSAL RATCHET WRENCH. JUDSON D. LAMB, Reno, Nev. Filed Mar. 31, 1931. Serial No. 526,720. 2 Claims. (Cl. 81—60.)



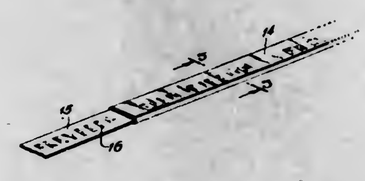
1. A universal socket wrench comprising a body having a spherical-shaped bearing with diametrically opposed openings, a ball-shaped member having a non-circular socket and being receivable in the bearing for rotation in any direction, said ball having meridian grooves of the same width throughout, and a roller having a concave surface with a curvature similar to the curvature of the ball groove, and spring means for guiding the roller into binding engagement with the ball.

1,905,389. AEROPLANE. SAMUEL W. LANNING, New Lexington, Ohio. Filed Mar. 14, 1932. Serial No. 598,827. 4 Claims. (Cl. 244—30.)



1. An aeroplane comprising a fuselage, wings mounted transversely on the fuselage at longitudinally spaced points, said fuselage including a bow portion extending the width of the fuselage and providing a dining room, a nose portion projecting forwardly from the bow portion and separated therefrom and providing a control room, the fuselage further including substantially duplicate extensions projecting rearwardly from the bow portion, partitions defining passenger compartments in the extensions immediately rearwardly of the dining room, and partitions defining lavatories in the extensions rearwardly of the passenger compartments, the fuselage still further including transversely spaced compartments in the forward portion of the bow portion immediately to the rear of the first named partition, the partitions having doors therein, the last named compartments defining a longitudinal passage between the dining room and the control room.

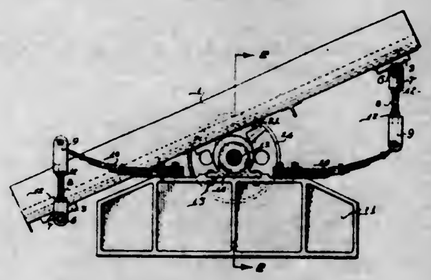
1,905,390. DEVICE FOR SHAPING AND TRUING GRINDING ROLLS. HERBERT LINDNER, Berlin, Germany. Original application filed Apr. 30, 1930, Serial No. 448,658, and in Germany Oct. 17, 1927. Divided and this application filed June 1, 1932. Serial No. 614,777. 8 Claims. (Cl. 125—11.)



1. A device for shaping and truing grinding rolls comprising a frame, a saddle mounted on the frame to move transversely thereof, a tool holder mounted on the saddle to move longitudinally of the frame, a drive shaft extending transversely of the frame and provided with driving means, a cam mounted on the drive shaft and engaging the tool holder to move the same in one direction, a spring constantly holding the tool holder against the cam, and means to feed the saddle transversely of the frame.

1,905,391. SEWING MACHINE. CHARLES W. MUELLER, St. Louis, Mo., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a Corporation of Maine. Filed Nov. 19, 1930. Serial No. 496,728. 12 Claims. (Cl. 112—176.)

1. In a sewing machine, the combination with an oscillatory shaft, of a ridge forming element fixed to said shaft and having ridge forming surfaces of different radii arranged in tandem, and means for adjusting said ridge forming element about the longitudinal axis of the shaft to vary the effective height of said element.

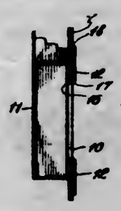


1,905,392. TYING STRAND OR STRIP. AARON FREYDBERG, New York, N. Y., assignor to Freydberg Brothers, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 17, 1931. Serial No. 509,525. 4 Claims. (Cl. 154—52.)

1. As a new product of commerce, a tying strand consisting of a flattened cylinder or tube formed from flexible transparent sheets of synthetic cellulose material, substantially one-half of the wall of said tube being formed of a single layer of said cellulose material, and substantially the other half of the wall of said tube being formed by a double layer of said cellulose material separated by a thin layer of transparent adhesive material, the said tube or cylinder being flattened so that a strip will be formed, one side of which will consist of the single layer of material and the other side of which will consist of the triple layer of material, the inner walls of said tube or cylinder being substantially free of adhesive, so that when the tube or cylinder is flattened they may readily slip relative to each other.

1,905,393. VIBRATING SCREEN. BURNETT E. GAMBN, Alpena, Mich., assignor to Huron Industries, Inc., Alpena, Mich., a Corporation of Michigan. Filed Mar. 3, 1930. Serial No. 432,667. 7 Claims. (Cl. 209—326.)

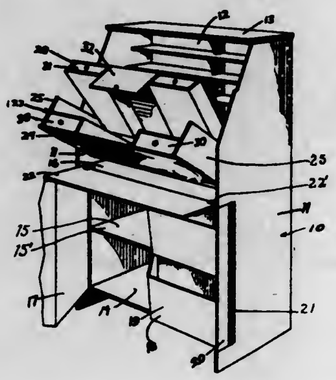
1. A device of the character described comprising a base, a screen-supporting frame, front and rear multileaf quarter elliptic springs disposed lengthwise in spaced apart parallel relation to said frame and base and having one end secured to said base and the other pivotally shackled to said screen-supporting frame, variable-length connecting means between said springs and said screen adapted to support said screen in an adjustably inclined position, and a transversely-disposed eccentric drive shaft



supported by said base and connected to said screen frame whereby rotation of said shaft causes vibration of said screen.

1,905,394. VENTILATOR. ERNEST W. HORNUNG, Cleveland, Ohio. Filed May 22, 1931. Serial No. 539,277. 3 Claims. (Cl. 98—2.)

1. A ventilator comprising a body having front, top and bottom walls, plates slidably secured to the top and bottom walls and projecting beyond the ends of the body, resilient members having means at one end adapted to engage the inner ends of said plates for opposing inward movement thereof, said bottom wall having a series of openings therein, and means on the other end of said resilient member for engagement with said openings.



1,905,395. DISPLAY DEVICE. FERDINAND MALLGRAF, Little Neck, N. Y., assignor to The American Tobacco Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1932. Serial No. 616,548. 6 Claims. (Cl. 40—126.)

1. A display device of the class described, including a sign providing a support, a dummy package formed independent of the sign, the sign having an opening over which the dummy is mounted at the front of the sign, and a flap on the dummy extending through said opening and provided with creases at the front and back edges

of the opening, the end of said flap being bent over the back of the sign, said dummy being of greater dimension than said opening whereby marginal portions around said flap abut the face of the sign.

1,905,396. CABINET DESK. WILHELM J. MICHELET, Waukegan, Ill. Filed Sept. 9, 1932. Serial No. 632,287. 8 Claims. (Cl. 45—6.)

1. In combination, a cabinet and desk furniture unit, a stationary partition therein; a triple strap hinge having its rearmost strap secured on said stationary partition; a writing panel secured to the foremost strap of said hinge, and a desk portion comprising a pair of panels secured in perpendicular relation to each other, one of said panels being secured to the intermediate hinge strap.

1,905,397. WALL BOARD CONSTRUCTION. CLIFTON G. REYNOLDS, San Francisco, Calif. Filed Apr. 6, 1931. Serial No. 527,899. 7 Claims. (Cl. 154—45.9.)

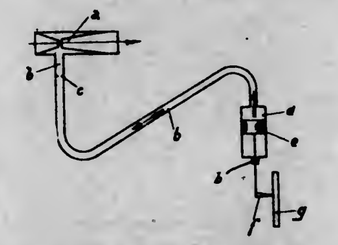
1. A wall board construction comprising a layer of porous fabric, and a layer of semi-rigid material affixed to each side of the fabric, the said layers of semi-rigid material having a composition in which asphaltum is the main ingredient.

1,905,398. METHOD AND APPAPATUS FOR MAKING A SILL PLATE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 6, 1931. Serial No. 513,906. 4 Claims. (Cl. 153—2.)

1. An apparatus for operating upon a continuously moving sheet metal strip comprising in combination a pair of rollers for forming the said strip to a predetermined shape, a pair of ornamenting rollers for indenting an ornamentation upon the said strip, and rigid means in front of the said ornamenting rollers for stretching the fibers of the metal strip to maintain the predetermined shape and to prevent the warping of the said strip.

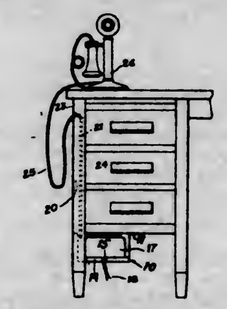
1,905,399. BRUSH FOR EYELASHES AND EYEBROWS. TOSCA WAGNER, Seattle, Wash. Filed Mar. 28, 1932. Serial No. 601,575. 1 Claim. (Cl. 15—160.)

A brush for treating eyelashes, comprising a handle of resiliently-connected sections, the free terminals of the sections forming brush-carrying plates and being projected in the direction of the lengths of the sections, the brush-carrying plates being curved throughout their lengths, bristles carried by each plate, the bristles of one plate being projected toward the bristles of the other plate, and guards carried by the plates in the direction of the bristles, the guards being relatively rigid and of materially less length than the length of the bristles.



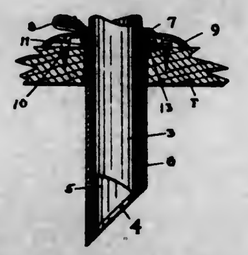
1,905,400. BRAKE MECHANISM. AUGUSTUS F. KLASING, Chicago, Ill. Filed July 24, 1930. Serial No. 470,367. 13 Claims. (Cl. 74—112.)

1. In a brake mechanism for a railway car having a wall with outwardly projecting corrugations, supporting means including integral bracket means comprising inner bracket means including horizontal arms having vertical end portions for securing to the car wall and lower depending bracket means securable to a corrugation, integral housing means on said supporting means, including an upper sleeve-like portion having its axis directly above said depending bracket means for carrying the brake staff with a pinion on its lower end, said housing means also including an outer housing portion for carrying the brake drum and an arcuate portion whereby said outer portion is merged with said upper portion and for housing and protecting a gear member to mesh with said pinion positioned at the inward side thereof.



1,905,401. MEASURING APPARATUS. WALDEMAR MÖLLER, Berlin-Charlottenburg, Germany, assignor to Askania-Werke Aktiengesellschaft, Berlin-Friedenau, Germany, a Corporation of Germany. Filed Feb. 27, 1930, Serial No. 431,951, and in Germany Mar. 18, 1929. 13 Claims. (Cl. 73—122.)

1. In apparatus for measuring distance traveled by a vehicle, in combination, a Venturi tube carried by said vehicle; means forming a passage connected to the throat of the Venturi tube and communicating with atmosphere; a constriction provided in said passage, said Venturi tube and said constriction cooperating to produce within said



passage, when said Venturi tube is operative, a flow of air proportional to the speed of travel of said vehicle; distance indicating means; and operating means for the latter actuated by said flow of air.

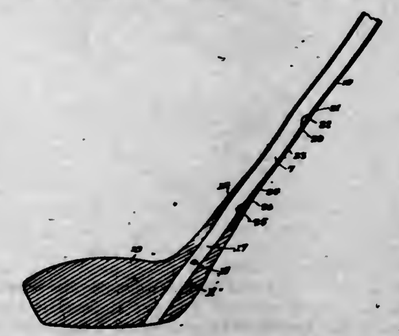
1,905,402. TELEPHONE INSTALLATION APPARATUS. JAMES FRANK SINK, Winston-Salem, N. C. Filed July 2, 1932. Serial No. 620,589. 4 Claims. (Cl. 45—90.)

1. In a desk and the like, a support for a telephone bell box secured to the lower portion of the desk, said support comprising an open ended U-shaped bracket enclosing at least three sides of the box, a conduit for a telephone cord leading from the support to the exterior of the side portion of the desk, said support having a slot therein thru which the incoming wires to the bell box may be inserted as the bell box is inserted into the support.

1,905,403. ASH RECEIVER. JOSEPH L. THOMAS, Milan, Wash., assignor of one-half to John Saad, Spokane, Wash. Filed Sept. 8, 1931. Serial No. 561,635. 8 Claims. (Cl. 206—19.5.)

1. In an ash receiver, the combination with a cylindrical stationary member and a concentric rotatable member, one of said members having a lateral port and a diagonally extending bottom forming a wall of the port, and the other member having a complementary open bottom having diagonally extending walls, of means for turning the rotatable member for alternately opening and closing the ash receiver.

1,905,404. PROCESS OF MANUFACTURING EBONITE IN WHICH STONE CHIPPINGS OR THE LIKE ARE INCORPORATED. FRANS CORNELIS VAN HEURN, Amsterdam, Netherlands, assignor, by mesne assignments, to Shell Development Company, San Francisco, Calif., a Corporation of Delaware. Filed May 21, 1931, Serial No. 539,131, and in Germany May 27, 1930. 3 Claims. (Cl. 18—59.)



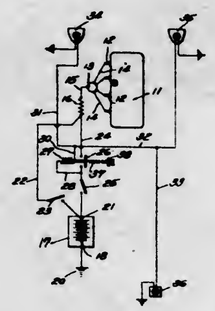
1. A process of manufacturing ebonite in which stone chippings or the like are incorporated, which comprises preparing a mixture of unvulcanised rubber, fillers and sulphur, subjecting said mixture to a partial vulcanisation, crumbling the partially vulcanised mixture and mixing said crumbled, partially vulcanised mixture with a stone aggregate, moulding and then completely vulcanising the partially vulcanised mixture to produce an ebonite article of manufacture containing aggregate.

1,905,405. REPAIR DEVICE FOR CLOSING RUPTURES IN CONCRETE STRUCTURES. EDWARD J. WINSLOW, Chicago, Ill. Filed July 8, 1931. Serial No. 548,570. 7 Claims. (Cl. 72—128.)

5. In a repair device for closing ruptures in concrete and the like structures, including a metal sheet member adapted to overlie the rupture to be sealed and having a series of perforations adjacent the rupture, clamping bolts extending through said perforations, means for anchoring the bolts in the concrete structure adjacent the rupture, and a sealing member positioned between and adapted to be clamped against the concrete structure and the metallic sheet metal member.

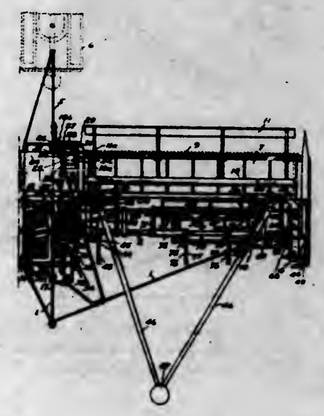
1,905,406. GOLF CLUB. HAROLD G. BARRETT, Wilmette, Ill., assignor to Pyratone Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1929. Serial No. 413,957. 6 Claims. (Cl. 273—80.)

1. A shaft for golf clubs and the like embodying a core, a casing sleeve upon the core, one end of the casing being reduced, the end of the casing terminating a considerable distance from the end of the core, a sleeve telescoped upon the said reduced portion of the casing and terminating short of the end of the said reduced portion, a cap telescoped upon the end of said casing and abutting



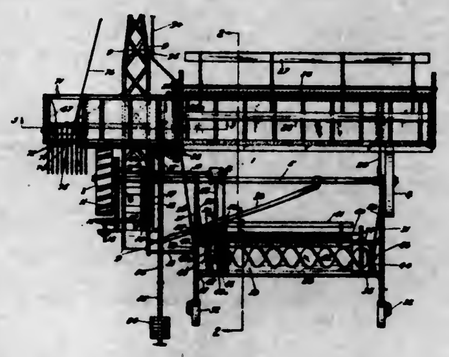
the end of the sleeve, said cap having an internal shoulder flush with the end of said casing, the lower portion of the cap being spaced from the core and flaring from said shoulder toward the lower end thereof and said core extending beyond the lower end of the cap.

1,905,407. FISH LURE. VIRGIL H. BEST, Pasadena, Calif. Filed July 17, 1931. Serial No. 551,814. 5 Claims. (Cl. 43—42.)



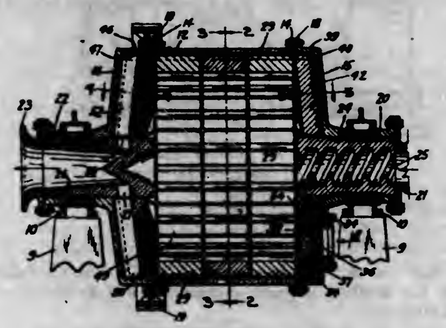
1. A fish lure including a hook, a spoon plate of substantially uniform thickness secured thereto and extending longitudinally of the shank thereof, said spoon plate being characterized by a continuous reverse curve throughout the length of its body and along its longitudinal center whereby the plate will generally form a longitudinally extending concaved and convexed section throughout its length, said concaved and convexed sections being laterally concaved and convexed respectively, the lateral and longitudinal concavity and convexity merging along the center of the spoon, and the marginal edges of the spoon lying in substantially a common plane.

1,905,408. AUTO LIGHT CHECKING MEANS. WILLIAM T. CRESPINEL and CHARLES W. PRYNNE, Los Angeles, Calif. Filed Sept. 16, 1931. Serial No. 563,214. 8 Claims. (Cl. 180—82.)



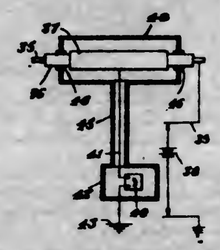
1. In a motor propelled vehicle, the combination of: a motor for propelling said vehicle; an electric circuit involved in the operation of said motor; lights on said vehicle; an electric circuit for energizing said lights; and electrically actuated means in said second circuit operated by a flow of electric current having a magnitude equalling the electric current consumption of all of said lights to close said first named circuit, said means opening said first named circuit when the flow of electric energy is reduced below said magnitude.

1,905,409. METHOD OF HARVESTING GRAIN. GEORGE INNES, Davenport, Iowa, assignor to Innes Manufacturing Company, Bettendorf, Iowa, a Corporation of Delaware. Filed Feb. 20, 1929. Serial No. 341,893. 5 Claims. (Cl. 56—28.)



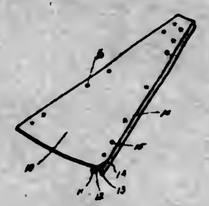
1. The herein described method of harvesting grain which consists in severing the heads of grain from the stalks and collecting said heads, cutting swaths through the standing straw to provide pathways of standing stubble, and depositing the several heads in windrows on the standing stubble along said pathways.

1,905,410. HARVESTING MACHINE. GEORGE INNES, Davenport, Iowa, assignor to Innes Manufacturing Company, Bettendorf, Iowa, a Corporation of Delaware. Filed Dec. 19, 1929. Serial No. 415,319. 16 Claims. (Cl. 56—28.)



1. A harvesting machine comprising a main cutter for severing the stalks of grain adjacent the heads thereof, an auxiliary cutter for cutting straw left standing by the main cutter, and means for collecting the heads of grain and discharging the same in windrows on stubble left standing by the auxiliary cutter.

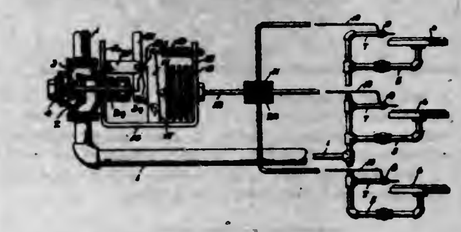
1,905,411. GRINDING MILL. RUDOLF P. JUERS, Denver, Colo., assignor to American Ball Mill Company. Filed Mar. 31, 1930. Serial No. 440,403. 5 Claims. (Cl. 83—9.)



1. In a grinding mill, a shell, a channeled head closing an end of the shell, the head having a channeled flange, and lining sections for the head having flanges in the channels of the head and in the channels of the flange.

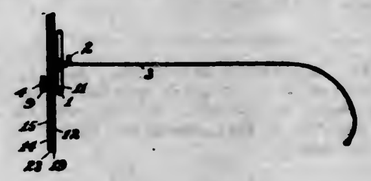
1,905,412. METHOD OF TESTING. CHARLES L. KASSON, Mattapan, Mass. Filed Mar. 14, 1927. Serial No. 175,221. 2 Claims. (Cl. 175—183.)

1. That improvement in the art of measuring the electrical leakage current, electrical power input, electrical energy input, or the like of an insulating material under an electrical stress which consists in completely electrically shielding the material, the measuring instruments, and connections thereto.



1,905,413. REENFORCED METALLIC STRUCTURAL SHEET AND METHOD OF MAKING THE SAME. ANDREW A. KRAMER, Kansas City, Mo. Filed Jan. 31, 1930. Serial No. 424,828. 12 Claims. (Cl. 113—120.)

1. In a device of the character described, a sheet metal body portion having a doubled flange substantially perpendicular to said body portion along one edge thereof, and a portion lying in face to face relation to said body bracing portion narrower than said body portion adjacent said flange, said body portion and said last mentioned portion having aligning openings therein.

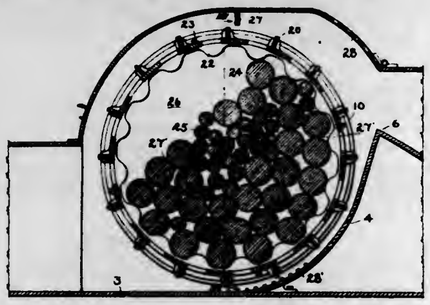


2. The method of making a sheet metal construction unit, comprising cutting a blank out of sheet metal, forming a flange along one edge of said blank, doubling back the edge portion of said blank having the flange thereon to provide a two ply portion adjacent said flange and bending up said two ply portion between said flange and the outer edge thereof in substantial parallelism to said first flange to provide an integral channel on said unit.

1,905,414. PILOT LIGHT CONTROLLED SAFETY VALVE. EDGAR J. LEACH, Janesville, Wis., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a Corporation of Delaware. Filed Feb. 20, 1928. Serial No. 255,847. 7 Claims. (Cl. 158—117.1.)

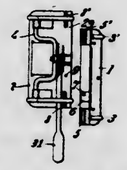
1. In an apparatus of the character described, a plurality of burners, an automatically closing valve controlling the flow of fuel to all of said burners, a plurality of tubes, one for each burner, each having a sealed free end closely associated with a burner, a closed junction box to which all of the tubes are connected, an expansible and contractible vessel, means establishing communication between said vessel and said junction box, said vessel, junction box and tubes connected therewith being filled with a volatile fluid, and means associated with said vessel and said valve for holding the valve in open position when the vessel is expanded in response to the heat of all of said burners and permitting the automatic closing of said valve when any one of said burners is extinguished.

1,905,415. DEVICE FOR THE PROTECTION OF THE EYES. SAMUEL L. LEIBEL, Shaker Heights, Ohio. Filed Mar. 26, 1931, Serial No. 525,380, and in Austria Nov. 28, 1930. 3 Claims. (Cl. 2—12.)



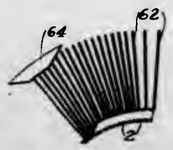
1. In a device for the protection of the eyes, the combination of spectacle frames, pins extending from the eye-glass frames thereof, said pins being arranged at the outer sides and near the bottom of said eye-glass frames, discs of transparent material rotatably mounted upon said pins, the discs covering the eye-glass frames, a shield supported by said pins, the shield protecting said discs, the shield being provided with openings opposite the eye-glass frames, and means for retaining said discs and said shield upon said pins.

1,905,416. CIGARETTE. ALBERT H. LOW, Denver, Colo. Filed Jan. 19, 1931. Serial No. 509,288. 2 Claims. (Cl. 131—52.)



1. As a new article of manufacture, a cigarette having its wrapper impregnated with a soluble silicate having a fixed alkali base.

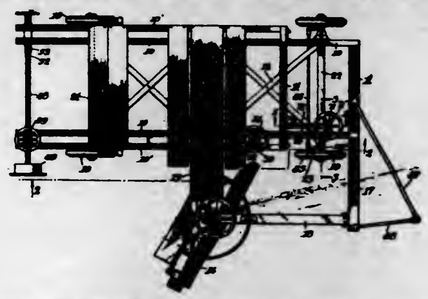
1,905,417. ROD MILL. CHARLES H. MACDONALD, San Francisco, Calif. Filed Apr. 4, 1930. Serial No. 441,511. 3 Claims. (Cl. 92—20.)



1. A rod mill comprising a casing; a rotary drum having peripheral openings therein and mounted within said casing; a segmental apron in said casing adjacent the periphery of said drum; radially disposed fly bars on said periphery between said openings and cooperating with said apron and rods within said drum.

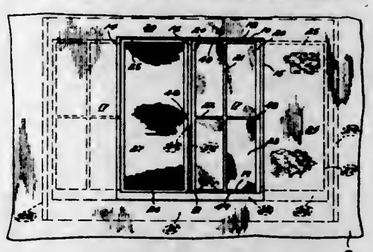
1,905,418. LETTER FILE. ROBERT HERMANN MEYER, Berlin-Friedenau, Germany. Filed Sept. 27, 1930, Serial No. 484,816, and in Germany Sept. 28, 1929. 4 Claims. (Cl. 129—11.)

1. In a letter file of the character described, the combination with a file cover of a pair of filing pins, a supporting base for said pins secured to the cover, a latch plate secured to the cover for the reception of the free ends of the filing pins, a pair of transfer arches, a supporting base for said arches, and means for detachably securing said latter supporting base to that of the filing pins with the transfer arches in position to form continuations of said pins.



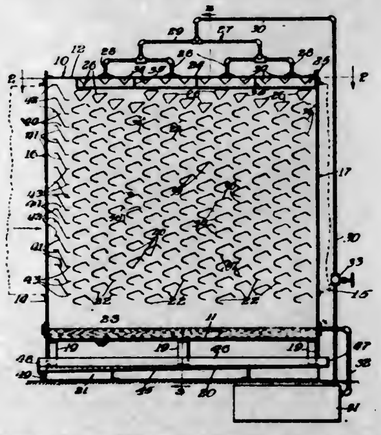
1,905,419. KNITTING MACHINE. MAX C. MILLER, Cumberland, R. I. Original application filed Apr. 10, 1923, Serial No. 631,071. Divided and this application filed Mar. 7, 1931. Serial No. 520,810. 4 Claims. (Cl. 66—102.)

1. In a knitting machine, a series of spring needles, and a corresponding series of reciprocating pressers provided with laterally projecting and ovelapping beard pressing surfaces.



1,905,420. ROAD GRADER. CHARLES J. MORITZ, Effingham, Ill. Filed June 20, 1930. Serial No. 462,575. 7 Claims. (Cl. 37—155.)

2. In a road shoulder machine, a carriage, front and rear wheels on said carriage adapted to travel on the surface of a hard road, a mold board carried at the side of the carriage and adapted to operate on the road shoulder, means for engaging the edge of the hard road

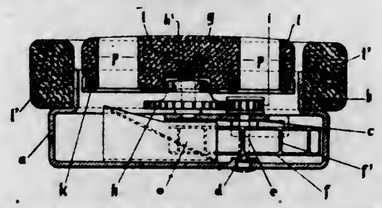


to hold the carriage in alignment, and means for adjusting the position of said engaging means vertically and transversely.

1,905,421. WINDOW SCREEN AND STRUCTURE. HAZLEHURST R. NOYES, Los Angeles, Calif., assignor to Gertrude E. Noyes, Los Angeles, Calif. Filed Oct. 24, 1930. Serial No. 490,883. 14 Claims. (Cl. 20—52.1.)

1. In combination with a window structure and a window, a screen, and pivoted means connecting the screen to the window, said means being characterized whereby a movement of the window out of the window structure will automatically cause the screen to occupy the position in the window structure formerly occupied by the window.

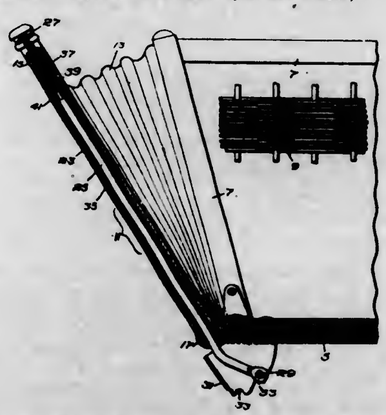
1,905,422. AIR CONDITIONING APPARATUS. ROBERT P. RASMUSSEN, Chicago, Ill., assignor of one-fourth to Edvald L. Rasmussen and one-fourth to Aksel F. Rasmussen, Chicago, Ill. Filed Jan. 15, 1931. Serial No. 508,913. 8 Claims. (Cl. 261—112.)



1. In an air conditioner of the kind described, a plurality of vertical stacks of baffles, each baffle being formed

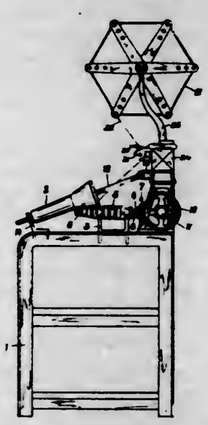
of sheet metal formed to provide an upwardly inclined top surface and a downwardly inclined lower surface, the two joined at their forward edges, the lower surfaces being narrower than the upper surface and the upper surface terminating in a downwardly inclined flange.

1,905,423. TREATMENT OF TAR. EDMUND O. RHODES and FLOYD D. HAGER, Pittsburgh, Pa., assignors to The American Tar Products Company, a Corporation of Delaware. Filed Jan. 2, 1930. Serial No. 418,151. 4 Claims. (Cl. 196—13.)



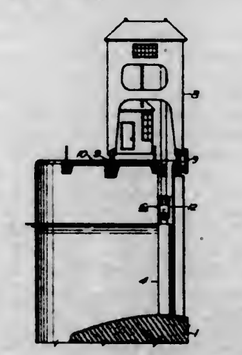
1. A process comprising treating high-temperature coke oven tar with a solvent containing acetone to extract the soluble matter from the said tar, distilling the solution thus formed to remove the said solvent, and distilling the soluble matter to produce a creosote-like distillate and a pitch-like residue.

1,905,424. HYDRAULIC DRIVEN WASHING APPARATUS. RUDOLF SCHLIEPER, Remscheid-Hasten, Germany. Filed Dec. 23, 1929, Serial No. 416,094, and in Germany May 3, 1929. 1 Claim. (Cl. 15—97.)



A hydraulic driven washing apparatus, comprising in combination a rotary sponge having passage and distributing apertures for the washing water situated away from the centre of rotation of said sponge, a casing carrying said rotary sponge, an annular stationary sponge surrounding said rotary sponge, adapted to completely catch the water thrown off by said rotary sponge, and an inclined trough in said casing adapted to supply the washing water to the apertures of said rotary sponge means for rotating said rotary sponge accommodated in said casing.

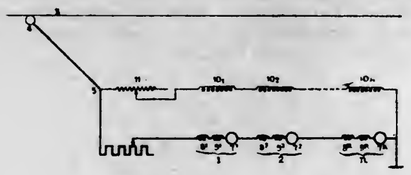
1,905,425. ARTICLE WITH ASSOCIATED PLUNGER ROD. HAROLD F. SHAW, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1929. Serial No. 402,686. 1 Claim. (Cl. 155—160.)



An article embodying a frame including opposed pairs of frame members defining a panel, a number of stakes extending across the panel between the members of one pair and including in their number one stake constituted by a channelled element extending in openings passing through the members of the pair, filling strand embracing the second pair of frame members and interwoven with said stakes to form a stake and strand fabric embracing said channelled element in its plane, and a movable operating member working in the plane of the fabric within said channelled element.

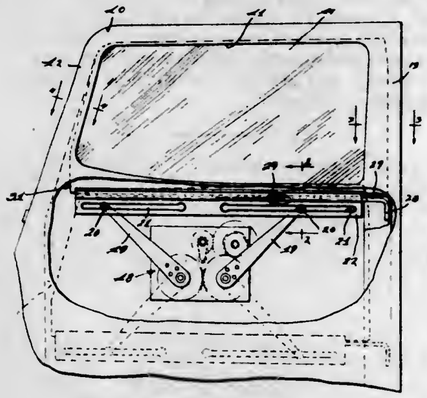
1,905,426. WINDING FRAME. OSWALD STENGLEIN, Markersdorf-Chemnitztal, Germany, assignor to Chemnitzer Strickmaschinen-Fabrik, Chemnitz, Germany. Filed June 17, 1931, Serial No. 545,031, and in Germany June 21, 1930. 4 Claims. (Cl. 242—27.)

1. A winding frame comprising a rotary winding cylinder having an endless helical camway, a thread guide under the control of said winding cylinder, a driving member connected to said cylinder so as to rotate at the same speed and having an endless helical camway of the same pitch and lead as the camway in said cylinder, and a bobbin adapted to engage said driving member and mounted for free rotation and free axial displacement with respect to said driving member.



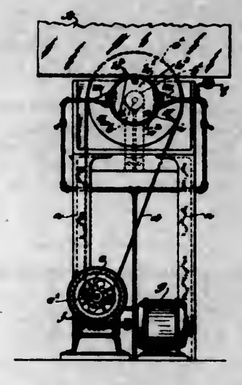
1,905,427. LIFTING DEVICE. ADOLPH J. ACKERMAN Mankato, Minn. Filed Oct. 14, 1931. Serial No. 568,737 14 Claims. (Cl. 61—28.)

1. A lifting device comprising a beam supported at its opposite ends from a flexible support adapted to raise or lower the beam, means at each end of the beam adapted to automatically take hold of the load by the act of lowering the beam to load engaging position, and means on the



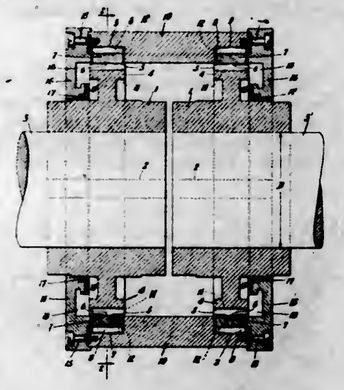
load coacting with said automatic means arranged to automatically disengage the same from the load by the act of lowering said beam to a point below the load engaging position.

1,905,428. ELECTRIC TRACTION SYSTEM EMPLOYING COMPOUND MOTORS. LOUIS BACQUEYRISSE, Paris, France. Filed Jan. 24, 1930, Serial No. 423,093, and in France Oct. 8, 1929. 1 Claim. (Cl. 172—179.)



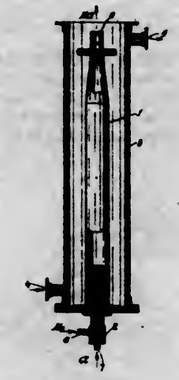
The method of operating a plurality of compound-wound motors in a system of regenerative electric traction which consists in connecting the armature windings and series field windings in series across the power mains, connecting the shunt field windings in series across said power mains, maintaining said connections during starting, normal operation, and regenerative braking, and controlling the speed of said motors during said operations solely by varying the shunt excitation.

1,905,429. DOOR AND WINDOW CONSTRUCTION. ALBERT P. BALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 13, 1931. Serial No. 550,586. 1 Claim. (Cl. 296—48.)



A vehicle body provided with a window opening comprising a frame having a vertical side and an inclined side, a glass channel carried by said inclined side and a relatively deep glass channel carried by said vertical side, a glass panel having corresponding vertical and inclined side edges slidably mounted in said channels, means projecting from the vertical edge of said panel and engageable in said deep channel for maintaining the inclined edge of said panel in engagement with said inclined channel during the raising and lowering of the panel, the lateral edgewise shifting movement of the panel resulting therefrom being less than the depth of the deep channel, for the purpose set forth.

1,905,430. MANUFACTURE OF LAMINATED GLASS. EDWARD M. BALL, Bloomingdale, N. J., assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company. Filed Feb. 8, 1929. Serial No. 338,572. 5 Claims. (Cl. 49—81.)



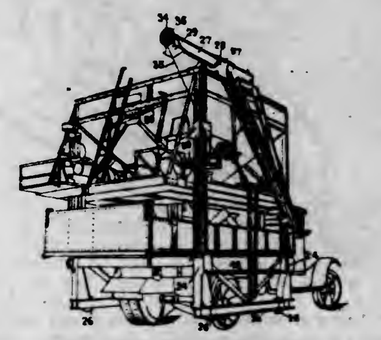
1. The improvement in the manufacture of laminated glass composed of two sheets of glass and an intersheet of non-brittle material, which consists in preparing the laminated glass for sealing at the edge by destroying the material of the intersheet by burning the material to the required depth at the edge of the laminated sheet.

1,905,431. SHAFT COUPLING. OTTO A. BANNER, Highland Park, N. J., assignor to John Waldron Corporation, New Brunswick, N. J., a Corporation of New Jersey. Filed Nov. 3, 1931. Serial No. 572,743. 8 Claims. (Cl. 64—92.)

1. A coupling for shafts, comprising two hubs, gears on said hubs, torque ring gears cooperating with said hub gears, a cover, gears within said cover cooperating with said torque ring gears, spaced abutments within said cover to permit the cover to cock with respect to the torque ring gears until a predetermined tilting angle is reached, said abutments in predetermined spaced relationship with respect to said torque rings for said abutments to tilt said torque rings with said cover when said cover has tilted beyond a predetermined angle with respect to said hubs.

1,905,432. MANUFACTURE OF HYDROGEN CHLORIDE OR HYDROGEN BROMIDE OR THEIR CORRESPONDING ACID SOLUTIONS. WALTER BAUER, Darmstadt, Germany, assignor to Rohm & Haas Aktiengesellschaft, Darmstadt, Germany, a Corporation of Germany. Filed May 27, 1929, Serial No. 366,537, and in Germany June 2, 1928. 6 Claims. (Cl. 23—156.)

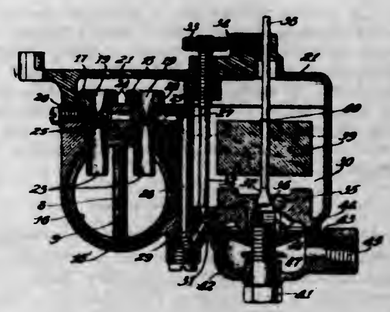
1. The method of manufacturing hydrogen compounds of the intermediate halogens in the halogen series, or their corresponding acid solutions by a combination of the halogen elements with hydrogen which consists in passing the reacting gases through a resistant metal burner at a velocity of about 450 grams of halogen per hour per square millimeter to prevent reaction of the gases or their products with the metal burner.



6. The method of manufacturing hydrogen chloride or its corresponding acid solution by a combination of the halogen elements with hydrogen, which consists in passing the reacting gases through a burner of copper at a velocity of about 450 grams of halogen per hour per square millimeter to thereby prevent reaction of the gases or their products with the burner, and then passing the gases into a combustion chamber made of copper while at the same time cooling said chamber.

1,905,433. HYDROGENATION CATALYST. OWEN G. BENNETT, Baltimore, Md., and CAREY B. JACKSON, Meridian, Miss., assignors to Catalyst Research Corporation, Baltimore, Md., a Corporation of Maryland. Filed Sept. 27, 1932. Serial No. 635,048. 17 Claims. (Cl. 23—236.)

1. The method of making a nickel catalyst for hydrogenation of unsaturated fatty oils and the like, comprising heating a nickel chromate admixed with a tolerable amount of sulfur to convert the chromate to chromite, and reducing said chromite at an elevated temperature with hydrogen and thereby forming metallic nickel activated by said sulfur to a state of enhanced hydrogenation ability as compared with nickel prepared in the same way without the use of sulfur compound.

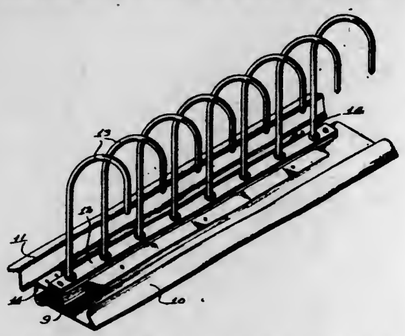


1,905,434. HOPPER CRANE OF THE MOVABLE AND TRAVELING TYPE. FERNAND BOYER, St. Quentin, France. Filed July 19, 1930, Serial No. 469,184, and in France May 1, 1930. 7 Claims. (Cl. 214—41.)

1. A portable and self contained loading and handling apparatus which may be condensed into compact condition, including the combination, with a supporting frame surmounted by a hopper and a folding crane permanently associated with said hopper, of extensible posts upon said frame having telescoping members which may be extended downward whereby to support said hopper at such distance from the ground as to afford clearance for

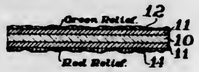
vehicles to pass freely beneath the same, and which members may also be telescoped upward to lower said apparatus as a whole upon a truck for transportation.

1,905,435. CARBURETOR. ROBERT F. BRACKB, Chicago, Ill., assignor, by mesne assignments, to Lynn A. Williams, Evanston, Ill., and Clifford C. Bradbury, Glencoe, Ill., as trustees. Filed Mar. 4, 1931. Serial No. 520,032. 9 Claims. (Cl. 261—69.)



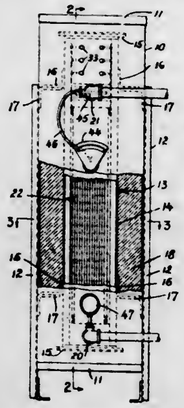
1. In a carburetor, having a mixing chamber through which a stream of secondary air is adapted to pass, a pair of suction multiplying Venturi tubes extending into said chamber and terminating therein and constituting the primary air inlet of the carburetor, said tubes being located symmetrically with respect to a diameter of the mixing chamber, a fuel chamber, a passage interconnecting the fuel chamber and throats of said Venturi tubes whereby fuel may be drawn into the primary air stream from said fuel chamber and discharged into the mixing chamber in two distinct streams.

1,905,436. ALLOY FOR USE IN THE CRACKING OF PETROLEUM. VERE B. BROWNE, Brackenridge, Pa. Filed Feb. 7, 1930. Serial No. 426,596. 1 Claim. (Cl. 196—133.)



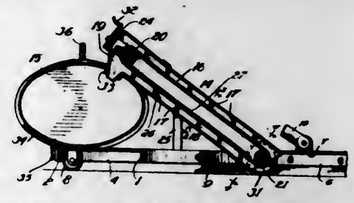
In petroleum cracking, carrying out the cracking operations in apparatus composed of 4–8% chromium, .25–5% copper, .5–1% aluminum, with the balance chiefly iron, there being freedom from other elements in an amount more than that classified as impurity.

1,905,437. MECHANISM FOR SHIFTING SHEETS. HUGH G. BUCHAN, Philadelphia, Pa. Filed Nov. 18, 1931. Serial No. 575,723. 3 Claims. (Cl. 129—11.)



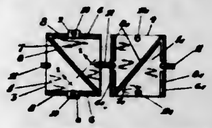
1. A sheet shifter for use in a binder having guide posts comprising a base portion having downwardly projecting resilient clips for engaging said guide posts, a strip hinged to said base and hook-like prongs attached to said strip.

1,905,438. PHOTOGRAPHIC COLOR PROCESS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 25, 1930. Serial No. 431,800. 10 Claims. (Cl. 95—2.)



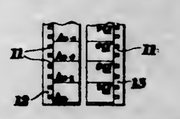
10. The method of making a two-color picture that comprises forming color-component, silver images in two insoluble colloid layers on opposite surfaces of a transparent support and having unsensitized gelatin layers readily soluble in warm water adherent thereto, the two soluble layers being differently and permanently colored, treating the images with a bath that removes the silver and differentially tans the soluble layers, and removing the unhardened gelatin.

1,905,439. ELECTRIC FLUID HEATING APPARATUS. ROBERT A. CARLETON, Brooklyn, N. Y., assignor to National Electric Heating Co., Inc., New York, N. Y., a Corporation of New Jersey. Filed July 31, 1931. Serial No. 554,258. 10 Claims. (Cl. 219—39.)



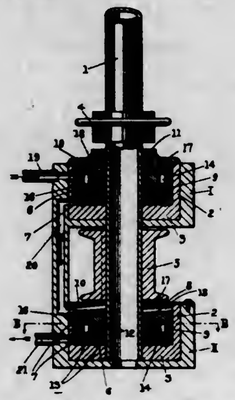
1. A fluid heating apparatus comprising a fluid containing receptacle having an inlet and an outlet, a chamber having narrowly spaced parallel walls of electric insulating material, a plurality of thin metallic strips of high electrical resistance arranged in substantial parallelism, narrowly spaced apart and edge supported between said walls to provide a plurality of rectangular conduits of small cross sectional area for the fluid, means for supplying an electric heating current to pass through said high resistance strips, means for causing the fluid to pass through said conduits in a predetermined direction and in direct contact with said high resistance strips.

1,905,440. SQUEEGEE MACHINE. ARTHUR P. CARTER and MICHAEL J. HYNES, Chicago, and JAMES C. CRONIN, Oak Park, Ill., assignors to Arco Vacuum Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 11, 1930. Serial No. 474,848. 7 Claims. (Cl. 15—98.)



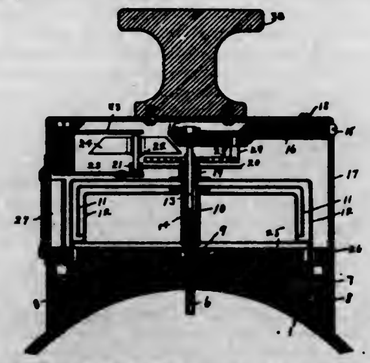
1. A squeegee machine having, in combination, a squeegee supporting means including members arranged at an angle to each other, a squeegee secured to said members and adapted to rest upon the floor, a tank located rearwardly of the squeegee, an endless belt conveyor carrying squeegees, a pan extending from a point near the floor within the angle formed by said members and upwardly to said tank, the squeegees on the lower run of said belt conveyor being arranged to travel upwardly in said pan, a backing for the lower run of the conveyor to maintain said squeegees in wiping contact with said pan, and roller means adapted to bear upon the floor for driving said belt conveyor.

1,905,441. NONSKID DEVICE. WILLIAM COOPER and WILLIAM F. KNAPP, Apalachin, N. Y. Filed Nov. 4, 1932. Serial No. 641,210. 2 Claims. (Cl. 152—14.)



1. A non-skid device for tires comprising a plurality of tread elements arranged in end to end relation, each of said elements comprising a base having upstanding flanges on two parallel sides, each of said elements having its flanges disposed at right angles to the flanges of the adjacent element, and each of said elements having a diagonally extending rib substantially the same height of said flanges.

1,905,442. METHOD OF PRODUCING MOTION PICTURE FILM. FRITZ COONS, Jr., Berlin, Germany, assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 2, 1931, Serial No. 541,703, and in Germany June 3, 1930. 4 Claims. (Cl. 88—19.5.)



1. The method of producing a motion picture film which comprises making longitudinally of a film one series of exposures to true images of an objective field, making alongside the first series but in the reverse direction another series of exposures to true images of an objective field, the individual exposures of the second series being inverted with respect to those of the first series, developing the exposed film by a reversal process, slitting the film between the two longitudinal series of pictures resulting from said developing and joining one end of the first series to one end of the second series to form a continuous strip of film with a continuous series of similarly positioned pictures.

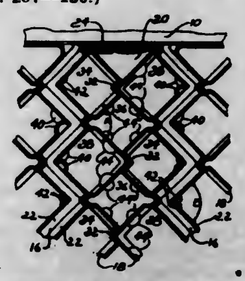
1,905,443. BEARING AND APPLICATION THEREOF. ERNEST CECIL COPE and EDWARD KINSELLA, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed June 9, 1928, Serial No. 284,064, and in Great Britain June 30, 1927. 9 Claims. (Cl. 308—162.)

1. A vibration-damping bearing for a shaft comprising at least one member surrounding the shaft and out of driving connection with said shaft, at least one member surrounding and clear of said shaft, means for introducing lubricant between said members, and an orifice in at least one surface of said members, whereby the first-mentioned member shares the lateral vibration of the shaft and slides transversely over the second-mentioned member to damp the lateral vibration by sliding friction between the surfaces of the said members, and by the resistance to shear of the lubricant in said orifice.

1,905,444. ANEMOMETER. ALFRED U. DAVIS, Baltimore, Md., assignor to Davis Instrument Manufacturing Company, Incorporated, a Corporation of Maryland. Filed Apr. 30, 1930. Serial No. 448,617. 1 Claim. (Cl. 73—2.)

An anemometer comprising a vane case having an aperture in the upper end thereof, a number of vanes revolubly mounted in said vane case, a casing mounted on said vane case and having an opening in one side thereof, a drive shaft driven by said vane and projecting through said aperture and into said casing and having a hub on one end thereof, a drive box within said casing and mounted on the hub of said drive shaft and revoluble therewith, a driven shaft revolubly mounted in said casing, a driven box rigidly mounted on said driven shaft and surrounding said drive box and having a dial thereon visible through the opening in said casing, a stabilizer fan mounted in said casing, a shaft upon which said stabilizer fan is mounted, a pinion on said stabilizer fan shaft, and a gear wheel on the driven shaft and in mesh with said pinion.

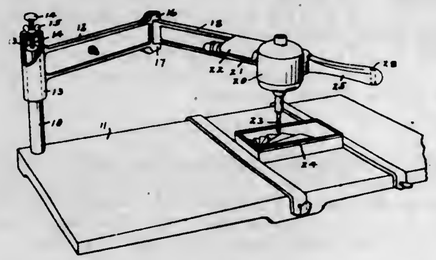
1,905,445. ALLOY. ERNST DE RIDDER and HUBERT ALTWICKER, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation, a Corporation of Delaware. Original application filed Sept. 20, 1929, Serial No. 394,119. Divided and this application filed June 28, 1931. Serial No. 546,862. 2 Claims. (Cl. 75—1.)



1. An alloy in sheet form having the characteristic of being drawn or embossed consisting of, manganese between about 0.2 and 1.5 percent, zinc from about 0.5 to about 3 percent, aluminium from about 0.5 to about 6.5 percent, balance magnesium.

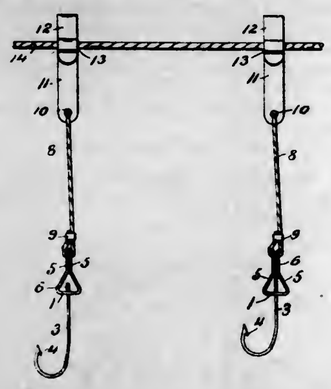
1,905,446. FILM BACKING PAPER MAKING MACHINE. HAYWOOD G. DEWEY and JOHN G. JONES, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 17, 1929. Serial No. 386,692. 17 Claims. (Cl. 164—89.)

16. In a machine for preparing film backing papers from printed strip material, the combination with a power drive and an advancing means for said strip material driven by said power drive, of a compensator means for holding a portion of said strip material stationary, a mechanism for performing an operation on said strip material, a control means for actuating said compensator means and said mechanism in timed relation to each other, and a change speed device between said power drive and said control means, and adapted to be adjusted manually for varying the timed relation between said advancing means and said control means.



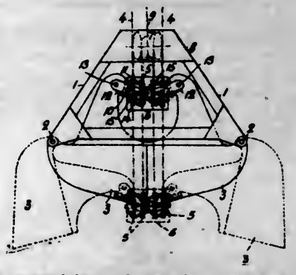
1,905,447. RADIATOR. NICHOLAS S. DIAMANT, Detroit, Mich. Filed Oct. 5, 1929. Serial No. 397,596. 8 Claims. (Cl. 257—130.)

1. In a core, spaced pairs of corrugated plates forming liquid passages and having adjacent joined edge portions



at the front and rear of the core, the intermediate portions of each pair of plates being offset with respect to said edge portions, and a pair of corrugated spacer plates forming with each other a series of vertically aligned air passages through said core and forming a pair of vertically aligned air passages with the adjacent plates of said liquid passages, the edge portions of said spacer plates being so located with respect to the joined edge portions of the plates of said liquid passages so as to form substantially geometrically identical cells on the front and rear sides of said core and the intermediate portions of said spacer plates being offset inwardly towards each other between their edge portions and sufficiently to substantially balance the volumes of the air passages between said spacer plates with the volumes of the air passages between each spacer plate and the adjacent plates of said liquid passages.

1,905,448. ROUTING MACHINE. JOHN W. DIXON, Indianapolis, Ind. Filed Apr. 18, 1932. Serial No. 606,041. 5 Claims. (Cl. 90—15.)



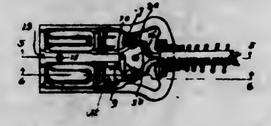
1. In a routing and levelling device, a table, a post carried by the table, an arm, a sleeve closed at the top carried by the arm revolubly fitted over the post in a manner to be lifted freely off of the post, an adjusting screw screw-threadedly passed through the closed end of the sleeve to abut the end of the post, the contacting surfaces between the post and the sleeve being smooth, and an electric motor carried on the arm.

1,905,449. FISHHOOK FASTENING MEANS. WILLIAM EARL DUNN, Kansas City, Mo. Filed Mar. 9, 1932. Serial No. 597,708. 5 Claims. (Cl. 43—28.)

1. In a fishhook fastening means, the combination with a fishhook having a shank, a barb at one end of said shank and an enlarged part at the upper end of said shank, of an attaching member having a transverse portion provided with a hole therethrough through which said shank extends, said hole having a diameter less than the largest diameter of said enlarged part, whereby said portion may support said hook, said member having two arms extending upwardly from said portion at opposite sides respectively of said hole, said arms having means for attachment to a snell.

1,905,450. GRAB. EGIL VALDEMAR PETERSEN DYGGVE, Copenhagen, Denmark, assignor to Koefoed, Hauberg, Marstrand & Helweg, Aktieselskabet Titan, Copenhagen, Denmark. Filed Mar. 11, 1931, Serial No. 521,787, and in Denmark Mar. 11, 1930. 8 Claims. (Cl. 37—187.)

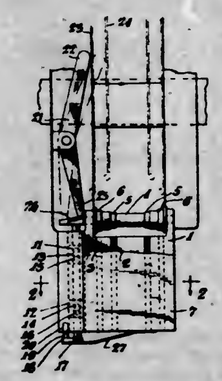
5. A grab comprising a frame, jaws pivoted at relatively fixed points to said frame, a closing crosshead, and means comprising connections solely between the jaws and the crosshead to hold the vertical axis of the crosshead coincident with the vertical axis of symmetry of the jaws during opening and closing movements of the jaws.



1,905,451. SUN SUIT. GEORGE F. EARNSHAW, Newton, Mass., assignor to Earnshaw Knitting Company, Newton, Mass., a Corporation of Massachusetts. Filed Dec. 22, 1931. Serial No. 582,520. 4 Claims. (Cl. 2—67.)

1. An article of the character described consisting of a sun suit comprising a trunk portion, supporting means including a pair of shoulder straps, each secured at its ends to the front and back portions of said trunk portion at the waist line thereof, said straps being crossed in the back and provided with snap fastening means for fastening them together at the said crossing, a neck portion connecting the straps at the front thereof near their shoulder engaging portions, a front shield or panel filling in the space between said straps, neck portion and trunk portion, said shield or panel being of a mesh formation sufficiently close to conceal the front upper portion of the body from view and yet leave the same exposed to the influence of sunlight, and a pair of side straps for holding said shield or panel close to the body irrespective of the posture of the wearer, each of said straps being permanently fastened at one end to the front portion of one of said shoulder straps and at its other end to the rear portion of the same strap at the point of the crossing of said straps.

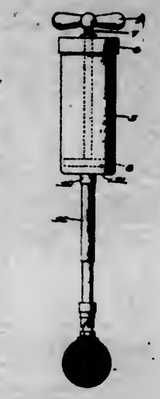
1,905,452. ELECTRIC PLUG. GEORGE EATON, Cleveland, Ohio, assignor to May C. Eaton. Filed May 9, 1929. Serial No. 361,828. 6 Claims. (Cl. 173—332.)



4. An appliance plug including a chambered insulation body comprising a plurality of sections detachably but rigidly connected together, a terminal prong receiving socket in the body chamber comprising a pair of members yieldingly constrained towards each other for socket formation and prong engagement, and means including a body exposed portion for forcibly separating said members for ready socket reception and removal of the prong.

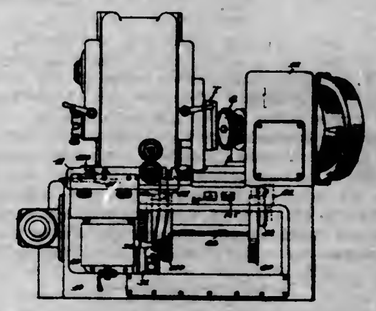
1,905,453. TREATMENT OF CELLULOSE DERIVATIVES. GEORGE HOLLAND ELLIS and HENRY CHARLES OLPIN, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Sept. 29, 1928, Serial No. 309,850, and in Great Britain Nov. 15, 1927. 4 Claims. (Cl. 8—13.)

1. In a process for weighting materials comprising organic derivatives of cellulose with tin compounds, the step of treating the materials with a solution containing stannic chloride and zinc chloride in such concentration as to swell the organic derivative of cellulose.



1,905,454. CINEMATOGRAPHIC APPARATUS. MAX ENGELMANN, Lausa, Germany. Filed Dec. 16, 1930, Serial No. 502,725, and in Germany Apr. 4, 1930. 7 Claims. (Cl. 88—17.)

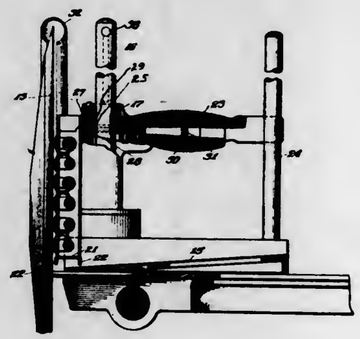
1. In a cinematographic apparatus of the class described, including the fire preventing film drums and film spools, a support having bearings, a stepped spool journaled in said bearings, doors hingedly attached at opposite sides to said support, a two-armed lever in each drum engaging with one of its arms the spools, means for holding said arm in its spool engaging position, a wedge shaped element adapted to be engaged by the other of said arms, and locking means for one of said doors adapted to be operated by said wedge shaped element.



7. In an apparatus of the character described, a vertically disposed body having opposed faces formed with film channels of unequal width, doors for closing said channels, a spindle for hingedly mounting one door, said spindle being slidably carried by said body and turning when the door is moved, a spring urging said spindle upwardly, means carried by the spindle to engage said body and prevent turning of the spindle and secure the door closed when the spindle is moved upwardly, and a cam at the upper end of the spindle to facilitate depression of the spindle to release the door.

1,905,455. COMPRESSOR. DOUGLAS F. FRELER, Evanston, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 16, 1921, Serial No. 515,460. Renewed July 7, 1930. 5 Claims. (Cl. 221—47.4.)

3. A lubricant compressor comprising a barrel, compressing means comprising cylinder and plunger elements having relative telescoping movement for receiving lubricant from said barrel and ejecting lubricant under pressure, and separate cylindrical guide means rigid with said barrel for guiding the movement of one of said elements.

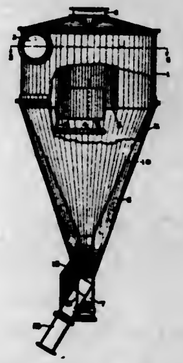


1,905,456. AUTOMATIC THROW-OUT MECHANISM FOR GEAR CUTTING MACHINES. ERVIND FINSEN, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1930. Serial No. 439,646. 28 Claims. (Cl. 90—4.)

1. In a machine for cutting gears, tool mechanism and a work support, means for moving one of said parts toward and away from the other through a limited distance for alternate finding and indexing, means for automatically stopping the tool mechanism after a pre-

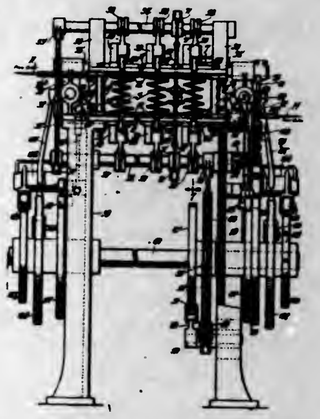
determined number of operations have been performed, means operable automatically thereafter for producing a relative movement of separation between the tool mechanism and the work support to permit removal of the completed gear and chucking of a new blank, means for actuating said last named means to return the tool mechanism and the work support into operative relation, and means operable when said return movement has been completed for rendering the tool mechanism operative.

1,905,457. COMBINED TOP CLAMP AND END GRIP FOR SLICING MACHINES. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Apr. 20, 1927. Serial No. 185,093. 14 Claims. (Cl. 146—217.)



4. In a slicing machine, a slicing knife, a work support for presenting material to said knife, an upright mounted on said work support, a sleeve slidably mounted on said upright, a gripper secured to said sleeve and projecting over said work support, said gripper having its front face substantially parallel to the cutting plane of said knife and having means for securing material to said front face, a clamping bar carried by the lower face of said gripper for clamping material between said gripper and said work support, a releasable clutch for holding said gripper against upward movement on said upright, means for shifting said upright toward and from the cutting plane of said knife, and means for preventing upward movement of said sleeve and gripper when said upright is in one position of adjustment.

11. In a slicing machine, a slicing knife, a work support for material to be sliced, an upright mounted on said work support at the edge thereof opposite the operator's position, a sleeve slidably mounted on said upright, a combined top and end grip projecting from said sleeve substantially parallel to the cutting plane of said knife and leaving the space between the lower edge thereof and said support unobstructed at the operator's side of said support, a clutch connected with said sleeve for holding said sleeve against upward movement on said support, a manipulating arm extending rearwardly from said sleeve, a lever for releasing said clutch disposed beneath said manipulating arm, and a post mounted on said work support and engaging said manipulating arm to hold said sleeve against horizontal rotation upon said upright.

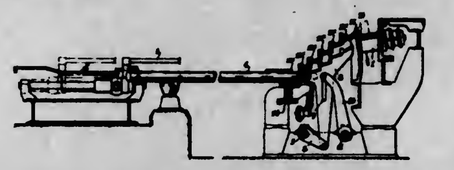


1,905,458. SEPARATOR. JOSEPH B. GAFFNEY, Bethlehem, Pa., assignor to Fuller Lehigh Company, Fullerton, Pa., a Corporation of Delaware. Filed Mar. 1, 1928. Serial No. 258,389. 4 Claims. (Cl. 209—144.)

1. In a separator, a cylindrical upper portion, a tangential inlet into said cylindrical portion, a conical portion extending downwardly from said cylindrical portion, a second conical portion within said first-named conical portion and spaced therefrom, extending downwardly from adjacent said cylindrical portions, separate outlets from said conical portions, and means for maintaining said

conical portion in different adjusted positions with respect to each other so that the distance between said conical portions may be varied.

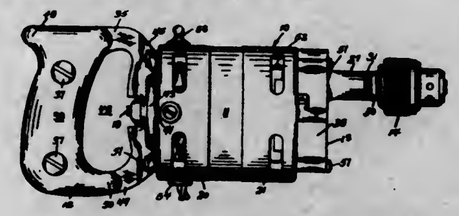
1,905,459. SPRING ASSEMBLING MACHINE. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1929, Serial No. 407,941. Renewed Aug. 26, 1932. 27 Claims. (Cl. 140—3.)



1. Spring assembling mechanism of the character described, comprising in combination means for supporting two parallel rows of coil springs with corresponding end coils of the two rows disposed adjacent to each other, means for feeding a wire helix endwise between said end coils and simultaneously rotating said helix on its axis, and spiral means for guiding said helix so as to cause the coils thereof to be wrapped around laterally adjacent portions of said spring coils.

1,905,460. PROCESS FOR CONVERTING INTO SOLUBLE SALTS LEAD AND OTHER METALS CONTAINED IN LEAD BEARING ORES. PAUL GAMICHON, Paris, France. Filed June 12, 1931, Serial No. 543,819, and in France June 17, 1930. 5 Claims. (Cl. 75—67.)

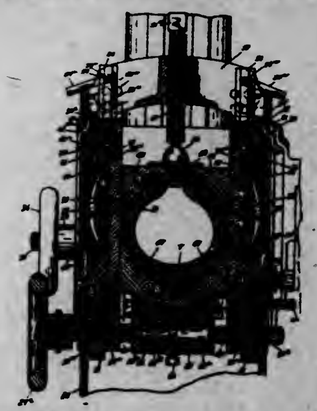
1. Process for converting into soluble salts metals contained in lead bearing sulphide ores, which consists in roasting said ores at a moderate temperature in the presence of a small quantity of sulphate of lime and of alkaline or earth-alkaline chlorid, then in treating the roasted



material successively with a strong acid having the property of converting into soluble salts the sulphides or traces of oxides left unconverted after roasting, lixiviating the mass to separate the salts of soluble metals, such as those of zinc or copper, and treating with a brine to bring into solution the lead, the silver and the metals associated therewith.

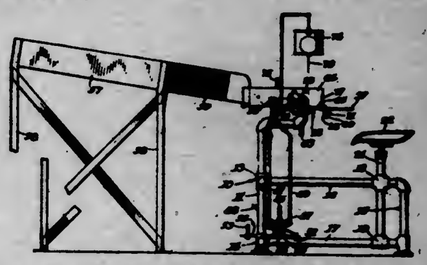
1,905,461. COOLING MEANS FOR ROLLED BARS. JOSEF GASSEN, Dusseldorf, Germany, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany, a Corporation of Germany. Filed July 12, 1932, Serial No. 622,080, and in Germany July 18, 1931. 8 Claims. (Cl. 80—42.)

1. Cooling means for rolled bars comprising, in combination, a feed mechanism for the rolled bars, a cooling bed, a stepped member between the feed mechanism and the bed, means cooperating with said member to effect a step by step advance of bars entirely thereacross from the feed mechanism to the cooling bed, and a glide member separate from said means, said glide member being mounted for movement between an inoperative position in which it does not affect the step by step advance of the bars across the stepped member and an operative position in which it overlies the stepped member and extends from the feed mechanism to the bed to support bars during their transfer from the feed mechanism to the cooling bed.



1,905,462. ELECTRIC DRILL OR SIMILAR TOOL. ALFRED C. GILBERT, North Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed May 20, 1929. Serial No. 364,449. 8 Claims. (Cl. 77—6.)

1. In an electric tool, an electric motor, a handle for supporting the motor and a speed reduction unit, said handle comprising a pair of L-shaped members secured together with two of their arms abutting and the other arms extending laterally on either side of the abutting arms and common means for securing the laterally extending arms and the speed reduction unit to the motor casing.

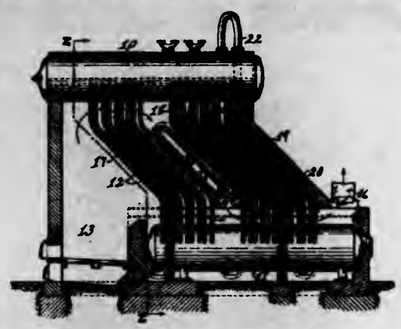


1,905,463. VULCANIZER. LEO O. GRANGE, Chicago, Ill., assignor to Walter J. Jarratt, Chicago, Ill. Filed Nov. 11, 1930. Serial No. 494,881. 23 Claims. (Cl. 18—18.)

8. A tire vulcanizing mold comprising a central arcuate bottom member and cooperating side members adapted to provide a trough to receive a section of a tire to be vulcanized, means for heating each of said mold members comprising an electrical resistance element adjacent the wall of each member including stretches of resistance wires, the stretches of said wires being comparatively concentrated on each side member at the ends thereof and along the tops thereof and comparatively widely spaced at the centers and along the bottoms thereof adjacent the bottom member and the stretches of wires in said bottom member also being comparatively concentrated at the ends thereof and comparatively widely spaced at the center thereof whereby a substantially uniform vulcanizing temperature may be maintained throughout the vulcanizer, said central member and the side members being separable, means comprising rods in the ends of the central member for slidably supporting the side mem-

bers on the central member, means associated with the ends of the side members to hold them against spreading from adjusted positions, means comprising a shaft in the center of the bottom member and having reversely threaded screw portions threaded through the side members for simultaneously adjusting the side members toward and from the central member, and heat conductor segments adapted to be fitted between the central member and side members when adjusted apart.

1,905,464. JOURNAL BOX WASTE ROLL WINDING MACHINE. CHARLES W. HARRIS, Michigan City, Ind., assignor, by mesne assignments, to Pullman Car & Manufacturing Corporation, a Corporation of Delaware. Filed Feb. 18, 1931. Serial No. 516,765. 8 Claims. (Cl. 28—1.)

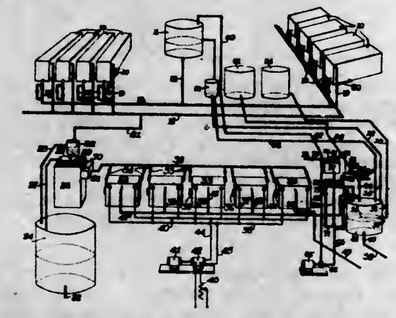


1. A machine for winding material in rolls for use in journal boxes comprising a spindle, a support for said spindle, mechanism for rotating said spindle, a waste container, a passageway leading to said spindle from said container, means for retaining said spindle on said support, means for discharging one end of said spindle from said support when said first named means is released and means for stopping and starting said mechanism.

1,905,465. STEAM BOILER. ISAAC HARTER, New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Oct. 29, 1921, Serial No. 511,337. Divided and this application filed Sept. 8, 1930. Serial No. 479,494. 5 Claims. (Cl. 122—347.)

1. In a water tube boiler, an upper and a lower cylindrical drum, with their axes horizontal and parallel, a

furnace, a flue arranged to conduct the hot gases from the furnace between and longitudinally of the drums, a plurality of water tubes in the path of the gases and connecting the upper and lower drums and being connected to said drums in circumferential rows, the tubes being arranged in rows extending across the flue, with the greater portion of each of the tubes in the several

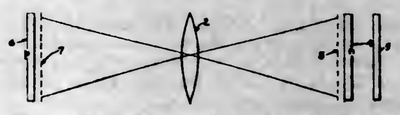


rows in parallel planes perpendicular to the plane of the axes of the drums and inclined toward the furnace end of the flue, the distance between the outer tubes in each row being greater than the diameter of one of said drums, the axis of each end of each tube being normal to that portion of the shell of the drum which the end enters and each tube having more than two bends.

1,905,466. PROCESS OF PREPARING ACETIC ANHYDRIDE. FRANZ HENLE, Frankfort-on-the-Main-Hochst, GEORG MEDER, Munster in Taunus, VALENTIN LANG, Frankfort-on-the-Main-Hochst, and FRANZ PRIVINSKY, Hofheim in Taunus, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Feb. 10, 1931, Serial No. 514,816, and in Germany Feb. 4, 1928. 4 Claims. (Cl. 260—123.)

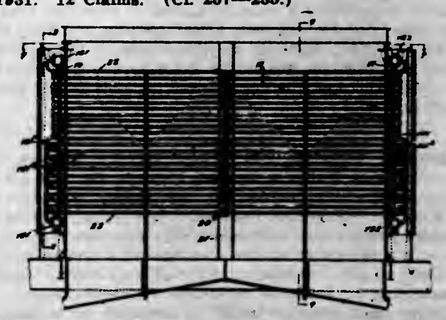
1. In the process of preparing acetic anhydride by heating together acetyl chloride and glacial acetic acid the step which comprises causing the two components to act upon each other in about stoichiometric proportions in a continuous manner at a temperature in the neighborhood of the boiling point of acetic anhydride and in the presence of boiling acetic anhydride.

1,905,467. METHOD FOR PHOTOGRAPHIC PROCESSING. KENNETH C. D. HICKMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 4, 1931. Serial No. 542,053. 7 Claims. (Cl. 204—16.)



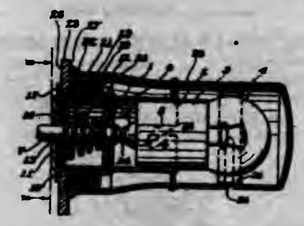
1. The method of recovering silver from a used photographic fixing solution by electrolysis in a plurality of electrolytic units, which comprises circulating the solution continuously through some of said electrolytic units, plating part of the silver from the solution in the units containing continuously circulating solution, bleeding some of the solution into the remaining electrolytic units and plating substantially all of the silver from the solution in said remaining electrolytic units.

1,905,468. PROCESS AND APPARATUS FOR FORMING SHAPED MOLD CHARGES OF MOLTEN GLASS. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 21, 1930. Serial No. 462,795. 8 Claims. (Cl. 49—55.)



4. The method of feeding molten glass in a mold charge having an artificial shape which comprises, passing glass in a stream from a source of supply through a downwardly tapering passage having an orifice at its lower end to form the lower end of said charge, decreasing the taper of said passage and increasing the size of said orifice to increase the flow of glass while at suspended portion of the charge is formed and while the glass issuing from said passage is connected by said stream with said source of supply, and severing the charge when formed and before the same receives any substantial undersupport.

1,905,469. METHOD OF PRINTING STEREOSCOPIC POSITIVES FROM INVERTED RELIEF NEGATIVES. HERBERT E. IVES, Montclair, N. J. Filed May 31, 1930. Serial No. 458,305. 17 Claims. (Cl. 88—24.)

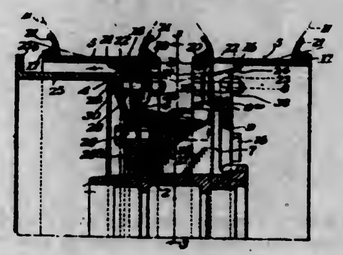


1. The method of printing stereoscopic positives from inverted relief negatives, which consists of projecting the image on the negative through a large lens and a grating located between said negative and said lens, on to a sensitive plate placed slightly behind another similar grating, both of said gratings being formed of alternate opaque and transparent vertical lines.

1,905,470. ECONOMIZER. DAVID S. JACOBUS, Montclair, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 4, 1928, Serial No. 323,716. Renewed Jan. 17, 1931. 12 Claims. (Cl. 257—255.)

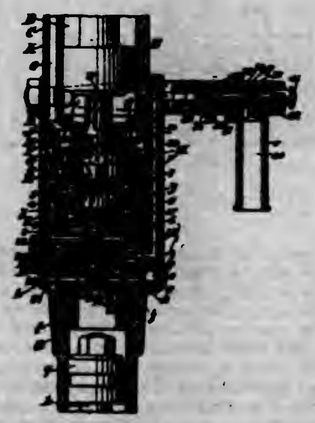
1. In an economiser, a gas flue in which the gases flow upwardly, an upper and a lower header extending transversely of said flue, continuous tubular members connected at their ends to said headers and bent to extend back and forth across said flue, the tubes located in the lowest portion of said economiser being divided into sections, the water flowing upwardly in individual sections and downwardly from section to section, whereby a series of pockets are formed and any steam formed in a given tube can rise no further than the higher tube with which it directly communicates.

1,905,471. LAMP AND LAMP MOUNTING. PHILIP J. KENT, Birmingham, and IAN C. MCKECHNIE, Detroit, Mich., assignors to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 13, 1930. Serial No. 495,461. 6 Claims. (Cl. 240—8.16.)



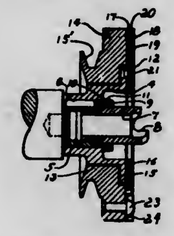
1. A lamp mounting including a member having an irregular shaped base portion on one end including projecting elements for insertion through a correspondingly shaped opening in a support and having a bulb receiving recess at its opposite end, said base end portion being insertable through said opening from the side of said support on which the bulb receiving end of said member is desired, and being movable in said opening for placing corresponding portion of said base portion and opening in misalignment after insertion of said base portion into said opening, and a rubber cushion on said member engageable with said support and located between the side thereof and the bulb receiving end of said member for yieldably resisting insertion of said base portion and frictionally resisting turning of said member.

1,905,472. LOADING MACHINE. ROBERT H. KRAFT, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1929, Serial No. 407,593. Renewed June 18, 1932. 10 Claims. (Cl. 198—10.)



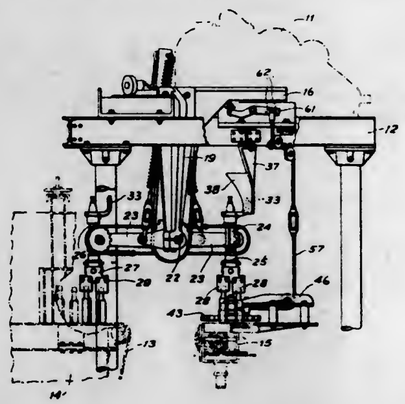
1. In a loading machine, a base, a conveyor adapted to engage the ground at the front of said base, an extensible thrust member pivotally mounted on said base on an axis extending transversely of said conveyor, a loading pan pivotally connected on the forward end of said thrust member and having its swinging end collapsible toward the rear end of said thrust member, when the latter is moved forwardly and means limiting the downward swinging movement of said loading pan when said thrust member is moved rearwardly.

1,905,473. WHEEL. ALVAN R. LAMBERT, Hollywood, Calif., assignor, by mesne assignments, to Bennett Walker, New York, N. Y. Filed Apr. 22, 1926, Serial No. 103,868. Renewed Jan. 22, 1932. 8 Claims. (Cl. 301—6.)



2. A wheel structure comprising a hub having inner and outer ends, a first series of spokes extending from the inner end of the hub, a second series of spokes extending from the outer end of the hub, fan blades extending from spokes of the first series to spokes of the second series, said fan blades being arranged radially in planes extending longitudinally of the hub, the fan blades having their outer ends bent rearwardly from the leading surface of the blades.

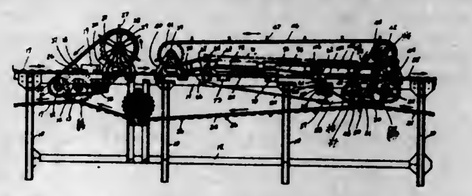
1,905,474. SAFETY DEVICE FOR ROCK DRILLS. EARL B. LAAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 15, 1931. Serial No. 537,597. 7 Claims. (Cl. 121—7.)



1. In a safety device, the combination with a rock drill having a hammer piston and rotation mechanism for the piston comprising a rifle bar wherewith said piston is slidably interlocked, a feeding element for the rock drill, a ratchet ring, of pawls carried by the rifle bar to engage the ratchet ring for holding the rifle bar against rotation during one stroke of the piston thus causing the piston to describe a partial revolution, pressure actuated trip means for preventing engagement of the pawls with the ratchet ring, and pressure actuated valve means for controlling the supply of pressure fluid to the pressure actuated trip means.

1,905,475. VIBRATION DAMPER. ROGER K. LEE, Highland Park, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 1, 1930. Serial No. 425,312. 9 Claims. (Cl. 74—6.)

3. A vibration damper comprising a pair of relatively movable concentric members, a connecting unit consisting of inseparable parts and having an inner element secured to said inner member and an outer element secured to said outer member and having a rubber member between said elements and secured to the adjacent surfaces thereof.



1,905,476. APPARATUS FOR HANDLING GLASSWARE. EDWARD H. LORENZ, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 24, 1931. Serial No. 552,865. 6 Claims. (Cl. 214—1.)

2. Apparatus for handling glassware, comprising the combination with a transfer arm having tongs mounted thereon for engaging an article of ware at a single receiving position and releasing it at any one of a plurality of laterally spaced delivery positions, and means for mounting said tongs for angular movement with respect to said arm about a vertical axis, of means including a member not partaking of the transferring movement of the tongs for presenting the tongs always in a single predetermined relation to said receiving position at the time they are in readiness to engage a glass article at that position.

1,905,477. BRICK EDGING MACHINE. GRAFTON E. LUCE, Chicago, Ill., assignor to Lancaster Iron Works, Inc., Lancaster, Pa., a Corporation. Filed Oct. 19, 1929. Serial No. 400,835. 14 Claims. (Cl. 198—30.)

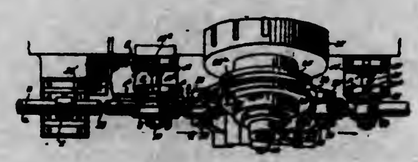
1. In combination, a conveyor adapted to movably support a pallet having brick thereon, a separator for removing the brick from the pallet, a platform having guide channels adapted to turn the brick on edge to group the same in a predetermined relation, a conveyor for moving the brick from the separator to the platform and for discharging the brick therefrom in the said predetermined relation, said first mentioned conveyor extending to a point adjacent the point of discharge of said brick from said platform, and mechanism for operating said conveyors in

such timed relation that the brick and pallet reach said point of discharge simultaneously and the brick are discharged upon said pallet.

1,905,478. METHOD OF ELECTRIC WELDING. GEORGE A. LUTZ, Cranford, N. J., assignor to American Circular Loom Company, Inc., Dover, Del., a Corporation of Delaware. Filed Dec. 16, 1930. Serial No. 502,660. 7 Claims. (Cl. 219—10.)

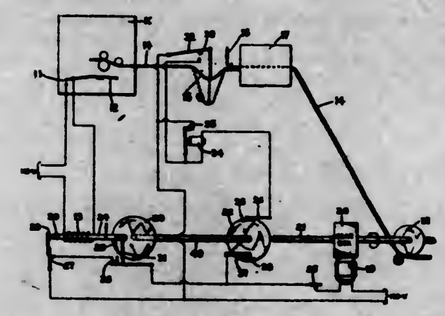
1. The method of lap-welding consisting in making an inclined surface along an edge of a metal blank, forming the blank into tubular shape, overlapping one marginal portion upon the outer surface of the adjacent marginal portion for a distance from the longitudinal edge of the latter with the inclined surface lapping said adjacent marginal portion, and compressing and heating said overlapped portions to a welding temperature.

1,905,479. METHOD OF ELECTRIC WELDING. GEORGE A. LUTZ, Cranford, N. J., assignor to American Circular Loom Company, Inc., Dover, Del., a Corporation of Delaware. Filed Feb. 12, 1931. Serial No. 515,229. 4 Claims. (Cl. 219—10.)



1. The method of lap-welding consisting in forming inclined surfaces along the marginal portions of metal stock, lapping portions of said metal stock with the inclined surfaces substantially parallel to and over-lapping one another, heating said inclined marginal portions to a welding temperature, and forcing said marginal portions one into another while so heated to such a thickness as substantially equals the thickness of the gage of said stock.

1,905,480. MEANS FOR ELECTRIC WELDING. GEORGE A. LUTZ and LOUIS B. KRAMER, Cranford, N. J., assignors to American Circular Loom Company, Inc., Dover, Del., a Corporation of Delaware. Filed Dec. 1, 1930. Serial No. 499,278. 18 Claims. (Cl. 219—6.)

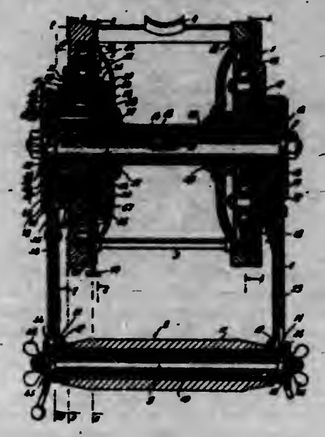


1. A welding apparatus comprising means to traverse a tubular blank having overlapped marginal portions, a pair of spaced electrodes having a common axis and located

in a position to engage the exterior of the blank adjacent to the overlapped portions thereof, means supporting said electrodes parallel in planes at an angle oblique to a

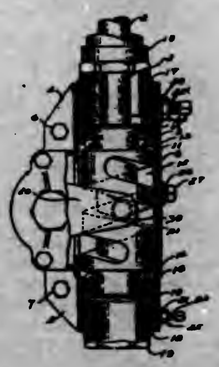
plane passing through the longitudinal axis and the overlapped portions of the blank, and means to supply said electrodes with electric current.

1,905,481. TAPE FEEDING DEVICE. HARRY H. LYNN, New Rochelle, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a Corporation of Delaware. Filed June 20, 1928. Serial No. 286,905. 26 Claims. (Cl. 178—42.)



1. In apparatus of the class described, a ticker, a motor, tape pulling means operated by said motor for feeding tape with respect to a projector, an operating circuit for said motor, and a switch controlled directly by the ticker printing mechanism whereby said motor circuit is impulsively energized to cause the tape pulling means to advance the tape with respect to said projector each time that a character is printed by the ticker.

1,905,482. SAW ADAPTER. ABEL A. MAGNI, Rochester, N. Y. Filed Apr. 6, 1932. Serial No. 603,619. 5 Claims. (Cl. 145—108.)

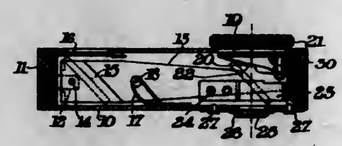


1. A saw adapter comprising a handle having a forked end, a stud passing through said forked end, a pair of washers on said stud inside the forked end of the handle, said washers being cut away to form radial recesses therein, which together form an opening, an adapter, a stem on said adapter adapted to engage said opening.

1,905,483. FISHING REEL. HYLA P. MAYNES, North Tonawanda, N. Y., assignor of one-half to Emma C. Maynes, North Tonawanda, N. Y. Filed May 20, 1932. Serial No. 612,467. 26 Claims. (Cl. 242—84.5.)

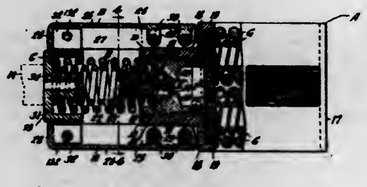
1. In a fishing reel, a spool, means for mounting the spool on a pole a crank mounted to swing about the axis of the spool and extending across the pole, and means interposed between the crank and the spool for transmitting movement of the handle to the spool for rotating the spool.

1,905,484. STEERING GEAR MECHANISM. CHARLES D. MCCALL, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 2, 1930. Serial No. 441,122. 5 Claims. (Cl. 74—79.)



1. In steering apparatus, driving and driven members having a substantially closer fitting engagement with each other throughout a limited portion of their operating cycle than during the remainder of said operating cycle, and means for shifting one of said members in respectively opposite directions relative to the other member for locating the latter member in a selected position when said members are in close fitting engagement.

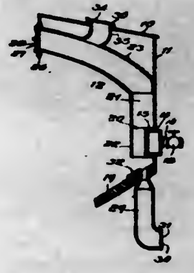
1,905,485. RANGE TYPE RANGE FINDER. JOSEPH MIHALTI, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 8, 1931. Serial No. 579,750. 2 Claims. (Cl. 88—2.7.)



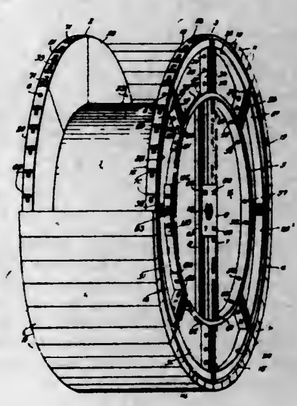
2. In a range finder the combination with two relatively adjustable mirrors, of an eye piece for viewing an

image of an object as formed by said mirrors, one of said mirrors being semi-transparent whereby the object may be viewed directly, means for adjusting one of said mirrors relatively to the other, a scale in the apparent field of

view of the eye piece, and an indicator movable over said scale in accordance with the adjustment of said one of said mirrors, said eye piece having a plane parallel center portion for viewing the images of the object and an outer spherical portion for viewing the indicating scale.



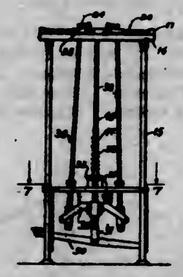
1,905,486. BUFFER. WILLIAM H. MINER, deceased, Chazy, N. Y., by Alice T. Miner, executrix, Chazy, N. Y., and William P. Sidley, executor, Winnetka, Ill., assignors to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 29, 1930. Serial No. 457,378. 1 Claim. (Cl. 213—222.)



In a buffer, the combination with a casing open at one end and containing a shock absorbing means, said casing having, at said open end, laterally projecting pairs of exterior ears at opposite sides thereof, the ears of each pair being spaced apart; of channel-shaped guide members at opposite sides of the casing having the flanges thereof directed inwardly, each of said guides members having its inner end seated betwen the ears of the pair at the corresponding side of the casing and rigidly secured thereto by fastening devices extending through the ears and the flanges of the corresponding guide member, each of said guide members having reinforcing portions between the flanges thereof disposed about said fastening devices, each of said guide members having the outer ends of the channels thereof closed, thereby providing limiting shoulders; a spring cap having integral guide lugs of substantially rectangular outline at opposite sides thereof engaging between the flanges of said guide members respectively, said lugs engaging said limiting shoulders to restrict outward movement of the spring cap; and spring means interposed between the spring cap and the shock absorbing mechanism of the casing.

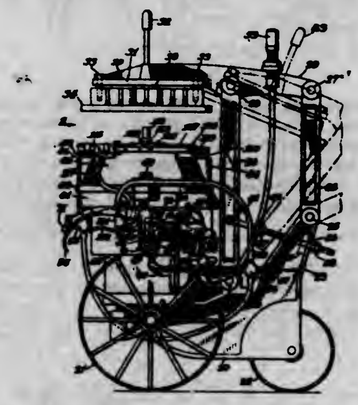
1,905,487. AUTOMOBILE HEATER. ARTHUR B. MODINE, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed May 14, 1930. Serial No. 452,319. 11 Claims. (Cl. 237—241.)

1. In a vehicle heater, the combination of a heater element and a wall of a vehicle body, the heater element being located exteriorly of said wall of said body and arranged with respect to said wall to transmit heat to said wall, to thereby provide heating means including said wall, and an element associated with said wall, said element providing a wall of a heat duct, the opposite ends of said duct being in communication with the interior of the vehicle body.



1,905,488. COLLAPSIBLE STEEL CABLE REEL. LEO W. NACK, Chicago, Ill. Filed June 5, 1930. Serial No. 459,299. 15 Claims. (Cl. 206—59.)

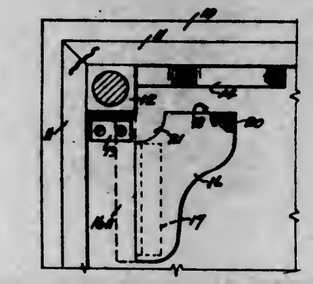
1. A cable reel, having a tubular cable support comprising a plurality of longitudinal radially joined sections, closures, flanges, and means for removably mounting a closure and a flange at each end of said support, comprising bolts each passing through aligned openings in a section, a closure and a flange.



1,905,489. MACHINE FOR WRAPPING PACKAGES. JOHN VICTOR NELSON, Chicago, Ill., assignor, by mesne assignments, to Milprint Products Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 26, 1930. Serial No. 504,817. 9 Claims. (Cl. 93—2.)

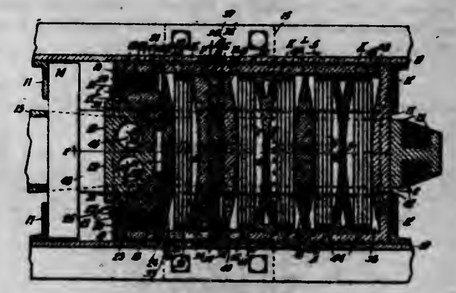
1. A wrapping machine comprising a frame, a table mounted on said frame adapted to support a wrapper and the goods to be wrapped, folding wing supporting members mounted on said frame for horizontal adjustment toward or from each other to adapt the spacing of the wings to different size packages, a plurality of folding wings pivoted on the supporting members, means for rotating said wings to vertical positions, said means comprising a rod pivoted to each of said wings and extending downwardly, a lever

for each rod pivoted to said frame and with its outer end pivoted to said rod, and means common to all of the levers for forcing downwardly the inner end of each of the levers.



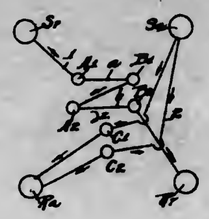
1,905,490. MOLDING MACHINE. STANLEY A. NORRICK, Newcastle, Ind., assignor to The Perfect Circle Company, Hagerstown, Ind., a Corporation of Indiana. Filed Dec. 14, 1929. Serial No. 413,979. 24 Claims. (Cl. 22—25.)

1. In a molding machine, the combination of a pair of squeezing members, means for supporting a pattern and a sand flask between said members, a plurality of cylinders carried by one of said members, the pistons in said cylinders excepting one having rods for engaging with said flask to move the same and the piston in said excepted cylinder having a rod normally extending through said pattern within the margin of said flask for forming the pouring gate of said mold, means for operating said members to compress the sand around said pattern to form a mold, and means for supplying fluid to said cylinders for moving said pistons to separate said mold from the pattern, and for retracting said gate forming rod from said mold.



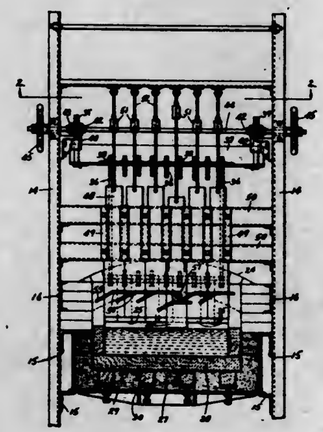
1,905,491. FOLDING TABLE. ABRAHAM E. NULL, Memphis, Tenn. Filed Feb. 5, 1931. Serial No. 513,478. 1 Claim. (Cl. 45—11.)

In a folding table having a top and depending side rails, forming a rectangle, legs each disposed beneath the table top in the angle formed by the intersection of two of the rails and positioned with a side and an edge against said rails, hinges one for each of said legs secured to said top and to the side of said leg away from one of said rails whereby folding of the leg along the other of the rails may be accomplished, a bracket of less than half the leg thickness secured to the edge of said leg away from the second of said rails, and having its top flush with the top of said leg, and extending therefrom substantially parallel to said hinge axis, the rail face of said bracket being substantially flush with the rail side of said leg, means for adjusting the height of said bracket adjacent the outer end thereof, and an auxiliary bracket hinged to



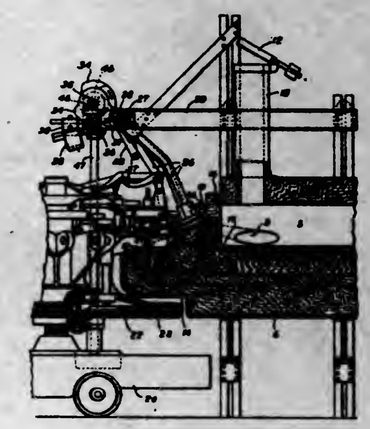
said top, and positioned when open parallel to said second rail, in the path of said leg and bracing said leg against the first of said rails, said auxiliary bracket being less than half the leg thickness and being adapted to be swung about said hinge out of the path of said leg, said post and the bracing end of said bracket having complementary parts of a bullet latch thereon to hold said latter bracket in place when in position to brace said leg.

1,905,492. SHOCK ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 10, 1928. Serial No. 311,425. 6 Claims. (Cl. 213—24.)



6. In a shock absorbing mechanism, the combination with a follower; of a combined friction shell and spring cage open at one end and having the friction shell portion at said open end, said follower and combined shell and spring cage being relatively movable toward and away from each other; a primary cushioning means; a secondary cushioning means including friction elements cooperating with the friction shell portion; a pressure-transmitting device extending through said friction shell portion and interposed between said follower and primary cushioning means and continuously engaged by said follower for compressing the primary cushioning means during a compression stroke of said mechanism, said device being freely movable with respect to the friction elements and opposed only by said primary cushioning means throughout the compression stroke of the mechanism; and means normally spaced from the follower and adapted to be actuated thereby after a predetermined compression of the primary cushioning means for actuating said friction elements to compress the secondary cushioning means.

1,905,493. PROCESS OF PURIFYING ROSIN. ROBERT C. PALMER, JOHN L. BURBA, and ANTHONY F. OLIVER, Pensacola, Fla., assignors, by mesne assignments, to Newport Industries, Inc., a Corporation of Delaware. Filed Jan. 27, 1930. Serial No. 423,598. 7 Claims. (Cl. 87—2.)



1. The process of purifying rosin which comprises forming a plurality of separate groups of adsorbent filter beds from beds of varying purities, arranging the beds in each group in series and in a descending order from the inlet end of each group according to the amount of impurities adsorbed on each bed, connecting the groups in series with the group having the most impure beds at the inlet end of the series and that having the freshest beds at the exit of the series, passing an impure rosin solution through the series of filters, cutting out the most saturated filter from each group, advancing each filter one position in each group, inserting a fresh or revivified filter at the exit end of each group and passing further quantities of impure rosin solution through the new series of filters.

1,905,494. APPARATUS FOR SUPPLYING MOLTEN GLASS. KARL E. PHILBE, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed May 16, 1931. Serial No. 537,811. 10 Claims. (Cl. 49—56.)

1. In combination with a container for a pool of molten glass, a mold unit adapted to be dipped to gather charges of glass periodically from the surface of the pool, a plurality of heat obstructing members, means holding said members out of contact with the glass at all times, and means operable in timed relation to the movement of the mold to move said members respectively into and out of heat obstructing position in succession.

1,905,495. APPARATUS FOR SUPPLYING MOLTEN GLASS. KARL E. PHILBE, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed May 21, 1931. Serial No. 538,950. 11 Claims. (Cl. 49—56.)

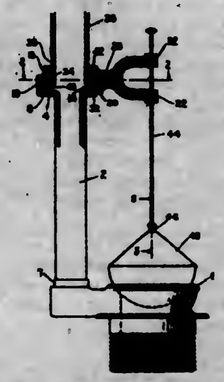
1. In combination with a container for a pool of molten glass from the surface of which charges of glass are gathered, a sectional cover for said container, means supporting said cover out of contact with the glass at all times, and means for periodically moving the sections of said cover respectively into and out of closed position.

1,905,496. SHIFTING DEVICE. RALPH F. PSO, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a Corporation of New York. Filed June 9, 1931. Serial No. 543,068. 2 Claims. (Cl. 74—17.)

1. A drag link consisting of two similar semi-tubular sheet metal sections of increased radius at their outer ends, said sections being welded together along their longitudinal engaging edges, and bearing abutments in the form of sheet metal cups inserted into the ends of and between said sections and welded thereto to form additional means for securing said sections together.

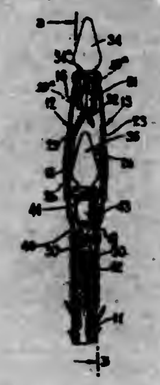
1,905,497. WORKING IMPLEMENT FOR PERCUSSIVE TOOLS. ARTHUR E. PETERS, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 5, 1932. Serial No. 591,071. 2 Claims. (Cl. 255—1.)

1. The method of drilling holes in rock and like materials which consists in driving a cutter head and its shank into the rock to the extent permitted by the shank, then withdrawing the shank from the cutter head and the hole



and inserting another shank into the cutter within the hole to advance the cutter into the rock.

1,905,498. VALVE SPRING. KARL PFEIFFER, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 19, 1928. Serial No. 262,780. 9 Claims. (Cl. 267—61.)

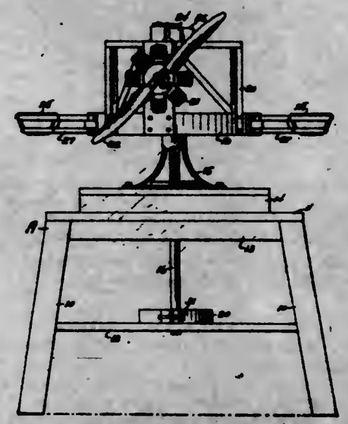


1. A resilient member of the class described comprising, a coiled body portion, and oppositely extending relatively thin flanges on said body portion.

1,905,499. VALVE. JACOB PODOLSKY, Dorchester, Mass. Filed Oct. 17, 1931. Serial No. 569,406. 8 Claims. (Cl. 4—57.)

5. A valve construction comprising an overflow pipe having an interiorly threaded collar integral therewith and provided with a valve seat, a pipe having a threaded portion engaging with the threads of the collar, a bracket having an interiorly threaded ring threaded upon the threads of the second-named pipe, a valve stem guided in the bracket, and a valve adapted to be seated on the valve seat and connected with the valve stem.

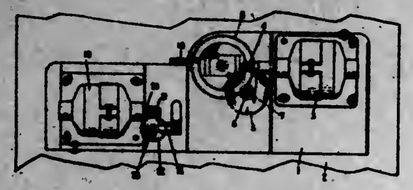
1,905,500. DECORATIVE DEVICE. LOUIS PERRY, New York, N. Y., assignor to Noma Electric Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1932. Serial No. 635,170. 8 Claims. (Cl. 40—133.)



4. A decorative device comprising a member, a plurality of radially extending sockets mounted on said member, lamps attached to said sockets and projecting from said member in radial directions, said member being formed with a legend cut out therefrom, means for illuminating said legend, and means on said member for mounting the same on a Christmas tree or the like support.

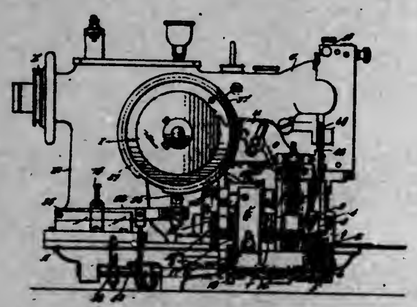
1,905,501. CIRCUIT BREAKER. KARL C. RANDALL, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 4, 1930. Serial No. 441,513. 9 Claims. (Cl. 175—294.)

1. The combination with a circuit breaker having a current-responsive thermal trip-device connected in series with the contacts thereof, of an auto-transformer connected in series with the circuit-breaker contacts for controlling the supply of current to the said trip-device.



1,905,502. FROST CONTROL MACHINE. CHAUNCEY S. REED, Brownsville, Tex. Filed Oct. 31, 1931. Serial No. 572,400. 1 Claim. (Cl. 47—2.)

In a machine of the character described, a stand constituting a tower and having a top and subplatform, a

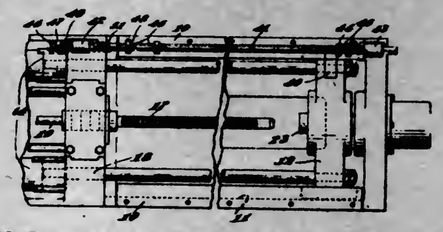


pedestal carried by the top, a vertical shaft journaled in the pedestal and in said subplatform, a wheel fixed to the upper end of the shaft and rotatable in a horizontal plane, a motor operated propeller supported by the wheel and having its axis disposed to one side of the axis of rotation of the wheel and inclined away from the plane of the latter, a brake having its parts carried by the subplatform and shaft and manually set.

1,905,503. SYSTEM OF REMOTE RADIOCONTROL. LLOYD THOMAS ROBERTSON, Milwaukee, Wis. Filed Oct. 25, 1929. Serial No. 402,880. 12 Claims. (Cl. 250—20.)

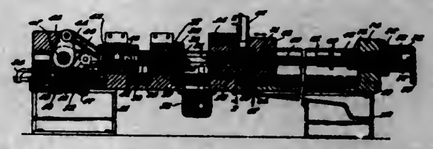
1. The combination, with a radio receiving set having a tuning condenser and a volume control rheostat, of electrically actuated means to operate the tuning condenser, electrically actuated means to operate the volume control rheostat, a control therefor, comprising a switch connected to convey current to the set, and means actuated by a single mechanism to close any one or more desired circuits individually or simultaneously, whereby either or both the rheostat control and tuning control will be moved in any desired direction or either one may be moved in any desired direction and the other in the opposite direction or both may be moved in the same direction.

1,905,504. MACHINE FOR SEWING FASTENER TAPE AND THE LIKE. LEO ROSSMAN, Newark, N. J. Filed Apr. 15, 1931. Serial No. 530,170. 11 Claims. (Cl. 112—2.)



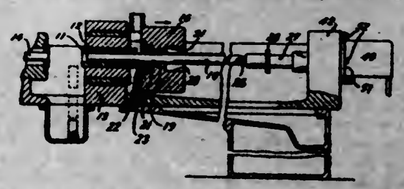
1. In a sewing machine for sewing fastener elements on work, a sewing mechanism including a needle, means at the work discharge side of said needle for feeding work to the needle with a step-by-step motion to form a line of stitches, and auxiliary work advancing means between said needle and said work feeding means including a member to engage the fastener elements which have been stitched and move the work from the needle at a different rate than said work feeding mechanism.

1,905,505. METALLIC COMPOSITION AND METHOD OF MAKING THE SAME. ADRIAN P. ROUX, Oriskany, N. Y., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Dec. 3, 1929. Serial No. 411,390. 7 Claims. (Cl. 75—1.)



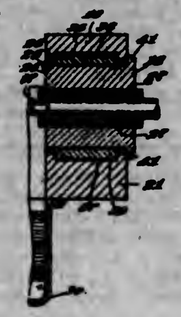
1. The method of making a metallic composition which comprises, making a plurality of simple tungsten carbide compositions at approximately 1100° C. or 2012° F., one having a carbon content of ½% to 1%, a second having a carbon content of 3½% to 4%, a third having a carbon content of 5½% to 6% and a fourth having a carbon content of 7½% to 8%, mixing these several simple compositions and sintering in a closed carbon mold, cutting off the sintering heat at approximately 2600° F. and simultaneously applying pressure upon the sintered material in the mold and cooling the mold and contents.

1,905,506. BROACHING MACHINE. GEORGE J. RUSSELL, Waltham, Mass. Filed Jan. 30, 1930. Serial No. 424,557. 18 Claims. (Cl. 90—33.)



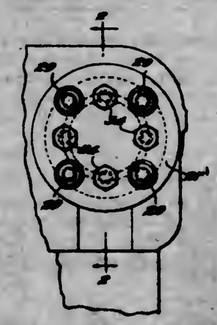
18. Broaching apparatus of the class described comprising a broach, an abutment engageable with the rear end of the broach, a carrier for advancing stock to be broached, means for reciprocating the carrier along the broach for effecting the broaching operation, means providing lubricating ducts within the carrier and directed toward the broach, and a source of lubricant to supply said ducts.

1,905,507. EXTERNAL BROACHING MACHINE. GEORGE J. RUSSELL, Waltham, Mass. Filed Jan. 30, 1930. Serial No. 424,558. 12 Claims. (Cl. 90—33.)



12. A broaching machine comprising an external broaching tool, an internal guide for slidably receiving and guiding pieces of stock and holding the latter from axial tilting movement relative to this guide as the stock is advanced to and beyond said external tool, said internal guide being disposed within said external tool and extending through the stock past said tool, said internal guide having its ends accessible for receiving and discharging pieces of stock, external means for slidably engaging and supporting previously broached pieces of stock disposed on said internal guide and thereby supporting said internal guide through the medium of such pieces of stock while the ends of said guide are accessible for receiving and discharging pieces of stock.

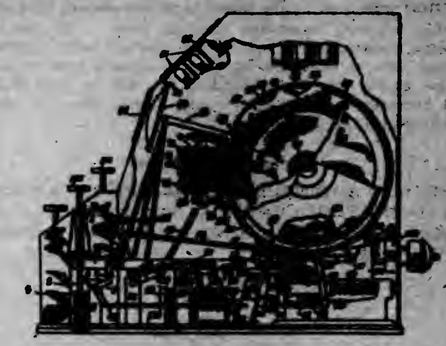
1,905,508. BROACH CENTERING APPARATUS. GEORGE J. RUSSELL, Waltham, Mass. Filed Jan. 30, 1930. Serial No. 424,559. 16 Claims. (Cl. 90—33.)



1. In a broaching machine, the combination of a broach, means for holding the broach substantially stationary during broaching, a center engageable with the front end of the broach and fluid-pressure means for advancing the center to a fixed position in engagement with the broach and for holding the center in this fixed position during broaching.

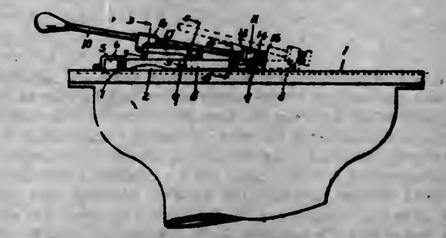
1,905,509. BROACHING GUIDE. GEORGE J. RUSSELL, Waltham, Mass. Filed Jan. 30, 1930. Serial No. 424,560. 20 Claims. (Cl. 90—33.)

1. In a broaching machine of the class described, the combination of an external guide for receiving stock from the broach and for supporting the stock with an end of the broach disposed therein, said external guide comprising members segmental in section and arranged with their longitudinal edges adjacent, means for urging the members inwardly, and means for supporting the members in position longitudinally of the broach.



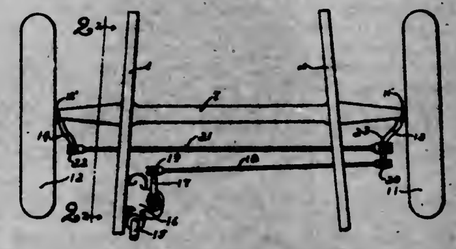
1,905,510. CYLINDER CONSTRUCTION. GEORGE J. RUSSELL, Waltham, Mass. Original application filed Mar. 5, 1930, Serial No. 433,490. Divided and this application filed Apr. 11, 1931. Serial No. 529,998. 15 Claims. (Cl. 74—108.)

1. The combination of a cylinder wall having a substantially annular end portion, a head fitting this end portion of the wall, relatively fixed abutment means adjacent the head, a member bearing against the abutment means and extending across the head in spaced relation thereto, means for holding this member rigidly against the abutment means, and means carried by the member and engageable with the head only at points substantially opposite the annular end portion of the cylinder wall for holding the head and the cylinder wall in fluid tight relation.



1,905,511. AUTOMATIC LIGHT CONTROL. KURT SCHWENNER, Rocklyn, N. Y., assignor to Oehler Machine Company, Inc., a Corporation. Filed Sept. 24, 1931. Serial No. 564,791. 15 Claims. (Cl. 95—75.)

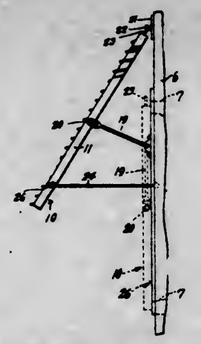
1. In a key operated machine for automatically controlling the exposure lamps used in motion picture film printing machines, a means for automatically locking the keys, said means comprising a block having an axial bore for the reception of a number of balls, and a plurality of slots



for the passage of the key levers, and a switch lever, a plunger, spring and screw arrangement in said bore permitting the operation of one of the key levers only, and the switch lever selectively.

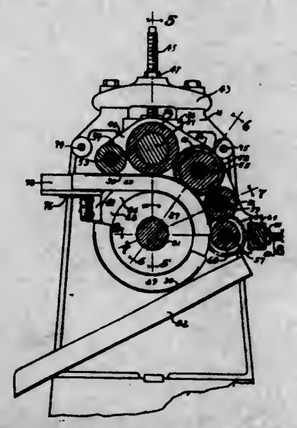
1,905,512. CLAMP FOR SAWS AND THE LIKE. ALVIN O. SHAFER, Kalamazoo, Mich. Filed July 21, 1930. Serial No. 469,466. 6 Claims. (Cl. 90—59.)

6. In a clamp, the combination with an abutment member, of a coacting slidably supported jaw, a lever pivotally and rotatively connected to said jaw, and a clutch embracing said lever and pivotally connected to said abutment member to move towards and from said abutment on the swinging of the lever and to move said sliding jaw on the swinging of said lever when the latter is engaged with said clutch member, said clutch member being engaged and disengaged with said lever by a rotative movement of the lever.



1,905,513. ANTISHIMMYING STRUCTURE FOR VEHICLES. EDGAR SHAY, Pleasant Ridge, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 8, 1930. Serial No. 426,970. 2 Claims. (Cl. 280—95.)

1. In a vehicle chassis including a frame and a front axle, leaf springs extending longitudinally of said chassis fixed at their intermediate portions to the respectively opposite end portions of said axle for supporting the front end portion of said chassis, a pair of tension shackles



each pivotally connected at its lower extremity with said frame and each pivotally attached at its upper end to one of the respectively opposite ends of one of said springs, dirigible wheels pivotally mounted on the ends of said axle having inwardly extending steering arms, a tie rod extending transversely of said chassis and pivotally attached to the ends of said steering arm, a pitman arm on said frame, and a drag link extending laterally of said frame and pivotally connected with said pitman arm and with one of said steering arms.

1,905,514. ADJUSTABLE COMBINATION AWNING AND SHUTTER. GEORGE F. SHEPARD, Bethel, Conn. Filed July 10, 1931. Serial No. 549,873. 6 Claims. (Cl. 20—59.)

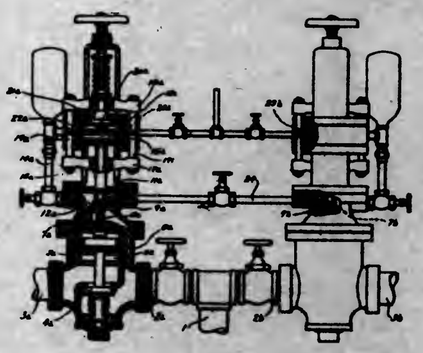
1. The combination with a window frame, a combined shutter and awning device comprising a rigid frame having slats extending between the side members thereof, said device of a size to cover the window opening with which it is associated, means for mounting the device on the window frame or house for movement from a position immediately in front of and covering the window opening to a position where the upper end of the device is above the window frame and the device inclines outwardly from the window opening, means above the window frame, means on said device for detachably engaging said means above the window frame to secure the device in inclined position, and independent means to secure the device in window closing position.

1,905,515. BENDING MACHINE. ADELBERT R. SMITH, Newcastle, Ind., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 29, 1930. Serial No. 457,262. 23 Claims. (Cl. 153—57.)

1. A bending machine comprising a main frame, a main shaft journaled on said frame, a forming roll on said main shaft, a second shaft journaled on said frame in spaced parallel relation to said main shaft, a sub-frame pivotally mounted on said second shaft, a plurality of forming rolls journaled on said sub-frame for cooperating with said first mentioned main shaft roll and means for driving some of said rolls to feed work through said machine.

1,905,516. CELLULOSIC COMPOSITION OF MATTER CONTAINING A DIALKYL HYDROPHTHALATE. HENRY B. SMITH, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 17, 1931. Serial No. 545,083. 10 Claims. (Cl. 106—40.)

1. A composition of matter comprising an organic ester of cellulose and a lower dialkyl hexahydrophthalate.



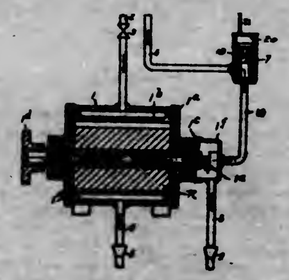
1,905,517. CELLULOSE ESTER COMPOSITION OF MATTER CONTAINING THE TETRAETHYL ESTER OF A TETRACARBOXYL DERIVATIVE OF A SATURATED ALIPHATIC HYDROCARBON. HENRY B. SMITH, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 10, 1931. Serial No. 556,229. 10 Claims. (Cl. 106—40.)

1. A composition of matter comprising a cellulose ester and the tetraethyl ester of a tetracarboxyl derivative of a saturated lower aliphatic hydrocarbon.

1,905,518. CELLULOSE ORGANIC DERIVATIVE COMPOSITION OF MATTER CONTAINING A BB'-DIALKOXY ETHYL CARBONATE. HENRY B. SMITH, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 10, 1931. Serial No. 556,230. 8 Claims. (Cl. 106—40.)

1. A composition of matter comprising an organic derivative of cellulose and a lower BB'-dialkoxy ethyl carbonate.

1,905,519. REGULATOR. STEN E. B. SODERBERG, Passaic, N. J., assignor to Leslie Company, Lyndhurst, N. J. Filed Sept. 22, 1931. Serial No. 564,316. 5 Claims. (Cl. 103—11.)

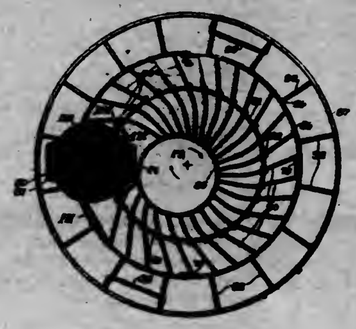


1. In apparatus of the class described, the combination of a plurality of pump regulators, each adapted to regulate the respective supply of actuating pressure fluid to one of a plurality of pumps discharging into the same main, each of said regulators comprising a valve controlling the supply of pressure fluid to a pump and a movable member actuating the valve, the position of the member being responsive to fluid pressure in a space adjacent to it, and a conduit placing the fluid pressure spaces into communication with each other.

1,905,520. CONVERSION OF METHANE INTO LIQUID HYDROCARBONS. CHRISTIAN SCHNEEWALD, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Feb. 16, 1931, Serial No. 516,217, and in Germany Feb. 28, 1930. 2 Claims. (Cl. 260—168.)

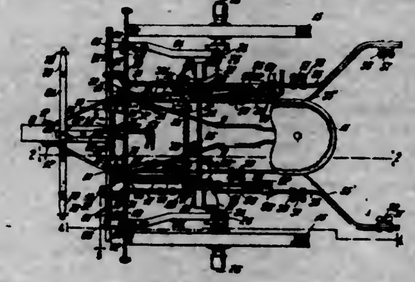
1. In the production of liquid hydrocarbons by heating a gas comprising methane to a temperature between about 800° and 1200° C., the step which comprises confining said gas by means of a surface consisting of an element selected from the group consisting of chromium, tungsten, molybdenum and carbon in the form of graphite.

1,905,521. COOLING FACILITIES FOR ROTARY COMPRESSORS. HANS STEMME, Winterthur, Switzerland. Filed Aug. 2, 1929, Serial No. 383,913, and in Germany Aug. 16, 1928. 4 Claims. (Cl. 230—208.)



1. An arrangement for providing circulation of a cooling medium in the stationary and moving parts of a rotary compressor, comprising a water jacket housing for a rotor, a hollow shaft for the latter, means for supplying the cooling medium to the housing and hollow shaft, and means operatively connected to the supply means and compressor for automatically varying the quantity of cooling medium supplied by said first named means in accordance with variations in pressure of the air discharged from said compressor to reduce to a minimum the play between rotor and housing at all working conditions.

1,905,522. MOTION PICTURE CAMERA CONTROL. PAUL A. STEPHENSON, Newton, Mass., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 16, 1929. Serial No. 414,903. 10 Claims. (Cl. 74—107.)



2. In a multi-speed motion picture camera, the combination with a motor, of a release therefor movable to an operative position in which the motor may run and to an inoperative position wherein the motor will not run, a speed change device adapted to normally retain the parts in position for a predetermined speed, and a locking bar cooperating with the speed change device and release through which said release may hold said speed change device from its normal position.

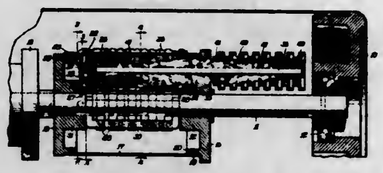
1,905,523. DISHWASHING MACHINE. EDGAR S. STOCKBARD, Berwyn, Ill., assignor to The Conover Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21 1928. Serial No. 271,661. 7 Claims. (Cl. 141—9.)

1. A dish rack of the type described, comprising an outer ring, an inner ring eccentric thereto, and wire partitions connecting said outer ring to said inner ring to form a graduated series of dish holders.

1,905,524. CULTIVATOR. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 8, 1928. Serial No. 298,199. 22 Claims. (Cl. 97—147.)

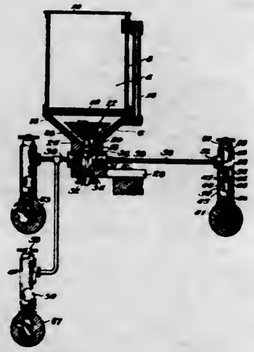
1. In a cultivator, the combination of a pair of wheels, a wheel frame tiltably mounted thereon, a seat frame having a seat thereon, pivot means connecting said frames on a transverse pivot axis disposed in a plane spaced longitudinally from the axis of said wheels sufficient to cause the seat to shift vertically through a distance at least substantially equal to the distance said wheels shift longitudinally, means for permitting vertical folding movement between said frames at said axis, a pole, means for normally holding said pole in substantially fixed relation to said seat frame so that said pole moves therewith as a unit in the relative folding movement between said frames, and cultivator rigs carried by said wheel frame.

1,905,525. ELECTRICAL RECTIFIER. CHARLES E. STROBEL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Sept. 10, 1931, Serial No. 562,042. Divided and this application filed Nov. 30, 1932. Serial No. 644,979. 4 Claims. (Cl. 175—366.)



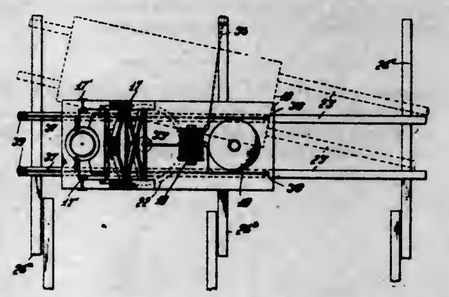
1. A rectifier comprising a metal block provided with a hole and with a slot which communicates with one side

of said hole throughout its length, means for insulating the sides of said hole and said slot, a plurality of asymmetric units in said hole, a plurality of conducting spacers in said hole, one between each two adjacent units and between the bottom of said hole and the adjacent unit and



each provided with a lug which extends outwardly through said slot, a pressure disk in said hole adjacent the outer unit, a compression spring having one end engaging the outer side of said pressure disk, and means secured to said block for compressing said spring.

1,905,526. TYPE CARRYING CYLINDER. HJALMAR A. SWANSON, Chicago, Ill., assignor to Cummins Perforator Company, a Corporation of Illinois. Filed Oct. 7, 1931. Serial No. 567,362. 7 Claims. (Cl. 101—91.)

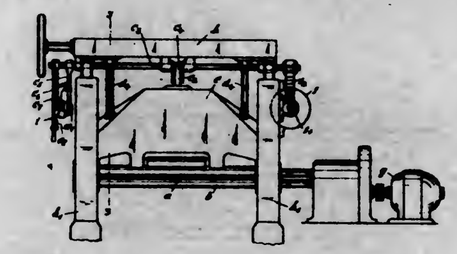


1. In a type cylinder of the character described, in combination, a cylinder including end members, an arcuate plate forming a portion of the drum of the cylinder and being secured to the members, a type form secured to the respective ends of the plate, and a yoke member insertable in the cylinder through the space formed by the drum plate and positioning for association with the type form a plurality of type discs.

1,905,527. GRAVITY LUBRICATING SYSTEM. GEORGE F. THOMAS, Berwyn, and OTTO J. HERR, Chicago, Ill., assignors to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 261,779. 7 Claims. (Cl. 184—7.)

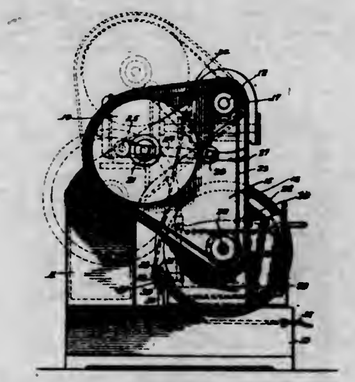
1. In a central lubricating system, the combination of a source of lubricant, a plurality of bearings to be lubricated, conduits connecting said source with said bearings, and a lubricant flow controlling fitting interposed between between said conduits and each of said bearings, each of said fittings comprising a pair of flow resistance passages and a transparent well intermediate said passages.

1,905,528. PILE DRIVER. JOSEPH H. THORNLEY, Evanston, Ill. Filed Nov. 13, 1929. Serial No. 406,759. 6 Claims. (Cl. 61—73.)



1. In a pile driver of the class described, the combination of a bed, a platform, a pivot connection between said bed and said platform permitting horisontal rotative movement of said platform on said bed, a derrick rising from said platform, cable winding means on said platform, a pair of rails materially longer than said bed and along which the bed is adapted to move, guide means for guiding relative movement between said rails and said bed in a direction longitudinally of the rails, said guide means positively preventing tilting of said bed relative to said rails, a plurality of skid timbers adapted to be supported on the ground, said pair of rails having slidable mounting on said timbers to be skidded endwise and sidewise thereon a cable adapted to be extended from said winding means to a point of anchorage for effecting movement of said bed on said rails or movement of said rails on said skid timbers, said rails having free sliding mounting on said skid timbers so as to enable them to be skidded in any direction, endwise or sidewise, on said timbers, and said rails being capable of motion independently of each other in their endwise sliding movement, said platfom having an opening therein in proximity to said pivotal connection for permitting said cable to be passed from said winding means down through said opening to the lower portion of the pile driver, and a pulley mounted on the lower portion of the pile driver substantially in line with said opening and having a horisontal swivelling movement for guiding the cable substantially horisontally to different points of anchorage.

1,905,529. SHOE. THOMAS TORIO, Corona, N. Y. Filed Aug. 4, 1931. Serial No. 555,037. 1 Claim. (Cl. 36—12.)



A shoe construction comprising an inner sole having a split perimeter from the toe to the heel thereof, the lower part of said split portion being folded downwardly and inwardly with the free ends thereof opposing each other, an upper secured to the outer part of said downwardly bent portion, the under part of said sole and the downwardly and inwardly bent ends of said portion cooperating to form adjacent the arch a pocket completely enclosed at its sides and a sole shank stiffener located in said pocket.

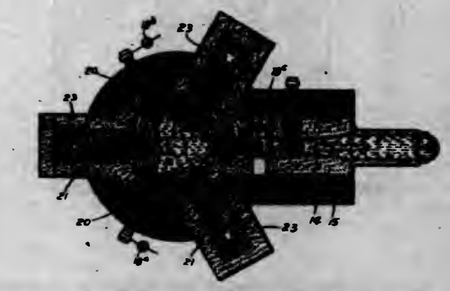
1,905,530. ADJUSTING DEVICE FOR PLATE STRAIGHTENING MACHINES. FRITZ UNGERER, Pforzheim, Germany. Filed Jan. 22, 1932, Serial No. 588,426, and in Germany Jan. 31, 1931. 8 Claims. (Cl. 153—54.)

1. A device for adjusting the mutual inclination of rows of straightening rollers of plate straightening machines, comprising in combination with the rows of straightening rollers, a main motor adapted to rotate said straightening rollers, a yoke carrying one of said rows of rollers, and an auxiliary motor adapted to oscillate said yoke and consequently the row of rollers carried by said yoke, whilst said rows of rollers are being rotated by said main motor.

1,905,531. SLICING MACHINE. CORNELIS FRANCISCUS MARIA VAN BERKEL, Wassenaar, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed June 20, 1927, Serial No. 200,245, and in the Netherlands Sept. 10, 1926. 5 Claims. (Cl. 146—103.)

1. A slicing machine comprising a support, a casing adapted to move relatively to said support and guided by means on said support, a knife having a spindle journaled in said casing, a sprocket fastened to said spindle within said casing, a chain drive for said sprocket, a rotary member within said casing and driven by said chain, a pitman operatively connected at one end to said rotary member and at its other end to a member extending through said casing and attached to said support, and means for actuating said chains to rotate said sprocket and said rotary member.

1,905,532. FUNGICIDE. HAROLD P. VANNAN, West Palm Beach, Fla., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 15, 1929. Serial No. 386,227. 3 Claims. (Cl. 167—14.)



1. A process of making from zinc sulphate and copper sulphate a composition in which basic sulphates of both zinc and copper exist as such, which comprises forming independent solutions of zinc sulphate and copper sulphate, forming an aqueous alkaline medium containing alkaline earth oxide and of an alkalinity to precipitate basic sulphates from both sulphate solutions, adding the zinc sulphate solution to the alkaline medium to precipitate first the zinc basic sulphates, and then adding the copper sulphate solution to precipitate the copper basic sulphate.

1,905,533. FOREHEARTH OF GLASS MELTING FURNACES. HAROLD A. WADMAN, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 1, 1930. Serial No. 432,370. 2 Claims. (Cl. 49—55.)

1. A forehearth for a glass melting furnace comprising a trough adapted to receive glass from the furnace, a second trough adapted to maintain a body of glass in contact with the bottom and side walls of the first trough, means comprising the first trough for dividing the second trough into a plurality of electrically insulated compartments, and means to pass a variably controllable electrical current through the glass contained in each of said compartments, whereby the temperature of the various compartments may be regulated.

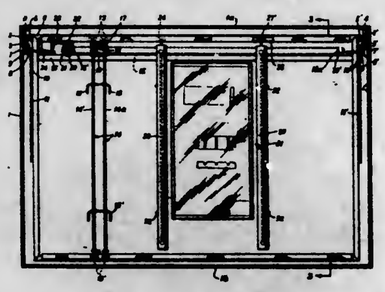
1,905,534. APPARATUS FOR AND METHOD OF MAKING GLASS. HAROLD A. WADMAN, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 25, 1931, Serial No. 553,040. Renewed Sept. 9, 1932. 8 Claims. (Cl. 13—6.)

1. In a furnace for making glass and similar substances in which the glass acts as a resistance to a current of electricity, a plurality of electrodes submerged in the glass and located so that the major portion of a current of electricity passing therebetween tends to flow

through the glass adjacent the side walls of the tank, and means for passing batch through said side walls between the electrodes and into the major portion of the current passing therebetween, whereby the zone of greatest current density and of greatest heat is removed from said side walls by the relatively non-conductive batch.

1,905,535. MODIFIER FOR CELLULOSE ACETATE PLASTICS. JAMES F. WALSH, South Orange, and AMERIGO F. CAPRIO, Newark, N. J., assignors to Celluloid Corporation, a Corporation of New Jersey. Filed June 8, 1929. Serial No. 369,519. 1 Claim. (Cl. 106—40.)

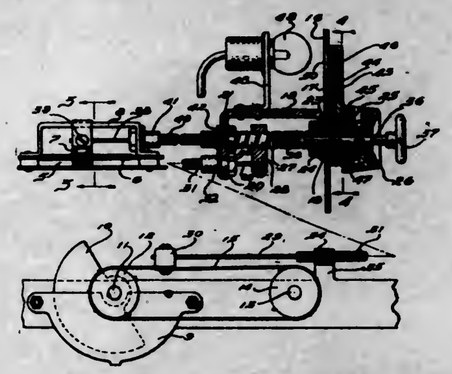
A firm, relatively hard composition comprising cellulose acetate, triphenyl phosphate and dibutyl tartrate in the proportion of 100 parts of cellulose acetate, 20 to 25 parts of triphenyl phosphate and 5 to 10 parts of dibutyl tartrate.



1,905,536. PROCESS FOR THE HYDROLYSIS OF CELLULOSE ACETATE. CHARLES S. WEBBER, Springfield, Mass., and CYRIL J. STAUD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 14, 1929. Serial No. 414,207. 4 Claims. (Cl. 260—102.)

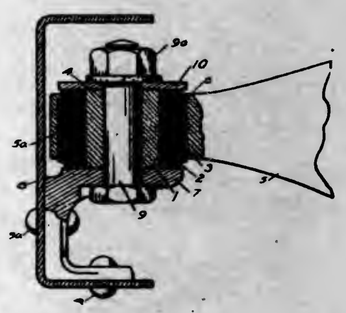
1. In the process for the production of acetone-soluble cellulose acetate the step which comprises hydrolyzing an acetic acid solution of cellulose acetate in the presence of B B' dichlordiethyl ether.

1,905,537. PROCESS FOR THE HYDROLYSIS OF CELLULOSE ACETATE. CHARLES S. WEBBER, Springfield, Mass., and CYRIL J. STAUD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 14, 1929. Serial No. 414,209. 6 Claims. (Cl. 260—102.)



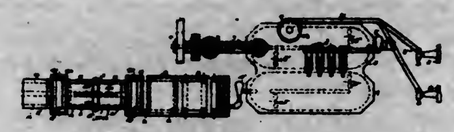
1. In the process for the production of acetone-soluble cellulose acetate, the step which comprises hydrolyzing the cellulose acetate in the presence of 1–4 dioxan and an organic acid at a temperature of approximately 100° C.

1,905,538. APPARATUS FOR ILLUMINATING OBJECTS TO BE REPRODUCED. ELLIS WEISKER, Bronx, N. Y. Filed Aug. 8, 1929. Serial No. 384,445. 6 Claims. (Cl. 240—1.)



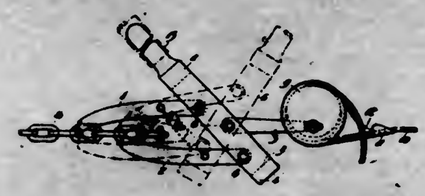
1. In apparatus for illuminating objects to be reproduced, an illuminating element composed of a plurality of illuminating parts, said illuminating parts having coupling edges adapted to be interengaged to form a light-sealed joint therebetween and being capable of joint traversing movement across the object to reproduce the same, said parts being also capable of independent movement to enable independent positioning thereof.

1,905,539. CONTROL APPARATUS FOR RADIO RECEIVING INSTRUMENTS. JAY R. WEBER, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 1, 1930. Serial No. 485,802. 9 Claims. (Cl. 250—14.)



9. A radio receiving set including a casing having a pair of variable instruments therein, control apparatus for said instruments located in said casing, a support spaced from said casing, an operating unit mounted on said support including a rotatable manually operable element and a shiftable manually operable element, the latter element being shiftably mounted on said rotatable element, a flexible cable extending into said casing and connected at one end with the control apparatus of one instrument and at its other end with said shiftable operating element, means on the rotatable element for converting rotary movement thereof to lineal movement, and a flexible cable secured at one end to said means and at its other end to the control apparatus of the other instrument.

1,905,540. MOUNTING. IRVING P. WHITEHOUSE, Erie, Pa., assignor to Hugh C. Lord, Erie, Pa. Filed Mar. 27, 1929. Serial No. 350,846. 9 Claims. (Cl. 248—14.2.)



1. In a mounting, the combination of a supported and a supporting member having opposing spaced walls; and a dampening member comprising an uncompressed rubber portion between the walls and normally carrying a major portion of the load of the supported member on the supporting member through shear of the rubber and a rubber portion having initial engagement with one of the members and subjected to compression through said engagement and incident to shock on the supported member.

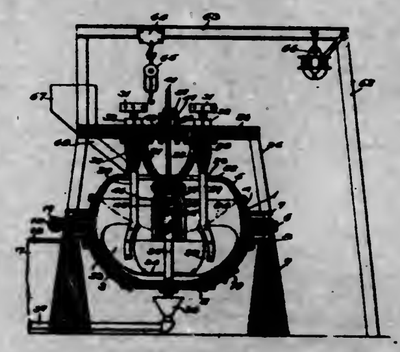
1,905,541. FIREPROOF WALL BOARD. JOHN A. WEBBER and JOHN B. HARMON, Oswego, N. Y. Filed May 5, 1932. Serial No. 609,424. 8 Claims. (Cl. 92—21.)

1. The hereindescribed process of making wall boards, which resides in conveying vermiculite from a source of supply, supplying a fluid to the vermiculite at its said source, then in mixing the vermiculite and fluid with pulp at a point remote from the said source of supply of the vermiculite and during conveying mixing the vermiculite with said fluid to render same viscous, then in refining the mass and forming same in sheets.

1,905,542. CABLE TIGHTENING AND HOLDING DEVICE FOR LOAD PULLING APPARATUS. ANDERS WIKSTRAND, Mora, Sweden. Filed Dec. 19, 1929, Serial No. 415,288, and in Sweden June 7, 1929. 1 Claim. (Cl. 24—129.)

A cable tightening and holding device embodying a supporting member, a grooved disc journalled eccentrically on said supporting member and having affixed to it a projecting arm whose free end is provided with a cable-engaging-hook lying in the plane of the groove in the disc, for the purpose set forth.

1,905,543. SUPPORTING STRUCTURE FOR THE CASING OF A MOTION PICTURE PROJECTION SCREEN. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 21, 1931. Serial No. 539,003. 22 Claims. (Cl. 88—24.)

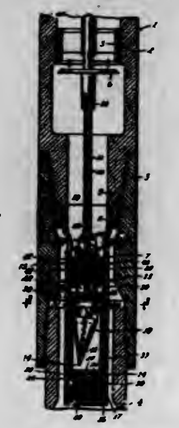


1. The combination with a casing and a plurality of connecting members attached to said casing and each having a portion rotatable about an axis, of a pair of legs mounted on said portion of each connecting member, each leg being rotatable about an axis transverse to said axis for said portion of each connecting member.

1,905,544. ORNAMENTAL DISPLAY DEVICE. CHARLES T. WITTEMEN, Newark, N. J. Filed July 13, 1929. Serial No. 377,963. 2 Claims. (Cl. 40—130.)

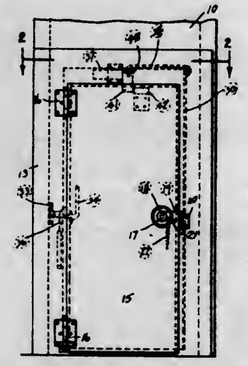
1. An ornamental display device, comprising an opaque member having an exposed segmental spherically concave surface, and means concealed outside the boundaries of said surface of said member adjacent one edge thereof to project light rays of different colors simultaneously upon said surface, from said edge thereof, whereby said colors are blended on the surface to produce an ornamental effect by reflection of the light rays from one portion of said surface to other portions thereof.

1,905,545. GRINDING MILL. CHARLES ERB WUENSCH, Joplin, Mo., assignor to Minerals Beneficiation Incorporated, a Corporation of Delaware. Filed Mar. 6, 1931. Serial No. 520,535. 6 Claims. (Cl. 83—9.)



1. In a grinding machine, a bowl mounted for rotation on a vertical axis, the interior of said bowl being of approximately elliptical shape in transverse vertical section, deflecting means within the bowl and disposed to deflect materials in the lower portion of the bowl upwardly and toward the central portion of the bowl during rotation thereof, and a take-off pipe opening into the bowl centrally and remote from the bottom thereof and disposed to take off by gravity fines accumulated at the central portion of the bowl.

1,905,546. INSTRUMENT FOR RECORDING INCLINATION. HOWE B. WESTON, Oakland, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Nov. 3, 1930. Serial No. 492,005. 4 Claims. (Cl. 234—1.)



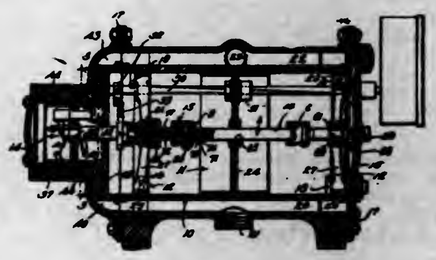
1. In a float valve operated instrument for recording inclination including the combination of a float valve, a

pivoted plumb-bob, a recording disc, and means operatively, connecting said valve and said disc arranged to actuate

said disc to and from recording engagement with said plumb-bob.

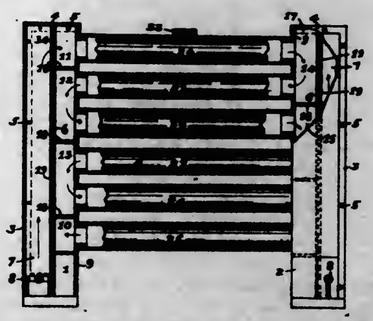
1,905,547. PROTECTIVE ENTRANCE TO A BURGLAR-PROOF SAFE. JAMES WOOD, Noblesville, Ind. Filed June 15, 1931. Serial No. 544,412. 7 Claims. (Cl. 20—1.01.)

1. A protective entrance to a burglar-proof safe and the like, including three cooperating doors, the first door being an entrance door, the second door being an intermediate door connected rigidly with the entrance door, and the third door being a rear door, releasable means for holding the rear door closed, and means mounted on the intermediate door for releasing the rear door when the intermediate door is in open position, whereby when the entrance door is open the intermediate door will close the entrance temporarily and the rear door will be locked and after the entrance door is closed the intermediate door will be open and the rear door can then be released and opened.



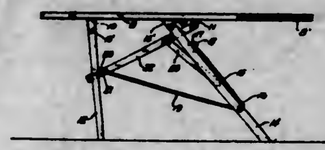
1,905,548. SHEET FEEDING MECHANISM FOR PRINTING MACHINES. KARL ZIMEN, Berlin, Germany, assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 28, 1930, Serial No. 439,064, and in Germany July 2, 1927. 4 Claims. (Cl. 271—38.)

1. A sheet feeding mechanism for printing machines and the like comprising a sheet supporting belt having a stack of sheets thereon, means for imparting an intermittent movement to said belt, means for withdrawing a sheet from the sheets on said belt, means for imparting movement to said sheet withdrawing means, means for connecting said intermittent movement imparting means to said sheet withdrawing means to receive movement therefrom, a detecting member in the path of the sheets moved by said sheet withdrawing means whereby said belt may be operated in different amounts, a normally



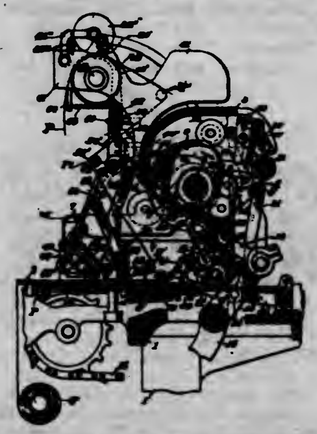
retracted pawl operable from said detecting member for rendering said intermittent movement imparting means inoperative when said detecting member is moved in certain predetermined amounts, and means for interrupting movement of said pawl to limit movement of said intermittent movement imparting means whereby said intermittent movement imparting means will remain operative when said detecting means is not moved or is moved in less than said predetermined amount.

1,905,549. METER. CARLOS J. BASSLER, Alhambra, Calif., assignor to American Liquid Meter Company, Alhambra, Calif., a Corporation of Washington. Filed Dec. 2, 1929. Serial No. 410,991. 16 Claims. (Cl. 73—30.)



11. A meter valve rod including, a rod, spaced stops on the rod, and thermostatic means carried by the rod for varying the spacing of the stops.

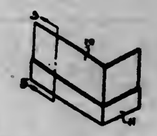
1,905,550. HEATING APPARATUS. WILLIAM A. BOLLINGER, Pittsburgh, Pa. Filed July 8, 1931. Serial No. 549,407. 8 Claims. (Cl. 126—91.)



1. In a heating apparatus, an end casing, partition walls mounted in said end casing and dividing the latter into a combustion chamber and a draft chamber, and a radiator manifold providing a continuous passage having its inlet communicably joined with the upper end of said combuston chamber, the outlet of said radiator manifold being communicably joined with the lower end of said draft chamber.

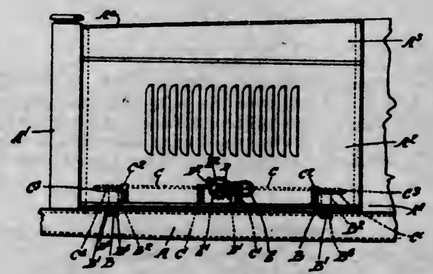
1,905,551. FOLDING IRONING TABLE. JOHN P. DORAU, Portage, Wis. Filed Feb. 13, 1932. Serial No. 592,676. 4 Claims. (Cl. 68—10.)

1. An ironing table, comprising a board member, a pair of legs pivotally connected to the bottom portion of the board member intermediate its ends, a third leg pivotally connected to the bottom portion of the board adjacent one end thereof and remote from the pivotal connections for the pair of legs, a brace member extended between a bottom portion of the board and said third leg, said brace member being pivotally connected at one end to one of the elements between which it is extended and having its free end releasably connectible to the other of said elements, a flexible brace member extended between the pair of legs and the third leg to cause joint movement of all of said legs to and from folded position, and diverging means pivotally connected to the first-mentioned brace member and to the pair of legs and exerting leg spreading forces on the pair of legs.



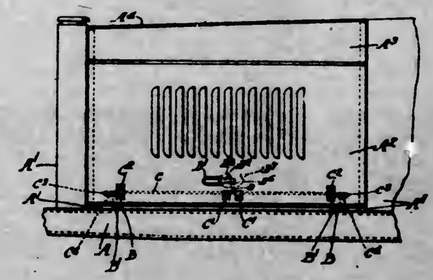
1,905,552. PRINTING MACHINE. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 19, 1928. Serial No. 247,814. 7 Claims. (Cl. 101—65.)

1. In a printing machine, the combination of a reciprocating platen, a platen head comprising two parts, arms projecting from said parts and pivotally connected, yielding means engaging said parts, a cam interposed between said parts, and means for operating said cam to position the platen for printing or for skipping.



1,905,553. BUILDING MATERIAL. RUDOLPH D. FALK, Peoria, Ill. Filed Aug. 1, 1930. Serial No. 472,218. 8 Claims. (Cl. 20—5.)

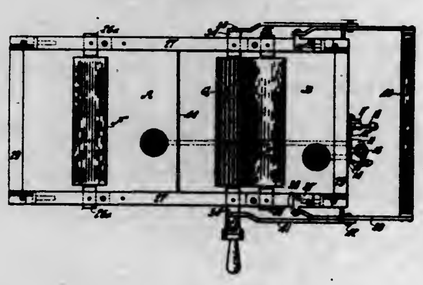
1. A corner siding construction composed of a plurality of flexible waterproof building shingles positioned at a building corner in overlapping relationship, each of said shingles being formed in L-shape by bending the shingle in a vertical plane, each shingle comprising at its front surface a lower portion which extends outward of the



plane of the upper portion to simulate brick, one side thereof being of a dimension to simulate a header and the other as stretcher.

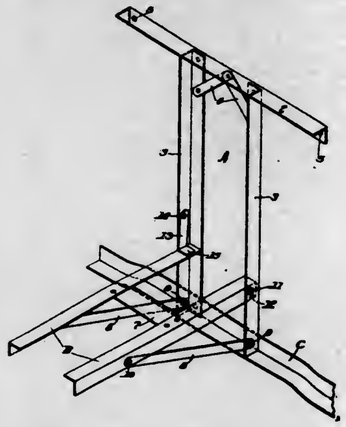
1,905,554. HOOD LATCH. FRANK A. FALK, Stacyville, Iowa, assignor to Chicago Forging & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1932. Serial No. 584,462. 9 Claims. (Cl. 292—215.)

1. For use with a latching device for the multiple hinge closure of an automobile hood, a rod rotatably mounted upon the inner face of the closure for rotation about a generally horisontal axis, and means for rotating said rod including an exterior handle mounted for rotation about an axis generally perpendicular to the axis of rotation of the rod, an offset of said rod including a portion generally inclined to said rod, and an actuating member associated with and rotatable in unison with said handle, said actuating member including a cam slot continuously penetrated by the offset portion of said rod.



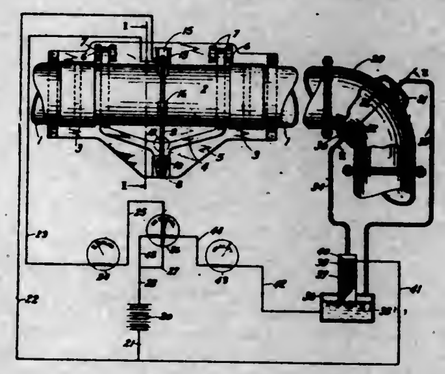
1,905,555. HOOD LATCH. FRANK A. FALK, Stacyville, Iowa, assignor to Chicago Forging & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1932. Serial No. 584,463. 9 Claims. (Cl. 292—215.)

1. For use with a latching device for the multiple hinge closure of an automobile hood, a rod rotatably mounted upon the inner face of the closure for rotation about a generally horisontal axis, and means for rotating said rod including an exterior handle mounted for rotation about an axis generally perpendicular to the axis of rotation of



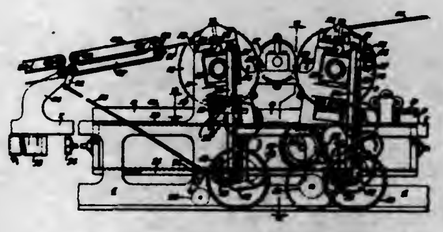
the rod, a closed loop associated with said rod and held against rotation in relation thereto and an actuating member, penetrating said loop, associated with and rotatable in unison with said handle.

1,905,556. WRINGER. ALVIN J. FATHAUER, Cleveland, Ohio. Filed Mar. 19, 1931. Serial No. 523,739. 12 Claims. (Cl. 15—262.)



1. A wringer including an open top tank, an end roller near each end of said open top, a laterally movable driving roller intermediate said end rollers, and a toggle mechanism adapted to move said driving roller into and out of mop wringing relations with either one of said end rollers.

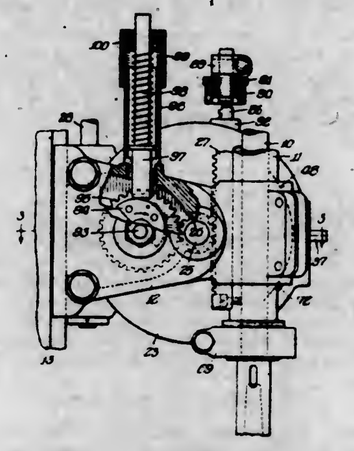
1,905,557. SUPPORTING STAND FOR PORCH GLIDERS. SAMUEL M. FISCHER, Pittsburgh, Pa. Filed May 4, 1931. Serial No. 534,757. 1 Claim. (Cl. 5—129.)



In combination with end framing members having a pair of vertical angle bars providing side flanges and inwardly extending end flanges, each side flange being provided with an inwardly extending button head stud, a pair of longitudinal connecting angle bars having at opposite ends downwardly sloping links pivotally connecting them with the vertical bars, the ends of the longitudinal bars having inclined slots in the side flanges for engaging the studs, a locking shoe of sheet metal pivoted to each upright having an angularly bent terminal having a lower face at an angle to the horizontal upper face of the longitudinal bar and adapted to engage by its rear edge on inward movement the slotted end of each longitudinal bar with increasing force to press it into engagement with the stud and against the inner face of the end flange of the vertical angle bar.

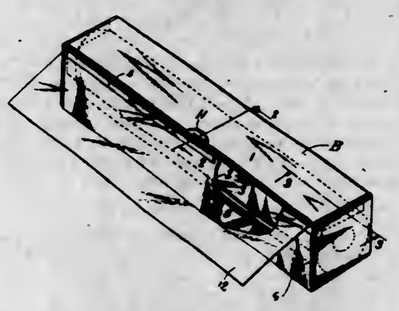
1,905,558. MEASURING DEVICE. LEONARD FOOTE, Pedro Miguel, Canal Zone. Filed Sept. 14, 1928. Serial No. 306,080. 5 Claims. (Cl. 73—167.)

1. Measuring apparatus comprising a conduit including a movable section and relatively stationary adjacent sections, flexible joints connecting said sections, a movable supporting member bearing said movable section, a counterpoise for said latter section and the material passing therethrough, said counterpoise being connected to said supporting member, an indicator, means connecting the indicator to the supporting member, and adjustable means associated with said member for varying the indication of said indicator to compensate for the specific gravity of the material passing through the conduit.



1,905,559. PRINTING, CUTTING, AND SCORING PRESS. GEORGE F. FORD, Hollywood, and WALTER PITTMAN, Huntington Park, Calif., assignors to Fibreboard Products Inc., San Francisco, Calif., a Corporation of Delaware. Filed Nov. 18, 1929. Serial No. 407,807. 7 Claims. (Cl. 101—250.)

1. In a press, the combination with a type carrying bed and a cylinder for impressing the material to be printed against the type, of a rule die secured to said bed, a second cylinder for impressing the material against said die, means on each of said cylinders for holding a sheet of material and means for transferring the material from said first cylinder to said second cylinder.

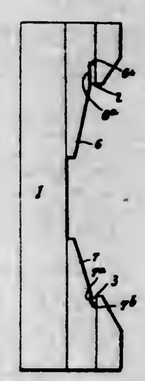


1,905,560. DRILLING MACHINE. JOSEPH FRIEDL, Covington, Ky., assignor to The Avey Drilling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Original application filed Mar. 20, 1924, Serial No. 700,525. Divided and this application filed June 23, 1930. Serial No. 462,974. 7 Claims. (Cl. 77—36.)

1. In a drill machine, the combination of a drill spindle, a power feed and a counterbalance for effecting the working and return strokes respectively of the spindle, and oscillating cam geared to said spindle, and an adjustably

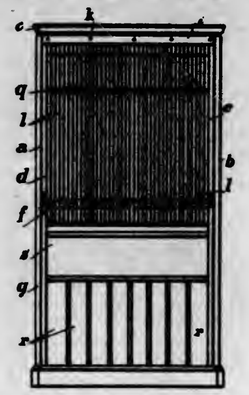
spring-pressed plunger constantly engaging and cooperating with said cam to control the return movement of the spindle.

1,905,561. DISPENSING CARTON. ALVA FLINT GLUCK, Minerva, Ohio, assignor to The Coated Paper Products Company, Minerva, Ohio, a Corporation of Ohio. Filed Nov. 13, 1929. Serial No. 406,747. 3 Claims. (Cl. 206—58.)



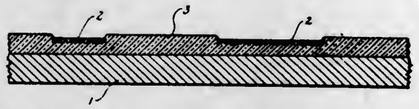
1. A dispensing carton for rolls of wax paper and the like made of a single piece of material folded into box form in which the end walls are formed of the parts constituting integral extensions of the front, rear and bottom walls, the said front wall having a metallic strip crimped over and secured to its upper edge and said strip having integral extensions crimped over and secured to the upper edge of the extending parts of the front wall which constitute a portion of the end wall, said strip constituting in its association with the front wall a cutting edge for paper drawn from the container and being turned at right angles at the ends of the front wall and extending rearwardly with the said extensions of the front wall in the formation of the end wall, the said extensions of the front and rear walls of the carton lying adjacent in the end walls, and the extending portion of the bottom wall of the carton extending upwardly from the bottom of the carton overlying the extensions of the front and rear walls in the end walls and having a portion folded over the top of the end wall and the said extensions of metallic strip and secured to the inner side of the end wall and closing and gripping the inwardly extending portions of the metallic strip and securing the front and rear walls in place and maintaining the said metallic strip in rigid and fixed relation to the end wall.

1,905,562. PAPER DISPENSING DEVICE. FRED CLARKE GLUCK, Minerva, Ohio, assignor to The Coated Paper Products Company, Minerva, Ohio, a Corporation of Ohio. Filed Oct. 2, 1930. Serial No. 485,924. 7 Claims. (Cl. 242—55.5.)



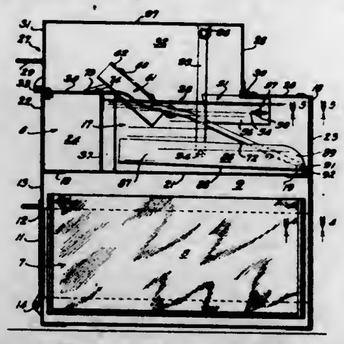
1. A dispensing cabinet comprising a front wall having opposed end walls integral therewith, means for mounting the cabinet on a support, means associated with said end walls for supporting a roll of sheet material, and a cutting edge at the lower side of said front wall for severing sheet material from the roll, the bottom of the cabinet being substantially unobstructed to permit access to the roll.

1,905,563. REVERSIBLE ATTRACTION SIGN. CHARLES W. HATKE, Denver, Colo. Filed May 27, 1932. Serial No. 618,881. 1 Claim. (Cl. 40—140.)



In a sign, in combination, a backboard, parallel upper and lower members attached to and relatively spaced apart upon the backboard and strips on the front faces of said members, said members being cut away behind said strips whereby to form upper and lower opposed grooves spaced forward from said backboard and adapted to carry character-bearing plates, the upper groove being deeper than the lower groove, the distance between the bottoms of said grooves being greater than the length of the character-bearing plates, but the distance between the lower edge of said upper strip and the bottom of the lower groove being less than the length of said plates whereby said plates may be readily placed in or removed from said grooves and whereby sufficient space is provided between the backboard and said plates, when carried in said grooves, to permit the gripping of the edges of said plates by the fingers of an operator.

1,905,564. NEWSPAPER STAND. MAX KLIEM, Leipsig, Germany. Filed May 23, 1931, Serial No. 539,616, and in Germany Sept. 3, 1930. 3 Claims. (Cl. 211—45.)

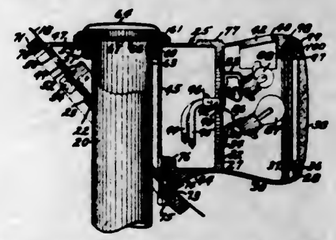


1. A newspaper stand comprising a cabinet having an open front, a horizontal channel rail at the top of the cabinet, a horizontal ledge projecting from the median part of the cabinet beyond the vertical plane of said rail and overhanging the lower part of the cabinet, the side wall portions of the cabinet between said rail and said ledge having straight, inclined edges situated in a plane which covers the rail as well as the ledge.

1,905,565. PRODUCTION OF SIGNS, DECORATIONS, AND THE LIKE. HOWARD B. LIND, Toledo, Ohio, assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 22, 1929. Serial No. 401,615. 2 Claims. (Cl. 41—26.)

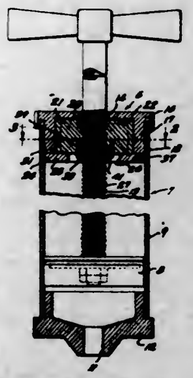
1. The method of producing designs upon porcelain enamel which consists in taking a pasty composition of mineral coloring matter and an oily carrier containing no frit capable of causing a change in the depth of porcelain enamel to which it is applied, applying the said composition to a layer of porcelain enamel material upon a metallic object, and subjecting the enamel so treated to fusing.

1,905,566. STERILIZER. JESS G. MOORE, Los Angeles, Calif. Filed Oct. 1, 1931. Serial No. 566,283. 2 Claims. (Cl. 167—3.)



1. In a steriliser of the class described, a reservoir adapted to contain a sterilising fluid, a cover hinged thereto, and a holder comprising a basket structure hinged adjacent one end to said reservoir below the level of the fluid therein, and a link connected at one end to said basket structure and at the other end to said cover, whereby the other end of said basket structure is raised above said fluid level when said cover is opened.

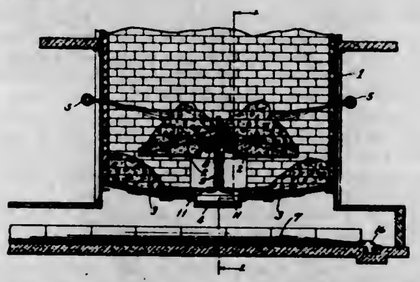
1,905,567. FLOATING BUG OR LURE. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 26, 1927. Serial No. 215,649. 1 Claim. (Cl. 43—42.)



A fish lure comprising a light buoyant body and a wire passing through the body from end to end, a hook attached to the wire in position to trail behind the body with its point directed upwardly, and a stop on the wire to flexibly maintain the hook in substantially horizontal position.

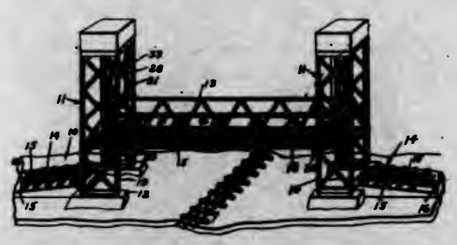
1,905,568. TAIL LAMP FIXTURE. WILLIAM A. RADKE, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Sept. 19, 1932. Serial No. 633,805. 9 Claims. (Cl. 240—8.3.)

1. In an automotive vehicle, the combination of a rear fender having an aperture therein, a gasoline tank filler spout extending through said aperture from a point below said fender to a point above the same, and a tail lamp fixture secured to said fender surrounding said aperture adapted to support and conceal the portion of said gasoline tank filler spout extending above said fender.



1,905,569. GREASE GUN. RENÉ RAPELLIN, San Gabriel, Calif. Filed Dec. 9, 1931. Serial No. 579,882. 2 Claims. (Cl. 74—40.)

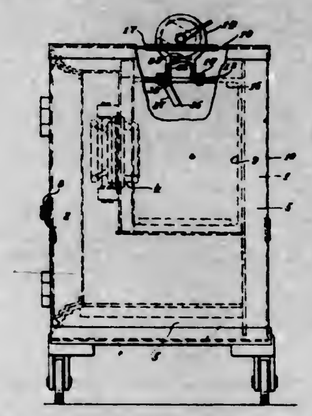
1. In a device of the class described, a tubular barrel, a closure cap mounted adjacent one end of said barrel and rotatable with respect thereto, a feed screw extending



slidably and rotatably through said cap, a pair of spaced guides rigid with said barrel and having opposed faces parallel to each other, a pair of threaded members slidable between said guides, an annular flange carried by said cap and having a pair of cams on its inner face engaging said threaded members, each cam extending a distance of half a circle, said cam surfaces being adapted to advance said members to said screw when said cap is turned half a revolution in one direction, and spring means for moving said members away from said screw when said cap is turned a half revolution in the other direction.

1,905,570. NOZZLE OSCILLATING MEANS. JACOB ROMM, Philadelphia, Pa., assignor to The Allen-Sherman-Hoff Company, a Corporation of Pennsylvania. Filed May 31, 1929. Serial No. 367,281. 6 Claims. (Cl. 302—15.)

1. Ash disposal means including walls spaced apart from each other for retaining ash, apparatus comprising in combination a sluiceway disposed in position to receive ash removed from the walls, a nozzle assembly including a plurality of pivotally suspended pipes having nozzles disposed between and above the tops of the said walls, means connecting said pipes together for conjoint movement, and guided means joined to the said pipes for swinging said pipes in unison about their pivots to direct water progressively against the ash on both walls.



1,905,571. TOY RAILWAY SYSTEM. RONALD G. SMITH, Fairfield, Conn. Filed Dec. 24, 1930. Serial No. 504,519. 18 Claims. (Cl. 104—129.)

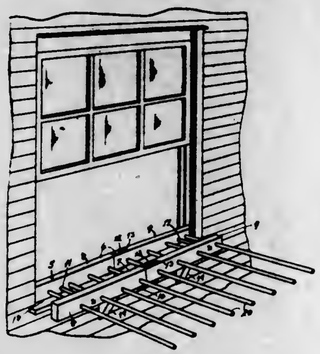
1. A toy railway bridge comprising as a unitary portable structure: piers; approaches; and a span movably mounted to permit the passage of movable objects beneath or upon it.

1,905,572. CHEST DEPOSITORY. CHARLES F. SIOMMO, York, Pa., assignor to York Safe & Lock Company, York, Pa., a Corporation of Delaware. Filed June 13, 1931. Serial No. 544,150. 5 Claims. (Cl. 109—1.)

1. The combination with a fireproof safe and burglar proof chest of a depository having a discharge passage leading downwardly into the chest with a depository casing at the top of the passage having a discharge opening leading to said passage, the casing having enclosing and supporting means for a rotary pocket member and an admission opening for access to the pocket, a rotary pocket member in the said casing, having a pocket opening adapted to register with the admission opening and the discharge opening in turn, the casing enclosure including a wall separating the admission opening from the discharge opening, the same being of a dimension in the direction of

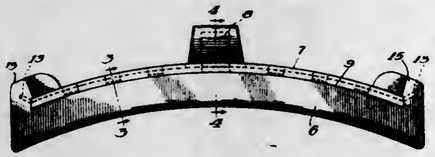
rotation of the pocket greater than the corresponding dimension of the pocket, the discharge passage from the depository having a baffle mounted to move from open to closed position as to said passage, and a float connected thereto to operate the baffle to block the passage if the chest is flooded with water.

1,905,573. OIL WELL SURVEYING INSTRUMENT. WAYNE M. SMITH and KENNETH W. HALBY, Fellows, Calif. Filed Mar. 29, 1932. Serial No. 601,814. 5 Claims. (Cl. 234—5.3.)



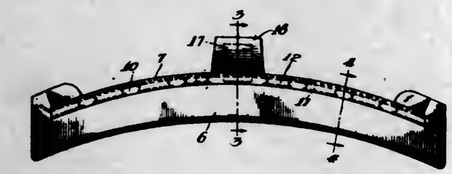
1. In an instrument for measuring the angular deflection of bores, a frame to be lowered into the bore, means on said frame movable through a great arc relative to said frame for recording great angles of deflection, a second means movable through a lesser arc relative to said frame, and cooperating with said first named means for recording lesser angles of deflection.

1,905,574. WINDOW CLOTHES RACK. CARRIE STERNBERG, Philadelphia, Pa. Filed Oct. 19, 1932. Serial No. 638,479. 2 Claims. (Cl. 211—104.)



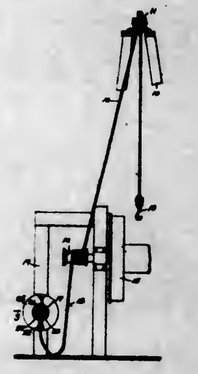
1. In a window clothes rack, an inner rail consisting of two sections hinged together and adapted to be mount-

ed in a window casing with the ends projecting into opposite sash guideways, said rail having a series of holes in both of the sections in longitudinally spaced relation, compressible members on the ends of said rail, an outer rail consisting of two sections hinged together and having



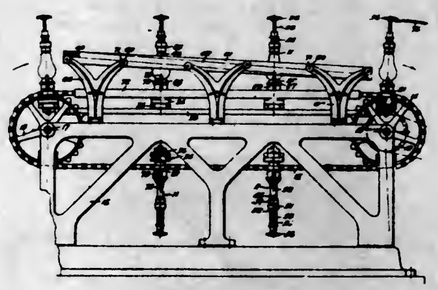
a series of longitudinally spaced holes throughout both sections of said rail, cross bars on the ends of which are mounted said rails for holding the latter in spaced relation with the holes in both rails in alignment, and rods removably and slidably mounted in the holes in said rails, said rods having heads on their inner ends.

1,905,575. BRAKE SHOE. WALLACE B. SUTHERLAND, Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed May 9, 1931. Serial No. 536,147. 4 Claims. (Cl. 188—258.)



1. A brake shoe comprising a body, a back on the body and having side edge flanges enclosing corners of the body, downwardly inclined and transversely extending tongues on the back adjacent said flanges and embedded in the body, and lugs on the body, and upturned projections with dovetail recesses therebetween embedded in the end lugs.

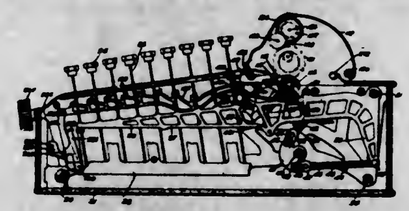
1,905,576. BRAKE SHOE. WALLACE B. SUTHERLAND, Suffern, N. Y., assignor to The American Brake Shoe and Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed May 18, 1931. Serial No. 538,162. 1 Claim. (Cl. 188—258.)



A brake shoe comprising a body, a reenforce back on the body and having side flanges enclosing adjacent corners of the body, an auxiliary back secured to the inner side of the reenforce back and having downwardly and outwardly inclined side flanges embedded in the body, a strap lug engaged with said backs, said auxiliary back having elongated recesses in its side edges and said reenforce back having complementary openings to receive parts of the strap lug and to permit the body metal to flow therethrough during the casing operation to form reenforce projections at the sides of said parts of the strap lug.

1,905,577. CAT LINE SPOOL. BERT TRAVIS, Santa Fe Springs, Calif. Filed Nov. 3, 1930. Serial No. 593,004. 2 Claims. (Cl. 254—176.)

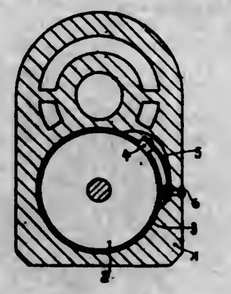
1. In combination with a well drilling rig having a cat line and a cat head, a spool on which the cat line may be wound after being removed from the cat head, and means on the spool rotatable therewith adapted to releasably hold the cat line whereby the spool may be rotated without winding up line on the spool to take the twist out of the cat line.



1,905,578. FRUIT PEELER. JOHN T. TUCKER, Berkeley, Calif. Filed Mar. 29, 1930. Serial No. 439,956. 18 Claims. (Cl. 146—48.)

1. A fruit peeler comprising means for advancing a fruit, means for rotating said fruit during the advancement thereof, and a blade having successive portions adapted to operate on successive superficial portions of said fruit during the advancement thereof.

1,905,579. CALCULATING MACHINE. JOSEPH A. V. TURCK, Wilmette, Ill., assignor to Felt & Tarrant Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 30, 1929. Serial No. 359,262. 25 Claims. (Cl. 235—82.)

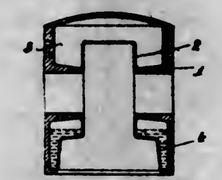


4. A combined key-driven and key-set operated calculating machine having a board of keys for driving and for setting actuating mechanism in said machine and having keyboard locking devices for locking the keyboard against accumulative manipulation, in combination: devices adapted for compelling full key-value-stroke of the actuating mechanism under both key-driven and key-set operation and adapted for setting said keyboard locking devices in event of a partial down key-stroke, under key-driven operation, to lock the rest of the keyboard against manipulation; and means for clearing the keyboard of said keyboard locking devices at the will of an operator.

12. In a calculating machine comprising ordinal columns of depressible keys; ordinal actuators set in motion by said keys; a digital stop device for each of said ordinal actuators for digitally controlling their degree of actuation, according to the key depressed, said stop devices being connected to said actuators and movable thereby into contact with a depressed key to effect the digital control; in combination: full stroke mechanisms for each of said actuators, said mechanisms being connected to and movable with their respective actuators to prevent their return until predetermined digital actuation of said actuators has been completed by said keys; said full stroke mechanisms being adapted to be cleared by limited movement of the actuators relative to said digital stop devices at the completion of each down key-stroke so as to allow the return of the actuators to normal position; and also being adapted to act on the return strokes of said actuators to compel a complete return of said actuators before another down key-stroke thereon may be effected.

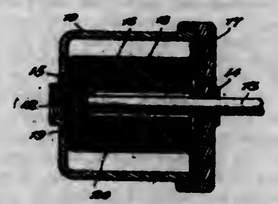
24. In a calculating machine comprising ordinal accumulator mechanism, ordinal actuators therefor, key set means for said actuators, ordinal keys for said key set means, and means for operating said actuators when set by said keys, the combination of partial key-value stroke locking means controlled by said actuators and adapted for compelling a full digital actuation of the actuators for the value of the keys set therefor.

1,905,580. DYNAMO-ELECTRIC IGNITION APPARATUS. FRITZ ALLENDORFF, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Sept. 15, 1930, Serial No. 482,116, and in Germany Oct. 7, 1929. 2 Claims. (Cl. 171—209.)



1. Grounding means for an ignition magneto comprising a slip ring carried by the armature of said magneto, a brush cooperating with said ring, and a combined support and grounding element for said brush comprising a spring of blade form in a single arc of curvature approximating the curvature of the slip ring secured at one end to the frame of said magneto and alone supporting said brush from said magneto frame in resilient engagement with said slip ring.

1,905,581. WIRE BALE-TIE. GEORGE H. GAUS, Washington, D. C., dedicated to the free use of the Government and the People. Filed Dec. 16, 1932. Serial No. 647,004. 2 Claims. (Cl. 24—28.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

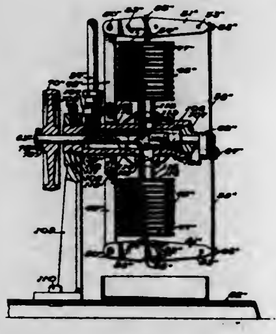


1. A bale-tie, comprising a metallic rectangular sleeve, having parallel tapering surfaces, semicircular slots cut at opposite ends of said sleeve, and a longitudinal slot, having parallel sides, bisecting said sleeve.

1,905,582. PISTON WITH COOLING EFFECT. ANTON GAZDA, Vienna, Austria. Filed Apr. 23, 1929, Serial No. 357,472, and in Austria Apr. 23, 1928. 2 Claims. (Cl. 123—176.)

1. A piston comprising a body portion, an insertion tightly fitted in said body portion providing a closed hollow space bounded by the interior surface of the body portion and the adjacent surface of the insertion, and a small quantity of liquefiable salt in said hollow space and having a boiling temperature above the highest temperature occurring in the engine.

1,905,583. FLEXIBLE CORRUGATED TUBULAR WALL. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed May 16, 1927. Serial No. 191,826. 7 Claims. (Cl. 137—156.5.)

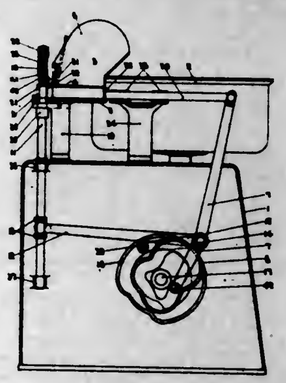


1. An axially expansible and collapsible, corrugated metallic bellows having relatively deep, flexible corrugations and provided with a casing of elastic material which substantially fills like corrugations and which is deformable but substantially incompressible, and means cooperating with said elastic material to limit the extent of its deformation in the direction of the radii of said bellows and thereby limit the collapse of said bellows by limiting the extent to which said elastic material may be extruded from said corrugations as a result of the squeezing action thereon of the lateral walls of said corrugations.

1,905,584. METHOD OF MAKING THIN WALLED TUBES. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Feb. 21, 1930. Serial No. 430,453. 10 Claims. (Cl. 29—156.)

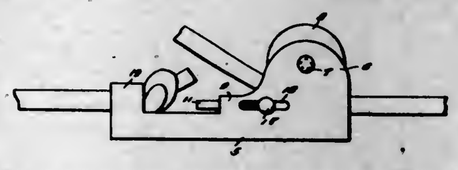
1. In the manufacture of thin walled tubes for highly-flexible, deeply-corrugated tubular metal walls, the method

which includes forming a tube with a non-homogeneous seam including a metal different from that of the tube, alternately subjecting the tube to a plurality of drawing operations during which the tube wall is reduced in cross section and a plurality of operations during which the tube is subjected to a sufficient temperature for a sufficient time to permit a substantial grain growth therein and continuing said alternate operations until under microscopic examination said seam has disappeared.



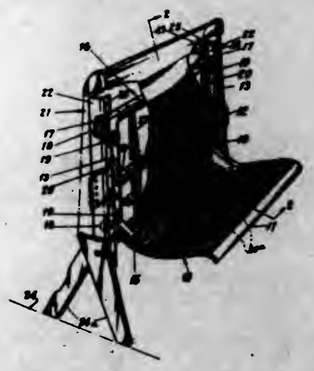
1,905,585. STEAM ENGINE. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Mar. 19, 1930. Serial No. 437,173. 2 Claims. (Cl. 121—48.)

1. In a toy engine of the type embodying a tubular support, a plurality of collapsible and expansible metallic vessels each having a movable end wall and a stationary end wall and mounted at intervals around the periphery of said support, means for admitting and exhausting a motive fluid to and from said vessels, and a crankshaft to be driven from said movable end walls, a device for transmitting the movement of each of said movable end walls to said crankshaft comprising a lever formed of sheet metal elements secured together and spread apart to form a bifurcated end, said lever being adapted to receive the thrust from said movable end wall, a lever support having a longitudinal portion and an arcuate portion, the latter portion having a curved surface conforming to a portion of the periphery of said tubular support and the longitudinal portion being pivotally secured between the furcations of the end of said lever, and a link connected at one end to the opposite end of said lever by the passage of the lever end through an opening in said link and the spreading of said lever elements, the other end of said link being adapted to be connected with said crank shaft, said lever, support and link being permanently secured together for installation as a unit after assembly of said vessels and tubular support, the arcuate portions of said lever supports surrounding said tubular support and being removably secured to one another when in installed position.



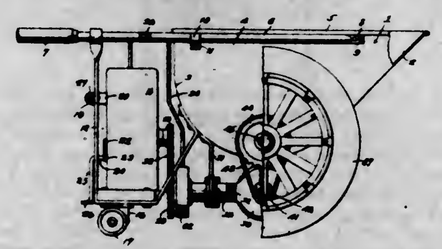
1,905,586. MACHINE FOR THE SEPARATION AND FORMATION OF THE FILLER OF CIGAR BUNCHES. ERIK GRANSTEDT, Stockholm, Sweden, assignor to Aktiebolaget Formator, Stockholm, Sweden, a Joint-Stock Company of Sweden. Filed Mar. 8, 1928, Serial No. 260,112, and in Germany Mar. 17, 1927. 2 Claims. (Cl. 131—5.)

1. A machine for making cigar fillers, comprising a press mold having a horisontal channel formed therein, the width of which is equal to the length of the desired strings, a plunger mounted above the one end of said press mold, a head wall closing the end of the channel adjacent the plunger, a piston movable in the channel toward the head wall to press the filler material between it and said head wall, a door at the top of said channel, said door engaging the upper side of the piston to retain the door in its closed position during the working stroke



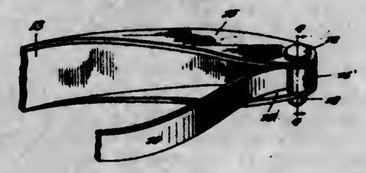
of the piston, and means whereby the working stroke of said piston is interrupted at predetermined intervals and whereby the piston makes short return movements on said interruptions.

1,905,587. FASTENING DEVICE. JOHN J. HAFER, Sr., Stratford, Conn., and MATHIAS HAFER, Sr., College Point, N. Y. Filed Oct. 27, 1932. Serial No. 639,884. 5 Claims. (Cl. 24—126.)



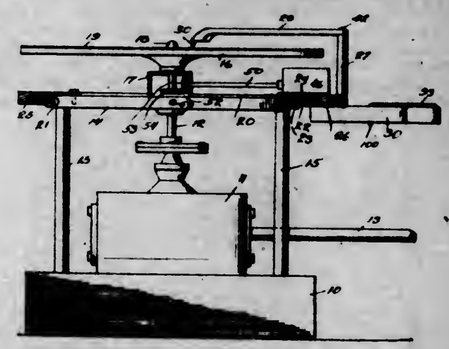
1. A device of the class described comprising a body, a pulley, means for rotatably mounting the pulley on the body, a wedge shaped jaw slidable on the body, and means normally urging the jaw to a position between the body and the pulley.

1,905,588. VEHICLE SEAT. LEONARD B. HARRIS, New York, N. Y. Filed Oct. 22, 1930. Serial No. 490,429. 2 Claims. (Cl. 155—53.)



1. In a multiple-passenger bench seat structure, the combination of an elongated unitary seat and back rest frame slidably housed in a stationary frame for vertical movement, said stationary frame being designed to be fastened to a floor and comprising two spaced channels positioned with the flange edges facing each other and providing guide tracks on the inner faces and on the edges of the flanges, rollers fixedly mounted at the corners of said back rest frame and disposed in rolling engagement with flange edges of said channels and further rollers fixedly mounted at the corners of said back rest frame and disposed between the inner faces of the flanges of said channels, said further rollers being of a diameter substantially equal to the distance between the said inner faces, said edge-contacting rollers being in right-angular relation with said further rollers, said back rest frame being guided in its vertical movement in the stationary frame on all sides.

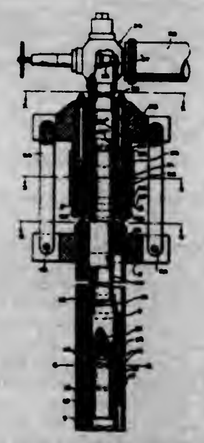
1,905,589. MOTOR BARROW. JOE HOFFMAN and HUGO HOFFMAN, Two Rivers, Wis. Filed Aug. 24, 1931. Serial No. 559,074. 2 Claims. (Cl. 180—29.)



2. A wheel barrow comprising a load-carrying body, a single pair of ground wheels supported for rotation at the sides of the body and located intermediate the front and rear ends of the body, a differential disposed underneath the body in substantially vertical alinement with the center of rotation of the ground wheels, the differential including transverse shafts and a rearwardly extending housing, means for suspending the differential from the body, means extended upwardly from the transverse shafts of the differential for operatively connecting those shafts with the ground wheels, a longitudinal shaft journaled in the housing and operatively connected with the transverse shafts of the differential, a motor, means for supporting the motor on the barrow in a position behind the body, a driving connection between the motor and the longitudinal shaft, a brake mechanism carried by the housing and acting on the longitudinal shaft, the brake mechanism being located between the motor and the body, rearwardly extended handles carried by the body, means for operating the brake mechanism, and means for controlling the motor, both of said means being extended backwardly upon the handles within reach of a person holding the handles.

1,905,590. AUTOMOBILE BUMPER. WALTER V. ISGRIG, Milwaukee, Wis. Filed Apr. 5, 1932. Serial No. 603,824. 4 Claims. (Cl. 293—55.)

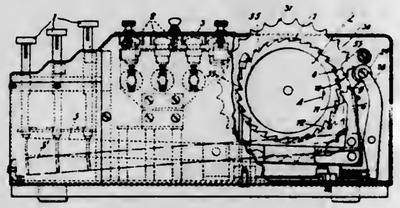
1. A bumper bar terminally bent along an oblique line at the longitudinal edge to provide a flange tapering from its extremity toward the center of the bumper bar, the extreme end of the bar being reversely bent to provide a tongue at the extremity of the flange, said flange being provided with a bolt opening adjacent said tongue.



1,905,591. SYNCHRONIZER. OLIVER A. JONES and JAMES A. STRUTHERS, Bacchus, Utah. Filed July 12, 1930. Serial No. 467,580. 9 Claims. (Cl. 274—9.)

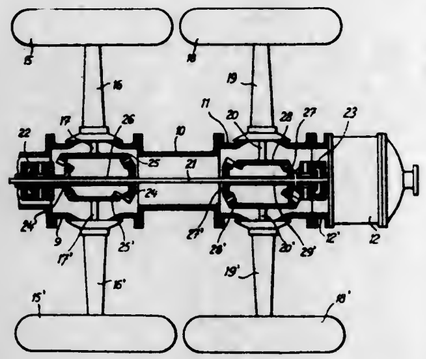
2. An adjusting device for reproducing instruments comprising a fixed table, a ring mounted for revolution on the periphery of the fixed table, a turntable, means for rotating the turntable, a phonograph pick-up arm mounted on the ring, the ring being adapted to be revolved for advancing or retarding the usual needle of the pick-up arm in a groove of a record carried by the turntable, means for supporting the ring at the periphery of the fixed table, and means for releasably holding the ring against rotation relative to the fixed table.

3. A synchronizing device for sound recording and reproducing instruments comprising a fixed support, a ring mounted for rotation on the support, a shaft for revolving a phonographic record, means for revolving the shaft, a pick-up arm mounted on the ring and provided with a stylus engaging a groove of the record, an indicating needle connected to the arm and moved through a definite arc by the arm by reason of the stylus moving across the record in the groove of said record, a complementary indicating needle, means operatively connecting the complementary needle with the shaft for causing the second indicating needle to move in synchronism with the first indicating needle.



1,905,592. CONTROL DEVICE FOR WELLS. DONALD R. KNOWLTON and WILBUR J. CRITES, Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla., a Corporation of Delaware. Filed Jan. 30, 1932. Serial No. 589,952. 10 Claims. (Cl. 166—15.)

1. The combination in a well having a casing and tubing, of a plurality of adjustable beans for controlling

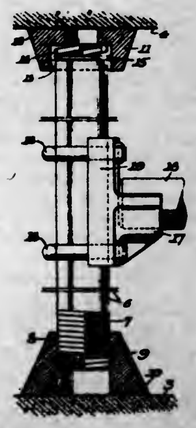


the flow of fluid through the tubing, one of said beans being submerged and the other being positioned at the top of the tubing, and means at the top of the well for adjusting both beans.

1,905,593. CODING MACHINE. WILLI KOHN, Berlin-Friedenau, Germany. Filed Nov. 12, 1929, Serial No. 406,695, and in Germany Nov. 16, 1928. 5 Claims. (Cl. 35—13.)

1. An electrical coding device comprising coding cylinders containing electric conductors and electrical contacts for passing the electric current through the coding device for the purpose of exchanging characters, a gear connected with each coding cylinder, means for rotating the coding cylinders, character keys operating the rotating means for the coding cylinders, manually operable character rings adapted to be operated with respect to the coding cylinders, means for fixing the character rings on the coding cylinders, means for rotating at predetermined periods each coding cylinder from the preceding one, and a plurality of teeth for the rotating means connected with the character rings to enable a frequent rotation of the adjacent cylinder.

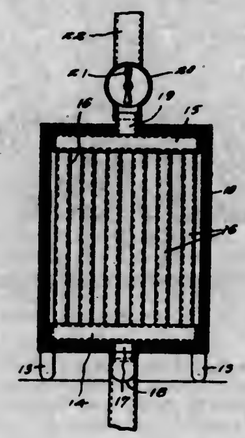
1,905,594. POWER-DRIVEN VEHICLE. HANS LEDWINKA, Koprivnice, Czechoslovakia. Filed Jan. 16, 1930, Serial No. 421,281, and in Germany Jan. 23, 1929. 6 Claims. (Cl. 180—22.)



1. A motor driven vehicle comprising driving wheels, an engine, electrical and mechanical power transmission devices between the engine and the driving wheels, the electrical transmission device including a generator driven by the engine and an electric motor operated by the generator, said electrical and mechanical power transmission devices including a shaft driven by the electric motor, a hollow shaft mounted on the first mentioned shaft, a gear wheel carried by the hollow shaft, means connecting the gear wheel with one of the driving wheels, a second gear wheel freely rotatable on the hollow shaft and means connecting the second gear wheel with the other drive wheel and a differential gear between the electric motor driven shaft and said gear wheels, and a tubular carrier arranged in the central longitudinal plane of the vehicle and constituting the chassis frame, said tubular carrier embracing the electric motor, generator and said shaft.

1,905,595. INTERCHANGEABLE PORCELAIN ROOT FACING. ARTHUR S. LEVY, Birmingham, Ala., assignor, by mesne assignments, to Dixie Dental Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1922. Serial No. 584,729. 10 Claims. (Cl. 32—9.)

4. A tooth which includes a root extension and a crown portion, the crown portion provided with an inclined surface extending labio-occlusally from the lingual side, the front side being a greater distance than the rear side from the gingival end of the tooth; a metal backing having a surface to fit said inclined surface; said crown portion and backing having retaining means disposed in the direction of the inclined surface and engaged by a relative sliding movement of the inclined surfaces of the crown portion and the backing, whereby the root extension can be withdrawn from the root socket by an outward movement in the direction of said inclined surface.

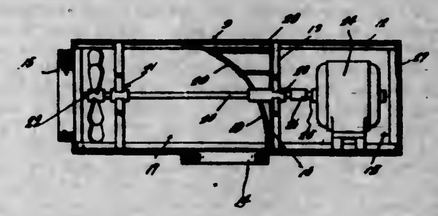


1,905,596. STANCHION. LLOYD L. LEWIS, Wollaston, Mass. Filed Apr. 6, 1931. Serial No. 528,173. 2 Claims. (Cl. 137—75.)

1. A stanchion for supporting pipe lines between vertically spaced surfaces comprising a pair of horizontally spaced vertically disposed standards, each having an end retaining member at each end for frictionally engaging the vertically spaced surfaces, a screw connection between one end of each standard and its corresponding retaining member for extending or retracting the length of the standard to adjust the frictional engagement with the vertically spaced surfaces, a spring between the opposite end of the standard and retaining member to maintain the frictional engagement at approximately a predetermined

degree of pressure, a retainer bracket attached to each standard intermediate its ends and a horizontally disposed pipe supporting rod having its ends supported in said retainer brackets.

1,905,597. REFRIGERATOR. JOSEPH H. LONG, Cleveland, Ohio. Filed May 10, 1932. Serial No. 610,468. 4 Claims. (Cl. 257—22.)



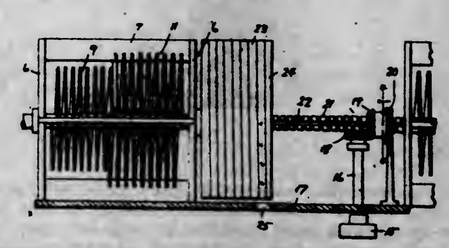
2. A refrigerator comprising an insulated box, an upper and a lower manifold in the box, a plurality of parallel cooling pipes mounted within the box and connected to said manifolds, nipples carried by each manifold and extending through the box, an intake pipe connected to one of said nipples and having the opposite end thereof disposed in a position to receive cool air, and means connected to the other nipple to draw the cool air through said intake pipe and said cooling pipes.

1,905,598. SIMULTANEOUS PRODUCTION OF CONDENSED CARBON DIOXIDE AND SLOW SETTING CEMENT. CHAUNCEY C. LOOMIS, Lenox, Mass., and ALEXANDER DONALD MACDONALD, New York, N. Y., assignors, by mesne assignments, to New England Lime Company, Pittsfield, Mass., a Corporation of Delaware. Filed June 5, 1929. Serial No. 368,717. 2 Claims. (Cl. 23—150.)

1. The method of producing carbonic acid gas and slow setting calcium sulphate cement from limestone and sulphuric acid solution which comprises finely crushing limestone, bringing the finely crushed limestone and the sulphuric acid solution into intimate contact with each other, the limestone being employed in at least sufficient amount to neutralize the sulphuric acid, maintaining this intimate contact with exclusion of air until the chemical reaction between the limestone and sulphuric acid is substantially complete and the sulphuric acid completely neutralized and separating the carbonic acid gas from the slow setting calcium sulphate cement, the initial concentration of the sulphuric acid solution being limited to a concentration not less than about 40 parts by weight of sulphuric acid to each 60 parts by weight of water and the temperature of the reacting mixture of limestone and sulphuric acid being maintained between about 110 deg. C. and about 300° C.

1,905,599. VENTILATOR. HERMAN S. NOWITSKY, Norfolk, Va. Filed June 2, 1932. Serial No. 615,068. 2 Claims. (Cl. 230—117.)

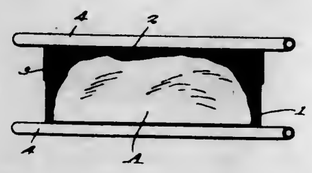
1. In a ventilator of the class described, frame work, a fireproof casing built around said frame work, a partition in said casing dividing it into individual compartments, one compartment being formed with a deflector plate and complemental pipe connections defining an exhaust duct, a rotary suction fan located in said duct, an operating shaft for said fan located in the duct and extending into the remaining compartment, a motor in said last named compartment operatively connected with the adjacent end



of said fan shaft, said compartments being in communication with each other through the medium of screened openings and said fan serving to suck in atmospheric air for circulation through the motor compartment for cooling the motor, and said motor compartment having individual doors to permit access to be had to the compartment for repair and lubricating purposes.

1,905,600. METHOD OF MAKING SPARK PLUGS. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a Corporation of New Jersey. Filed Aug. 9, 1930. Serial No. 474,226. 2 Claims. (Cl. 123—169.)

1. A method of forming spark plugs to adapt them for use with internal combustion engines having different heat characteristics, which consists in making the central electrode assemblies of the plugs identical in structure, providing said assemblies with the same number of insulating washers having substantially the same diameters and surrounding the electrodes, adjacent their sparking ends, compressing said washers to form a substantially homogeneous mass of insulation, and thereafter applying a cutting tool to the mass to remove a different predetermined amount of said insulation from each of a different predetermined number of washers to form a cylindrical portion and a tapered portion of varying lengths in each assembly in accordance with the temperature requirements of the engine with which each plug is to be used.

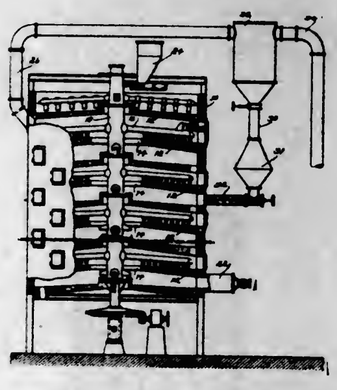


1,905,601. VARIABLE CONDENSER. CHARLES E. PARCELL, Vinton, Iowa. Filed Feb. 18, 1930. Serial No. 428,104. 1 Claim. (Cl. 175—41.5.)

A variable condenser comprising a supporting plate, a pair of spaced parallel members supported from each end portion of said plate, an elongated screw shaft passing

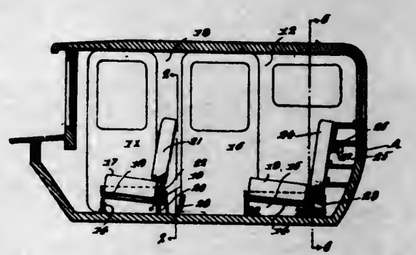
through the two pairs of parallel members, some of said members having openings therein engaging the threads of the shaft whereby the shaft will have longitudinal movement in said parallel members, a pair of spiral blades having their inner peripheries fastened in portions of the grooves formed by the threads of the shaft and each blade being located between one pair of parallel members, bars of non-conducting material connecting the parallel members of each pair together and spaced apart and having grooves in their inner edges, a second spiral blade located between each pair of parallel members and having portions of its outer periphery located in and fastened in the grooves of the non-conducting bars, said second blade having an opening at its center through which the shaft and portions of the first blade pass, with the first blade out of contact with the second blade, means located between the pairs of parallel members for rotating the shaft without interfering with its longitudinal movement, a drum carried by the shaft for movement therewith and located between the pairs of parallel members and a spiral scale carried by the periphery of the drum, the convolutions of the scale corresponding to the convolutions of the spiral blades on the shaft, said supporting plate having a window therein for exposing portions of the scale, with the operating means for the shaft extending through said supporting plate.

1,905,602. METHOD OF QUICK FREEZING. FRANK HOWARD PATTERSON, Fredonia, Kans. Filed Aug. 31, 1931. Serial No. 560,480. 3 Claims. (Cl. 62—104.)



1. The method of quick freezing which includes the steps of packing the article in a container with a comminuted material which will not cohere when subjected to quick freezing temperatures, said material and the container having a high coefficient of thermal conductivity, and then freezing the article by placing the container in contact with a freezing medium.

1,905,603. WALL INSERT. BION C. PLACE, Detroit, Mich., assignor of one-half to George E. Gagnier, Detroit, Mich. Filed July 10, 1931. Serial No. 549,981. 11 Claims. (Cl. 72—101.)

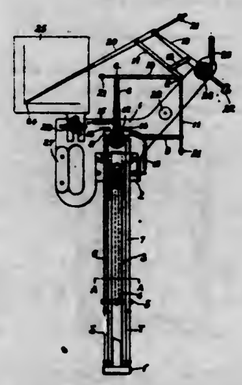


1. An insert strip for initially plastic walls, comprising a hollow body, provided with means designed to hold the body to the wall when embedded therein, said body including an exposed side provided with a cut substantially completely, but not entirely, severing a portion of said side from the remainder so that an opening may be readily formed through said side by removing said portion.

1,905,604. PROCESS OF ROASTING ORES. AUGUSTIN LEON JEAN QUENEAU, New York, N. Y. Filed June 25, 1931. Serial No. 546,892. 11 Claims. (Cl. 75—60.)

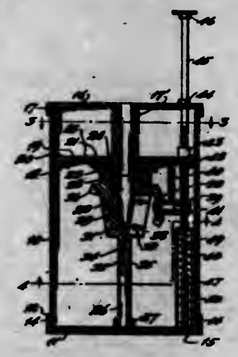
1. In the roasting of ores, the method of controlling the temperature of the roast which comprises adding at an intermediate point in the roasting process where the temperature is excessive increments of thermally decomposable material of relatively high heat absorbing capacity.

1,905,605. AUTOMOBILE BED. JOSEPH L. RICHARDSON, Nashville, Ark. Filed June 15, 1929. Serial No 371,191. 1 Claim. (Cl. 155—7.)



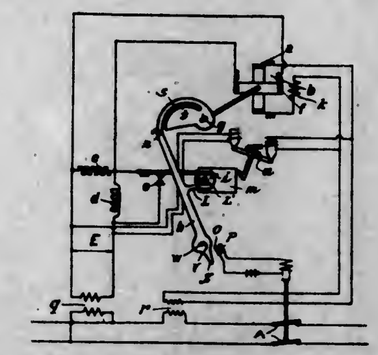
In a structure of the class described, a vehicle body, spaced front and rear bases within the body and having spaced front and rear walls defining intervening recesses, seat cushions in said recesses and movable to rest on the rear walls of said bases, a removable back cushion mounted at the rear of said rear base and adapted to rest on the front wall of the rear base between the said seat cushions, a foot rest between the front and rear bases and forming a support for the forward portion of the removable back, when the removable back is positioned between said cushions, a removable back for the front seat cushion and having attaching elements provided with angularly extending terminal portions, and socket members for engagement by the angularly extending terminal portions of said attaching elements, said back for the front seat cushion being adapted to rest on the front wall of the front base to form a head rest, there being means associated with the front base for sliding engagement by the angularly extending terminal portions of said attaching elements allowing said angularly extending terminal portions to have pressure contact with the seat cushion of the front base.

1,905,606. GAS SAVER. HENRY K. RYDER, Laurel, Mont. Filed Apr. 25, 1931. Serial No. 532,854. 1 Claim. (Cl. 137—69.)



An auxiliary air inlet for the intake manifold of a combustion engine including a downwardly extended suction pipe coiled to provide a substantially horizontal extension for threaded engagement with an intake manifold to discharge thereinto, opposite disposed tubular arms on the pipe above the coil and extending downwardly below the coil in substantially parallel relation, ball valves for normally closing the lower ends of said arms, said valves being liftable by suction to admit fresh air to the arms and pipe, and a rigid spacing connection between the arms and engaged by the pipe and the extension.

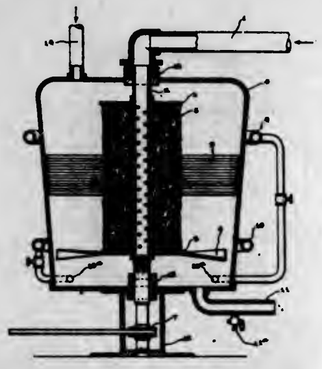
1,905,607. SELF RECORDING DILATOMETER. SEIKICHI SATO, Sendai, Japan. Filed Feb. 25, 1932. Serial No. 595,170. 2 Claims. (Cl. 234—11.)



1. A portable self-recording dilatometer adapted for recording the relation between the temperature and the thermal change as well as their time function by entirely mechanical means on a plane recording board in a rectangular coordinate system, comprising a portable base, a T-shaped supporting rod of a material having a very small coefficient of thermal expansion rigidly secured to said base and projecting therefrom, a pair of thin pipes of material having a very small coefficient of thermal expansion arranged in parallel on the opposite sides of said supporting rod, brackets secured to the base for slidably receiving the pipes, a pair of swing levers pivoted to said base on the same axis, one of said levers being parallel to said transmission rods while the other is arranged normally to said transmission rods in their initial positions and both levers being in engagement with said transmission rods respectively, links connected to the free ends of each of said levers to form a quadrilateral therewith, a pantograph mechanism associated with a point on said quadrilateral links, one member of said pantograph being pivoted to said base and the last member thereof being extended to provide a pen tip, a plane recording board supported by the base to cooperate with said pen tip, springs attached to said swing levers and pantograph mechanism so as to maintain their parts at normal condition to enlarge the resultant movement of said quadrilateral, a test piece and a standard piece being adapted to be held in position between free ends of said supporting rod and transmission rod respectively so that the thermal dilatation of said test piece and standard piece may be transmitted to the cooperating swing lever respectively and the resultant movement of a point on said parallelogram may be multiplied by said pantograph mechanism and recorded mechanically.

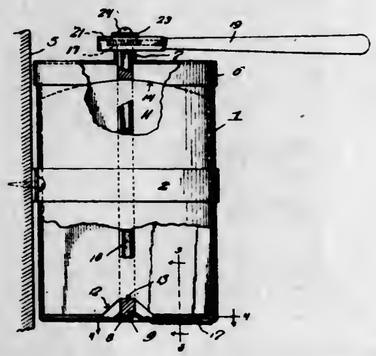
1,905,608. PENCIL SHARPENER. HENRY W. SCHOENFELDT, Youngstown, Ohio. Filed Aug. 6, 1930. Serial No. 473,401. 8 Claims. (Cl. 120—96.)

7. In a pencil sharpener, a casing, a cutter head rotatably mounted in said casing, a plunger extending from said casing, parallel to the axis of and adjacent said cutter head, gearing connecting the plunger and cutter head to rotate the latter upon depression of the plunger, a stem extending downwardly from said cutter head and provided with a dust escape opening, and a guide seat on the bottom of the casing receiving and guiding the lower end of said stem.



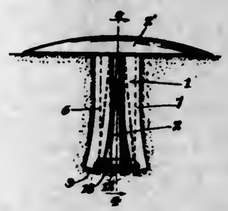
1,905,609. DISTANCE RELAY FOR ELECTRIC LINES. JOSEF STORCKLIN, Zurich, Switzerland, assignor to Aktiengesellschaft Brown, Boveri and Cie., Baden, Switzerland. Filed July 2, 1928, Serial No. 289,816, and in Germany July 7, 1927. 3 Claims. (Cl. 175—294.)

1. In a protective system for alternating current transmission lines, a protective device containing in combination transformers whose primary windings are connected to the line respectively in series and parallel, connections from the secondary windings of said transformers to the coils of an ohmmeter, a winding in series with one of said coils for producing the field of the ohmmeter, a choke coil in series with the other of said coils, a slotted member on a rotatable shaft which latter carries the said coils, a clockwork mechanism and a pivoted lever adapted to be



rotated by the mechanism, said lever coacting with said slotted member and adapted to abut on selective points on the latter and to slide on its pivot and in so doing to close a switch, means for disconnecting the transmission lines on the closing of said switch, means for setting in motion the clockwork mechanism in dependence on the line impedance, said protective device being provided with means for changing the phase of the current in one of the coils of the ohmmeter during the movement of the clockwork.

1,905,610. METHOD AND APPARATUS FOR REDUCING FUEL OIL OR THE LIKE TO A COMMINUTED CONDITION. EDGAR A. STOLL, South Bend, Ind. Filed Dec. 17, 1927. Serial No. 240,858. 5 Claims. (Cl. 158—53.)



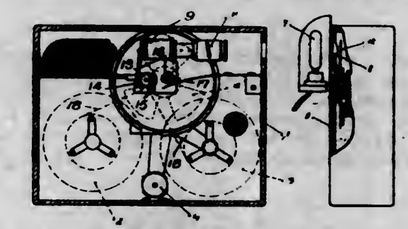
1. An apparatus for atomizing fuel oil or the like to a comminuted condition, comprising a hollow rotatable shaft having perforated walls, an annulus of matted fibrous material snugly embracing said shaft and mounted on said shaft, a casing enclosing the annulus, and means for adjustably compressing the annulus to vary the compactness of said fibrous material.

1,905,611. SOAP DISPENSING APPARATUS. DE WITT CLINTON TYLER, Chicago, Ill. Filed Apr. 7, 1931. Serial No. 528,423. 4 Claims. (Cl. 146—60.)

1. A container for paste soap or the like having a bearing in its bottom and an opening adjacent the bearing whose sides are provided with respective inwardly and outwardly directed angle flanges, a removable flanged top for the container having an opening in the center thereof surrounded by a flange, a shaft having a pointed end received in the bearing, and the said shaft likewise extending through the flange of the closure, said shaft being slotted longitudinally, a dasher plate having its lower end notched and its upper edge struck at a curvature, removably received through the opening, and an operating lever for the shaft.

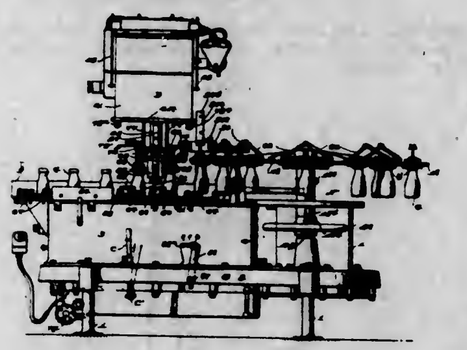
1,905,612. MARKER UNIT. JOHN A. WAGNER, Decatur, Ill. Filed Sept. 23, 1930, Serial No. 483,911. Renewed Sept. 7, 1932. 7 Claims. (Cl. 94—1.5.)

6. In a marker unit, a pair of elements, one of said elements including a marker head and a hollow stem of triangular cross section split, at spaced points from end to end to provide a series of anchoring members, the other of said elements including a base formed with deflecting surfaces, and a tapered spreading member formed with spreading surfaces, the said surfaces acting on the inner faces and inner ends of said members for spreading them to anchoring position, the said spreading surfaces being spaced from each other, and the said deflecting surfaces being spaced from each other.



1,905,613. DISPENSER. EDWIN G. WESSMAN, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Dec. 6, 1930. Serial No. 500,641. 3 Claims. (Cl. 312—41.)

2. In combination with a dispenser including a base, a readily removable housing supported by the base and adapted to receive a stack of the articles to be dispensed, said housing having a closed end and an open end adapted to register with a dispensing opening in the base, a projection at the open end of the housing extending inwardly to overlie the interior diameter of the housing but permitting dispensing of the articles, and a follower operable in the housing and adapted to be supported by the stack of articles, the follower being of a diameter permitting sliding movement in the housing but adapted to be engaged by the inwardly directed projection at the open end of the housing whereby it will be held within the confines of the housing when all of the articles of the stack have been dispensed or when the housing is removed from the base.

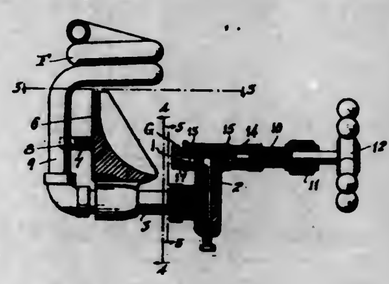


1,905,614. COMBINED CINEMATOGRAPHIC APPARATUS AND BOX. WILHELM WINNEBURG, Dresden, Germany. Filed June 20, 1929, Serial No. 372,425, and in Germany Feb. 25, 1928. 2 Claims. (Cl. 88—17.)

2. In a portable cinematographic projection apparatus, comprising, in combination with two film band reels located oppositely to one another and a film band running from one of said reels to the other thereof, an objective located opposite the middle portion of the film band between the reels, a light-reflecting member located counter to said objective opposite the other side of the middle film band portion, and means for illuminating this film band portion: a casing enclosing all said members and having in one of its large sides an illuminating opening, the axis of which lies parallel to the axis of rotation of said film

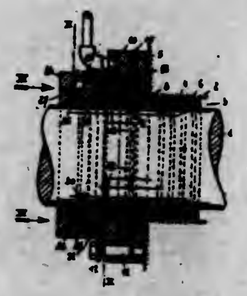
band reels, a lens in said opening, a rotary bladed shutter arranged between said lens and said light-reflecting member, means for rotating said shutter, and illuminating means adapted to be attached to, and detached from, said illuminating opening at the outside of said casing.

1,905,615. HOOD CAPPING CONTAINER. WILBUR L. WRIGHT and LEE D. PIERCE, Fulton, N. Y., assignors to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Dec. 12, 1927. Serial No. 239,538. 29 Claims. (Cl. 226—83.)



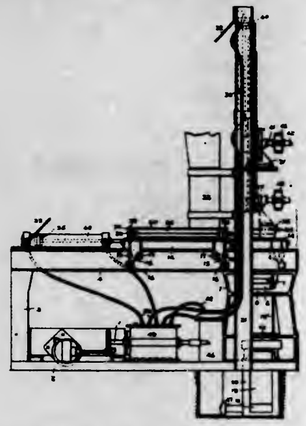
1. In the method of hood capping bottles, those steps which comprise arranging a stack of binder-carrying paper material flaring skirt hood cap disks with their skirts flaring rearwardly and their centers to the front; heating said caps to render their skirts moldable and to maintain a supply of said moldable hood cap disks; dispensing moldable caps from the front end of the stack to bottle heads; causing the stack to feed forwardly as caps are removed therefrom; and contracting the moldable cap skirts to securing position on the bottle heads.

1,905,616. CONCRETE FORM BOARD TRUING HOLDER. APOLLONY ZANELLA, Spadra, Calif. Filed Feb. 29, 1932. Serial No. 595,791. 3 Claims. (Cl. 25—131.)



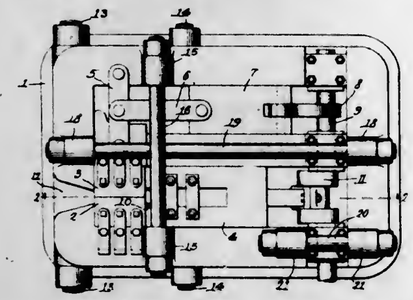
1. A concrete form board holder comprising a plane plate at each end of which is a set of lugs which are so disposed in their own sets as to form a Z end-contour.

1,905,617. PLUMBER'S FURNACE. WILLIAM REBER, JAMES EDWARD FLITCROFT, and JOSEPH M. IMFELD, Newark, N. J., assignors to Otto Berns Co. Inc., Newark, N. J., a Corporation of New Jersey. Filed Dec. 31, 1930. Serial No. 506,783. 2 Claims. (Cl. 158—82.)



1. A plumber's furnace comprising a fuel tank, a preheating pipe including a helical coil with its axis vertically disposed and connected at its upper end to said tank, said pipe at the lower end of said coil having a portion disposed substantially horizontally, a burner nozzle connected to said horizontally disposed portion with its axis substantially horizontal and at one side of said coil to direct a flame from the orifice horizontally beneath said coil, and a flame deflector mounted on said horizontally disposed portion of said pipe in the path of said flame to deflect the flame vertically in substantially the axial line of said coil.

1,905,618. METALLIC PACKING MEANS FOR THE SHAFTS OF CENTRIFUGAL PUMPS AND OTHER ROTARY MACHINES. JULES BODART, Brussels, Belgium, assignor to Fernand Bodart, Marchienne-au-Pont, Belgium. Filed May 14, 1930, Serial No. 452,465, and in Belgium May 16, 1929. 3 Claims. (Cl. 286—7.)

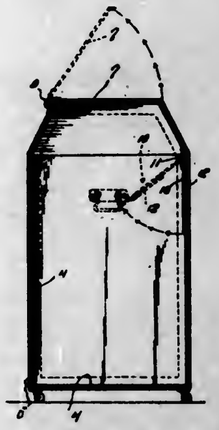


1. In a metallic joint for a rotating shaft, in combination with the shaft and a body in which the said shaft rotates, a fixed unit bodily connected to the said body, a wearing ring housed in the fixed unit, a plate bearing against the said wearing ring, the said plate having a face perpendicular to the axis of the shaft, an annular chamber formed in the plate, means for delivering a cooling fluid to said chamber, and a movable unit directly keyed to the shaft to turn with it, the said movable unit having also a face perpendicular to the axis of the shaft and means whereby the said face of the movable unit is pressed in frictional contact against the face of the plate perpendicular to the axis of the shaft.

1,905,619. CEMENT BLOCK MOLDING MACHINE. LEE C. CARTON, Detroit, Mich., assignor to Arthur Carton, J. H. Henderson, James E. Montgomery, and E. Trimble, Toronto, Ontario, Canada, and Thomas Watson, Woodstock, Ontario, Canada. Filed Dec. 21, 1929. Serial No. 415,864. 12 Claims. (Cl. 25—45.)

8. A block molding machine, comprising in combination a mold open at the top, horizontally reciprocable means for transferring a measured quantity of comminuted material to the mold, means for temporarily supporting, said transferred materials above the open mold a horizontally disposed fluid pressure operated ram connected with said transfer means, a movable closure hood adapted to form an enclosure above said supporting means and to receive fluid pressure to force said comminuted material therefrom into the mold, a fluid pressure operated ram for raising and lowering said hood, fluid pressure operated means for lifting the completed block from the mold, a valve chest having a plurality of cooperative pairs of inlet and exhaust valves adapted to direct a flow of fluid pressure to said rams and to exhaust the pressure therefrom, and means for operating said valves.

1,905,620. FORGING MACHINE. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed Oct. 9, 1929. Serial No. 398,415. 4 Claims. (Cl. 78—13.)

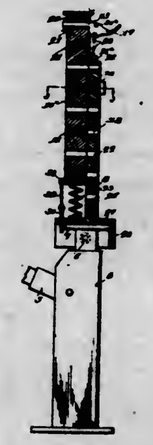


1. The combination with the bed frame of a forging machine having a feed gap in one end, a tool-carrying heading slide movable toward and from the gap, and gripping dies for receiving stock from the gap and holding it in the path of the slide and tool, of means for reinforcing the bed frame transversely against strains resulting from forging operations, said means including lower tie bars extending transversely through and connected at their ends to the bed frame and an upper transverse tie bar connected to the side portions of the bed frame and positioned back from the feed gap and the gripping dies, all of said tie bars being parallel and defining a triangular area in which are located the cooperating portions of the dies and tool all of the bars being substantially at right angles to the path of movement of the heading slide.

1,905,621. METHOD OF PRODUCING SELF-LOCKING NUTS. EDWARD J. COLE, Peekskill, N. Y., assignor, by mesne assignments, to Helen Margaret Cole, Peeksville, N. Y. Original application filed Oct. 28, 1930, Serial No. 491,686. Divided and this application filed Sept. 30, 1931. Serial No. 566,041. 2 Claims. (Cl. 10—86.)

1. The method of producing a self-locking nut which consists in dividing and separating the metal of the nut blank at one end of its unthreaded bore within the periphery of the blank to laterally spread the end of the bore and certain side portions of the blank, screw threading the bore and thereby forming threads of lesser depth at the divided and spread end of the bore, and finally compressing the spread side portions of the blank and consequently the divided and spread end of the bore.

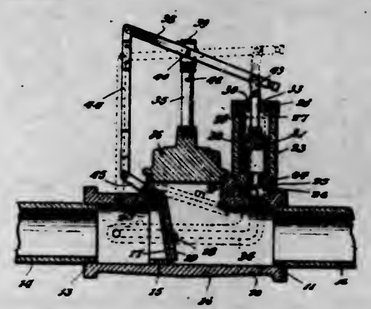
1,905,622. ASH CAN. PHILIP D'ANGELO, Algonac, Mich. Filed Feb. 28, 1929. Serial No. 343,455. 1 Claim. (Cl. 220—32.)



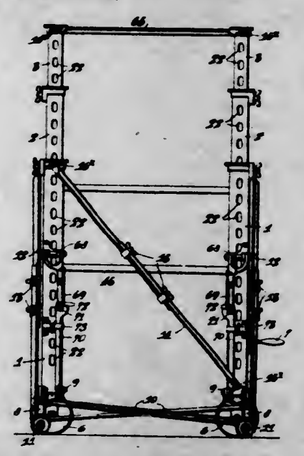
An ash can including an upright body of rectangular configuration having at its upper end an integral extension of truncated pyramidal form, said extension being open at its upper end and including walls of uniform height, an upwardly opening flat spring influenced cover normally closing the upper end of said extension and reposing on said walls thereof, one wall of said body portion having an opening immediately beneath said extension, and an inwardly opening spring influenced cover hinged within the body and normally closing said opening.

1,905,623. DOOR MOUNT FOR ACCESSORY EQUIPMENT OF MOTOR VEHICLES. JOHN G. DEITZ, Tulsa, Okla. Filed Feb. 8, 1929. Serial No. 338,606. 11 Claims. (Cl. 248—20.)

1. In a vehicle body having a hinged door having a glass channel therein and having a flange extending from a vertical side edge to overlie the jamb edge of the door casing, an accessory supporting bracket overlying and detachably mounted on the outer face of the door stile between its glass channel and edge flange and having members provided with portions insertible in the glass channel bordering the stile and over said jamb edge flange, with means for effecting relative movement of said members to clamp said portions thereof to a wall of said glass channel and to said edge flange.



1,905,624. JACK. MAX DWORK, Brooklyn, N. Y. Filed Feb. 27, 1930. Serial No. 431,875. 2 Claims. (Cl. 254—133.)

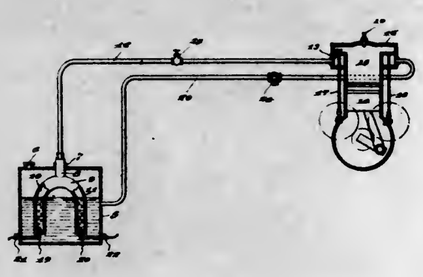


1. A lifting jack extension comprising a vertically extending member provided with a lifting element, a plate carried by the lower end of the vertically extending member adapted to rest upon a jack standard, parallel flanges depending from the plate, a third flange depending from the plate at right angles to the first mentioned flanges and contacting one side of said jack standard, oppositely extending threaded elements carried by the parallel flanges and engageable with the jack standard to hold the plate against movement in two directions, and a removable fastening passing through the plate and contacting the side of said jack standard opposite said other flange and serving therewith to hold the plate against movement in two other directions.

1,905,625. CONSERVATION VALVE. THOMAS A. FAGAN, Denver, Colo. Filed July 31, 1930. Serial No. 472,041. 1 Claim. (Cl. 137—153.)

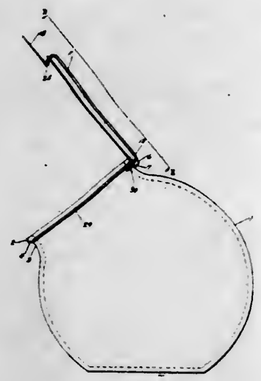
The combination with a valve housing, a swing valve pivoted at the top therein and closing in the direction of flow, a crank for operating the valve, a by-pass conduit in the housing laterally of the valve and a piston operated by pressure in the by-pass, of a cap closing a hand opening formed in the housing above the valve, a post adjustable at the bottom on said cap, a walking beam carried by the top of the post, a link connecting one end of the walking beam with said crank, a pair of links pivotally connected together and connecting the other end of said walking beam with said piston, a cylinder for the piston, and an annular seat adjustably mounted in the end of the cylinder, the piston and the seat being tapered to provide tight seating of the piston for sealing the by-pass when said valve is open, adjustment of said post and of said seat relative to each other permitting said piston accurately seating in said seat whereby leakage past the piston when said valve is open is positively prevented.

1,905,626. SCAFFOLDING. JOHN A. HERSHEY, Cherryville, Pa. Filed Oct. 1, 1931. Serial No. 566,345. 18 Claims. (Cl. 304—10.)



1. In scaffolding, a scaffolding comprising tubular telescoping-section posts, means to support said posts in vertical position, a platform, carriages for said platform which are vertically movably mounted on said posts, and mechanism on said carriages for raising and lowering said platform and extending and retracting said post sections, said posts having means cooperating with said mechanism for the purpose stated.

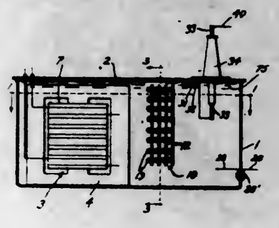
1,905,627. APPARATUS FOR ELECTROLYSIS. WALTER HOLLAND, Washington, D. C. Filed Sept. 24, 1930. Serial No. 484,147. 2 Claims. (Cl. 204—6.)



1. A device of the class described comprising a receptacle, a supply of liquid within said receptacle, a vessel positioned within said receptacle, said vessel including a

pair of members having their open ends extended into the liquid and spaced from the bottom of said receptacle, said members uniting to present a gas-collecting chamber with

the receptacle and electrodes of opposite polarity, one electrode being positioned within each of said members of said vessel.



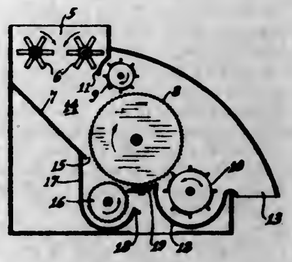
1,905,628. CONTAINER AND IN SEALING CLOSURE THEREFOR. CHARLES S. BARON, Tiffin, Ohio. Filed Mar. 4, 1931. Serial No. 520,145. 6 Claims. (Cl. 215—68.)

1. The combination with a container body having a continuous annular latch-member retaining ledge formed upon a mouth-defining rim for the container, of a cover having a yielding gasket and a latch member extending across it and provided at one end with two separate resilient ledge-engaging members extending toward each other, and at the opposite end with cam acting resilient ledge-engaging latches, said oppositely extending resilient member being hingedly secured to the container body by a collar confined to a neck formed therein below said rim.

1,905,629. APPARATUS FOR PRODUCING RECTIFIED HIGH VOLTAGE ELECTRIC CURRENT. HOWARD B. COBBITT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 8, 1930. Serial No. 425,880. 8 Claims. (Cl. 175—366.)

1. In an apparatus for producing rectified high voltage electric current, a housing, a plurality of insulating supporting panels removably mounted within said housing, a plurality of asymmetrically conductive solid contact rectifier units mounted on each of said supporting panels, means electrically connecting said rectifier units in series, and a body of liquid cooling medium within said housing

and surrounding all of said rectifier units, said supporting panels being provided with openings adjacent said rectifier units so as to permit free circulation of said cooling medium through said openings and around said units.



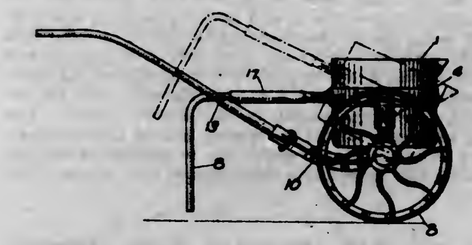
1,905,630. BITUMINOUS EMULSION. ORIN R. DOUTHETT, Perth Amboy, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Aug. 31, 1928, Serial No. 303,369. Renewed Sept. 7, 1932. 16 Claims. (Cl. 134—1.)

1. An emulsion including bitumen dispersed in an aqueous medium containing neutralised sludge sulfonic acid treated to render it substantially free from soluble alkaline earth compounds and characterised by the fact that it is of a substantial alkalinity.

1,905,631. COMPOSITION FOR ACOUSTICAL DEVICES. EARL EBERHARDT, Chicago, Ill. Filed May 18, 1928. Serial No. 278,922. 1 Claim. (Cl. 106—84.)

A composition for acoustical devices comprising hardened plastic material containing grains of sand to render the surface rough.

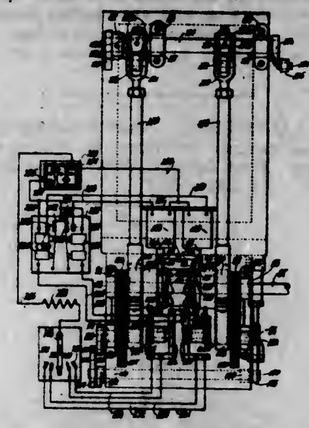
1,905,632. HULL EXTRACTOR. THOMAS ELLIOTT, Birmingham, Ala., assignor to Continental Gin Company, a Corporation of Delaware. Filed Apr. 28, 1930. Serial No. 447,876. 8 Claims. (Cl. 19—37.)



1. The combination with a hull extractor assembly comprising a rotatable toothed cylinder, means to guide cotton and hulls thereto, and a stripper means and a doffer means associated with said cylinder, of a second rotatable toothed cylinder disposed in position to retreat cotton and hulls escaping between said guide means and the first mentioned cylinder, a free unobstructed guide for said escaping hulls extending about the under side of said retreating cylinder and terminating opposite to and spaced from its upgoing side, said first mentioned toothed cylinder being disposed in position and driven so as to doff said retreating cylinder.

1,905,633. DENTAL MIRROR. DOUGLAS L. FELTHAM, Toledo, Ohio. Filed Mar. 14, 1931. Serial No. 522,563. 2 Claims. (Cl. 128—11.)

1. The combination of a compressed air supply conduit with an arm offset therefrom and formed with a socket, and a mirror having a shank detachably secured in said socket with the reflecting surface of the mirror spaced from the outlet end of said conduit and disposed across the path of air blown through said conduit.



1,905,634. FOUNDRY LADLE. JAMES G. GARRARD, Grand Rapids, Mich., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1931. Serial No. 580,243. 9 Claims. (Cl. 22—82.)

1. In a conveying and pouring device, a carriage tiltably mounted on wheels, spaced standards and a handle rigid with said carriage, and a ladle pivoted on said standards above said carriage, said handle extending downwardly with its end engaging the floor, in the rest position of the device, and said standards being inclined from the vertical towards said handle in said position.

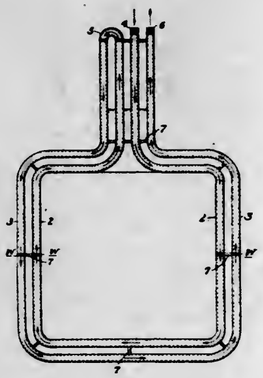
1,905,635. GEAR SHIFTING MECHANISM. FRED GINSBURG, Chicago, Ill. Filed Apr. 5, 1932. Serial No. 603,298. 20 Claims. (Cl. 74—97.)

1. The combination with a gear transmission having shafts, and gears adapted to slide axially of said shafts for coengagement to propel a drive shaft at a selected speed relative to said gears, of a mechanism for automatically engaging said gears and comprising a governor, a rotating member, means for sliding said gears, and means for operatively engaging said rotating means to said gear

sliding means incident to selected speeds, attained in a definite order, of said drive shaft, said governor being adapted to actuate said engaging means.

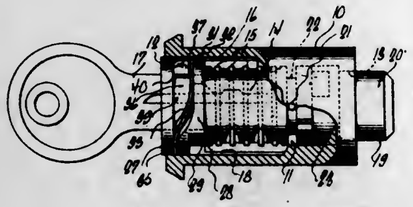
1,905,636. FOUR-WHEEL TRAILER TRUCK AND ASH HOPPER. HARRY GLAENZER, Philadelphia, Pa. Filed Nov. 27, 1931. Serial No. 577,622. 5 Claims. (Cl. 105—37.)

1. The combination in a radial truck for a locomotive, of a frame having pedestals for axle boxes and equalising gear located in the frame at each side thereof, said gear resting upon the boxes between the pedestals; and ash hoppers on the outer side of the frame beyond the equalising gear, arranged to receive ashes from the grates and main ash pan of the locomotive.



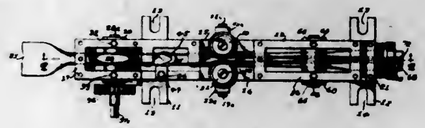
1,905,637. LOOP FORMING AND CUTTING DEVICE. JOHN HUDSON HOWE, South Orange, N. J. Filed Dec. 31, 1931. Serial No. 584,260. 10 Claims. (Cl. 112—80.)

1. A device of the class described, comprising a pair of relatively slidable supporting members, a stationary



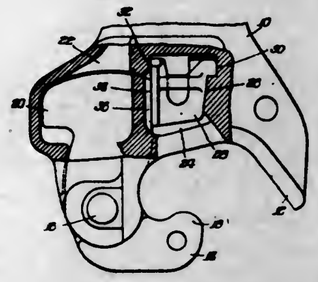
needle carried by one of said members, a loop former pivotally carried by the other of said members, a cam follower on said loop former on each side of the pivot point thereof, and spaced cams on said one member adapted to engage said cam followers to actuate said loop former in relation to said needle as said members are relatively moved.

1,905,638. VALVE SEAT. PERRY D. HUSHOUR, Youngstown, Ohio, assignor to Walter M. Charman, Youngstown, Ohio. Filed Dec. 17, 1929. Serial No. 414,707. 11 Claims. (Cl. 251—158.)



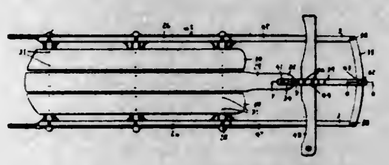
1. As an article of manufacture, a seat comprising a pair of water cooled portions extending in adjacent freely spaced relationship throughout the major portion of their length and lying in a substantially common plane throughout the major portion of their length, said water cooled portions being adapted to be directly engaged by a valve.

1,905,639. LOCK. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Sept. 6, 1929. Serial No. 390,738. 10 Claims. (Cl. 70—46.)



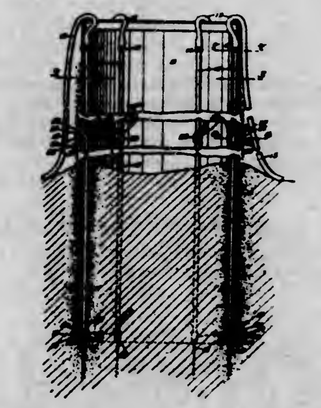
1. In a lock of the character described, a mounting member, a lock cylinder in the mounting member being movable therein in the performance of its normal locking functions upon insertion of a proper key, cooperating means carried by the mounting member and the lock cylinder for releasably securing the lock cylinder in the mounting member, said means becoming inoperative upon movement of the lock cylinder to a predetermined position, and means for preventing movement of the lock cylinder to said predetermined position, said means becoming operative upon insertion of the key.

1,905,640. MACHINE FOR PRODUCING STRIP MOLDINGS. WILLIAM JAQUIERY, Waterbury, Conn., assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed July 1, 1929. Serial No. 375,015. 18 Claims. (Cl. 153—32.)



1. In a machine for producing a thin molding, means for bending a longitudinally moving strip of metal into U-shape, means for forming spaced locking beads on the edges of said strip, and means for folding the portion of said strip below said beads into a pair of alined flat side sections.

1,905,641. COUPLER. FRANK H. KAYLER, Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed July 18, 1930. Serial No. 468,778. 6 Claims. (Cl. 213—145.)



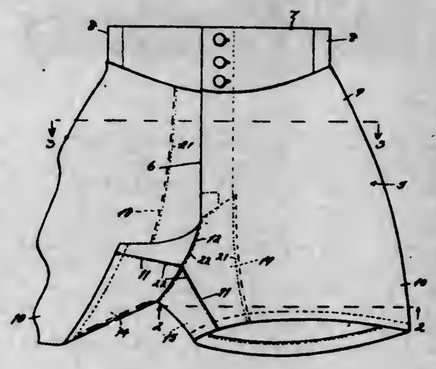
3. In a coupler, the combination of a coupler head, a knuckle pivotally mounted on said head, a lock for said knuckle, a lock cavity in said head for receiving said lock, said cavity having oppositely disposed walls provided with guide surfaces cooperating with said lock, one of said walls having a portion disposed forwardly of the guide surface thereof and at a greater distance from the opposite wall at the knuckle bearing surface than the normal width of a lock at the knuckle bearing surface whereby a lock of increased width may be substituted for said normal lock to maintain the gauge of said coupler when worn.

1,905,642. SLED. WILLIAM E. KIDDER, Kalamazoo, Mich., assignor to Kalamazoo Sled Company, Kalamazoo, Mich. Filed June 11, 1931. Serial No. 543,509. 13 Claims. (Cl. 280—22.)

8. In a sled, the combination with flexible runners having upwardly curved forward ends, knees mounted on said runners, links each having a slot in one end thereof pivoted to the forward ends of said runners and the front knees, and means for flexing said runners, said slots in said links permitting the effective lengths thereof to change in accordance with the flexing of said runners.

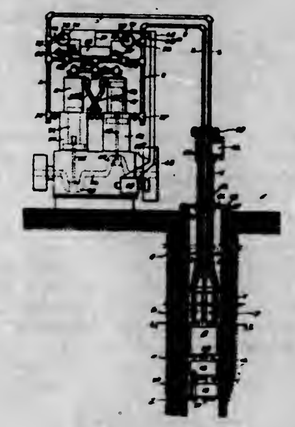
1,905,643. APPARATUS FOR SINKING BODIES SUCH AS CAISSONS AND PILES. ALGOT F. JOHNSON, Minneapolis, Minn., assignor to Al Johnson Construction Co., Minneapolis, Minn., a Corporation of Delaware. Filed Oct. 14, 1931. Serial No. 568,729. 1 Claim. (Cl. 61—80.)

The combination with a caisson having circumferentially spaced notches at its lower edge, of circumferentially spaced longitudinally extended jetting pipes within said caisson, said pipes terminating at their lower ends in close proximity to the bottom edge of the caisson and arranged to project jets of water downwardly from the inside of the lower edge portion of the caisson and being provided near their lower ends with projections extending outwardly through the said notches in the lower edge of the caisson and arranged to project jets of water upwardly past the outside of the caisson.



1,905,644. OPHTHALMIC LENS. MAX A. LAABS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 12, 1928. Serial No. 318,838. 3 Claims. (Cl. 49—82.1.)

1. The process of producing lenses in quantity comprising grinding a plurality of lens blanks simultaneously to a given lens power, said ground surface being curved and the opposite surface being plano, placing the blanks over a shaped portion of a refractory block and submitting them to heat to cause them to subside into the shaped portion of the block, said shaped portion being such that the subsided blank will have substantially the same lens power as it had before subsidance but its planoform will have been changed to a meniscus form.

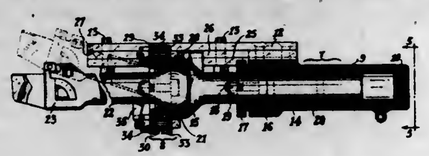


1,905,645. UNDERGARMENT. ANNA LAVER, Philadelphia, Pa. Filed Apr. 29, 1932. Serial No. 606,190. 4 Claims. (Cl. 2—224.)

1. A garment including a waist band, a body depending therefrom and legs, in combination with a reinforcement including a pair of similar back sections corresponding to parts of the back of the garment and the legs with the meeting edges of said sections stitched together, and front sections corresponding to parts of the front of the garment and the legs thereof stitched together along

their meeting edges, the contiguous leg parts of a front and back section being stitched together along their meeting edges and the whole reinforcement stitched around its edges on the inside of the garment in the region of the middle, back and front and inner parts of the legs.

1,905,646. FLUID PUMP. JOHN LIMING, Jr., Philadelphia, Pa. Original application filed Feb. 19, 1925, Serial No. 10,272. Divided and this application filed Dec. 6, 1928. Serial No. 324,153. 17 Claims. (Cl. 230—1.)

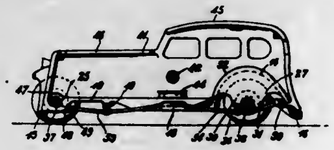


1. In a pump, the combination of a pair of compressors, a pair of pressure ducts respectively connected to the intakes of said compressors, and means for connecting the ducts alternately with the discharge ports of both compressors.

1,905,647. FLEXIBLE PIPE COUPLING FOR RAILWAY VEHICLES. FREDERICK W. MARTIN, Bronxville, N. Y., assignor to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 9, 1930. Serial No. 419,480. 7 Claims. (Cl. 285—94.)

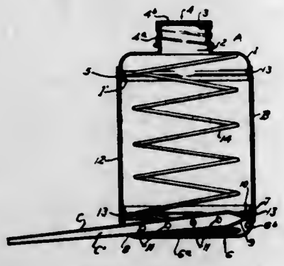
1. A flexible connection for use between coupled railway vehicles including a conduit having a flexible joint

part associated with an end thereof, a cooperating flexible joint part, and means for securing the joint parts in operative relationship including a pair of U-shaped



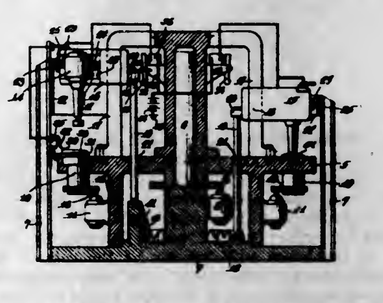
members adapted to engage the conduit and having cooperating interengageable portions providing against relative rotation of the members about the conduit.

1,905,648. COATED WELDING WIRE. ROBERT NOTVEST, Indianapolis, Ind., assignor to J. D. Adams Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Feb. 12, 1932. Serial No. 592,660. 5 Claims. (Cl. 219—8.)



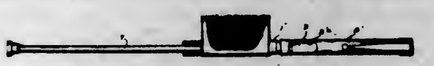
1. A coating composition for an arc-welding rod, comprising approximately 55 parts by weight of ferric oxide and 45 parts by weight of silica, a binder composed of sodium silicate and water, and sufficient calcium carbonate to render the coating composition neutral.

1,905,649. WHEELED TOY. EDWARD S. PEAKE, Westerville, Ohio, assignor to The Kilgore Mfg. Company, Westerville, Ohio, a Corporation of Ohio. Filed Oct. 29, 1931. Serial No. 571,918. 19 Claims. (Cl. 46—48.)



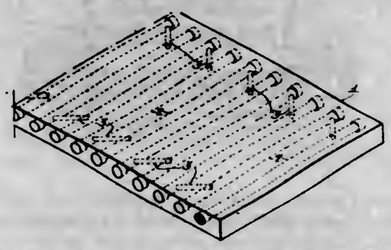
1. In a wheeled toy, a chassis frame having downwardly open recesses, an axle rotatably seated in said recesses, a demountable body supported on the frame, and a member serving to hold the body on the frame and the axle in said recesses.

1,905,650. DISTRIBUTOR FOR INSECTICIDES AND THE LIKE. THOMAS C. RALEY, St. Louis, Mo., assignor to Getz Exterminators, Inc., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 16, 1932. Serial No. 587,090. 2 Claims. (Cl. 43—147.)



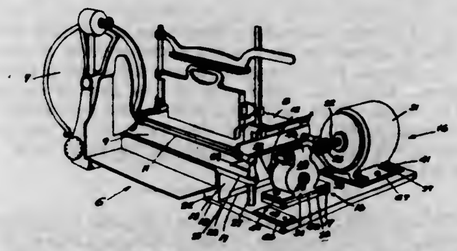
1. A device of the class described comprising a container, said container including a top element having an inlet opening, a cap for closing said inlet opening, a bottom element having a bottom wall and a continuous upstanding flange, a discharge spout associated with said bottom element and arranged to communicate with the interior of the container, said discharge spout being closed at its inner end and having openings formed therein forwardly of said inner end, said discharge spout being extended through an aperture formed through the upstanding flange of said bottom element and the inner end of said discharge spout being secured to said flange of said bottom element at a point which is in opposed relation with respect to said aperture whereby a two-point support for said discharge spout is provided, the relationship of said points of support of said discharge spout with respect to the bottom wall of the bottom element being such that a space is present between the discharge spout and said bottom wall whereby material within the device may circulate entirely around the discharge spout, a side wall associated with said top and bottom elements and adapted to be collapsed on movements of said top and bottom elements toward each other, and resilient means within said container which tends to restore said container to its extended position when the side wall thereof has been collapsed.

1,905,651. SAFETY DEVICE FOR GRINDERS. CLIFFORD T. RAULE, Brookline, Pa. Filed Mar. 2, 1929. Serial No. 343,878. 9 Claims. (Cl. 51—53.)



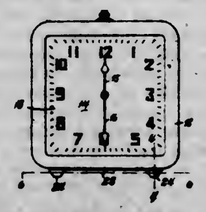
1. In a multiple grinder, a turn-table, grinding units mounted on the turn-table spaced thereabout, each unit comprising a revolving work-holder and a grinding wheel, supporting structure for the turntable having unloading and loading points for the units adjacent one side of the table, and mechanism for moving the wheels successively away from the grinding position before the unloading point is reached and back into grinding position after the loading point has been passed, in combination with a safety device for preventing the movement of a grinding wheel to its grinding position preparatory to initially grinding the work and operative by means of an abnormal condition at the unit.

1,905,652. CIGARETTE MAKING DEVICE. JEAN B. SABOURIN, Norton, Mass. Filed Nov. 24, 1931. Serial No. 576,959. 3 Claims. (Cl. 131—5.)



1. A cigarette making device comprising a tube adapted to extend into a wrapper and having a side opening, a hopper having a section rigidly attached to said tube and having a section rotatably mounted on said tube and movable to open said hopper for introduction of tobacco; an element extending through said tube beyond said hopper and adapted to be reciprocated in said tube to effect feeding of the tobacco through the tube and into the wrapper.

1,905,653. PLUG FOR STEAM PLATENS AND OTHER METALLIC ARTICLES. CHARLES A. SCHRANK, Philadelphia, Pa., assignor to Walter Wood (trading as R. D. Wood & Company), Philadelphia, Pa. Filed May 8, 1931. Serial No. 536,064. 1 Claim. (Cl. 257—256.)

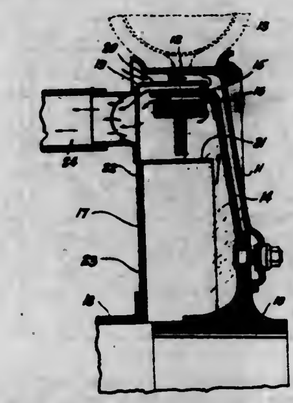


The combination of a metallic object having a channel therein, the end of the channel being counterbored, forming a seat for a plug; and a plug of metal harder than the metal of the object and of substantially frusto-conical form having its base contacting the seat formed by the counterbore and its sides impacted in the metal of the object.

1,905,654. POWER UNIT FOR SLICING MACHINES. THOMAS T. SHIELDS, Los Angeles, Calif. Filed Oct. 30, 1929. Serial No. 403,643. 4 Claims. (Cl. 146—102.)

4. A power unit for a manually operable machine having a drive shaft, comprising a base plate, a motor mounted thereon, a speed reduction unit mounted on said plate and coupled to said motor, including a frame, a tubular shaft mounted in said frame having its end projecting therefrom in axial alignment with the drive shaft, means for directly connecting the tubular shaft to the drive shaft to form a unitary shaft, a pin serving as an end bearing for said tubular shaft mounted at one side of said frame, and a second bearing for the tubular shaft mounted at the opposite side of said frame.

1,905,655. CLOCK. JOHN O. SIMPSON, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a Corporation. Filed Mar. 19, 1932. Serial No. 599,880. 3 Claims. (Cl. 58—53.)

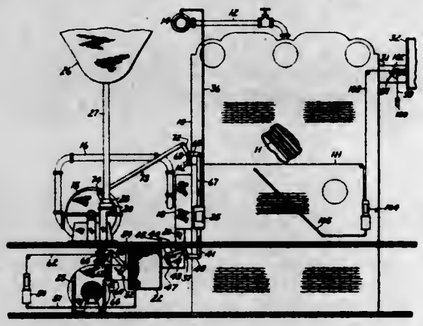


1. The combination with a clock-case; of a sheet-metal foot-plate having struck downwardly therefrom a plurality of integral hollow boss-like feet and secured to the under-face of the said clock-case in position to cause the same to conceal the upper face of the said plate and the hollow interiors of the said integral boss-like feet.

1,905,656. ROTARY TOOTHBRUSH. CARL C. V. SMITH, Copenhagen, Denmark, assignor to Alfa Klara Smith, Copenhagen, Denmark. Filed June 19, 1931. Serial No. 545,593. 2 Claims. (Cl. 15—25.)

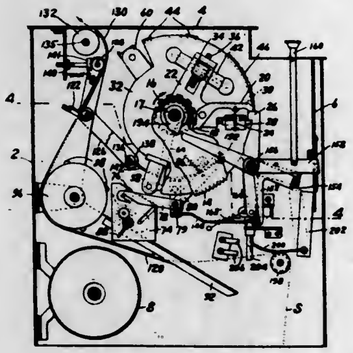
1. A tooth-brush comprising an elongated handle member, a guard member having a tubular portion adapted to fit snugly over said handle member, a brush member having a stem extending axially through said handle member, a cup-shaped member carried by said stem adjacent the brush and adapted to snugly fit over an end of said handle member and abut against said tubular portion to hold the same upon said handle member, and means removably attachable to the end of said stem and adapted to abut against the other end of said handle member, whereby said brush member may be firmly attached to said handle.

1,905,657. BRAKE COOLING SYSTEM. JOHN P. TARBOX, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1929. Serial No. 334,238. 5 Claims. (Cl. 188—264.)



1. In combination in a braking system, a wheel having a rim, a brake drum interiorly of the rim of the wheel, a brake drum cover plate, and annular transverse baffle flanges carried by the cover plate, one interiorly and one exteriorly of the drum and in spaced relation thereto.

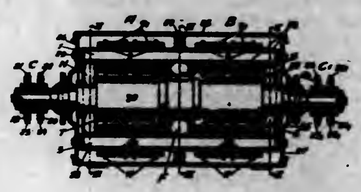
1,905,658. METHOD AND APPARATUS FOR CONTROLLING COMBUSTION. CHARLES M. TERRY, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a Corporation of Delaware. Filed May 6, 1929. Serial No. 360,976. 5 Claims. (Cl. 236—14.)



1. In combination with a plurality of steam boiler furnaces, means including regulatable feeding devices to deliver a controlled amount of pulverized fuel on a current of primary air to each furnace for combustion, a main air duct for secondary air, branch ducts leading from the main duct to each furnace, a movable damper in each branch duct, a plurality of fans arranged to discharge air into the main duct, a damper at the outlet of each fan, a compensating type regulator actuated by steam pressure and arranged to regulate simultaneously

all of the feeding devices and all of the branch duct dampers in accordance with the demand on the boilers, and a non-compensating type regulator actuated by the

pressure in the main duct and arranged to regulate all the fan outlet dampers and maintain this duct pressure constant.

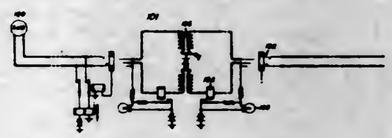


1,905,659. TICKET PRINTING AND ISSUING MACHINE. HENRY A. THOMSON, Bansdowne, Pa., assignor to Globe Ticket Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1931. Serial No. 513,505. 15 Claims. (Cl. 101—66.)

1. In a ticket printing and issuing machine, a rotatable type member provided with a series of successively arranged printing elements, means for presenting to the type member a ticket to be printed, driving means for the type member, a plurality of keys, and mechanism controlled by actuation of a key to effect rotation of the type member by the driving means and printing of the ticket by a selected printing element, said mechanism including devices limiting the type member to a single rotation upon each actuation of a key, which devices include a stop, a latch engageable with the stop to maintain parts of the machine in inoperative position, an element actuated upon depression of a key to trip the latch, and means for restoring the latch at the end of a cycle of operation, said element yielding if engaged by the restored latch whereby it does not prevent engagement of the latch with the stop.

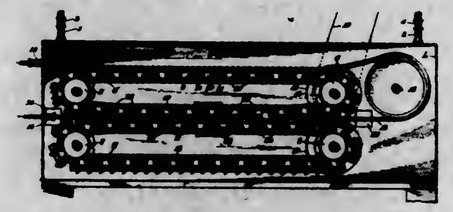
1,905,660. ELECTRIC MACHINE. BALTZAR CARL VON PLATEN, Stockholm, Sweden. Filed Apr. 23, 1930, Serial No. 446,471, and in Sweden May 3, 1929. 18 Claims. (Cl. 171—123.)

4. In an electric machine, a rotor provided with a plurality of rotor pole pieces, a plurality of magnetically independent stator cores cooperating therewith, and means for periodically forming a magnetic circuit between differ-



ent stator cores comprising a magnetic field distributor mounted on said rotor and rotatable in conjunction therewith.

1,905,661. STEEL WHEEL. DANIEL W. VOORHEES, Jr., Peru, Ill. Filed Nov. 4, 1931. Serial No. 572,889. 1 Claim. (Cl. 301—86.)



A heavy duty steel wheel, comprising an annular band having a circumferential grooved medial portion, the base of the grooved portion forming means for securing spokes thereto, flanges on either side of the grooved portion offset radially from said base, said flanges increasing in thickness laterally from the side walls of the grooved portion and having tread peripheries on equal radii of the wheel.

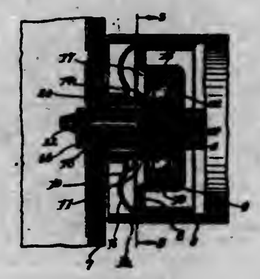
1,905,662. TELEPHONE SYSTEM. HORACE W. ULRICH, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1931. Serial No. 577,571. 11 Claims. (Cl. 179—27.)

1. In a telephone system, an operator's position, trunks incoming to said position from a manual office, trunks incoming to said position from a dial office, means at said dial office to automatically announce wanted line designations, common control equipment at said operator's position, an operator's telephone associated with said control equipment and normally disconnected therefrom, means in said control equipment for connecting said telephone with said trunks, means responsive to the seizure of any one of said trunks for automatically connecting said control equipment with said trunk, means to identify said trunks incoming from the dial office to said control equipment, means in said control equipment to transmit a tone signal to said operator's telephone, means responsive to said identifying means to transmit a signal to initiate the operation of said announcing means, means normally responsive to the completion of said tone signal to connect said telephone with said trunk, and means responsive to said identifying means to delay the connection of said telephone with said trunk until the termination of said signal.

1,905,663. CONTINUOUS VULCANIZING APPARATUS. ARCHIBALD L. WALLACE, Brooklyn, N. Y. Filed July 30, 1930. Serial No. 471,648. 16 Claims. (Cl. 18—6.)

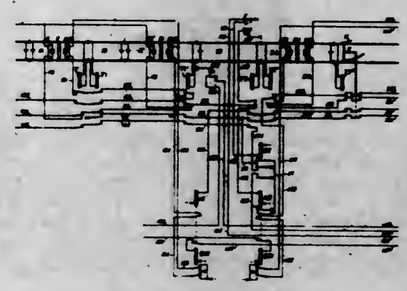
4. A vulcanizing machine, comprising a steam chest, a pair of endless chains within said steam chest co-operative to provide parallel leads between which the article to be vulcanized is received, means to continuously drive said chains, means to hold said leads in gripping engagement with the article, the steam chest having an opening through which to introduce the article into the chest, and one of said chains having a lead constituting a conveyor extending from adjacent said opening to adjacent the article receiving end of the first leads serving to carry the article from said opening to adjacent its point of reception between the first mentioned leads.

1,905,664. METHOD OF PRODUCING A CONTROLLING DEVICE. ALBERT J. WEATHERHEAD, Jr., Cleveland, Ohio. Filed Feb. 6, 1929. Serial No. 337,759. 2 Claims. (Cl. 153—2.)



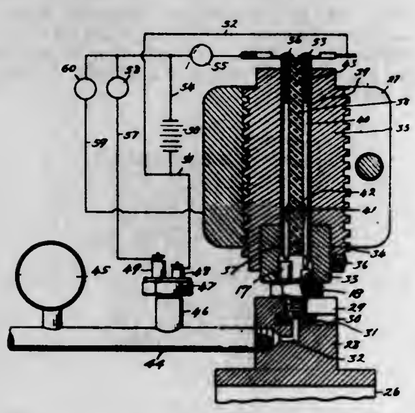
1. A method of producing a controlling device as described, including the steps of forming a tube close to its end with outwardly extending narrow and relatively short corrugations arranged parallel to the axis of said tube, in forming a bushing having approximately the same inner diameter as said tube with a stepped counter-bore, in inserting the corrugated end of said tube into said bushing until engaged with the shoulder at the inner end of said counter-bore, and in contracting the end of the counter-bored portion of said bushing to interlock with said corrugated end, and to embed said corrugations within the wall of said bushing.

1,905,665. METHOD OF PRODUCING COUPLINGS. ALBERT J. WEATHERHEAD, Jr., and JOHN D. BALDWIN, Jr., Cleveland, Ohio; said Baldwin assignor to said Weatherhead. Filed Oct. 29, 1929. Serial No. 403,228. 7 Claims. (Cl. 29—157.)



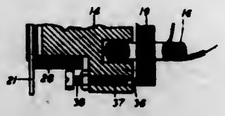
1. A method of producing a coupling member having a fluid-passage and screw-threaded chamber, together with a truncated conical seat having a finished truncated edge and projecting forwardly at the bottom of said chamber, consisting in forming the fluid-passage and chamber and also the truncated conical seat in a single uninterrupted cutting operation, and then tapping the chamber wall with a screw-thread.

1,905,666. SEALED BEARING. PETER C. WEGO, St. Paul, Minn., assignor to Standard Conveyor Company, North St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 2, 1930. Serial No. 417,891. 8 Claims. (Cl. 308—184.)



1. In a bearing for a roller having a revoluble body and a bearing recess in an end of said body, an axial support projecting into said recess, said support comprising an axial shaft and a sleeve on said shaft, a bearing on said sleeve in said recess, an annular closure cap for said bearing recess fixed on said sleeve and having an opening for the escape of lubricant extending around its outer periphery within said roller body and a passageway for lubricant extending longitudinally in said axial shaft and having branch passageways in said sleeve opening between said cap and bearing at a plurality of points spaced around the periphery of said support, said passageways and branches being adapted to receive lubricant from an opening in the outer end of said axial support.

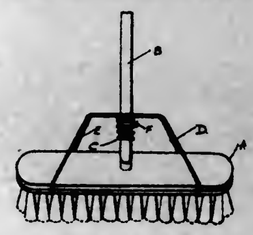
1,905,667. TRAIN-CONTROL TRACKWAY EQUIPMENT. GEORGE F. WEINRICH, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 2, 1931. Serial No. 519,421. 15 Claims. (Cl. 246—63.)



1. In combination with a stretch of trackway having sidings for permitting the passage of trains and being divided into insulated sections, sets of trackway electromagnets in various of the sections, each set including electromagnets for transmitting impulses to vehicles passing in both directions, means for preventing the energization of any of the magnets for controlling a vehicle moving in one direction over the stretch when a vehicle is moving over the stretch in the other direction, and means for successively energizing the other magnets of the sets first in one direction and then the other.

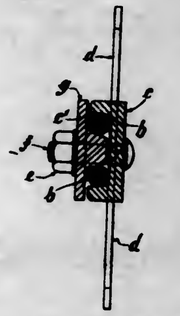
1,905,668. METHOD OF AND APPARATUS FOR FORMING AND TESTING SWITCHES. JOHN WILLIAM WHITE, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 10, 1930. Serial No. 434,717. 19 Claims. (Cl. 175—183.)

1. In an apparatus for completing a switch having binding posts adapted to be connected electrically by an element of said switch under pressure, said apparatus comprising a bed in which said switch is placed and a movable die, connecting means carried by said die for contacting with said binding posts, a source of electrical energy and a bulb in circuit with said connecting means, a master switch, the binding posts of which are in circuit with a source of electrical energy and a bulb, means for operating and completing the switch in said bed, and means for supplying pressure simultaneously to both said master switch and the switch in said bed to cause the element in each switch to complete the circuits.



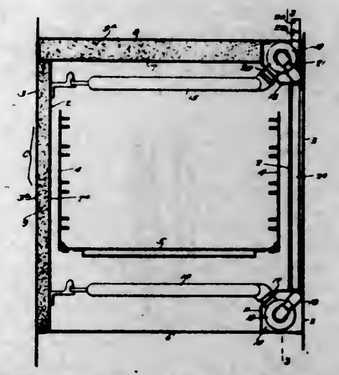
1,905,669. VIBRATION TRANSLATING DEVICE. GEORGE R. YENNER, Woodhaven, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1931. Serial No. 561,865. 6 Claims. (Cl. 179—100.41.)

3. In an electromagnetic translating device, a stationary structure including a magnet, a moving system including an armature adapted to vibrate between the poles of the magnet, a set screw in the stationary structure having an eccentric hole in the end thereof, and a pin secured to the moving system and extending into the hole in the set screw to provide a biasing means for the system.



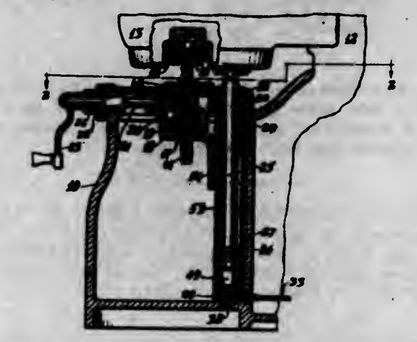
1,905,670. DEVICE FOR SECURING BROOM HEADS TO THEIR STICKS. ELIJAH ALFRED YOUNG, Johannesburg, Union of South Africa. Filed Sept. 9, 1931. Serial No. 561,888. 2 Claims. (Cl. 206—20.)

1. Means for securing a handle to a broom head comprising a symmetrical pair of wire rods each bent substantially U shape and both formed with horisontal medial portions united to each other, the remainder of the two wire rods being side limbs which are angularly spread hooks at the free ends of all of said side limbs adapted to engage under the broom head, a circular ring formed in the centre of the united median portion of said wire rods, a coiled wire rod united to said ring coaxial therewith and depending therefrom and adapted to receive the handle of



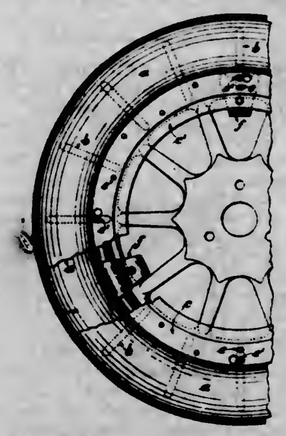
the broom, and a radial projection being driven into the handle of the broom adapted to travel along the convolutions of said coiled wire rod.

1,905,671. FLEXIBLE HARROW OR CULTIVATOR. WILLIAM AITKENHEAD, Failsworth, England. Filed Nov. 25, 1931, Serial No. 577,278, and in Great Britain Dec. 8, 1930. 4 Claims. (Cl. 55—82.)



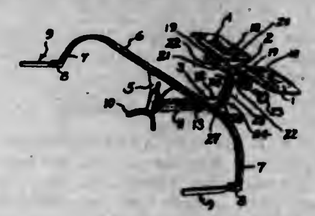
1. In flexible harrows or cultivators composed of a plurality of links having hooks and eyes or loops for connection with one another, and clamping means for holding tines thereto, a clamp having two acutely inclined relatively movable faces, and a third and opposed abutment face of the tine itself in the angle of the said inclined faces between which three faces the link is clamped.

1,905,672. GAS RANGE. WILLIAM D. ANTRIM, Gloucester, N. J., assignor to Roberts & Mander Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1931. Serial No. 570,019. 4 Claims. (Cl. 126—273.)



1. The combination in a gas range, of an oven having an inner and outer casing; a baking burner in the lower portion of the oven; a broiling burner in the upper portion of the oven; and a controlling valve controlling the flow of gas to the said burners through their mixing chambers, said mixing chambers being located in compartments formed by the inner and outer plates of the oven, the inner plates forming the compartments, being removable through the oven.

1,905,673. MILLING MACHINE. WALTER D. ARCHEA, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 8, 1930. Serial No. 419,425. 7 Claims. (Cl. 90—18.)



2. In a milling machine having a bed, a table slidably mounted on said bed, a column, a spindle carrier mounted on said column for movement toward and from said table, the combination of means for effecting said movement including a screw and nut, and means to counter-balance the carrier during movement in either direction including a piston and cylinder, one of which is attached to said head, a source of hydraulic pressure coupled to said cylinder to effect a lifting force on said head and adjustable automatic valve means for maintaining the pressure at a predetermined constant valve during movement of the head in either direction.

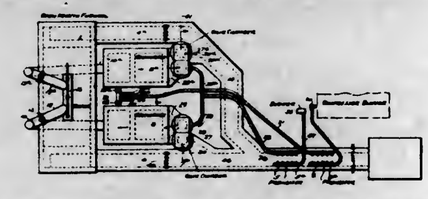
1,905,674. SPLASH GUARD FOR MOTOR VEHICLES. ALFRED JAMES BARBA, Longsight, Manchester, England. Filed Jan. 2, 1931, Serial No. 506,236, and in Great Britain Aug. 29, 1930. 2 Claims. (Cl. 280—156.)

1. A splash guard for a vehicle wheel, comprising a flexible ring of uniform thickness throughout and having in cross section an inner straight part and an outer curved part, flat metal springs intermoulded in the ring and arranged radially thereof, a metal clamping ring at each side of the straight part of the flexible ring clamping bolts passing through the clamping rings and the intermediate part of the flexible ring, each clamping bolt passing through one of the intermoulded metal springs, and means for securing the inner clamping ring to the vehicle wheel.

1,905,675. OPHTHALMIC MOUNTING. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 25, 1929. Serial No. 380,968. 5 Claims. (Cl. 88—41.)

1. In a device of the character described, a frame member having a nose rest support thereon, an arm pivoted to the nose rest support and extending forwardly therefrom, a lens support pivoted adjacent the outer end of said arm, a hinge joint on the arm intermediate the pivot connections by means of which the said arm may be folded, and a spring member at said hinge joint and pivot connections adapted to hold the lens support rigid in its outwardly adjusted position.

1,905,676. AUTOMATIC SPRINKLER OR FIRE EXTINGUISHER AND OTHER FIRE DEVICE. SIDNEY FRASER BARCLAY, Manchester, England, assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Mar. 30, 1931, Serial No. 526,509, and in Great Britain Apr. 15, 1930. 5 Claims. (Cl. 169—38.)

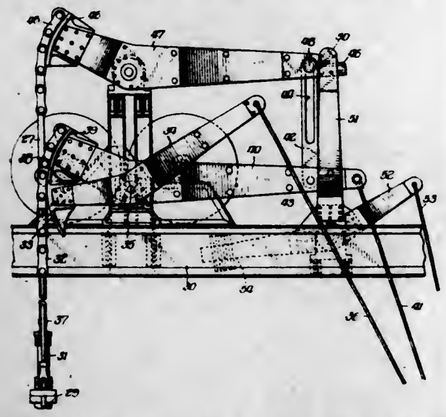


1. In bulbs containing a liquid and a bubble for use in automatic sprinklers, fire extinguishers and other fire control devices, the addition to the thermally expansive liquid by which the bulb is shattered at a predetermined temperature of a material or materials which destroy or reduce to a low value the tensile stress induced in such liquid prior to the reappearance on cooling of the bubble after its disappearance upon heating of the bulb to a temperature lower than the shattering temperature.

1,905,677. OPEN HEARTH FURNACE. IRVIN A. BILLIAR, Burnham, Pa. Filed Dec. 2, 1931. Serial No. 578,592. 8 Claims. (Cl. 263—15.)

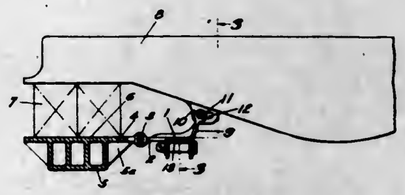
3. The combination in an open hearth furnace, of a furnace having downtake flues at each end; a waste gas flue with which said downtake flues communicate; a series of burners in the roof of the furnace, arranged to direct the flames upon the charge within the furnace; two regenerator chambers; a preheater in the waste gas flue; a burner pipe connected to each regenerator chamber; a pipe leading from the said pre-heater to said burner pipe;

valves in said burner pipe for controlling the flow of highly heated air to either regenerator furnace; a hot blast pipe leading from each regenerator chamber to the



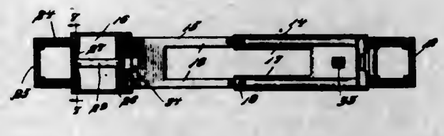
burner at the roof of the open hearth furnace; and a valve in each of said hot blast pipes for controlling the flow of heated air therethrough.

1,905,678. LOAD LIFTING ARRANGEMENT. CHARLES D. BONSALL, New Kensington, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1929. Serial No. 356,242. 4 Claims. (Cl. 108—5.)



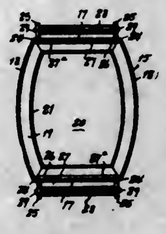
1. In a railway car, the combination of a load lifting beam having oppositely projecting flanges, and a member formed of a double looped bar with its free ends and the return bends thereof being substantially parallel and in close proximity to said flanges of the lifting beam, said member also having means for attachment of a lifting device positioned between said return bends whereby a downward inclined pull upon the lifting device causes the ends and return bends of the member to bind upon the flanges of the beam and retard movement of the member longitudinally of the beam.

1,905,679. APPARATUS FOR CHARGING FURNACES. ARTHUR J. BOYNTON and PAUL ZIMMERMANN, Chicago, Ill., assignors to H. A. Brassert & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1932. Serial No. 588,310. 5 Claims. (Cl. 214—36.)



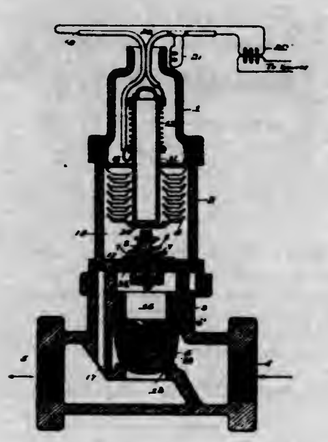
1. In a shaft furnace, charging apparatus comprising a charging hopper, a two-part bell closing the lower end of the hopper, said bell comprising an inner part and a ring shaped outer part, a bell rod and operating bell crank for each of said bell parts, and a slotted link connecting the two bell cranks for joint operation.

1,905,680. RAILWAY TRUCK CONSTRUCTION. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1932. Serial No. 597,066. 14 Claims. (Cl. 188—207.)



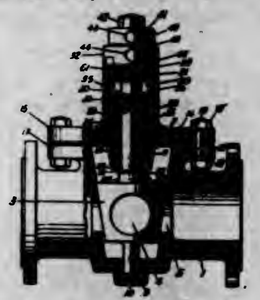
1. In a railway vehicle, a plurality of structural parts, one of said parts being movable relative to the other, and a brake beam guard, guide or support member deriving support from both of said parts.

1,905,681. EXTENSION DEVICE. EDWIN G. CARLSON, Riverside, R. I., assignor to Speidel Chain Co., Providence, R. I., a Firm composed of Frederic Speidel and Eugen Speidel. Filed Dec. 18, 1930. Serial No. 503,269. 11 Claims. (Cl. 24—71.)



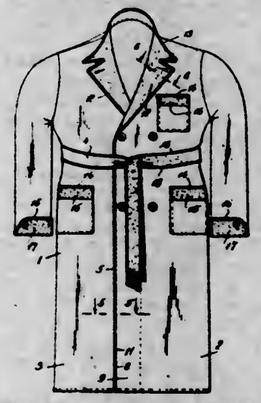
11. An extension device for an open chain link bracelet comprising a pair of overlying sections with spaced projecting arms hinged together at their ends and unconnected laterally leaving a continuously open unobstructed space between said arms from the pivoted free end for at least half the length of said sections when in folded position, and means for adjustably connecting a link bracelet to said device with the openings in the links registering with the space between said arms regardless of the position of said links when the extension device is in folded position, so as to give the appearance of a continuous chain.

1,905,682. WRIST WATCH AND THE LIKE. ELOF L. CARLSON, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a Corporation. Filed Mar. 18, 1932. Serial No. 599,706. 12 Claims. (Cl. 58—88.)



1. In a strap watch or the like, the combination with a case provided with spaced-apart openings; of a U-shaped strap-yoke having its cross-reach located within the said case and having its spaced-apart side-arms extending outwardly from the interior of the said case through the said spaced-apart openings therein.

1,905,683. THERMOSTATICALLY CONTROLLED VALVE. THOMAS W. CARRAWAY, Chicago, Ill., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Nov. 27, 1928. Serial No. 322,241. 1 Claim. (Cl. 137—138.)

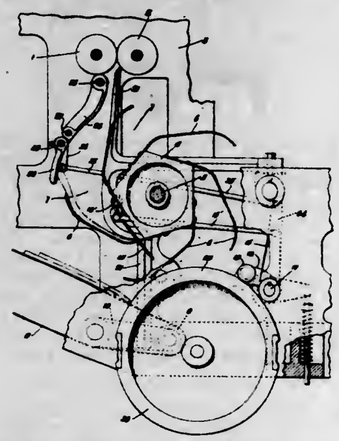


A valve mechanism comprising, in combination, a housing having an inlet an outlet passage with a valve seat therebetween; a main valve arranged to be seated on said seat to prevent direct flow from the inlet to the outlet passage; a second housing mounted on the first housing with a partition therebetween forming a chamber in the first housing on the side of said valve opposite its seat; a passage through said valve connecting the said chamber with the inlet passage whereby the supply pressure is admitted to said chamber to hold the valve seated; a third housing mounted on said second housing having a partition therebetween comprising a tubular container extending on both sides of the last said partition into the chambers of the second and third housings respectively; the portion of said container located in the chamber of the third housing having its end closed and the portion of said container located in the chamber of the second housing having its end open; a bellows sealed within the chamber of the second housing in communication with the open end of said container; a port in the first said partition connecting the chamber above the main valve in the first housing with the chamber of the second housing; an auxiliary valve located in the chamber of the first housing above the main valve having a stem extending through the first said partition into the chamber of the second housing in position to be engaged by said bellows; a spring acting on said stem to hold said auxiliary valve seated whereby the said port is closed; a second port in the first said partition opening into a passageway through the first housing leading to the outlet passage thereof; an electric heating coil surrounding the portion of the container extending into the chamber of the third housing having conduits leading to a source of electric current; and a fluid in said container and bellows adapted to expand when an electric current is passed through said heating coil; the expansion of said fluid causing said bellows to move into engagement with the stem of the auxiliary valve and effect the latter's opening, thereby permitting the pressure acting on the main valve to seat it to pass through the port opened by the auxiliary valve and thence escape through the other port in the first said partition and associated passageway to the outlet passage of the first housing, whereby the inlet pressure acting on the main valve effects its opening.

1,905,684. VALVE STRUCTURE. JOHN R. COFFMAN, Columbus, Ohio, assignor to The Columbus Valve Manufacturing Corporation, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 18, 1930. Serial No. 436,813. 9 Claims. (Cl. 251—93.)

1. In a valve structure, a valve casing including a seat, a plug adapted to be disposed in said seat, a stem for said plug, a cap member for said casing having a tubular extension, a packing material in the lower portion of said extension and surrounding said stem, a gland member disposed within said tubular extension for compressing said packing material, and a nut mounted upon the upper end of said tubular extension and slidably mounted on said stem for moving the stem axially, there being a space between said nut and said gland member so as to provide a reservoir for lubricant, said nut and said gland member operating independently of each other.

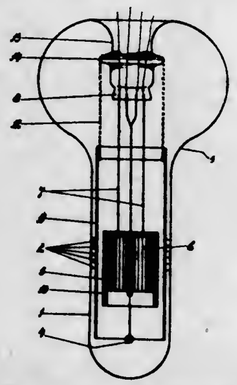
1,905,685. ROBE CONSTRUCTION. GEORGE SAFIR and LEO C. SAFIR, South Norwalk, Conn. Filed Nov. 22, 1932. Serial No. 643,822. 2 Claims. (Cl. 2—93.)



1. In an edging structure for a garment, a cord attached to the garment on the inner face thereof and adjacent the edge of said face, the margin of said garment adjacent the cord being laid against the surface of the cord, a strip of material stitched to said margin and folded upon itself so as to conceal said stitching, said strip extending around said cord and against the inner surface of said garment and being stitched to said garment in a line close to said cord, said line of stitching being exposed on the outer surface of said garment in close proximity to the fold of said strip, thereby appearing as the stitching by which said strip is secured to the garment.

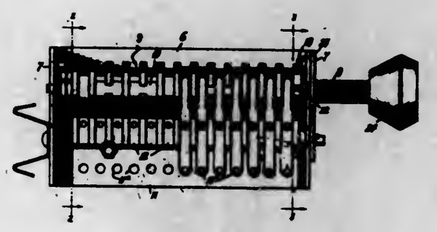
1,905,686. METHOD OF PREPARING CARBON AND PRODUCT THEREOF. ROBERT M. COLB, Bryn Athyn, Pa., assignor to American Dyewood Company, New York, N. Y., a Corporation of Pennsylvania. Filed Jan. 25, 1932. Serial No. 588,826. 18 Claims. (Cl. 134—60.)

1. The method of treating carbonaceous material to produce carbon which comprises subjecting such material



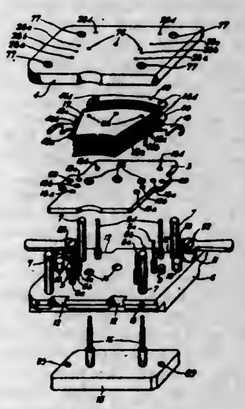
while submerged in a liquid medium to temperature, under pressure commensurate with such temperature, sufficient to char the material, the pressure and temperature being so coordinated as to maintain the medium in which the carbonaceous material is submerged in the liquid phase during the charring of the material.

1,905,687. **FOLDING MECHANISM.** CURTIS S. CRAFTS, Oak Park, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1932. Serial No. 587,498. 11 Claims. (Cl. 93—93.)



1. A delivery mechanism for high speed folders including in combination a rotary fly into which folded products are delivered, a moving surface onto which the products are placed by the fly, means for holding the products within the fly during a portion of its revolution, means for displacing certain of said products as said products are delivered and means for moving said holding means to permit normal operation of the displacing means.

1,905,688. **ELECTRIC DISCHARGE TUBE.** WILLEM DE GROOT and ENGBERT HARMEN REBBINK, Eindhoven, Netherlands, assignors, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Apr. 1, 1931, Serial No. 526,922, and in the Netherlands Apr. 3, 1930. 12 Claims. (Cl. 176—122.)



1. An electric discharge tube comprising at least two electrodes, a substance the vapour of which participates in the discharge, an open ended and solid wall member acting as a chimney for said vapour.

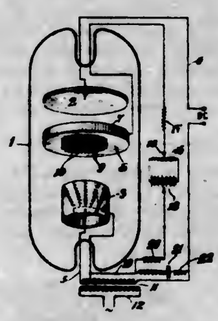
1,905,689. **SWITCH FOR RADIO PHONOGRAPH SETS.** FRANK C. DE RHAMES, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Feb. 3, 1931. Serial No. 513,184. 3 Claims. (Cl. 200—8.)

1. A rotary switch comprising a spindle, thick and thin disks alternately arranged thereon, the thin disks having axially extending sockets, thin metal contacts mounted on the thick disks, certain of which are in the same axial alignment, and shallow tenons on the contacts which enter the sockets, the aggregate length of a pair of tenons entering the same socket being less than that of the thickness of the disk containing the same.

1,905,690. **ASSEMBLING MACHINE AND JIG.** FREDERICK W. DOYLE, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Original application filed June 27, 1928, Serial No. 288,601. Divided and this application filed Nov. 21, 1931. Serial No. 576,453. 3 Claims. (Cl. 29—84.)

1. The process of assembling parts by means of a plurality of jigs and a compressor which consists in passing the jigs down a line of operators each of whom places one or more parts on each jig, in passing the jigs in turn to the compressor, the operator of which compresses the parts, permanently secures them together, and removes the complete assemblies from the jigs, and in returning the empty jigs to the beginning of the line.

1,905,691. **JOINT FOR HIGH TENSION UNDERGROUND CABLES.** EUGENE D. EBY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1927. Serial No. 167,082. 11 Claims. (Cl. 173—268.)

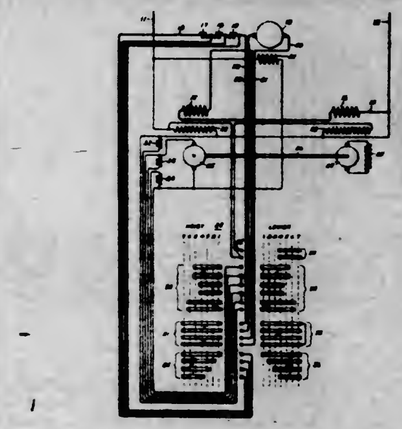


1. A joint for sheathed cable conductors comprising a casing which unites the sheaths, a cylindrical lining for

the casing, connectors for the conductors which are located within the lining between its ends, inner segmental barriers which are situated between the conductors, the sides of which engage the inner surface of the lining, and

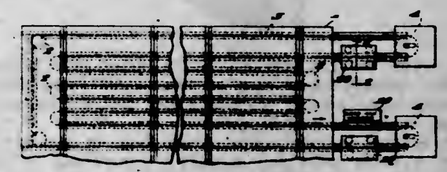
outer segmental barriers the sides of which also engage the inner surface of the lining, the edges of the inner and outer barriers of each conductor terminating at their points of contact.

1,905,692. **RECTIFIER.** DONALD V. EDWARDS, New York, N. Y., and EARL K. SMITH, East Orange, N. J., assignors to Electrons, Inc., of Delaware, a Corporation of Delaware. Filed Dec. 30, 1930. Serial No. 505,510. 5 Claims. (Cl. 250—27.5.)



1. A discharge tube enclosing a gaseous conducting medium, an anode, a cathode and a grid adapted to control the starting of said tube, said grid having open spaces therein formed by conductive elements separated a distance approximately as great as the mean free path of the gas in the tube under starting conditions.

1,905,693. **MOTOR CONTROL SYSTEM.** WALTER ENDRES and HERBERT HOOTZ, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Oct. 20, 1931, Serial No. 570,006, and in Germany Oct. 30, 1930. 11 Claims. (Cl. 172—179.)

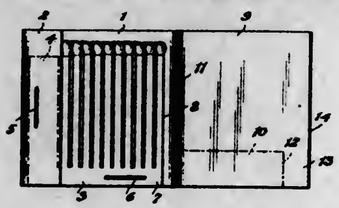


1. In a motor control system the combination with a main direct current shunt motor, of means for imparting a series characteristic to said motor comprising an auxiliary motor having its armature connected in the field circuit of said main motor and excited in inverse proportion to the load on said main motor.

11. A motor control system comprising a main direct current shunt motor, a resistance device having a plurality of sections, means for imparting a series characteristic to said motor comprising a regulating set, said set comprising an auxiliary motor having its armature connected in parallel with certain of said resistance sections and provided with a separately excited field winding and a differentially wound field winding connected in the armature circuit of said main motor and a generator driven by said motor and provided with a field winding connected in the armature circuit of said main motor, speed control means for said motor comprising a controller having a plurality of field weakening positions, electrical connections established in one of said field weakening positions for rendering said certain resistance sections and

said regulating set effective and electrical connections established in another of said field weakening positions for modifying the effect of said regulating set.

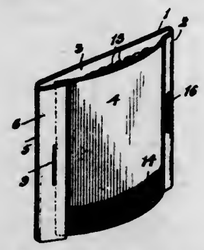
1,905,694. **ARTICLE TREATING APPARATUS.** ERNEST L. FOLEY, Newton, Mass., assignor to Underwood Machinery Company, South Boston, Mass., a Corporation of Massachusetts. Filed Feb. 15, 1928, Serial No. 254,419. Renewed Aug. 27, 1932. 11 Claims. (Cl. 91—45.)



6. Apparatus of the kind in which a succession of articles moves through a treating zone, said apparatus comprising a rotary spindle for supporting an article to be treated, said spindle being bodily movable along a path substantially perpendicular to its axis of rotation, a whirl on the spindle, a pair of endless belts each having a run disposed at one side of the path of the spindle and substantially parallel thereto, and means resiliently urging said runs toward the path of the spindle and into frictional contact with said whirl as the spindle progresses along its path, said belts moving in opposite directions.

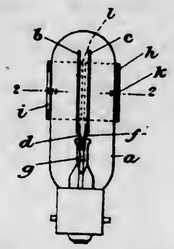
9. Apparatus of the kind in which articles to be treated are moved successively through a plurality of treating zones, said apparatus comprising an endless chain moving in a predetermined path, a guide rail for supporting the chain, a carriage rigidly connected to the chain, said carriage having a bearing, a spindle journalled in said bearing, said spindle having an article-supporting element, and power actuated means for rotating the spindle at high speed as it passes through each treating zone.

1,905,695. **MATCH PACKAGE.** BENJAMIN H. FREEDMAN, New York, N. Y., assignor to Hudson Holding Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1930. Serial No. 446,493. 1 Claim. (Cl. 206—29.)



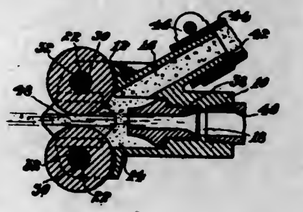
A match package having a cover, a match strip extending cross-wise on said cover and having portions of the

cover folded over it, the match strip being secured at two of its edges to the cover, with one of the secured edges lying at right angles to the other secured edge, a striking surface on the cover extending longitudinally of it, said



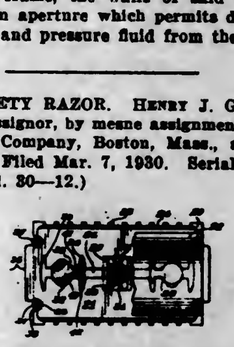
striking surface having one of its narrower ends terminating short of the free end of the cover and being so proportioned that it cannot be brought into contact with the heads of the matches by the inadvertent angular folding of the cover.

1,905,696. MATCH PACKAGE. BENJAMIN H. FREEDMAN, New York, N. Y., assignor to Hudson Holding Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 30, 1930. Serial No. 448,453. 1 Claim. (Cl. 206—29.)



A match package provided with a match strip having a flap disposed along each of two of its longitudinal parallel edges, a cover containing said match strip, said cover having a narrow inturned flap at one of its ends adapted to overlie one of the flaps on the match strip, a wider cover flap extending transversely of the match strip and adapted to have its end removably tucked under the narrow flap, said wider cover flap overlying the second flap on the match strip, means for attaching each of the two flaps on the cover to each of the flaps on the match strip which they respectively overlie and a striking strip on the outer face of the wider cover flap located adjacent to one of its edges.

1,905,697. POLARITY INDICATOR. HEINRICH FRIEDRICHSEN, Berlin-Treptow, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 8, 1930, Serial No. 427,033, and in Germany June 21, 1929. 1 Claim. (Cl. 250—27.5.)



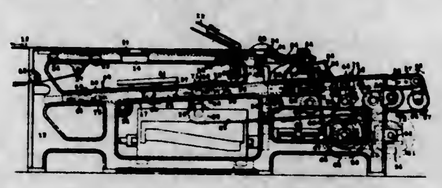
A polarity indicator consisting of an electric discharge device of the cathode glow type comprising a container, a gaseous atmosphere therein, electrodes therein and a stencil mounted externally thereon, said stencil being a split-ring, resilient shell having its inside diameter slightly less than the outside diameter of the container and having a plus sign opposite the flat side of the positive electrode and a minus sign opposite the flat side of the negative electrode, said electrodes being plates mounted in coextensive parallel relation, one of said plates being a shield to prevent light from the other plate from passing through the lamp wall in the direction of the first named plate.

1,905,698. SAND BLAST NOZZLE. JAMES S. FULTON, Shields, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 11, 1932. Serial No. 642,198. 3 Claims. (Cl. 51—11.)

1. A sand blast nozzle comprising in combination, a frame, a conduit for pressure fluid, a conduit for abrasive material, a plurality of rotatably movable elements mounted in the frame, the walls of said rotatable elements forming an aperture which permits discharge of a mixture of sand and pressure fluid from the nozzle.

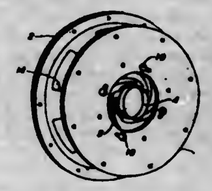
1,905,699. SAFETY RAZOR. HENRY J. GAISMAN, New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Mar. 7, 1930. Serial No. 434,047. 6 Claims. (Cl. 30—12.)

3. A safety razor head, including cap and guard members having co-operating blade flexing and blade clamping surfaces, and a flexible blade having cutting edges, said blade being interposed between said members and comprising blade sections held in spaced relation by flexing hinges, the adjacent portions of said blade sections being provided intermediate their end and central portions with a plurality of resilient tongues having their free ends recessed to form blade-locating openings, said guard member having studs engaging the openings at the ends of the tongues to align the blade and guard, said studs having excluding portions extending longitudinally beyond the recesses and transversely about portions of the free ends of said tongues, and co-acting means on said cap and blade to align the same.



1,905,700. FACING MACHINE. HARRY A. GREENHOLT, Chicago, Ill., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 16, 1926. Serial No. 129,388. 11 Claims. (Cl. 198—33.)

1. A facing machine for an article having a substantially flat face and sharp edge on one side and a receding edge on the other side, including a pair of driven belts having adjacent edges spaced apart less than the thickness of the articles being faced, guide means for said belts intermediate their ends disposed to tilt opposed portions of said belts to form a V of sufficient acuteness that one side of the V will exert pressure on the sharp edge of the article being faced and the other side of the



V will exert pressure on the receding side of the article inward from its extreme edge, whereby a turning moment will be produced to turn the flat face of the article against one of the belts.

1,905,701. CONVEYING MECHANISM. HARRY A. GREENHOLT, Chicago, Ill., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1925. Serial No. 10,720. 24 Claims. (Cl. 107—7.)

20. In a machine of the character described, the combination comprising a panner blade mounted for advancing and retreating movement for periodically delivering batches of articles, a pan carrier for receiving said batches, means for moving said pan carrier at alternate different speeds synchronously with said panner blade reciprocations, and means for controlling the panner blade reciprocation and said carrier speed changes, said means being constructed and arranged to advance said panner blade at a different speed than its retreating speed and means connecting said delivery point and carrier to cause them to move together.

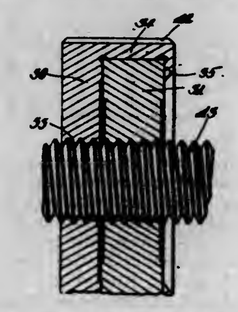
1,905,702. LOUDSPEAKER. RUPERT W. HARDISTY, Aldwych, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 4, 1931, Serial No. 527,656, and in Great Britain June 19, 1930. 11 Claims. (Cl. 179—115.5.)

8. A moving coil loud speaker comprising a diaphragm, a driving coil attached to said diaphragm, a permanent magnet providing a magnetic air gap for said coil, a frame assembly carried by the magnet and detachable as a unit therefrom, said diaphragm and coil being permanently centered on said frame assembly, and coil positioning means for accurately recentering the coil in the air gap after removal therefrom, said means being operative by a small rotation of the frame assembly relative to said magnet.

1,905,703. CONTACT RECTIFIER. WOLFGANG HARRIES, Jena, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 5, 1930, Serial No. 500,404, and in Germany Dec. 12, 1929. 6 Claims. (Cl. 175—366.)

1. In a contact rectifier, a plurality of rectifier units and a bolt arranged to compress said units, each of said units including a plate composed of a material having a coefficient of expansion substantially different from that of the material of said bolt, said plate having a layer of active material thereon, each of said units further including a plate in contact with said active material, said plates being of such thickness and of such material that the thermal expansion of said plurality of rectifier units is substantially equal to that of said bolt.

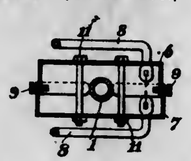
1,905,704. ACOUSTIC DEVICE. HENRY C. HARRISON, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1930. Serial No. 452,154. 9 Claims. (Cl. 179—115.5.)



1. A sound reproducing device comprising an elongated direct acting diaphragm, means defining a magnetic air-gap, and a current conducting member disposed in said air-gap and secured to and across the face of said diaphragm along its short dimension, said member having integral flexible portions near its extremities.

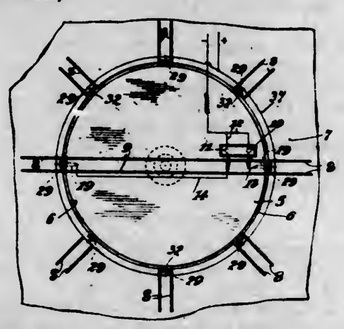
5. In combination, a diaphragm comprising a plurality of spaced elongated elements, means for securing said elements at their extremities, said means comprising a member having depressions into which the extremities of said elements are placed and clamped therein by displacement of the material between said depressions, and means for actuating said diaphragm.

1,905,705. SCREW THREAD GAUGE. JAMES HARTNESS, Springfield, Vt. Filed Nov. 18, 1927. Serial No. 234,116. 12 Claims. (Cl. 33—199.)



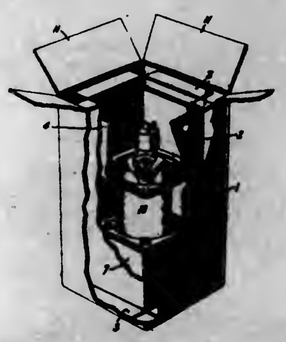
1. A method of gauging a screw, which comprises screwing onto said screw two ring gauges which are relatively adjustable about their common axis and are thus so adjusted that their threads lie in a common helix, the threads being of a sufficient pitch diameter to receive the

maximum tolerable screw to be gauged, effecting a relative rotation of the gauges from their original adjusted position as far as possible while restraining them from relative axial movement to cause their threads to jam against the opposite flanks of the threads of the screw, and noting the angle of relative rotation of said ring gauges.



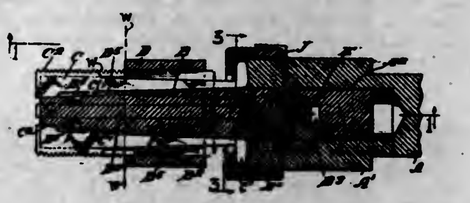
4. A gauge comprising a pair of members, each having a threaded aperture, said members being relatively adjustable about their common axis to positions wherein their threads lie in a common helix and being normally so adjusted, means for preventing relative axial movement of said members but permitting their relative rotation; and means for indicating the amount of relative rotation in either direction from said normal adjusted position.

1,905,706. ADVERTISING DEVICE. WOLFGANG HASENPATT, Berlin-Friedenau, Germany, assignor to General Electric Company, a Corporation of New York. Filed June 27, 1932, Serial No. 619,607, and in Germany July 9, 1931. 2 Claims. (Cl. 40—130.)



1. A sign comprising a plurality of letters mounted on a rod-support, said letters being in two parts adapted to clamp said rod, each of said parts having a reflecting surface and a luminous electric discharge device of the same configuration mounted thereon in operative relation to said surface.

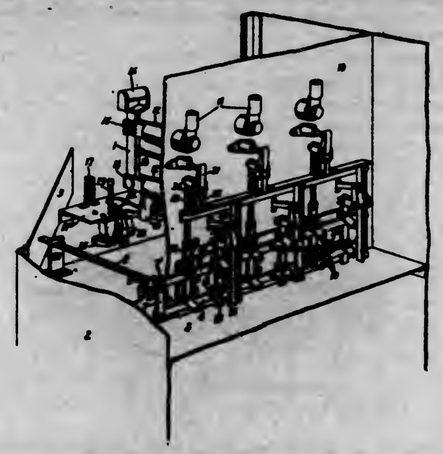
1,905,707. INDICATING MEANS FOR TURNTABLES AND THE LIKE. HENRY O. HAVEMEYER, Jr., Mahwah, N. J. Filed Apr. 5, 1930. Serial No. 441,747. 3 Claims. (Cl. 200—164.)



1. In combination with a rotary part, electrical circuit closing means including a fixed contact adjacent the periphery of said rotary part, a spring pressed circuit closing member carried by said rotary part and radially movable with respect thereto for engagement with the fixed contact, and means for regulating the frictional pressure of said circuit closing member upon the fixed contact.

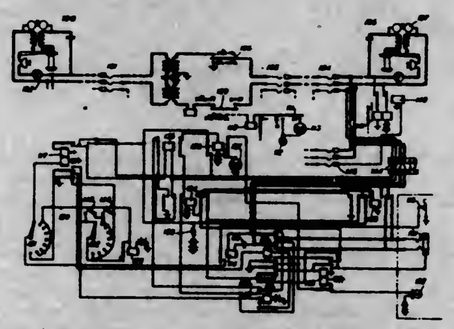
1,905,708. PACKING CASE FOR FRAGILE ARTICLES. JOHNSON F. HENDRY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 18, 1929. Serial No. 392,446. 6 Claims. (Cl. 206—65.)

5. In a packing case for glass tubes and the like, an outer casing, a unitary inner containing member, and retaining members snugly and yieldingly held within said inner containing member when in position, a tube within said inner containing member, and means for cushioning said tube within said inner containing member, said cushioning means forming part of said retaining members.



1,905,709. COLLAPSIBLE TAP. RAYMOND L. HERMAN, New York, N. Y., assignor to Benjamin May and Louis Schulman, Brooklyn, N. Y., a Partnership. Filed May 31, 1930. Serial No. 457,817. 7 Claims. (Cl. 10—145.)

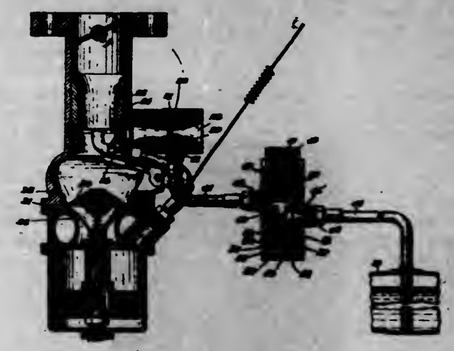
1. A collapsible tap comprising a body, a head slidable lengthwise relatively to said body, inwardly-springing chasers engaging said head, the latter being formed to expand the tap by moving the working portions of the chasers outwardly when the head slides in one direction relatively to the body, said chasers having attaching portions adjacent to the body, and a clamping collar mounted on the body movably and arranged to press said attaching portions firmly against the body to hold them stationary relatively thereto.



1,905,710. INTERLOCKING SYSTEM. CHARLES H. HILL, Drexel Hill, Pa., assignor to General Electric Company, a Corporation of New York. Filed Sept. 24, 1931. Serial No. 564,878. 7 Claims. (Cl. 200—50.)

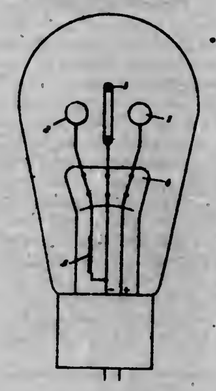
1. An interlocking system for a plurality of individually movable members and enclosing housing therefor, comprising locking means operatively related to each of said members, said locking means positioned to accordance with the determining positions of the corresponding member, and blocking structure arranged selectively to be engaged by said locking means, uniform positioning of said members permitting partial movement of said blocking structure and non-uniform positioning completely locking the

same, and means relating said blocking structure to said enclosing housing so that said housing may be closed only when said members are in uniform positions.



1,905,711. TELEPHONE SYSTEM. EDWARD E. HINRICHSEN, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1931. Serial No. 523,388. 9 Claims. (Cl. 179—27.)

1. In a telephone system, a calling line, a called line, means to establish a connection from said calling line to the terminals of said called line, means to apply ringing current to said called line at definite intervals, a stepping switch, a signal, means effective in a particular position of said stepping switch to operate said signal, means responsive to each application of ringing current to advance said switch one step, whereby said signal will be operated after a predetermined elapsed time, other means for advancing said switch, and means to render said other means effective to vary said elapsed time.

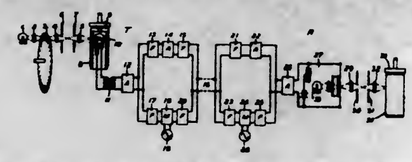


1,905,712. CARBURETING SYSTEM. CASPAR E. HOWBAUER, New York, N. Y., assignor to Paramount Carburetor Corporation, New York, N. Y., a Corporation of New York. Filed July 25, 1929. Serial No. 380,857. 2 Claims. (Cl. 261—69.)

1. As an attachment to a fuel feed system for automobiles and the like, a valve chamber, a valve seat therein, a valve, means acting automatically to keep said valve on its seat, a diaphragm supported in said chamber in spaced relation to said valve and connected thereto and presenting an area open to the chamber substantially equal to the area of the valve open to the chamber, the valve chamber being open to one side of the valve seat for connection of the conduit to the fuel nozzle and on the opposite side of the valve seat and at a point between the valve seat

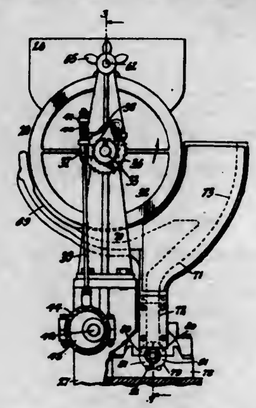
and the diaphragm for connection to the conduit to the fuel source whereby the action of the head of the fuel from the source of supply upon the valve and the diaphragm and therefore upon the valve will be substantially equal and opposite, thus eliminating this head as a factor in the operation of the fuel feed control.

1,905,713. GAS FILLED DISCHARGE TUBE. GILLES HOLST, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Jan. 22, 1927, Serial No. 162,900, and in the Netherlands Jan. 29, 1926. 7 Claims. (Cl. 176—123.)



1. An electric arc discharge tube comprising a rare gas filling, main cooperating electrodes and a ring-shaped auxiliary electrode for increasing the arc voltage, said ring-shaped electrode being mounted entirely between said main electfodes and surrounding the discharge path.

1,905,714. SIGNALING SYSTEM. JOSEPH W. HORTON, Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1931. Serial No. 529,043. 13 Claims. (Cl. 178—5.)

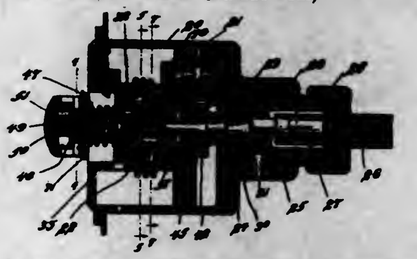


1. The method which comprises producing two currents having the same signal modulations but occupying differ-

ent frequency ranges, selecting a portion of one of said currents and stepping the selected portion into the frequency range of the other of said currents, and combining the

selected portion with the said other current to selectively modify the amplitude of certain frequency components of said other current.

1,905,715. NUT BLANK FEEDING MECHANISM. EDWARD H. INGRAM, Philadelphia, Pa., and VICTOR E. PEARSON, Buffalo, N. Y., assignors, by mesne assignments, to Helen Koch De Sherbinin. Filed Mar. 9, 1931. Serial No. 521,084. 5 Claims. (Cl. 10—170.)



1. A mechanism for feeding nut blanks which are provided with a diametrical deflection across the central parts thereof, comprising a rotary bowl of conical form into the small end of which nut blanks are introduced promiscuously into said bowl, two positioning rings mounted opposite each other on the periphery of the large end of said bowl and having their opposing surfaces constructed to form an annular row of positioning openings through which the nut blanks are adapted to pass from the interior of the bowl to the exterior thereof, the corresponding sides of the openings in one of said rings having convex faces and the corresponding sides of the openings in the other ring having concave faces conforming to the shape of the nut blanks being fed the large end of said bowl being provided with means to prevent the nuts from falling out of this end of the bowl.

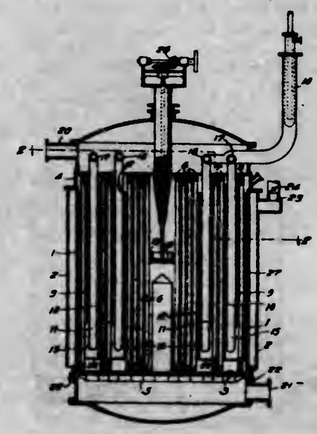
1,905,716. MAKING STEREOSCOPIC PARALLAX PANORAMAGRAMS FROM PSEUDOSCOPIC PARALLAX PANORAMAGRAMS. HERBERT E. IVES, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 3, 1931. Serial No. 527,378. 21 Claims. (Cl. 88—166.)

2. In a system for producing pictures in stereoscopic relief, means to produce a pseudoscopic parallax panoramagram of an object, pictures of which are to be viewed in stereoscopic relief, means to produce a stereoscopic parallax panoramagram from said pseudoscopic parallax panoramagram, and means utilising said stereoscopic parallax panoramagram to produce a picture visible in stereoscopic relief.

1,905,717. AUTOMOBILE INDICATING DEVICE. ALFRED F. JACKSON, Providence, R. I., assignor to Lewis R. Smith, receiver of Apco Mossberg Corporation, a Corporation of Rhode Island. Filed Apr. 9, 1931. Serial No. 528,855. 17 Claims. (Cl. 116—31.)

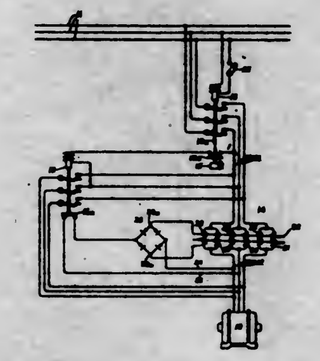
1. In an automobile indicating device, a rotary element driven in predetermined relation to the wheels of the automobile, a driven member for indicating the distance traveled, means for connecting said element and member thru a lost motion device whereby movement of said element in opposite directions causes a different relative corresponding movement of said member.

1,905,718. FASTENER. ISIDOR JACOBS, Union City, N. J., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed June 10, 1929. Serial No. 369,558. 22 Claims. (Cl. 24—205.)



1. A sliding cam device for the stringers of a slide fastener comprising a separable pair of cam members arranged to slide on the stringers, means to join said members together, and an actuating means cooperating with said joining means and so arranged that movement thereof longitudinally of the stringers moves the sliding cam, and movement thereof transversely of the stringers releases the joining means in order to separate the cam members.

1,905,719. CATALYTIC APPARATUS. ALPHONS O. JAEGER, Mount Lebanon, Pa., assignor, by mesne assignments, to the Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Filed June 10, 1929. Serial No. 369,544. 5 Claims. (Cl. 23—288.)

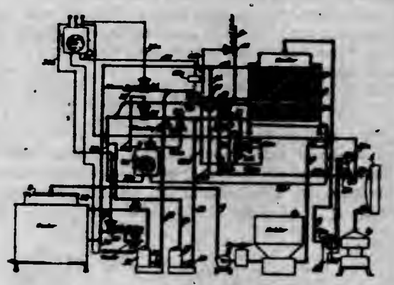


1. An apparatus for carrying out vapor phase catalyses, comprising in combination a converter shell, a plurality of zones of vertical catalyst tubes arranged concentrically therein, zones of tubes containing a cooling medium arranged between the zones of catalyst tubes and a baffle structure consisting in a baffle surrounding the central zone of catalyst tubes and extending from a point below the upper level of the bath to a point slightly above the bottom of the converter, a second baffle surrounding the first zone of cooling tubes and extending from above the upper surface of the bath to a point slightly above the lowest point of the first baffle, a third baffle surrounding

the second zone of catalyst tubes and extending from a point slightly above the bottom of the converter to a point slightly below the upper surface of the bath, the first and third baffles being joined at their bottom edge by a horizontal baffle. The baffling structure being repeated for each additional zone of cooling tubes and catalyst tubes whereby the bath is caused to flow upwardly along the

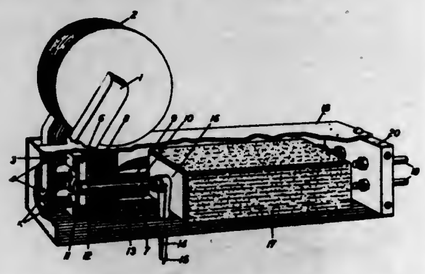
catalyst tubes of the central zone, downwardly along the cooling tubes of the first cooling tube zone, upwardly over the catalyst tubes of the second catalyst tube zone and so on until the bath flows over the top of the baffle surrounding the last zone of catalyst tubes, whereupon it flows downwardly between the converter shell and the last baffle, underneath the horizontal baffle joining the bottoms of the old numbered baffles and into the bottom of the central zone of catalyst tubes.

1,905,720. MOTOR STARTER. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 2, 1931. Serial No. 572,547. 11 Claims. (Cl. 172—289.)



1. A motor starting system comprising an electric motor, means for supplying a voltage to said motor, means for progressively increasing the voltage supplied to said motor to the starting value comprising a variable magnetization, reactance device and means responsive to an increase in the terminal voltage of said motor by said supply means for controlling the magnetization of said reactance device to provide a further increase in the voltage supplied to said motor.

1,905,721. STAINLESS IRON AND METHOD OF PRODUCING THE SAME. WILLIAM H. KNOX, Albany, N. Y., assignor to Chas. W. Guttsell, New York, N. Y. Filed Aug. 14, 1930. Serial No. 476,456. 7 Claims. (Cl. 148—12.)



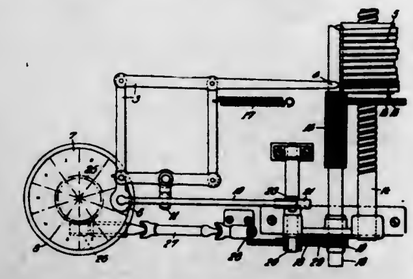
3. The method of treating stainless iron or steel containing chromium in a proportion approximating 10 to 15% and carbon in a proportion approximating 0.06 to 0.15% to produce a structure consisting essentially of a mixture of sorbite and troostite which comprises working the same at a temperature approximating 1800 to 1900° F. and below 1950° F. as a limit and thereafter annealing by heating to approximately 1500 to 1650° F.

1,905,722. MILK HEATER CONTROL. RUSSELL C. KINSMAN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Feb. 28, 1931. Serial No. 519,154. 10 Claims. (Cl. 257—4.)

1. In apparatus of the character described, the combination with a heater defining heating surfaces, means for supplying heat to the heating surfaces and means for passing a liquid to be heated, in contact with the heating surfaces including means for controlling the flow of the liquid to the heater, of means responsive to the operation of said controlling means to stop the flow of the liquid for applying a cooling medium to the said heating surfaces, said last means also being responsive in the reverse operation of said controlling means to reestablish the flow of the liquid, for reestablishing the supply of heat to the heating surfaces.

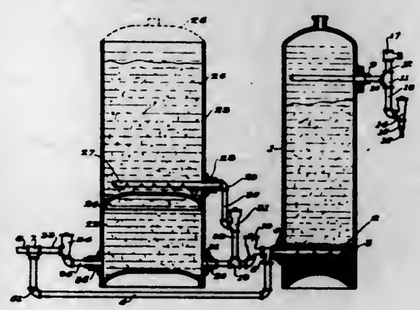
1,905,723. VIBRATION DAMPING DEVICE. WESLEY E. LANDAMAN, Cedar Grove, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1931. Serial No. 561,820. 3 Claims. (Cl. 179—180.)

1. In a vibration translating device a vibrating member and means for receiving and dissipating the excess energy of the member comprising a solid block of reclaimed rubber supported solely by being attached at one end to and adapted to be vibrated torsionally by the member.



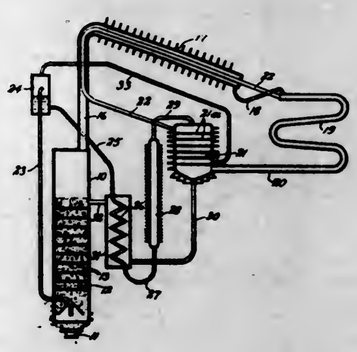
1,905,724. ELECTRIC CURRENT VALVE. JOHN G. H. LIEBEL, Cincinnati, and ROBERT C. JACQUELET, Norwood, Ohio, assignors, by mesne assignments, to The Union Switch & Signal Company, a Corporation of Pennsylvania. Filed Aug. 8, 1927, Serial No. 211,629. Renewed Feb. 4, 1933. 11 Claims. (Cl. 175—366.)

1. An electric current valve, comprising, a copper member having a film of copper oxide thereon, and a layer of reduced copper on the surface of the oxide film, the surface of said layer burnished.



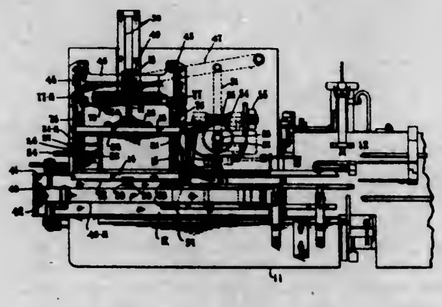
2. The process of making an electric current valve, comprising, the heating of a copper member to a temperature approximating 1900° F. in the presence of oxygen, the reduction of the surface of the oxide film by contact with a reducing liquid when said copper member is at an elevated temperature, and the pressing of the grains of the reduced copper into a smooth surface to decrease the electric resistance of the element.

1,905,725. ENGRAVING MACHINE. JOHN DUNLOP LINN, York, England, assignor of one-half to Cooke, Troughton & Simms Limited, York, England, a British Company. Filed Mar. 10, 1931, Serial No. 521,458, and in Great Britain May 12, 1930. 11 Claims. (Cl. 90—13.4.)



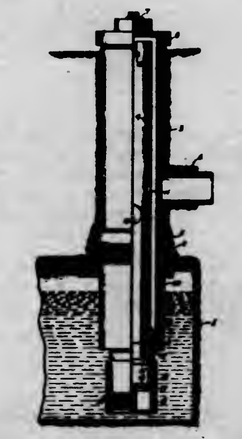
1. An engraving machine, comprising a copy cam, means for rotating said cam, said cam having a contoured portion, said portion having a groove, an engraving tool capable of universal movement in a given plane, and a controlling member capable of similar movement, said member having operative connection, on the one hand with said engraving tool, and on the other hand with said contoured portion, for applying to said tool a component of motion in a given direction, and with said groove for applying a second component at right angles thereto.

1,905,726. METHOD OF AND MEANS FOR SOFTENING WATER. LYNN G. LINDSAY, near Dayton, Ohio, assignor to Trupar Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 1, 1929. Serial No. 351,581. 7 Claims. (Cl. 210—24.)



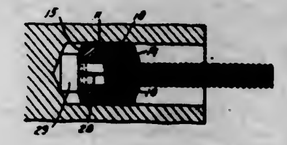
1. In a water softener, a tank containing water softening material, a brine tank in communication with the latter, a valve for admitting water under pressure to the brine tank, a valve for admitting brine from the brine tank to the softening tank, a valve for draining the latter tank, and means set by a single operation to simultaneously open all of said valves to recondition and wash the water softening material without a further change in said valves.

1,905,727. ABSORPTION REFRIGERATING SYSTEM. GUIDO MAIURI and RAOUL FELICE BOSSINI, London, England, assignors, by mesne assignments, to Electrolux Servel Corporation, a Corporation of Delaware. Filed June 9, 1930, Serial No. 460,018, and in Great Britain Oct. 29, 1929. 31 Claims. (Cl. 62—119.5.)



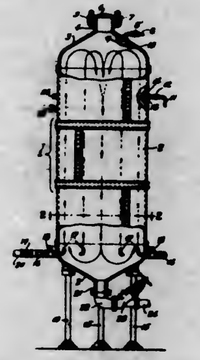
1. In a generator of an absorption refrigerating apparatus, means presenting small interstices located mutually closely adjacent throughout substantially the entire depth of the liquid space of said generator for restraining vertical movement of the liquid within said space.

1,905,728. CIGAR HANDLING MACHINE. FRANCIS X. MALOCHAY, Upper Saddle River, N. J., assignor, by mesne assignments, to Commercial Investment Trust Incorporated, a Corporation of New York. Filed Mar. 2, 1931. Serial No. 519,847. 22 Claims. (Cl. 131—39.)



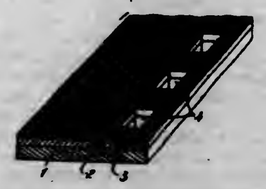
1. In a cigar handling machine, a cigar hopper adapted to receive rows of cigars and intervening spacers, means for discharging individual rows of cigars from the hopper and means for individually discharging the spacers from the hopper.

1,905,729. REMOVABLE VALVE MECHANISM FOR UNDERGROUND LIQUID TANKS. WILLIAM R. MCFEELY, Ponca City, Okla. Filed Apr. 11, 1932. Serial No. 604,465. 5 Claims. (Cl. 137—21.)



1. An underground tank fluid discharge assembly comprising in combination a tank, a casing secured thereto, a foot valve unit including a suction pipe, a valve housing and a valve; said unit being removably supported in said casing, means integral with said casing for supporting said unit, said suction pipe being provided with a discharge opening intermediate its length and being spaced inwardly from said casing to form an annular reservoir therewith, a discharge nipple for said casing communicating with said reservoir, and a cover plate for said casing accessible at the surface of the ground adapted to be removed to permit said unit to be withdrawn.

1,905,730. BOLT ANCHOR. ROY B. MCINTOSH, New York, N. Y., and THOMAS J. NOONAN, Jersey City, N. J., assignors to J. Edward Ogden Company, Inc., East Orange, N. J., a Corporation of New Jersey. Filed Oct. 18, 1930. Serial No. 488,388. 7 Claims. (Cl. 72—105.)

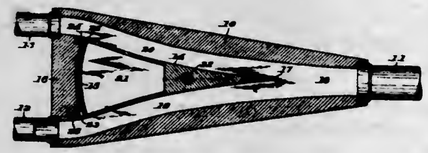


1. A bolt anchor unit comprising a body portion of ductile metal having a central bore therethrough, and a dished washer at each end of the body portion said washer and body portion having intereengaging portions whereby they are connected together.

1,905,731. PROCESS OF DIGESTING PULP AND APPARATUS THEREFOR. RALPH H. MCKEE, Jersey City, N. J. Filed May 4, 1929. Serial No. 360,341. 8 Claims. (Cl. 92—7.)

1. A pulp digester having electrical heating means.

1,905,732. SOUND RECORD BLANK. JAMES A. MILLER, Forest Hills, N. Y. Filed Oct. 7, 1931. Serial No. 567,439. 11 Claims. (Cl. 274—43.)

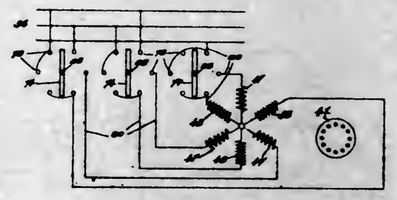


1. A sound record blank adapted to receive a sound track capable of optical reproduction, said blank having an opaque surfacing and a layer of transparent material below and adjacent to the opaque surfacing, the transparent ma-

terial having a degree of softness such that it may be cut into by a recording stylus and having a thickness sufficient to receive a sound track having vertical undulations.

2. A sound record blank adapted to receive a sound track capable of optical reproduction, comprising a base of transparent material, an intermediate layer of transparent material on the base, and an opaque surfacing on said intermediate layer, the material comprising the intermediate layer being of softer composition than the material of the base and having a thickness sufficient to receive a sound track having vertical undulations.

1,905,733. FLOW DIVIDER. WILLIAM F. MOORE, Flushing, N. Y., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 18, 1932. Serial No. 599,648. 4 Claims. (Cl. 137—166.)

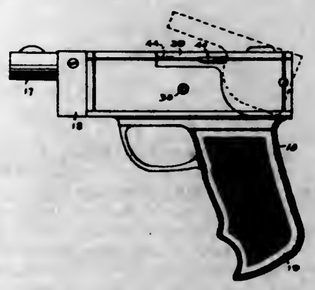


1. A device for dividing a stream of fluid into two equal streams comprising a casing interposed in the stream of fluid, a wedge-shaped vane pivoted centrally in the casing, limited in the extent of its rotation and adapted to divide equally the flow of fluid through the casing.

1,905,734. DRAFT REGULATOR. CLARENCE H. MORROW, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 12, 1930. Serial No. 443,767. 3 Claims. (Cl. 236—45.)

1. An automatic damper of the class described, comprising an annular base adapted to be secured with the pipe through which flow is to be controlled, a shutter mounted on said base for swinging movement about a non-diametric axis in the plane thereof, a threaded spindle carried by said shutter on one side thereof at right angles to said axis, said shutter having an opening in its short stretch from said axis, a head secured upon said spindle and projecting through said opening, whereby the spindle may be rotated from either side of said shutter, said head having mass to substantially balance the shutter upon its axis whereby the head serves as a counterbalance for the long stretch of the shutter, and a weight threaded on said spindle for adjustment thereon through said long stretch of the shutter, said weight extending from said shutter substantially beyond said spindle whereby its center of mass is substantially offset from the plane of the shutter.

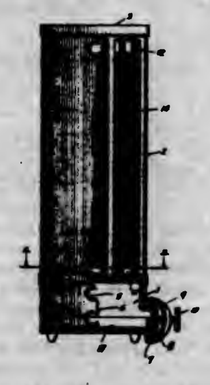
1,905,735. DRIVING AND STOPPING MECHANISM. ALFRED R. MORRILL, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed July 25, 1927, Serial No. 208,116. Divided and this application filed Feb. 1, 1930. Serial No. 425,342. 14 Claims. (Cl. 172—239.)



1. A driving and stopping mechanism for a machine having, in combination, an electric motor, a cam shaft driven thereby, means for supplying current to the motor, comprising an electric switch part movable to high, low, reverse and off positions, mechanism rendered operative in starting the machine to move the switch part to high speed position, and in stopping the machine to move the switch part to low speed position and then at a predetermined angular position of the cam shaft to move the switch part to reverse position.

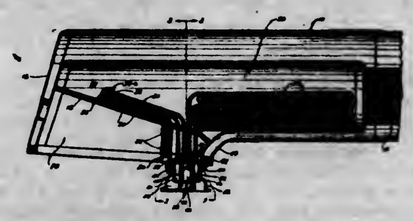
1,905,736. SPRING FROG. HENRY E. MUCHNIC, Atchison, Kans., assignor to The Locomotive Finished Material Company, Atchison, Kans., a Corporation of Kansas. Filed Nov. 4, 1931. Serial No. 572,994. 4 Claims. (Cl. 246—276.)

1. A spring frog of the character described comprising a single piece casting constituting the non-movable member having an integral extended supporting base, tie-plate portions and spring housing; and a single piece element constituting the movable member having an integral spring housing.



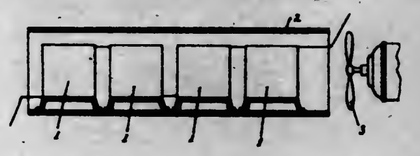
1,905,737. TOY GUN. HENRY F. NELSON, La Fayette, Ind. Filed Mar. 14, 1932. Serial No. 598,591. 7 Claims. (Cl. 42—57.)

1. In a toy gun adapted to detonate percussion caps carried by a tape, a reciprocating hammer, an anvil against which the hammer in the form of an equilateral triangle



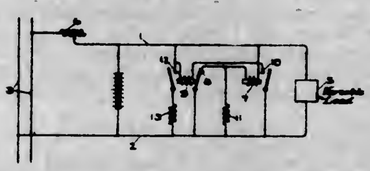
may strike, a cam adjacent said hammer, a tape passageway across said cam leading to said anvil, a projection on said cam adapted to press said tape against a wall of said passageway upon revolution of the cam and drag the tape therealong across said anvil, a spring normally urging said hammer toward the anvil, a member on the hammer adapted to be intercepted by said cam projection to pull the hammer away from the anvil and to be released upon continued travel of the projection therepast to allow said spring to return the hammer sharply against the anvil having an extension with an outwardly curved edge, and means for revolving said cam.

1,905,738. FILTER. VICTOR C. NORQUIST and EARL E. TRENNON, Kansas City, Mo., assignors to Butler Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed June 6, 1930. Serial No. 459,577. 2 Claims. (Cl. 210—184.)



1. A filter comprising in combination a casing, a partition dividing said casing into upper and lower chambers, a plurality of apertures in said partition, tubular filter screens mounted in said apertures, a sludge pan removably positioned in said lower chamber, a handhole in said lower chamber permitting the removal of said sludge pan, a cover plate for said handhole, an inlet for introducing the liquid to be filtered into said lower chamber, an outlet for the filtered liquid from said upper chamber, said upper chamber provided with a removable cover, and said filter screens provided with removable caps whereby said cover and said caps may be removed to permit the filter screens to be cleaned expeditiously.

1,905,739. SUPERHEATER. HENRY B. OATLEY, Great Neck, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Apr. 20, 1931. Serial No. 531,379. 10 Claims. (Cl. 122—481.)

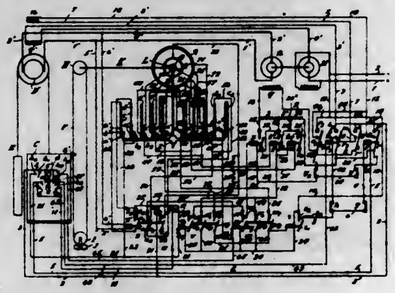


1. The combination in a boiler fire-box having arch tubes, of baffling on said tubes adapted to radiate heat from its upper surface and extending downwardly at the rear of the lower ends of said tubes, headers near the lower ends of said tubes, and superheater elements arranged along the upper and forward surface of said baffling and having end portions running down to and connected with said headers, said members all so arranged that said end portions lie outside the current of combination gases.

1,905,740. MEANS FOR OPERATING DRY DISK RECTIFIERS AT CAPACITIES GREATER THAN NORMAL. CLARENCE E. OGDEN, Cincinnati, Ohio, assignor, by mesne assignments, to The Union Switch & Signal Company, a Corporation of Pennsylvania. Filed May 25, 1929, Serial No. 366,043. Renewed Jan. 21, 1933. 1 Claim. (Cl. 175—366.)

A device of the character specified comprising a channel open at both ends, dry disk rectifier units, mounted with their edges turned longitudinally in said channel, and means at one end of said channel for forcing a draft therethrough.

1,905,741. STORAGE BATTERY VOLTAGE REGULATOR. JAMES H. OLIVER, Aldan, Pa., assignor to General Electric Company, a Corporation of New York. Filed Jan. 2, 1931. Serial No. 506,184. 6 Claims. (Cl. 171—314.)

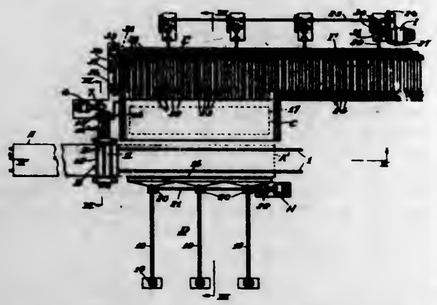


5. In combination, a source of direct current, a variable load connected thereto, a storage battery connected to be charged from said source, a pair of electrically interlocked relays, one of said relays being connected to respond to the battery voltage through a pair of contacts on the second relay which remain closed until the second relay is actuated, the first relay being arranged to be actuated when the battery voltage reaches a predetermined value, a current limiting device connected in parallel with the contacts of the second relay, the first relay having a pair of contacts for connecting the second relay to respond to the battery voltage when the first relay is actuated, the second relay being arranged to be actuated by a higher battery voltage than the voltage at which the first relay is actuated, an artificial load, and additional contacts on the second relay for connecting said artificial load to said source when the second relay is actuated.

1,905,742. ELECTRIC ELEVATOR SYSTEM. CARL F. E. OLOFSON, West Orange, and NILS O. LINDSTROM, Nutley, N. J., assignors to A. B. See Elevator Company, Inc., a Corporation of Delaware. Filed Dec. 6, 1927. Serial No. 238,010. 37 Claims. (Cl. 172—152.)

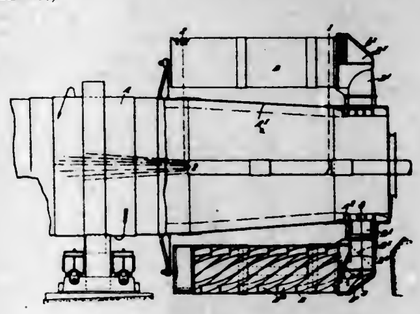
1. In an electric elevator system, a car and a contact movable in unison therewith, a set of normally open car stopping circuits, one for each landing, and means under control of the operator for causing said movable contact to close one of said circuits to stop the car.

12. In an electric elevator system, a car, a set of slow down circuits, one for each landing, each of said circuits being normally open at two points, means for closing said circuits at one of said points comprising a fixed contact



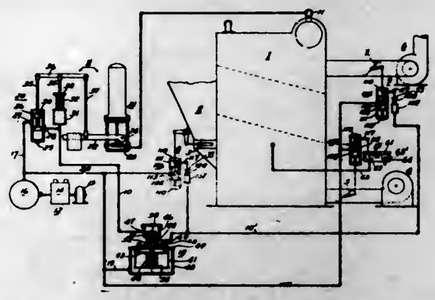
for each landing and a contact movable in unison with the car to engage said fixed contacts, and means for closing said circuits at the other of said points comprising a fixed contact and a rotating contact to engage the same, said rotating contact moving in unison with the car.

22. In an electric elevator system, a plurality of fixed contacts in stepped relation to each other and corresponding to one floor landing, a corresponding number of movable contacts each cooperating with one fixed contact, means for moving the movable contacts in accordance with the movement of the elevator, a plurality of normally open circuits corresponding in number to the fixed contacts, each circuit including a fixed and movable contact to be closed by the successive engagement of said fixed and movable contacts.



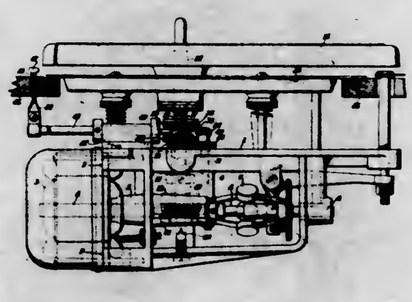
36. In an electric elevator system, a hoisting motor, a generator directly connected thereto, a variable resistance in the generator field circuit, a plurality of circuits for varying said resistance, an electromagnet adapted to control said circuits, means under the control of the operator for partially energising the electromagnet, and means responsive to the voltage in the hoisting motor circuit for controlling the full energization of the electromagnet.

1,905,743. APPARATUS FOR MAKING PLATE GLASS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 25, 1929. Serial No. 380,910. 5 Claims. (Cl. 49—3.)



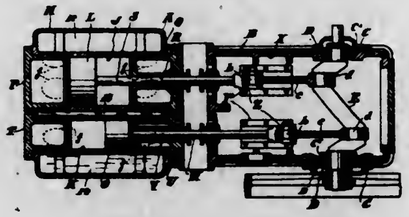
5. Apparatus for making sheet glass, comprising a receiving leer section provided with rollers interspersed with lifting bars mounted for vertical movement so that in one position their upper faces lie above the rollers and in another position such faces lie below the tops of the rollers, means for raising and lowering said bars, a main roller leer section in alignment with said receiving section, means for driving the rollers of said sections at the same peripheral speed, an oven alongside said receiving leer section having its bottom at the level of said bars when they are in raised position, a sheet receiving table along one side of the oven with its surface at the level of said floor, means for forming a glass sheet and depositing it on the table, and stowing means movable laterally across the table and oven for moving the sheet from the table onto the floor of the oven and for moving it from the floor of the oven onto said bars in the receiving leer section.

1,905,744. ROTARY KILN FOR BURNING CEMENT, ORE, AND SIMILAR MATERIALS. LIONEL DOUGLAS PARKER, Barrow-in-Furness, England, assignor to Vickers-Armstrongs Limited, Westminster, England, a British Company. Filed Feb. 6, 1931, Serial No. 513,904, and in Great Britain July 19, 1930. 10 Claims. (Cl. 222—7.)



1. In a rotary kiln, the combination of a plurality of hollow heat recuperating members disposed longitudinally around the front portion of the kiln, transverse hollow members which establish communication between the interior of the kiln and the forward ends of the latter hollow members, an inclined surface at the forward end of each heat recuperating member, down which surface the hot material falls by gravity at all positions of said member during the rotation of the kiln, and inwardly extending projections which shield the outlet openings of the transverse members and act as barriers to the return of the material through these members.

1,905,745. AUTOMATIC COMBUSTION SAFETY CONTROL SYSTEM. THOMAS A. PEEBLES, Mount Lebanon, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed July 7, 1931. Serial No. 549,178. 15 Claims. (Cl. 236—14.)



2. The combination with a boiler furnace having forced and induced draft mechanisms, fuel delivery mechanism, pressure actuated regulators for controlling the draft and the rate of fuel delivery, said regulators being disposed to operate between two extreme positions, and a source of supply of fluid under pressure for operating said regulators, of means responsive to a predetermined condition approaching failure of the fluid pressure source for causing said regulators to move to one of said extreme positions, before failure of the supply source has been completed.

1,905,746. PHONOGRAPH DRIVING MECHANISM. WILBUR J. PEETS, Elizabeth, N. J., assignor to Diehl Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 31, 1930. Serial No. 505,712. 2 Claims. (Cl. 274—9.)

1. A phonograph driving device having a frame formed with a lubricant well, a removable bearing-plug closing the top of said well, a horizontal motor-shaft, a vertical sleeve-shaft journaled in said bearing-plug and extending into said well, a worm on the motor-shaft, a gear on said sleeve-shaft meshing with said worm in said well, a turntable shaft journaled in said sleeve-shaft, and a selective two-speed gear transmission mechanism above said bearing-plug and between said sleeve- and turntable-shafts, said mechanism including a driving gear on said sleeve-shaft, a sliding gear splined to the turntable-shaft, and a pair of rigidly connected intermediate gears journaled on said removable bearing plug.

1,905,747. COMPRESSOR. ARTHUR E. PETERS, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 9, 1931. Serial No. 521,133. 5 Claims. (Cl. 230—182.)

1. In a multi-stage compressor, the combination of cylinders operating at different pressures, a casing through which pressure fluid flows from one cylinder to another, a cooling element in the casing to cool the compressed medium flowing therethrough and comprising cooling liquid conveying tubes, closely spaced fins on the tubes to conduct the compressed medium into intimate contact with the tubes, and baffles in the casing and being staggered with respect to each other to direct the compressed medium along a serpentine path through the casing.

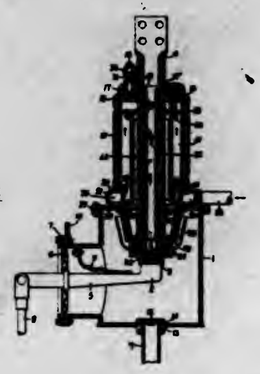
1,905,748. GLASS DRAWING APPARATUS. JOSEPH H. REDSHAW, Homestead Park, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 12, 1932. Serial No. 598,437. 4 Claims. (Cl. 49—17.)

4. In combination with apparatus for drawing a glass sheet and carrying it vertically through a leer, a conveyor mounted for lateral movement above the leer, a tilting vacuum frame swivelled for movement about a vertical axis on the conveyor and adapted to engage the top section of the sheet as it emerges from the leer, and power means on the conveyor for applying a lifting force to the vacuum

frame preliminary to cutting off such top section, such force being in excess of that required to lift the top section at a rate of speed in excess of the speed of draw of the glass sheet.

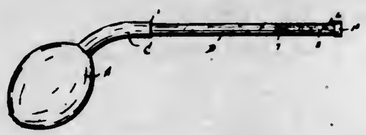
1,905,749. MANUFACTURE OF ARTIFICIAL LEATHER. GEORGE A. RICHTER, WALLACE B. VAN ARSDEL and ROGER B. HILL, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 17, 1929. Serial No. 393,310. 11 Claims. (Cl. 91—70.)

8. Sheet material comprising a porous foundation of loosely felted cellulose fiber, the pores of which contain rubber and bakelite varnish.



9. A process which comprises impregnating a porous foundation of interfelted cellulose fiber with an aqueous dispersion of rubber, drying said foundation, impregnating with a solution of bakelite varnish, removing the solvent, and curing at elevated temperature.

1,905,750. APPLICATOR AND MASSAGE INSTRUMENT. EMMET M. ROBINSON, Minneapolis, Minn. Filed July 6, 1931. Serial No. 548,775. 6 Claims. (Cl. 128—65.)

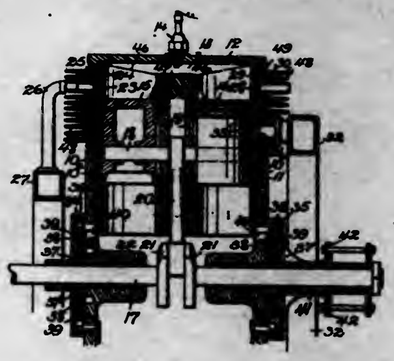


4. An applicator comprising a container having an open end, a discharge controlling element secured over said open end and provided with a discharge aperture and a flexible cap secured over said discharge controlling element and having a series of projections and discharge ports for supplying material to said projections, the apertured portion of said discharge controlling element being normally disposed flush against an imperforate portion of said cap to close said aperture whereby when said cap is flexed by rubbing the same against a surface, portions of said cap will be spaced from said discharge controlling element to permit discharge of material from the device.

1,905,751. VACUUM SEALING STRUCTURE. WILLIAM K. RANKIN, Lansdowne, Pa., assignor to General Electric Company, a Corporation of New York. Filed Dec. 26, 1929. Serial No. 416,319. 9 Claims. (Cl. 200—144.)

1. In vacuum apparatus comprising an evacuated casing and a substantially rigid electrical conductor extending therein, a mounting for positioning said conductor with respect to said casing for limited longitudinal movement in one direction, and a flexible diaphragm independent of said mounting for sealing said conductor with respect to said casing.

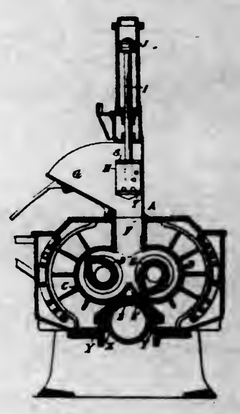
1,905,752. CARTRIDGE FOR MEDICINAL APPLICATIONS. BYRON REES, Salt Lake City, Utah. Filed Mar. 3, 1931. Serial No. 519,756. 4 Claims. (Cl. 128—266.)



1. In a device of the class described the combination of a tube; a pad of soluble material carried therein; a dosage of medicine carried in said tube adjacent said pad, having the end of said tube closed by a cap.

1,905,753. INORGANIC METAL INSULATION. EMIL RUPP, Berlin-Frohnau, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 23, 1931, Serial No. 524,772, and in Germany Apr. 7, 1930. 5 Claims. (Cl. 148—7.)

1. A method for producing an insulating layer on metals having a melting point higher than alkaline fluorides which comprises contacting the metal with a fused alkaline fluoride until it has assumed the temperature of the latter and a thin, adherent layer consisting of the fluorine compound of the metal and of the fluorine compound of the fusion is formed on the metal, and cooling said coated metal outside of the bath in a non-oxidizing atmosphere.

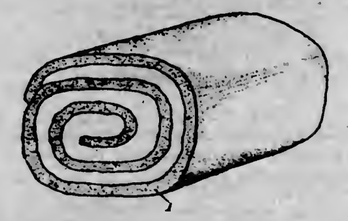


1,905,754. INTERNAL COMBUSTION ENGINE. JACOB SCHICK, Sound Beach, Conn., assignor to Schick Dry Shaver, Inc., a Corporation of Delaware. Filed July 28, 1929. Serial No. 380,849. 1 Claim. (Cl. 123—53.)

An internal combustion engine comprising a pair of cylinders side by side with a partition between them which partition terminates short of the end of the cylinders, a single flat cylinder head bridging both cylinders and co-operating with the end of the partition to form a combustion chamber, pistons in the cylinders, and sleeves in the cylinders and surrounding the pistons, the cylinders having ports controlled by the sleeves, said sleeves having

inclined ends whereby the sleeves at the outer sides are at the end of the cylinder and at their inner sides at the top of the partition.

1,905,755. MIXING MACHINE. CARL F. SCHNUCK, New Haven, and FRANLEY H. BANBURY, Ansonia, Conn., assignors to Farrel-Birmingham Company, Incorporated, Ansonia, Conn., a Corporation of Connecticut. Filed May 23, 1930. Serial No. 454,857. 4 Claims. (Cl. 18—2.)



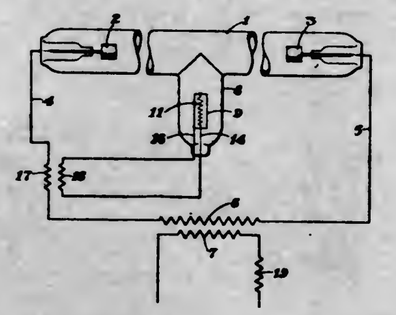
4. In a mixing machine, the combination of mixing mechanism, a feed opening, and a weight adapted to press upon the material which is being fed, said weight having on one side an inclined surface running substantially from top to bottom of the weight, the upper part of the incline being at the rear, and the lower part of the incline being nearest the feed opening, and said weight having side walls defining the ends of the incline, and said side walls having lips or flanges extending laterally beyond the sides of the weight and designed to contact with the side walls of the feed passages.

1,905,756. ICE CREAM ROLL CAKE. ALBERT SCHORNO, Grand Rapids, Mich., assignor of one-half to Carl Cegler, Grand Rapids, Mich. Filed Nov. 14, 1931. Serial No. 574,941. 1 Claim. (Cl. 99—16.)

The method of manufacturing an ice cream cake roll consisting of forming a layer of cake dough containing approximately 10% of shortening to render substantially

resistant to moisture on a sheet of paper, baking said dough at a temperature of approximately 300° F. and in the presence of steam to prevent forming a crust, cool-

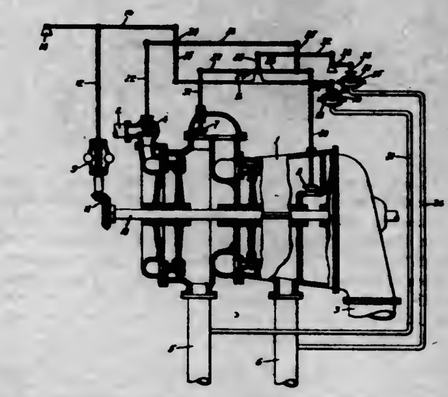
ing, applying thereto a layer of ice cream, convolutely wrapping the cake layer and the ice cream layer into a roll by the manipulation of the paper sheet, and freezing.



1,905,757. DEODORIZATION OF PAPER. MILTON O. SCHUR, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 5, 1931. Serial No. 535,293. 20 Claims. (Cl. 92—40.)

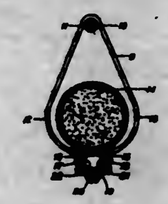
5. A step which comprises treating viscose-containing paper with an oxidising agent to destroy foul odors and odor-generating substances in such paper.

1,905,758. PROCESS FOR THE MANUFACTURE OF ELECTRICAL INSULATION. EMIL W. SCHWARTZ, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1930. Serial No. 453,110. 4 Claims. (Cl. 18—47.5.)



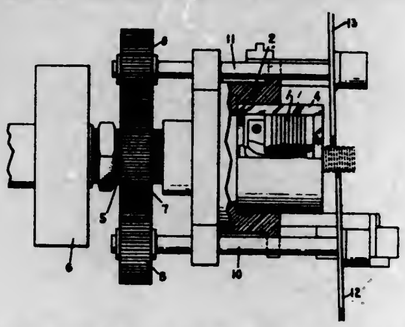
1. In the manufacture of rubber insulation including waste reclaim rubber for insulating electrical conductors, the process of forming insulation stock material which comprises devulcanizing waste rubber, adding thereto after the devulcanizing process and prior to the refining operations, fillers, and producing a blended reclaim, compounding said blended reclaim with crude rubber and other usual non-filler ingredients.

1,905,759. GASEOUS ELECTRIC DISCHARGE DEVICE. FRANZ SKAUPY, Berlin-Lichterfelde, HANS EWEST, Berlin, and HANS PULFRICH, Berlin-Baumschulenweg, Germany, assignors to General Electric Company, a Corporation of New York. Filed June 4, 1931, Serial No. 542,166, and in Germany July 18, 1930. 2 Claims. (Cl. 176—125.)



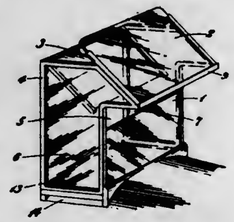
1. An electric discharge device comprising a container, electrodes sealed therein, a gaseous atmosphere therein, and two or more different gas evolving materials in said container adapted to evolve gas when heated, the gas evolved by one gas evolving material being adapted to transform to a gas these solid materials formed from the gas evolved by the other gas evolving material which are reactive with said first named gas.

1,905,760. ELASTIC FLUID TURBINE. REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 26, 1932. Serial No. 644,461. 2 Claims. (Cl. 60—67.)



1. An elastic fluid turbine having valve means for controlling the admission of elastic fluid thereto, two conduits connected to the turbine at stages of lower pressure therein, valve means for regulating the flow of elastic fluid from said stages to the next lower stages, a three arm lever having two of its arms connected to said regulating valve means, a floating lever on which the three arm lever is pivoted, means responsive to the pressure in one of said stages connected to the floating lever, means responsive to the pressure in the other of said stages connected to the other arm of said three arm lever, a third lever connecting the three arm lever to said controlling valve means, a speed governor, and means connecting the speed governor to said third lever and to said floating lever.

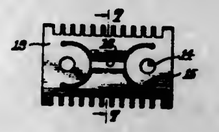
1,905,761. CABLE SUSPENSION. EVERETT ST. JOHN, Westport, Conn., and STANLEY C. MILLER, Mountain Lakes, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1930. Serial No. 456,986. 2 Claims. (Cl. 175—376.)



1. The method of installing cable and the like which comprises first placing a hand line or rope adjacent a supporting strand, placing the cable ring over both the supporting strand and the rope, inserting a portion of the cable ring in a holding means to hold the ring open, positioning the ring on a supporting strand, pulling the cable into the ring by means of the rope and then causing the ring to firmly grip the cable by removing the holding means.

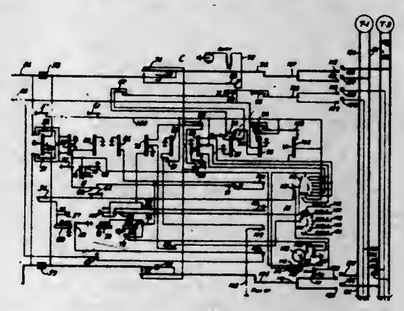
1,905,762. DIE. R. HARRY STONE, Irvington, N. J., assignor to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed May 8, 1929. Serial No. 361,417. 23 Claims. (Cl. 113—35.)

1. In an apparatus for forming tubing from a strip, the combination with a rotating mandrel, of a die about said mandrel, said mandrel gripping the strip to draw it through the die, said die having channels with cam walls adapted to bend the strip transversely and to interfold the edges of adjacent convolutions of said strip and a bending roll positioned adjacent the point where the strip enters into the die for preliminarily bending the strip before it enters said channels.



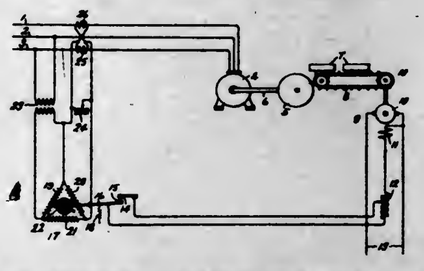
1,905,763. WINDSCREEN. FREDERICK ASSHETON TAYLOR, Tadworth, England. Filed Jan. 9, 1930, Serial No. 419,476, and in Great Britain Jan. 21, 1929. 5 Claims. (Cl. 296—84.)

3. A wind screen for a vehicle comprising side members, a lower panel mounted between said side members at an angle to the horisontal, and a plurality of horizontally displaced upper panels held by said side members in fixed parallel relationship, said lower panel having an upper free edge, said upper panels having free upper and lower edges, the upper edge of the lower panel being normally below the lower edges of the upper panels to provide a clear vision gap, said upper panels being inclined rearwardly with respect to said lower panel, one of said upper panels being disposed vertically above the lower panel and one of said upper panels being disposed behind the lower panel, whereby the vertical projection of the lower panel passes between the lower edges of the upper panels, the upper panels providing a passageway of undiminished cross-sectional area having a lower inlet opening normally above the upper edge of the lower panel and an outlet opening above the inlet opening.



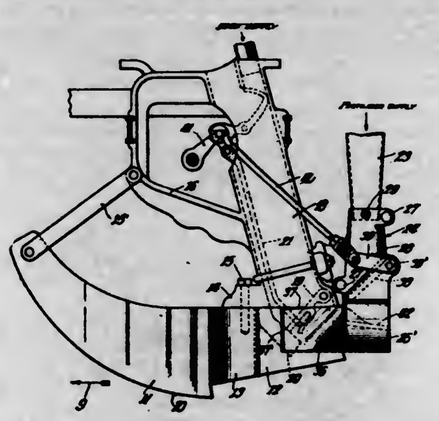
1,905,764. SAFETY RAZOR. NICHOLAS TESTI, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass., a Corporation of Delaware. Filed Nov. 19, 1931. Serial No. 576,110. 4 Claims. (Cl. 30—12.)

4. A safety razor guard formed of resilient material, said guard having an oblong central aperture extending longitudinally of said guard, said guard having slits extending divergently from the ends of the central aperture thereby forming a plurality of resilient tongues, two of said tongues extending transversely of said guard



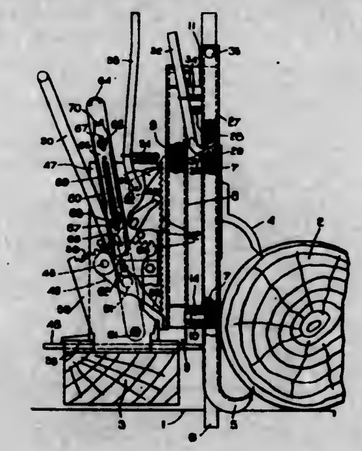
and deflected therefrom at their free ends, two of said tongues extending longitudinally of the guard and provided with positioning apertures.

1,905,765. TELEPHONE SYSTEM. VICTOR S. THARP, deceased, Elmhurst, Ill., by Bessie Mary Tharp, administratrix, Elmhurst, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 7, 1931. Serial No. 579,416. 9 Claims. (Cl. 179—16.)



1. In an automatic switch, a line relay and a release relay, a circuit for said release relay closed when said line relay operates responsive to the seizure of said switch, means controlled by said line relay responsive to received digit impulses for operating said switch, and means responsive to the operation of said switch for completing an auxiliary holding circuit for said release relay during the intervals when said first circuit is opened by the release of said line relay responsive to received impulses.

1,905,766. POWER RESPONSIVE MEANS. LOUIS W. THOMPSON, Schenectady, N. Y., and MYRON ZUCKER, Royal Oak, Mich., assignors to General Electric Company, a Corporation of New York. Original application filed Jan. 13, 1930, Serial No. 420,309. Divided and this application filed Feb. 2, 1931. Serial No. 512,874. 7 Claims. (Cl. 172—280.)

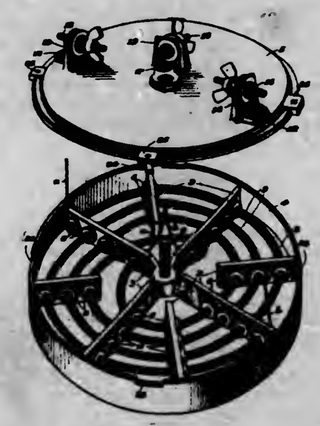


1. In combination, a polyphase power circuit, a polyphase induction motor having means for producing a rotating magnetic field and means connecting said motor to said circuit so that the torque of said motor is proportional to the power flow through said circuit.

1,905,767. FERTILIZER BOOT. HARRY RANDALL TRAPHAGEN, Rockford, Ill., assignor to J. I. Case Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 8, 1931. Serial No. 507,810. 2 Claims. (Cl. 111—73.)

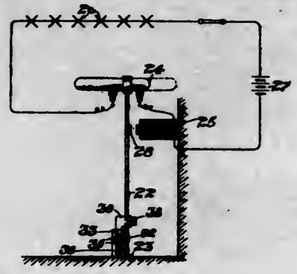
1. In a device of the class described, the combination of a seed planter shoe having a portion for forming a seed-receiving furrow, and a fertilizer-receiving, furrow-forming device including a pair of side members diverging rearwardly and downwardly and having their lower edges elevated above the bottom of said shoe and their front edges fitting said shoe, said side members being arranged to materially widen the seed furrow and form lateral shoulders above the bottom thereof without materially increasing the width of the same at its top, thereby forming inwardly and upwardly inclined side walls in the fertilizer-receiving furrow, which walls normally collapse to fill in the furrow when said device is moved away, a single fertilizer container, and means for dividing fertilizer from said container into two portions and conducting said portions to said shoulders.

1,905,768. SAWMILL DOG. EDWARD P. TUFTS, Bow, N. H. Filed Aug. 24, 1932. Serial No. 630,201. 5 Claims. (Cl. 143—130.)



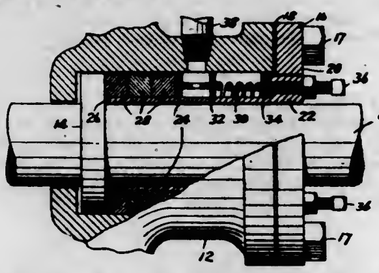
1. A sawmill dog comprising a supporting post, a sleeve fitting over said post and adjustable vertically thereon, two dog-carrying bars carried by said sleeve, an upper dog mounted on one bar, a lower dog mounted on the other bar, means for moving said bars simultaneously but in opposite directions to cause the dogs to bite into the log, said sleeve having ratchet teeth, a rocking pawl-supporting member, a lifting pawl carried by said member and adapted to engage said ratchet teeth, and means to rock said member thereby to cause the lifting pawl to engage the ratchet teeth and raise the sleeve and dogs supported thereby relative to the post, said rocking member having means normally engaging said teeth to lock the sleeve from raising movement.

1,905,769. AUTOMOBILE RUNNING BOARD AND THE LIKE. WILLIAM S. VROOMAN, Cleveland, Ohio, assignor to The Paine and Williams Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 1, 1928. Serial No. 282,086. 6 Claims. (Cl. 154—49.)



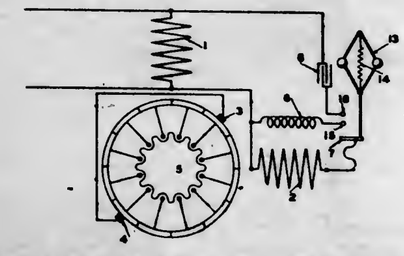
1. As an article of manufacture, a covering material for automobile running boards and the like, comprising sheets of rubber and paper vulcanized together, the paper being exposed at the under side of such article.

1,905,770. ELECTRIC HEATING UNIT AND METHOD OF MANUFACTURING SAME. ARTHUR W. WALKER, Malden, and ALBERT L. SMITH, West Medway, Mass., assignors to Walker & Pratt Mfg. Co., Boston, Mass., a Corporation of Massachusetts. Filed July 3, 1929. Serial No. 375,750. 16 Claims. (Cl. 219—37.)



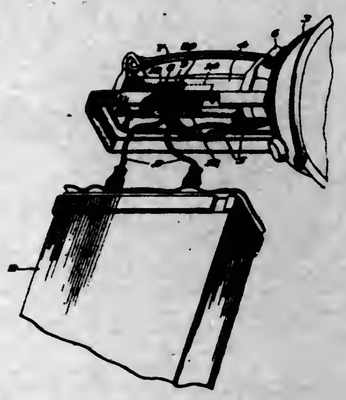
1. In an electric heating unit, the combination of an electric heating conductor, a plurality of insulating bushings arranged in spaced relation through which said conductor extends and in which it is supported, and a metal support carrying said bushings and shrunk on them, thereby to hold the bushings in place.

1,905,771. SWITCH MOUNTING. WARREN R. WALKER, Bloomfield, N. J., assignor to General Electric Vapor Lamp Company, a Corporation of New Jersey. Filed Nov. 27, 1926. Serial No. 151,214. 10 Claims. (Cl. 200—90.)



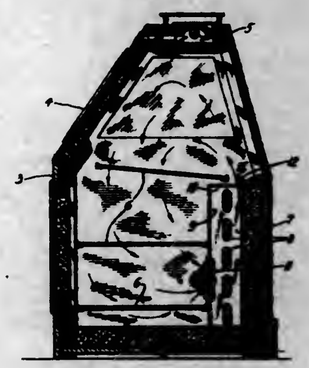
1. In combination, a mercury switch, and means for periodically moving said switch horizontally and at a speed such that the inertia of the mercury will cause it to remain relatively stationary with respect to the envelope and electrodes of the switch.

1,905,772. PACKING MEANS FOR SHAFTS. JULIAN N. WALTON, Brooklyn, N. Y., assignor to The Anchor Packing Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Aug. 27, 1929. Serial No. 388,649. 4 Claims. (Cl. 286—7.)



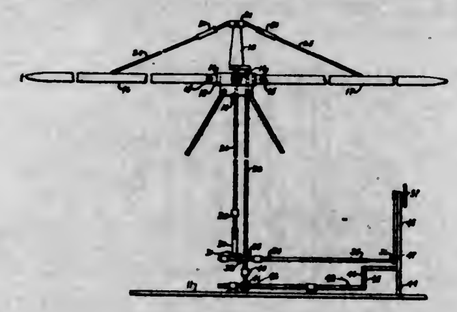
1. In combination, a stuffing-box, a shaft extending through the stuffing-box and having an annular bearing shoulder, a gland having a sleeve portion extending about the shaft towards the bearing shoulder, annular packing located between the sleeve portion and the stuffing-box walls and pressed towards the shoulder, and means for introducing liquid under pressure to the side of the packing opposite the bearing shoulder.

1,905,773. SINGLE PHASE MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed May 14, 1931. Serial No. 537,355. 2 Claims. (Cl. 172—277.)



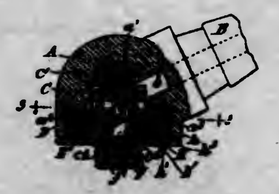
1. In a single phase motor, the combination of an induced member provided with a commuted winding, an inducing member having a main inducing winding and an auxiliary winding displaced therefrom, an inductance, means closing the commuted winding along an axis displaced from the main inducing winding, speed controlled means for short-circuiting the commuted winding along a plurality of axes when a selected sub-synchronous speed has been attained, and means for connecting the auxiliary winding in circuit with the inductance at a speed lower than said last named speed.

1,905,774. PORTABLE ELECTRIC LAMP. GRANT WHEAT, Marlboro, Mass., assignor to Kohler Manufacturing Company, Marlboro, Mass., a Corporation of Massachusetts. Filed June 30, 1931. Serial No. 547,814. 8 Claims. (Cl. 240—19.)



1. A portable lamp structure comprising the combination with an electric lamp, a storage battery, a casing for one of said elements, and connections for supplying current from said battery to said electric lamp, of charging terminals in said casing, a cover for protecting said terminals, said cover being movable to expose said terminals, and means for locking said cover in position to prevent access to said terminals.

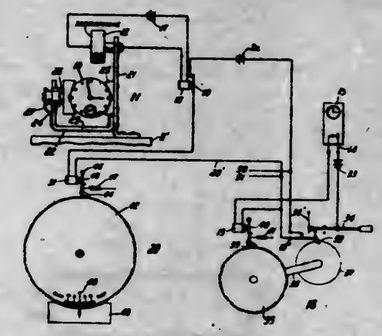
1,905,775. ILLUMINATED REFRIGERATOR DISPLAY CASE. CHARLES E. WICKE, Mount Vernon, N. Y., assignor to A. C. Wicke Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1930. Serial No. 483,768. 6 Claims. (Cl. 62—89.5.)



1. The combination of a display case having a bottom section and a top section with inwardly sloping sides, tray supports intermediate the top and bottom sections and spaced from the sides thereof, of refrigerating means disposed in the bottom section adjacent the front wall thereof, said bottom section having a food storage compartment disposed rearwardly of said refrigerating means or cooling coils.

1,905,776. AIRCRAFT. EDWARD BURKE WILFORD, Merion, Pa. Filed Feb. 20, 1931. Serial No. 517,226. 2 Claims. (Cl. 244—19.)

2. In gyroplanes, a mast, a mast extension pivoted relative to the mast a hub rotatably mounted on the mast, blades pivoted to the hub, a ring rotatably disposed on the mast extension, compression members engaging between the ring and the respective blades, and means for varying the angular relation of the mast extension to the mast.



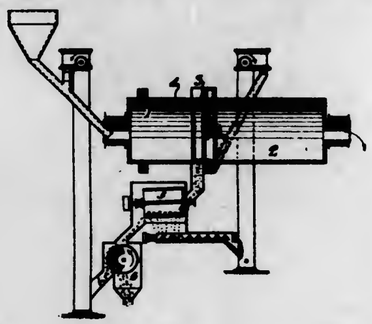
1,905,777. AIR CHUCK. SELDEN T. WILLIAMS, Bellerose, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 28, 1931. Serial No. 511,664. 6 Claims. (Cl. 284—17.)

1. An air chuck or the like comprising a casing having within it a valve provided with a deflator, a gasket providing a seat for said valve, a second gasket for making a seal with the end of a tubular member with which the air cauck is adapted for connection, said gaskets being mounted in superposed relation within said casing upon an element having a bushing-like portion extending into the opening in the second mentioned gasket and providing a guide for the deflator, and removable means engaging the sealing face of the second mentioned gasket whereby it may be removed from the casing independently of the first mentioned gasket.

1,905,778. MEANS FOR COMPARING TIME MECHANISMS. JOHN L. ALDEN, Wyncote, Pa., and CHARLES J. MCCARTHY, East Orange, N. J., assignors, by mesne assignments, to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1927. Serial No. 243,545. 4 Claims. (Cl. 73—51.)

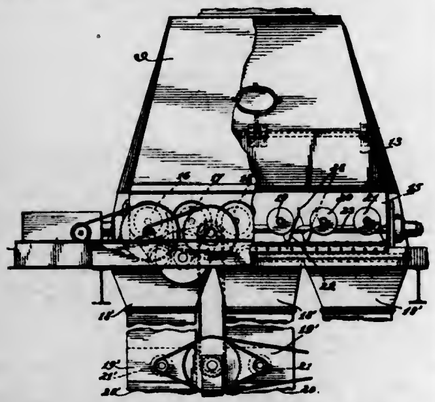
1. In a time indicating system, a base, an oscillatory reed having one end secured to said base, means carried by said reed at a point adjacent said base for supporting the timepiece, a microphone mounted on the free end of said reed for receiving amplified impulses from the timepiece, and a work circuit connected to said microphone.

3. In a time indicating system, a base, an oscillatory reed having one end secured to said base, a pair of jaw members carried by said reed at a point adjacent said base for supporting the timepiece, a microphone mounted on the free end of said reed for receiving amplified impulses from the time-piece, a circuit for said microphone including a source of current, and a magnet alternately energized through the operation of said microphone, an armature actuated by said magnet, an indicator, a motor magnet for actuating said indicator, a circuit for said motor magnet including a source of current, and said armature and a contact arranged to be engaged by said armature for alternately closing and opening the last mentioned circuit, a normally open switching device in the last mentioned circuit, manually operable means for closing said device for causing the operation of said indicator, a time standard, and a camming mechanism operable under control of said standard for actuating said switching device after a predetermined lapse of time for stopping the operation of said motor magnet.



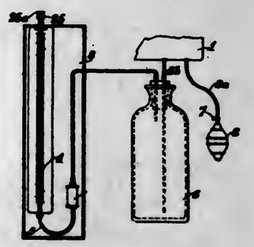
1,905,779. CENTRIFUGAL SEPARATOR. WILLIAM ALEXANDER, Glasgow, Scotland. Filed Jan. 30, 1932, Serial No. 589,830, and in Great Britain Jan. 1, 1932. 5 Claims. (Cl. 183—83.)

1. A multiple separator comprising a plurality of centrifugal separator components acting in parallel, each of said components incorporating a substantially vertical exposed cylindrical vortex chamber having a gas inlet at one end and a gas outlet at the opposite end, said chamber being entirely free from internal obstructions from the gas inlet to the gas outlet, said inlet admitting directly all of the gas into the vortex chamber near the periphery of the vortex with a tangential component of motion, the gas outlet being constituted by an outlet pipe having its inner end coaxial with the chamber and arranged to convey all the gas from said chamber in a direction away from the inlet end of the chamber, a dust outlet from the chamber, and a partition extending from said outlet pipe towards the wall of the chamber, compelling all of the separated dust to pass from the chamber at or near its periphery and at a radius substantially greater than that



of said outlet pipe, and an unenclosed dust hopper common to said components and open to the several dust outlets, said components being mounted outside of and on top of said hopper.

1,905,780. APPARATUS FOR GRINDING MATERIALS WHICH CONTAIN PARTICLES OF IRON. NIKOLAJ AHLMANN, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Oct. 18, 1930, Serial No. 489,634, and in Great Britain Oct. 24, 1929. 1 Claim. (Cl. 209—6.)

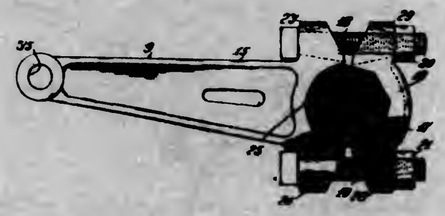


Apparatus for grinding Thomas slag and the like comprising a drum having a preliminary grinding chamber and a fine grinding chamber, a screening device, means to deliver the material from the preliminary grinding chamber to the screening device, means to deliver fine material to the fine grinding chamber from the screening device, and a magnetic separating device, means to deliver the coarse material from the screening device to the magnetic separating device, means to deliver the non-magnetic separated material to the preliminary grinding chamber from the magnetic separating device, whereby the material from the preliminary grinding chamber is subjected to a screening and a separation of the iron contents, and the sufficiently comminuted material is conveyed to the fine grinding chamber, and the coarse material is returned to the preliminary grinding chamber, while the iron contents are removed.

1,905,781. WOOD-WASTE FEEDING SYSTEM. WILLIAM E. ALLINGTON, Saginaw, Mich. Filed Sept. 8, 1931. Serial No. 561,590. 6 Claims. (Cl. 214—21.)

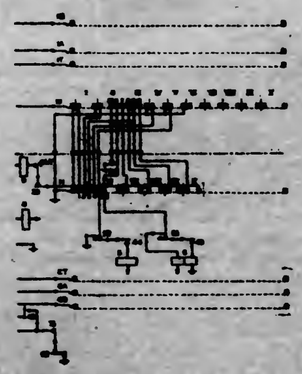
3. A heterogeneous material feeder comprising a storage reservoir having a downward and outward taper, a hopper lying laterally of and below the reservoir and tapering in the direction of movement of material therethrough, a screw conveyor in the hopper for carrying material therethrough, and a screw agitator rotatable on an axis at an angle to the axis of the screw conveyor and projecting above the plane of the bottom of the screw conveyor.

1,905,782. MANOMETER. SAMUEL S. AMDURSKY, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Oct. 25, 1930. Serial No. 491,146. 9 Claims. (Cl. 73—44.)



1. In a manometer of the character described, the combination with a cuff, a pressure chamber, a measuring tube connected to the pressure chamber and a liquid in the pressure chamber and the tube, of a closed vessel in fluid connection with the cuff and the pressure chamber, said vessel having a volume capacity such as to materially damp out pulsating waves coming from the cuff.

1,905,783. REWINDING MECHANISM FOR CLOCK SPRINGS. JOHAN M. ANDERSEN, Brooklyn, Mass., assignor to Albert & J. M. Anderson Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1928. Serial No. 247,178. 3 Claims. (Cl. 58—41.)



1. In an apparatus of the character described, in combination, a clock mechanism provided with a main shaft and with a main spring having one end connected with said main shaft, a time train geared to said main shaft and governing rotation thereof, a gear loose on said main shaft and with which the other end of said main spring is connected to be driven by said main spring, a rotatable device, a differential having a member geared with said rotatable device and a second member geared to the gear loose on said main shaft, a shaft upon which said differential members are mounted, an electric motor geared with the last-mentioned shaft, means for restraining said main spring from rotating said device, means for releasing said restraining means, a selective mechanism driven by said main shaft and co-operating with said releasing means, a circuit controller for said electric motor, and means actuated by said main spring for automatically operating said circuit controller to cut out the electric motor when the main spring has been wound up a predetermined amount and to cut in said electric motor when the main spring has been unwound a predetermined amount.

1,905,784. ADJUSTABLE LEVER. ALFRED ALGAKER and ELIAS S. CHRISTIANSEN, Chicago, Ill., assignors to The Delta Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1929. Serial No. 378,337. 16 Claims. (Cl. 287—52.02.)

12. In combination, a polygonally shaped rotatable shaft, an arm having a semi-cylindrical end surface adapted to embrace said shaft, opposed ears at said arm extending outwardly in angular relation with respect to each other, a heel piece adapted to non-rotatably cooperate with said shaft, opposed ears extending outwardly from said heel piece, and adjustable means for drawing one set of correspondingly disposed ears of said arm and heel piece together and simultaneously drawing apart the other set of correspondingly disposed ears of the arm and heel piece whereby the angularity of said arm may be varied with respect to said heel piece.

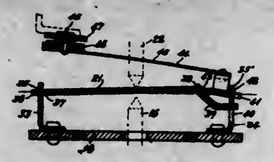
1,905,785. AUTOMATIC TELEPHONE SYSTEM USING SINGLE MOTION SWITCH BY-PATH CIRCUITS. JOHN HENRY ELVIDGE BAKER, Aldwych, London, England, assignor to International Standard Electric Corporation, New York, N. Y. Filed June 26, 1930, Serial No. 463,920, and in Great Britain July 3, 1929. 15 Claims. (Cl. 179—18.)

1. In or for an automatic or semi-automatic telephone system, selecting means comprising a plurality of single-motion switches, groups of outlets from said selecting means, multiple connections for certain of said groups to the later portion of the bank of one of said switches and to the earlier portion of the bank of another of said switches, and connections for the remaining groups connected to the earlier portion of the first-mentioned switch.

1,905,786. METHOD OF AND MEANS FOR USE IN MAKING FOOTWEAR. ALBERT F. BANCROFT, West Newton, Mass., assignor to Bancroft-Walker Company, Boston, Mass., a Corporation of Massachusetts. Filed May 7, 1931. Serial No. 536,635. 7 Claims. (Cl. 12—107.)

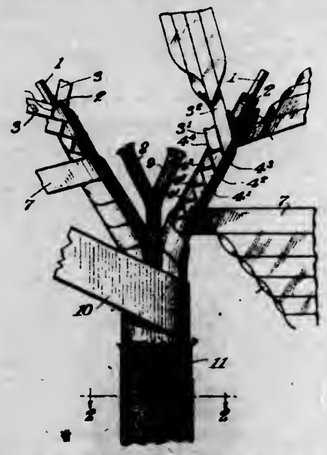
1. An increaser element for use in making shoes comprising a piece of material having index means for selectively determining its location when applied to a shoe upper, whereby any desired increase in the cross-sectional dimension of the throat portion of the shoe upper may be attained.

1,905,787. FLASH LIGHT BOTTOM CAP WITH SPARE BULB CARRIER. GEORGE H. BARBER, New Rochelle, N. Y., assignor to Bond Electric Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Nov. 16, 1929. Serial No. 407,590. 2 Claims. (Cl. 240—10.66.)



1. A spare lamp carrier adapted to be inserted in a flashlight bottom cap comprising a single sheet of metal of generally strip-like shape formed with an intermediate plate-like portion extending from one edge of the strip and bent downwardly at an angle thereto, an intermediate portion of the strip being substantially flat and adapted to form a battery thrust receiving portion, the ends of the strip being bent from said flat battery thrust receiving portion downwardly to provide flexible arms to engage at their ends the bottom cap substantially on a diameter and at the junction of the bottom and wall thereof and said downwardly bent plate-like portion being formed with an aperture to receive the base of a spare lamp.

1,905,788. TEMPERATURE AND PRESSURE CONTROLLER. FRANK J. BASH, Queens Village, N. Y., assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y., a Corporation of New York. Filed July 3, 1931. Serial No. 548,530. 14 Claims. (Cl. 200—83.)



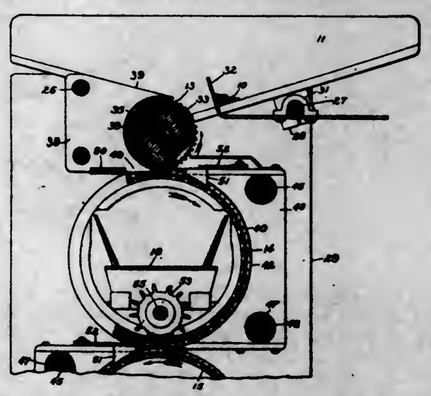
1. In a temperature or pressure control device, including a responsive member adapted to expand and contract in response to temperature or pressure changes, the combination of two elements associated with each other in pivotal relation at their inner end portions and separate from said responsive member, spring means urging said elements toward each other, said elements arranged to be

moved by said responsive member and adapted to snap quickly to reverse position when moved by said member toward a neutral plane, a spring arranged to urge said

elements toward their original position, and a switch arm attached to one of said elements and adapted to cooperate with a terminal of an electric circuit to control the latter.

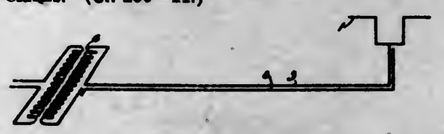
1,905,789. INSULATED ELECTRICAL CONDUCTOR. ANTHONY A. BENNER and RUDOLPH A. SCHATZEL, Rome, N. Y., assignors to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed July 30, 1927. Serial No. 209,505. 10 Claims. (Cl. 178—264.)

1. An article of manufacture comprising, in combination, a plurality of insulated conductors having separate overlying protective jackets comprising fibrous material assembled and enclosed within a fibrous outer sheath to form a cable, a sticky protective compound incorporated in the outer sheath, and a thin sealing layer enclosing the assembled conductors and separating said outer sheath from the conductors, said layer non-adhesively engaging the insulated conductors to keep the protective jackets clean of said protective compound and facilitate movement of the insulated conductors within the outer sheats.



1,905,790. MAGNETIC CORE WITH SUPPORTING AND CLAMPING STRUCTURE. FREDERICK F. BRAND, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 18, 1932. Serial No. 638,811. 8 Claims. (Cl. 175—356.)

1. The combination with a laminated magnetic core, of a metal supporting and clamping structure for said core

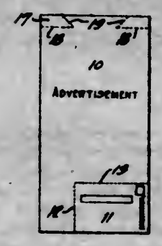


said supporting and clamping structure including a mechanically closed loop surrounding a leakage flux path, and said loop also including at least one insulated joint to prevent flow of current in the loop.

1,905,791. APPARATUS FOR SORTING RODS AND TUBES. CARL A. BROWN, East Cleveland, and FRANK B. VAN SICKLE, Wickliffe, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Oct. 9, 1929. Serial No. 398,516. 3 Claims. (Cl. 209—97.)

1. An apparatus for sorting rods, tubes or similar articles comprising a plurality of substantially horizontally disposed superposed drums each having longitudinal slots in the peripheral wall thereof, the widths of said sorts being least in the uppermost and progressively greater in lower drums, means for rotating said drums, and plates spaced from said drums and each shaped to retain rejected rods or tubes as they are carried around the outside of one drum to the next drum below.

1,905,792. TRANSMISSION SYSTEM. EDMOND BRUCH, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1929. Serial No. 348,485. 6 Claims. (Cl. 250—11.)



1. In combination with a transmission line, a second transmission line, means comprising an antenna for causing high frequency current to flow in the first mentioned line, and means comprising a reflector for causing high frequency current to flow in the second line, said currents being of relatively opposite phase and the spacing of said lines being small as compared with the wave length of the said current.

1,905,793. GARMENT BOARD. ALFRED O. BUCKINGHAM, New Rochelle, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a Corporation of New York. Filed Aug. 12, 1932. Serial No. 628,500. 2 Claims. (Cl. 223—18.6.)

1. A garment board comprising a substantially rectangular sheet of material, the longer sides of the board having longitudinal outer edges extending substantially the full length of the board providing a form for supporting the bosom of a shirt which may be drawn taut and folded over said longitudinal outer edges of substantially the full length of said bosom, and a cuff support and re-

taining member comprising a detachable card forming a part of said sheet of material, said card being spaced within said longitudinal outer edges and disposed across the lower end of the board and having its end portions separated from the body of the board along lines extending inwardly from the lower edge of the board in a direction approximately parallel to said longitudinal outer edges, the upper side of said card being defined by a weak-

ened line along which said card is detachable, said card being folded outwardly along said weakened line to a position adjacent said board and cooperating therewith to provide a support and retaining member for the cuffs of a shirt folded about the board the portions of of the board between said outer longitudinal edges and said inwardly extending lines providing lower substantially aligned, transversely extending edges about which the lower portion of a shirt may be folded upwardly.

1,905,794. CONDUIT FOR SUBWAY CABLES. EDMUND BURKE, Portland, Me., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 5, 1928. Serial No. 267,505. 3 Claims. (Cl. 247—27.)

1. In combination with a wall and cable-supporting brackets thereon, a longitudinally split fiber conduit on said brackets, and means for holding the split conduit portions together, said means including a monolithic concrete structure enclosing said brackets and conduit and abutting said wall.

1,905,795. AMMUNITION. JAMES H. BURNS, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Sept. 20, 1929. Serial No. 393,415. 6 Claims. (Cl. 52—2.)

1. A priming mixture comprising guanylnitrosaminoguanylitetracene and lead nitrate.

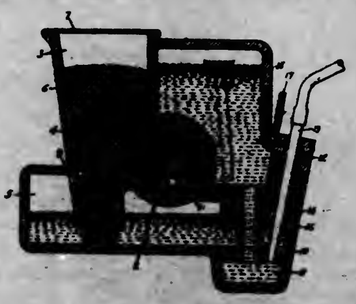
2. A priming mixture comprising guanylnitrosaminoguanylitetracene, lead trinitroresorcinate, and lead nitrate.

1,905,796. AMMUNITION. JAMES H. BURNS, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Aug. 27, 1930. Serial No. 478,204. 4 Claims. (Cl. 52—4.)

1. A priming mixture comprising diazodinitrophenol and lead trinitroresorcinate.

1,905,797. PROCESS OF TREATING RUBBER AND PRODUCT OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Original application filed Mar. 2, 1928, Serial No. 258,670. Divided and this application filed Mar. 2, 1928. Serial No. 258,681. 53 Claims. (Cl. 18—53.)

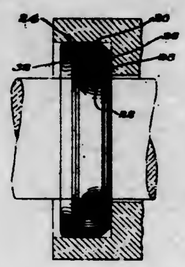
1. A method of treating rubber which comprises adding to rubber a vulcanising combination including a compound containing the group



in which R represents either H, O, or C or further represents S when X is N; X represents O or S, or further represents N when R is S; and Y represents a carbon atom in a substituted cyclic group, or in a substituted methyl group that does not contain O or S doubly bonded to Y which compound hydrolyses in aqueous alcohol in the presence of sodium hydroxide, at least as rapidly as diphenyl methyl dimethyl dithiocarbamate under the same conditions, and carrying out the vulcanization of the rubber in the presence of a basic material introduced therinto.

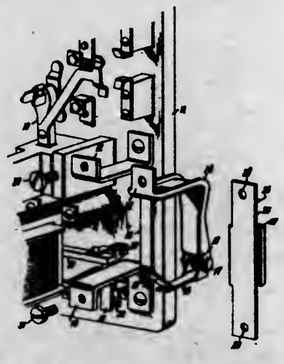
1,905,798. MERCAPTO ARYL THIAZOLES AND METHOD OF MAKING THEM. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Mar. 2, 1928. Serial No. 258,682. 25 Claims. (Cl. 260—44.)

12. A method of forming a benso thiazyl sulfid containing a substituted phenyl group attached to said sulfid grouping, which comprises reacting in the presence of an organic solvent, a mercaptobenzothiazole, an alkali and a di-substituted benzene containing less than eight carbon atoms, the latter containing a nitro group, and separating the reaction product.



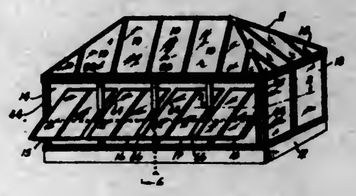
1,905,799. CONSTANT LEVEL LUBRICATING DEVICE FOR BEARINGS. FRANK E. CASE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Aug. 8, 1930, Serial No. 473,934. Renewed June 18, 1932. 8 Claims. (Cl. 308—189.)

1. In combination with a bearing, a lubricating device comprising a storage reservoir adapted to contain lubricant below atmospheric pressure, said reservoir having an opening in the lower portion thereof, a feeding chamber communicating with said bearing and the opening in the lower portion of said reservoir, said feeding chamber having a passageway therinto, a vent tube communicating with the upper portion of said reservoir and directly with said passageway, said passageway being formed below the opening of said vent tube into the same and arranged to provide for introducing a filling nozzle there-



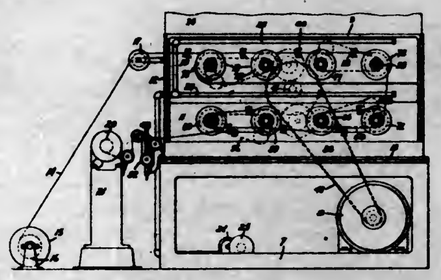
through into the opening in the lower portion of the reservoir to direct lubricant into said reservoir and to prevent the flow of lubricant into said feeding chamber during filling of said reservoir.

1,905,800. OIL SEAL. ROBERT W. CHANDLER, Worcester, Mass., assignor to Graton & Knight Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 16, 1932. Serial No. 628,995. 4 Claims. (Cl. 288—1.)



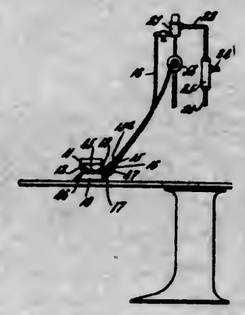
1. As an article of manufacture, a self-contained seal for insertion as an assembled unit within a housing in encompassing relation to a centrally located shaft, comprising a generally cylindrical housing having an inwardly formed and generally radial flange at one end and an inturned flange at the opposite end having a re-entrant portion to provide spaced concentric walls forming between them a circumferential space, the two flanges providing circular apertures of greater diameter than the shaft passing therethrough, a flexible packing of sheet material having a reduced axially extending portion adapted to encompass and engage with the shaft, an outer and axially extending clamping portion offset radially from the inner portion and assembled and clamped within the circumferential space, and a circular spring engaging with the reduced axial portion of the packing and maintained in assembled relation therewith by the housing for maintaining the packing in yielding engagement with the shaft.

1,905,801. ELECTRICAL HEATER. CHARLES H. CHAPMAN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 18, 1930. Serial No. 436,815. 6 Claims. (Cl. 219—19.)



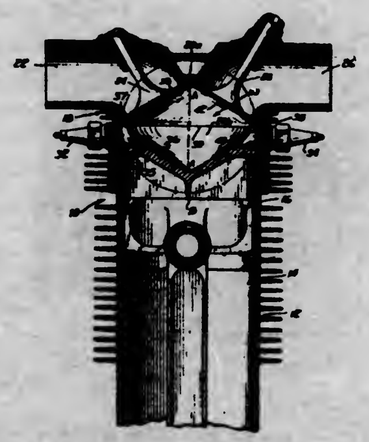
1. An electric heater for a bimetallic strip comprising a flat portion extending the length of the heater for conducting the heating current and provided with terminal engaging apertures, a portion intermediate the ends of said flat portion and extending from a side thereof and cooperating with said flat portion to provide a substantially closed loop for surrounding a bimetallic element for radiating heat thereto to all sides thereof, said looped portion having a substantial heat storage capacity.

1,905,802. TURRET OR WINDOW CONSTRUCTION. STEPHEN E. CIBULAS, Bridgeport, Conn. Filed Oct. 24, 1930. Serial No. 490,916. 7 Claims. (Cl. 108—16.)



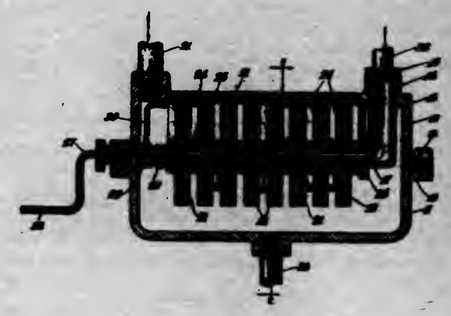
2. In a window construction, a mounting post, said post being substantially U-shaped in cross section, a sash at each side of said post, means pivoting the sashes intermediate their upper and lower edges to the post, each of said sashes at their edges adjacent the post including front and rear members extending for substantially the length of the respective sashes and connected together to clamp an edge portion of a window glass between them, one of said members of each sash integral with a corresponding member of the other sash and including a portion connecting their lower portion whereby the sashes move together toward and from open position, said connecting portion closing a portion of the open side of said post and swingable toward and away from the post as the sashes are swung to closed and open position, and a slide pivotally secured to said connecting portion and closing the remaining portion of the open side of the post when the sashes are in closed position.

1,905,803. WIRE DRAWING MACHINE. ERNEST W. CLARK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 17, 1930. Serial No. 453,375. 6 Claims. (Cl. 205—13.)



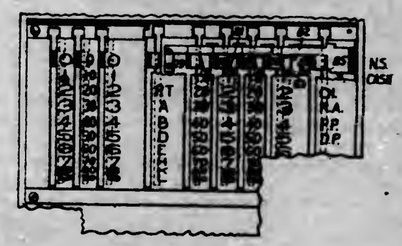
2. In a wire drawing machine, the combination of a frame having a vertical partition, spaced drawing rolls mounted on the front of the partition and arranged in horizontal rows, one row above the other with the initial and final rolls located at the same end of the machine, horizontal shafts extending through the partition from the rear for driving each of the rolls, a main driving shaft located centrally of the frame in the rear of the partition, pairs of spur gearing located in the rear of the partition for independently transmitting motion from the main shaft to some of the roll shafts of both the upper and lower rolls, other gearing also located in the rear of the partition for transmitting motion from certain of the roll shafts to other roll shafts located at greater distances from the main shaft, all of said gearings cooperating to drive the rolls at progressively increasing surface speeds from the initial to the final roll to distribute the slippage of the wire between them, and dies supported on the front of the partition in such positions as to act on the wire prior to passing around each of the rolls.

1,905,804. PRESSING IRON. FREDERICK J. CLARK, Buffalo, N. Y., assignor to Steam Pressing Iron Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 21, 1931. Serial No. 570,127. 7 Claims. (Cl. 68—26.)



5. The combination of a pressing iron provided with steam discharge means including a valve distant from the iron for controlling the discharge of steam therefrom, a bearing plate detachably secured on said iron, a control device movably mounted on said bearing plate in position to be actuated by a finger of the hand grasping the handle of the iron, and means controlled by said control device for operating said steam discharge valve.

1,905,805. COMBUSTION CHAMBER CONSTRUCTION. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1930. Serial No. 477,857. 9 Claims. (Cl. 123—191.)

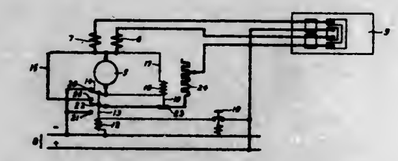


1. In an internal combustion engine, opposing portions having conical recesses therein diverging towards each other and forming a combustion chamber of double conical formation.

1,905,806. FILTER. LEE H. CLARK, Haverford, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 24, 1928. Serial No. 256,554. 13 Claims. (Cl. 210—200.)

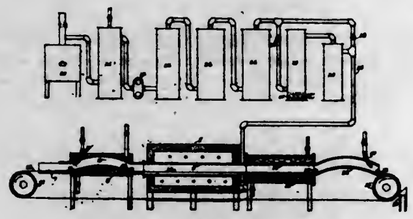
1. A filter comprising a porous support having a rigid surface and a filtering membrane loosely enclosing and supported by said support and directly engaging and smoothly overlying the surface thereof.

1,905,807. INTERLOCKING MECHANISM. GROVER C. COIL, Dayton, Ohio, assignor to Ohmer Fare Register Company, Dayton, Ohio. Filed June 29, 1928. Serial No. 289,278. 4 Claims. (Cl. 235—130.)



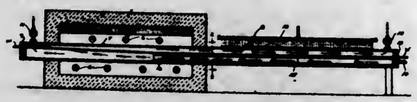
1. In a register, a plurality of money keys and a class key each adapted to be set to a plurality of operative positions and means whereby said class key is locked out of "no sale" position unless all of said money keys are in zero position.

1,905,808. MOTOR CONTROL SYSTEM. ABRAHAM COUWENHOVEN, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Mar. 18, 1929, Serial No. 347,871, and in Germany Mar. 19, 1928. 2 Claims. (Cl. 172—179.)



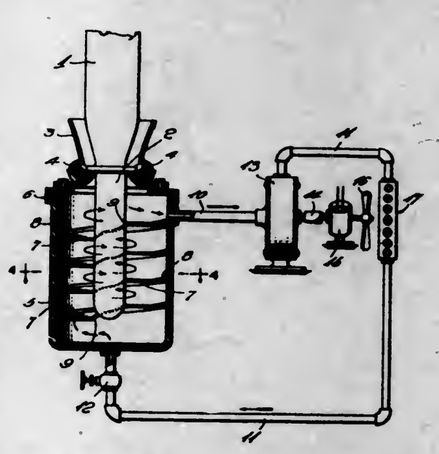
1. In an electric motor control system, a source of current supply, a motor comprising a plurality of field excitation windings and an armature winding, means including a reversing switch operative to a plurality of positions to selectively connect one or another of said field windings in series circuit with said armature winding and with said source of current, a low resistance disposed to be connected in shunt circuit with said armature winding, a current limiting resistance disposed to be connected in series circuit with said field windings and said source of

current, an electromagnetically actuated switch operable to a plurality of positions, the said electromagnetically actuated switch being effective when operated to one of its said positions to connect said armature winding in operative circuit with said source of current and effective



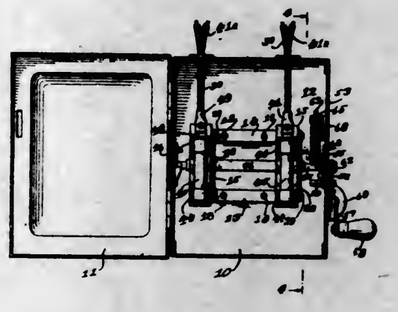
when operated to another of said positions to connect said low resistance in shunt circuit with said armature winding and to connect said current limiting resistance in series circuit with said field windings and said source of current.

1,905,809. METHOD OF PREVENTING OXIDATION OF METALS DURING HEAT TREATMENT. ROYSEL J. COWAN, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed May 2, 1931. Serial No. 534,470. 9 Claims. (Cl. 148—16.)



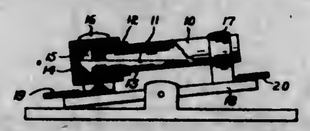
1. In a method of bright annealing metals, the steps comprising continuously passing through a heating chamber a gaseous mixture comprising dehydrated flue gas and the vapors of an alcohol, and passing the metal through said chamber in a direction opposite to the flow of said mixture.

1,905,810. LOW-TEMPERATURE BRIGHT-ANNEALING. ROYSEL J. COWAN and ORVILLE E. CULLEN, Toledo, Ohio, assignors to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed Dec. 29, 1930. Serial No. 505,240. 8 Claims. (Cl. 148—16.)



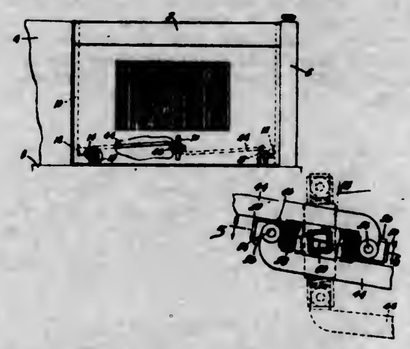
1. In a method of preventing the formation of and removing surface tarnish on nonferrous metals which are to be heat-treated at temperatures not substantially in excess of 1200° F., the steps comprising continuously passing a gas containing hydrogen through a heating chamber maintained at a temperature substantially in excess of 1200° F., moving the metal through said chamber in a direction opposite to the flow of the gas and at such a rate that the desired heat-treating temperature will not be exceeded, continuing the movement of the metal through a cooling chamber, and continuously passing through the cooling chamber in the same direction of flow as the metal some of the gases from the heating chamber.

1,905,811. COOLING SYSTEM FOR VACUUM TUBES. CHARLES A. CULVER, Northfield, Minn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1929. Serial No. 406,549. 2 Claims. (Cl. 250—27.5.)



2. A cooling system for electron discharge devices comprising, a chamber adapted to receive and enclose in a gas tight manner the anode of an electron discharge device, a baffle plate within said chamber and adapted to encircle the anode of said discharge device, a pump, a radiator, an expansion valve, a conduit connecting said chamber, pump, radiator and expansion valve to form a closed fluid circulating system, an inert gas constituting the sole cooling medium contained in said closed system, and means for operating said pump to cause a circulation of said gas in said closed system.

1,905,812. ELECTRIC SWITCH. JOSEPH J. DANTE, Bantam, Conn., assignor to The John E. Cook Estate, Incorporated, Torrington, Conn., a Corporation of Connecticut. Filed Oct. 12, 1928. Serial No. 312,091. 9 Claims. (Cl. 200—164.)

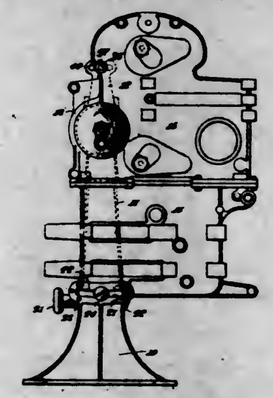


1. In an enclosed switch, a movable contact comprising a two-part hollow rotary member, a detachable floating conductor element located within said member and having exposed resilient terminals extending outside the periphery of said member, a pair of fixed contacts on opposite sides of said movable contact for engagement by said terminals, an operating shaft extending through the interior of said member, between said terminals and means for connecting said fixed contacts to a source of current.

1,905,813. MERCURY TUBE SWITCH. DEAN W. DAVIS, Pendleton, Ind., assignor to Joseph H. Staley, Columbus, Ind. Filed Dec. 24, 1932. Serial No. 648,788. 4 Claims. (Cl. 200—152.)

1. In a mercury switch, the combination of a metallic tube closed at one end, a metallic cap having a chamber and overlapping the open end of the tube, a compressible, resilient, insulating bushing interposed between and having sealing contact with the tube and cap, said bushing having a projection extending above the bottom of the tubes to provide a dam therebetween and the chamber, and a mass of mercury bridgable across the projection to electrically connect the tube and cap.

1,905,814. HOOD LATCH. STEPHEN DE ORLOW, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 31, 1931. Serial No. 560,840. 3 Claims. (Cl. 292—48.)

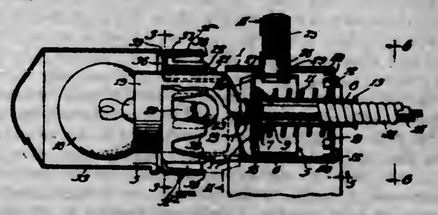


1. In a hood latching means, a plurality of links having overlapping ends and extending away from each other inside the hood, a resilient connection between said overlapping ends comprising a hollow member, a spring in said member, blocks slidable in said member and urged apart by the spring, said ends secured to said blocks, and a handle to move said member to operate said links.

1,905,815. HOOD LATCH. STEPHEN DE ORLOW, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 15, 1932. Serial No. 592,994. 6 Claims. (Cl. 292—214.)

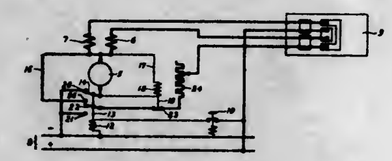
1. In a latch for the hoods of vehicles having holding means permanently secured thereto at spaced apart points and latching means on the hood and adapted to engage with or become disengaged from the holding means, said latching means having a crank intermediate its length, operating means secured to the hood and engaging the said crank, said operating means comprising a bracket rigidly secured to the hood, a shelf on the bracket, a vertically reciprocable lever mounted on the bracket, said lever having a portion lying on said shelf rigidly to hold the parts when in latched position, and a link secured to the lever and to the crank, the raising of said lever causing the link to swing inwardly and downwardly to turn the crank to cause the latching means to become disengaged from the holding means.

1,905,816. MOTION PICTURE PROJECTION MACHINE STRUCTURE. AUGUSTO DINA, Elizabeth, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1929. Serial No. 410,820. 7 Claims. (Cl. 88—17.)



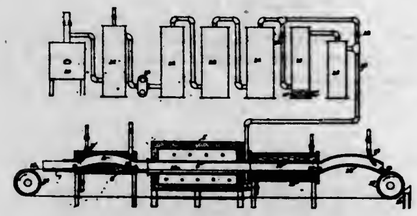
1. In a motion picture projector, a frame supporting the projector mechanism and including the intermittent motion sprocket, a support for said frame, means for supporting said frame in said support for movement of the frame around the axis of said sprocket as a pivot.

1,905,817. ODORANT FOR REFRIGERATION. FRANK J. DOBROVOLNY, Niagara Falls, N. Y., assignor, by mesne assignments, to The Roessler and Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 2, 1930, Serial No. 418,166. Renewed Sept. 10, 1931. 6 Claims. (Cl. 252—5.)



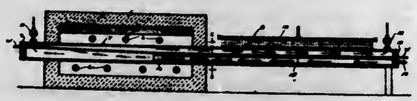
1. A composition of matter comprising a refrigerant of the group comprising hydrocarbons and halogenated hydrocarbons containing an alkyl mercaptan in amounts suitable for warning purposes.

1,905,818. ELECTRIC LAMP. HARRY A. DOUGLAS, Bronson, Mich. Original application filed Feb. 27, 1931, Serial No. 518,665. Divided and this application filed Dec. 14, 1931. Serial No. 580,889. 2 Claims. (Cl. 240—8.16.)



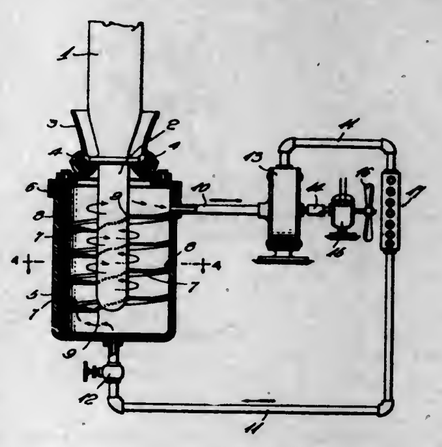
1. A dash lamp or the like embodying, in combination, a cylindrical metallic shell of resilient material split lon-

current, an electromagnetically actuated switch operable to a plurality of positions, the said electromagnetically actuated switch being effective when operated to one of its said positions to connect said armature winding in operative circuit with said source of current and effective



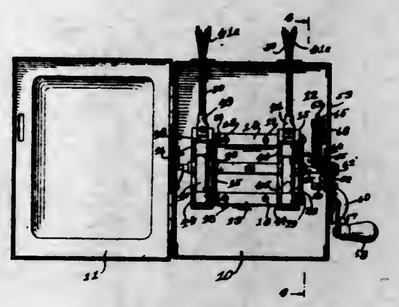
when operated to another of said positions to connect said low resistance in shunt circuit with said armature winding and to connect said current limiting resistance in series circuit with said field windings and said source of current.

1,905,809. METHOD OF PREVENTING OXIDATION OF METALS DURING HEAT TREATMENT. ROYSEL J. COWAN, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed May 2, 1931. Serial No. 534,470. 9 Claims. (Cl. 148—16.)



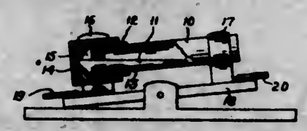
1. In a method of bright annealing metals, the steps comprising continuously passing through a heating chamber a gaseous mixture comprising dehydrated flue gas and the vapors of an alcohol, and passing the metal through said chamber in a direction opposite to the flow of said mixture.

1,905,810. LOW-TEMPERATURE BRIGHT-ANNEALING. ROYSEL J. COWAN and ORVILLE E. CULLEN, Toledo, Ohio, assignors to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed Dec. 29, 1930. Serial No. 505,240. 8 Claims. (Cl. 148—16.)



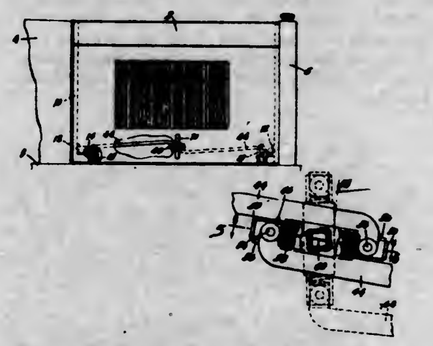
1. In a method of preventing the formation of and removing surface tarnish on nonferrous metals which are to be heat-treated at temperatures not substantially in excess of 1200° F., the steps comprising continuously passing a gas containing hydrogen through a heating chamber maintained at a temperature substantially in excess of 1200° F., moving the metal through said chamber in a direction opposite to the flow of the gas and at such a rate that the desired heat-treating temperature will not be exceeded, continuing the movement of the metal through a cooling chamber, and continuously passing through the cooling chamber in the same direction of flow as the metal some of the gases from the heating chamber.

1,905,811. COOLING SYSTEM FOR VACUUM TUBES. CHARLES A. CULVER, Northfield, Minn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1929. Serial No. 406,549. 2 Claims. (Cl. 250—27.5.)



2. A cooling system for electron discharge devices comprising, a chamber adapted to receive and enclose in a gas tight manner the anode of an electron discharge device, a baffle plate within said chamber and adapted to encircle the anode of said discharge device, a pump, a radiator, an expansion valve, a conduit connecting said chamber, pump, radiator and expansion valve to form a closed fluid circulating system, an inert gas constituting the sole cooling medium contained in said closed system, and means for operating said pump to cause a circulation of said gas in said closed system.

1,905,812. ELECTRIC SWITCH. JOSEPH J. IANTE, Bantam, Conn., assignor to The John E. Cook Estate, Incorporated, Torrington, Conn., a Corporation of Connecticut. Filed Oct. 12, 1928. Serial No. 312,091. 9 Claims. (Cl. 200—164.)

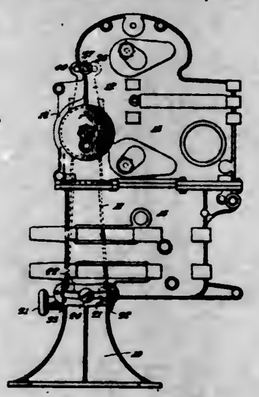


1. In an enclosed switch, a movable contact comprising a two-part hollow rotary member, a detachable floating conductor element located within said member and having exposed resilient terminals extending outside the periphery of said member, a pair of fixed contacts on opposite sides of said movable contact for engagement by said terminals, an operating shaft extending through the interior of said member, between said terminals and means for connecting said fixed contacts to a source of current.

1,905,813. MERCURY TUBE SWITCH. DEAN W. DAVIS, Pendleton, Ind., assignor to Joseph H. Staley, Columbus, Ind. Filed Dec. 24, 1932. Serial No. 648,782. 4 Claims. (Cl. 200—152.)

1. In a mercury switch, the combination of a metallic tube closed at one end, a metallic cap having a chamber and overlapping the open end of the tube, a compressible, resilient, insulating bushing interposed between and having sealing contact with the tube and cap, said bushing having a projection extending above the bottom of the tubes to provide a dam therebetween and the chamber, and a mass of mercury bridgable across the projection to electrically connect the tube and cap.

1,905,814. HOOD LATCH. STEPHEN DE ORLOW, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 31, 1931. Serial No. 560,340. 3 Claims. (Cl. 292—48.)

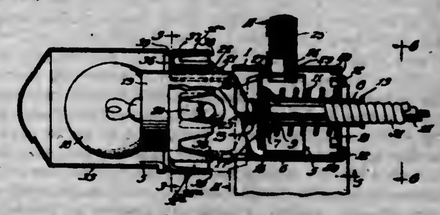


1. In a hood latching means, a plurality of links having overlapping ends and extending away from each other inside the hood, a resilient connection between said overlapping ends comprising a hollow member, a spring in said member, blocks slidable in said member and urged apart by the spring, said ends secured to said blocks, and a handle to move said member to operate said links.

1,905,815. HOOD LATCH. STEPHEN DE ORLOW, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 15, 1932. Serial No. 592,994. 6 Claims. (Cl. 292—214.)

1. In a latch for the hoods of vehicles having holding means permanently secured thereto at spaced apart points and latching means on the hood and adapted to engage with or become disengaged from the holding means, said latching means having a crank intermediate its length, operating means secured to the hood and engaging the said crank, said operating means comprising a bracket rigidly secured to the hood, a shelf on the bracket, a vertically reciprocable lever mounted on the bracket, said lever having a portion lying on said shelf rigidly to hold the parts when in latched position, and a link secured to the lever and to the crank, the raising of said lever causing the link to swing inwardly and downwardly to turn the crank to cause the latching means to become disengaged from the holding means.

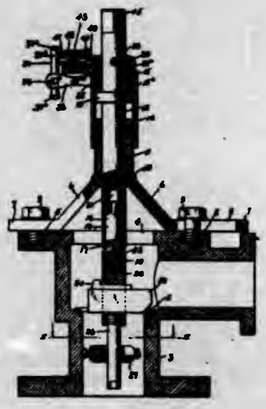
1,905,816. MOTION PICTURE PROJECTION MACHINE STRUCTURE. AUGUSTO DINA, Elizabeth, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 20, 1929. Serial No. 410,829. 7 Claims. (Cl. 88—17.)



1. In a motion picture projector, a frame supporting the projector mechanism and including the intermittent motion sprocket, a support for said frame, means for supporting said frame in said support for movement of the frame around the axis of said sprocket as a pivot.

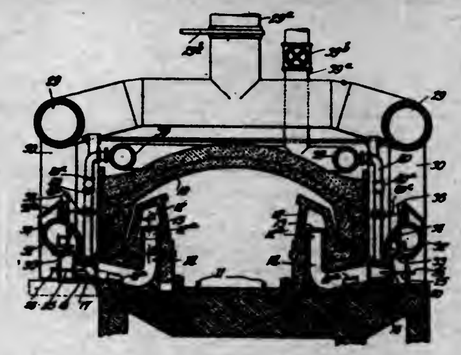
1,905,817. ODORANT FOR REFRIGERATION. FRANK J. DOBROVOLNY, Niagara Falls, N. Y., assignor, by mesne assignments, to The Roessler and Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 2, 1930, Serial No. 418,166. Renewed Sept. 10, 1931. 6 Claims. (Cl. 252—5.)

1. A composition of matter comprising a refrigerant of the group comprising hydrocarbons and halogenated hydrocarbons containing an alkyl mercaptan in amounts suitable for warning purposes.



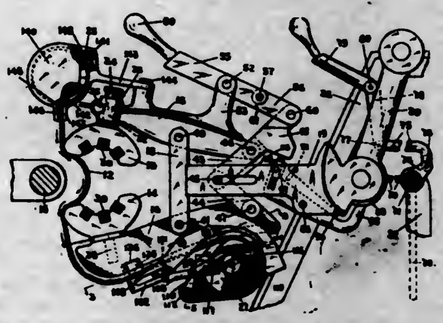
1,905,818. ELECTRIC LAMP. HARRY A. DOUGLAS, Bronson, Mich. Original application filed Feb. 27, 1931, Serial No. 518,665. Divided and this application filed Dec. 14, 1931. Serial No. 580,889. 2 Claims. (Cl. 240—8.16.)

1. A dash lamp or the like embodying, in combination, a cylindrical metallic shell of resilient material split lon-



gitudinally; a flange at the forward end of said shell, said flange being turned back over the body of the shell and extending longitudinally rearwardly thereof spaced from said shell; continuations of said flange extending longitudinally rearwardly in the form of spring fingers, the material of said fingers being decreasingly tapered in longitudinal section toward their free ends to progressively decrease their resiliency; and a cylindrical cowl, said cowl telescoping over said flange and said fingers which yieldingly engage the cowl, whereby said flange provides a split ring bearing for the cowl and said fingers at their free ends have substantially no greater resiliency than is necessary to maintain them in frictional engagement with the cowl.

1,905,819. BORING AND FACING TOOL WITH FEED ATTACHMENT. MICHAEL P. DOYLE, Brooklyn, N. Y. Filed May 13, 1931. Serial No. 536,965. 2 Claims. (Cl. 90—12.5.)



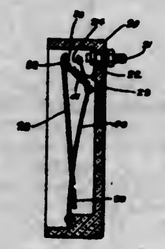
1. A tool of the class described comprising a support adapted to be adjustably secured to the valve casing and having an upwardly extending exteriorly threaded tubular extension, a hollow interiorly threaded tubular element having a head portion with an opening therethrough, and mounted on said threaded tubular extension and adapted to be rotatably moved with respect thereto, a shaft having rotary mounting in said support and extending through said threaded extension and the opening in the head portion of said tubular element, a collar integrally secured to said shaft and positioned within the hollow interiorly threaded element so as to contact with the interior face of the head portion thereof, an arm secured to and extending outwardly from the head portion of said tubular element and slidably carrying at its outer end, a square pin with a rounded portion formed thereon, means secured to said shaft adapted to engage said pin when said shaft is rotated and to cause the said pin and its associated arm and the tubular element to be rotated with said shaft so as to cause said tubular element to be moved downwardly along the threaded portion of the exteriorly threaded tubular extension of said support and thus cause said shaft to move downwardly into the valve casing, an extension shaft removably secured to the lower end of said shaft, a cutting tool removably secured to the lower end of said extension shaft and provided with a cutting element positioned so as to contact with the valve seat of said valve casing when said first mentioned shaft is moved downwardly by the downward progression of said tubular element on the threaded extension of said support, and means secured to the lower end of said cutting element to center said tool with respect to the valve casing and its valve seat.

1,905,820. KILN AND BURNER APPARATUS. HENRY A. DREFFEIN, Chicago, Ill. Filed Oct. 4, 1928. Serial No. 310,389. 11 Claims. (Cl. 158—7.)

8. In apparatus of the class described, a duct, means to supply gas thereto and means to supply air to the inner periphery of said duct in such wise as to envelop said gas.

1,905,821. LAPPING DEVICE FOR CYLINDRICAL OBJECTS. HOWARD W. DUNBAR and JOHN C. BAKER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 15, 1929. Serial No. 347,298. 15 Claims. (Cl. 51—73.)

1. A lapping device comprising two jaws having concave bearing surfaces conforming substantially to the curvature of the work to be lapped, feeding and receiving mounts, one being located on each of the jaws to support and retain the ends of a flexible strip of abrasive material and hold it in operative relation with the work, means for opening and closing the jaws, and means operated in timed relation with the movement of the jaws to move a measured invariable amount of the abrasive strip for each operation of the jaws and present a fresh portion to the work and to feed the used portion of the strip to the receiving mount.

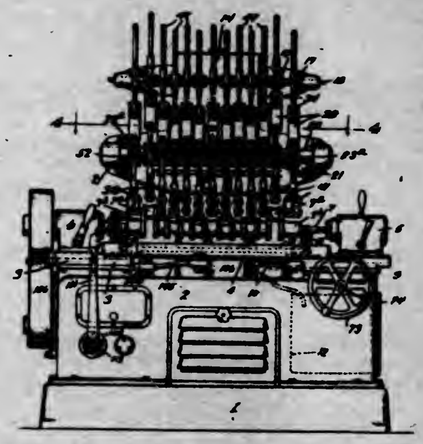


1,905,822. PACKING. IRWIN L. DUNN, Tulsa, Okla. Filed Oct. 6, 1930. Serial No. 486,710. 1 Claim. (Cl. 288—1.)

A packing ring having a central portion of its circumference reduced in diameter to provide relatively narrow contacting rings at the end of the body, the body

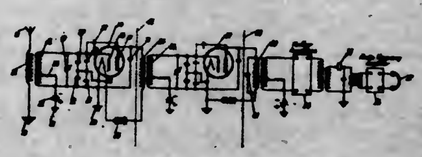
member being recessed to provided inclined undercut grooves at the ends of said reduced central portion forming relatively narrow necks for said end ring members, whereby said members may be flexed in response to pressure of fluid admitted to said grooves.

1,905,823. THERMOSTATIC SWITCH. HENRY G. DYRVIG, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 27, 1930. Serial No. 431,758. 6 Claims. (Cl. 200—138.)



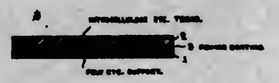
1. A thermo-switch comprising, in combination, a housing having two parallel walls provided with aligned, oppositely disposed openings, one of said openings having connecting means therein, a contact carrier having oppositely disposed arms extending into the said openings of the housing walls respectively whereby said contact carrier is pivotally supported at one end within the housing; a thermostatic member anchored at one end within the housing; a compression spring interposed between the free ends of the thermostatic member and carrier and adapted to shift the carrier from one position in the housing into another in response to movement of the thermostat; and a switching means comprising a stationary contact on the housing and a cooperating contact on the carrier.

1,905,824. JOINTED METALLIC HOSE CASING. MARTINIUS DYSTHE, Minneapolis, Minn. Filed Sept. 28, 1931. Serial No. 565,410. 3 Claims. (Cl. 187—90.)



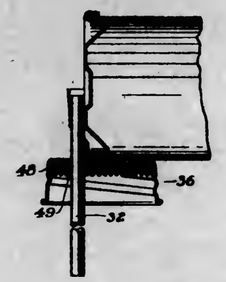
1. A device of the class described comprising a plurality of axially spaced tubular links telescopically assembled and connected for angular movement, and a metallic lining for the links comprising spring members in the form of leaves that extend longitudinally of the device and are anchored thereto with freedom to permit longitudinal movement of the links in respect thereto during their angular movement.

1,905,825. MACHINE FOR HONING AND POLISHING CRANK SHAFTS. WALTER F. EGGER, Cleveland, and LOGAN A. BECKER, Lakewood, Ohio, assignors, by mesne assignments, to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 18, 1927. Serial No. 206,515. 32 Claims. (Cl. 51—73.)



1. In a machine of the kind described, the combination, with means for supporting and rotating a crank shaft, of a tool carrier having a tool adapted to operate on a crank pin on said crank shaft, a pivotal support for the end of the tool carrier opposite said tool, and a guide adapted to slidably engage the carrier between the ends thereof as said carrier is reciprocated by said crank pin, said guide comprising side plates and means to move the plates laterally to clamp the carrier therebetween and hold it in a fixed position.

1,905,826. HIGH FREQUENCY AMPLIFIER. HAROLD F. ELLIOTT, Palo Alto, Calif., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1928. Serial No. 271,861. 10 Claims. (Cl. 179—171.)



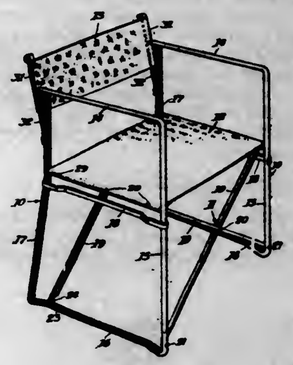
6. In an amplifying system having a certain frequency range of operation, a plurality of cascade connected amplifiers, coupling transformers between successive amplifiers each including a primary coil connected in the output circuit of one amplifier and a secondary coil included in the input circuit of a second amplifier, and means associated with said coils forming resonant circuits having resonant frequencies above and below the operating range of the system.

1,905,827. FLOOR COVERING. CARLETON ELLIS, Montclair, N. J., assignor, by mesne assignments, to Resyl Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1926. Serial No. 148,112. 9 Claims. (Cl. 91—68.)

1. A floor covering comprising a backing of asphalt-saturated felt substantially free from oil, coated with a flexible self-flattening layer comprising a mixture of high viscosity nitrocellulose and low viscosity nitrocellulose.

1,905,828. LIQUID SPRAYER AND METHOD OF MAKING THE SAME. CARL F. ELLSWORTH, Collingswood, N. J., assignor to The R. M. Hollingshead Co., Camden, N. J., a Corporation of New Jersey. Filed Apr. 23, 1931. Serial No. 532,197. 10 Claims. (Cl. 299—88.)

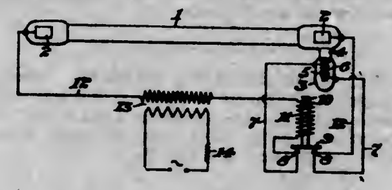
4. The method of constructing liquid sprayers which consists of providing a hand pump having a discharge head with a discharge opening therein, said discharge head attached to the hand pump by a bead; an apron having a resilient bead-engaging flange, and having a flangeless bead-engaging portion, and having also a siphon-tube-receiving aperture; a siphon tube; and a container retaining means, said retaining means having a siphon-tube-receiving aperture, and having also a solderable aperture; and assembling the sprayer by attaching the apron to the discharge head by snapping the resilient flange of the apron onto the bead and interlocking the bead with the flangeless bead-engaging portion; inserting the siphon tube through the aperture in the apron into interlocking juxtaposition to the apron and discharge head, and positioning the siphon tube in operative juxtaposition to the discharge opening in said discharge head; inserting the free end of the siphon tube into said aperture therefor in the container-retaining means, and positioning said retaining means in abutting relation to the pump wall; soldering the container retaining means through the solderable aperture therein to the pump wall, and soldering the siphon tube to a portion of the assembled sprayer.



10. A sprayer including an air pump having a discharge head attached thereto by means of a bead, said discharge head having a discharge hole therein; an apron having a bead-engaging flange adapted to engage the apron with the discharge head; a siphon tube, the upper portion of said siphon tube being intermediate said apron and said discharge head so as to lock the engagement of the apron with the discharge head, said siphon tube being in operative juxtaposition to the pump discharge hole; container-retaining means having a siphon-tube-receiving aperture, the free end of the siphon tube extending into said aperture of the container-retaining means, and said container-retaining means being in abutting relation to the pump and secured thereto.

1,905,829. LUMINAIR EMPLOYING PRISMATIC REFLECTORS. SOLOMON ENGLISH, London, England, assignor to Holophane Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1932, Serial No. 591,945, and in Great Britain Feb. 18, 1931. 16 Claims. (Cl. 240—106.)

1. A prismatic reflector having external prisms on a reflector form concave to incident light and of non-circular section, wherein the prism systems radiate from the points of normal incidence and reflection and in which at any point on the surface of the reflector the prism axis passing through said point lies in the plane of the incident and reflected rays reaching and leaving that point.



1,905,830. FOLDING CHAIR. PHILIP E. G. ERICSON, St. Charles, Ill., assignor to The W. H. Howell Company, Geneva, Ill., a Corporation of Illinois. Filed Nov. 9, 1931. Serial No. 573,757. 6 Claims. (Cl. 155—140.)

1. In a chair, a side frame composed of a channel bar bent upon itself to provide an arm, front and rear legs and a lower brace, the rear leg being joined to the arm adjacent the rear end thereof, and said rear end of the arm having a down turned tongue, a flexible back having a looped end, a bar extending through said loop and bearing against the rear leg and the rear end of the arm, removable securing means extending through said bar, loop and the tongue of the arm, and other means rigidly connecting the bar to the leg.

1,905,831. GASEOUS ELECTRIC DISCHARGE DEVICE. HANS EWEST, Berlin, and MARCELLO PIRANI, Berlin-Wilmersdorf, Germany, assignors to General Electric Company, a Corporation of New York. Filed July 9, 1929, Serial No. 377,009, and in Germany July 17, 1928. 2 Claims. (Cl. 176—125.)

1. In an electric discharge device, a container, electrodes for said container, a gas filling in said container, a gas supply chamber for said container, a dividing body between the gas filled container and the gas supply chamber pervious to said gas only when heated, heating means connected in series with said electrodes for heating said

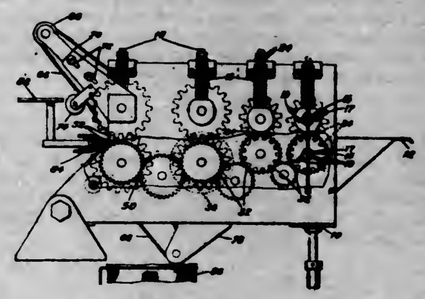
dividing body, and means controlled by the current flowing in said device to cut into and out of circuit said heating means.

1,905,832. INSULATING WALL. STUART W. ECKEL, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a Corporation of Indiana. Filed Sept. 17, 1930. Serial No. 482,506. 7 Claims. (Cl. 72—16.)

1. A construction for insulating walls comprising a wall, a plurality of horizontally disposed and outwardly directed strips secured at one edge of said wall between the top and bottom of the latter, and a layer of insulation against said wall and supported by said strips.

1,905,833. NONHYGROSCOPIC COMPOSITION COMPRISING ALUMINUM SULPHATE AND AN ACID SALT. CHESTER C. FRASELEY, Philadelphia, Pa., assignor, by mesne assignments, to The Grasselli Chemical Company, a Corporation of Delaware. Filed June 25, 1926. Serial No. 118,568. 1 Claim. (Cl. 23—250.)

The process of forming a soluble non-hydroscopic acid sulphate of aluminum which comprises adding sodium carbonate to particles of sodium acid sulphate to form thereon a coating of normal sodium sulphate to render them non-gyroscopic and thereafter incorporating said particles with aluminum sulphate.

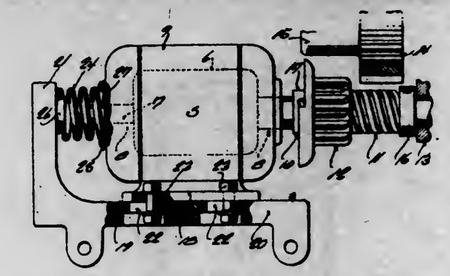


1,905,834. COPYHOLDER. CHARLES FRUSKY, St. Louis, Mo., assignor of one-half to Vera F. Fiader, St. Louis, Mo. Filed June 21, 1930. Serial No. 462,726. 13 Claims. (Cl. 129—34.)

4. A copy-holder comprising a copy-holding support, a line indicator movable thereover, mechanism for moving said line indicator with a step-by-step movement, said mechanism including a pull-rod slidably mounted on said copy-holding support and operatively connected to said line indicator to actuate the same when slid in one direction

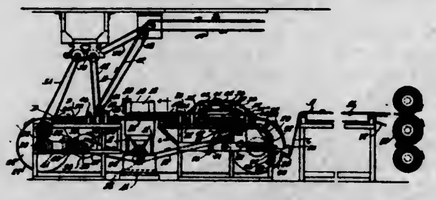
only, a spring operatively connected to said pull-rod for sliding the same in the other direction, an abutment on said pull rod, and a stop disposed in the path of said abutment.

1,905,835. SHEET-SEPARATING APPARATUS. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 5, 1928. Serial No. 325,900. 50 Claims. (Cl. 271—18.)



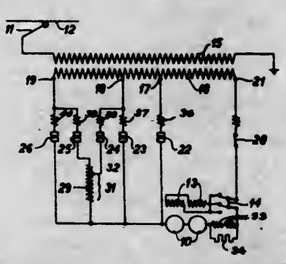
1. In a sheet-separating apparatus, cooperating rolls arranged to receive between them adhering sheets, and sheet-separating projections carried by each roll and extending in a series about the entire periphery.

1,905,836. ENGINE STARTER. JOHN W. FITZ GERALD, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Original application filed May 19, 1926, Serial No. 279,174. Divided and this application filed July 15, 1931. Serial No. 550,863. 8 Claims. (Cl. 74—7.)



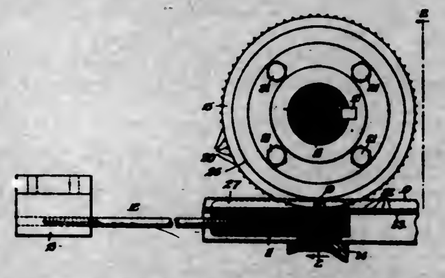
1. An engine starter, comprising the combination with a member operatively connected with an engine, a motor, a rotatable member, a driving member mounted to travel

longitudinally on said rotatable member into engagement with said engine member and also to rotate therewith, means mounting the motor for axial movement, and



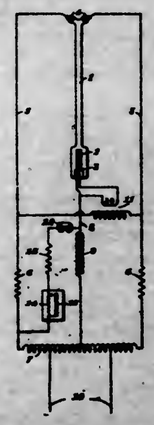
means yieldably resisting axial movement of the motor in a direction opposed to the direction of movement of the driving member to engage the engine member.

1,905,837. METHOD AND APPARATUS FOR PRODUCING CUT ARTICLES OR BLANKS FROM PLASTIC STRIP MATERIAL. JOHN H. FLINK, Watertown, Mass., assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 5, 1931. Serial No. 542,419. 20 Claims. (Cl. 164—20.)



19. Apparatus of the character described comprising, in combination, a conveyor adapted to feed plastic strip stock past a cutting station, a plurality of cutter backing mats positionable between incoming strip stock and the conveyor consecutively along the latter, and mechanism for progressively stripping surplus outgoing stock from the mats, said mechanism comprising means for preventing relative movement of the mats and conveyor.

1,905,838. CONTROL SYSTEM FOR ELECTRIC MOTORS. ALFRED K. FLUELER, Collingswood, N. J., assignor, by mesne assignments, to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 10, 1929. Serial No. 353,939. 5 Claims. (Cl. 172—274.)

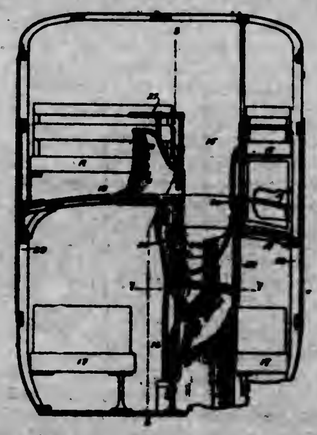


1. In a control system, the combination with a source of alternating current, a transformer connected with said source and provided with a plurality of voltage-stage taps, a multi-tapped impedance device, and a motor, of a controller comprising a plurality of switches arranged to sequentially effect connection of the said voltage-stage taps with the said motor, the said controller including switches to effect connection of a portion only of said device in circuit between certain of said voltage-stage taps and the said motor, and including switches for effecting connection of the whole of said device in circuit with certain other of said voltage-stage taps and the said motor to vary the impedance of the motor circuit.

1,905,839. SASH FORMING MACHINE. GUSTAV T. FORREDD and VERNON R. CORNISH, Elkhart, Ind., assignors to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1929. Serial No. 393,087. 5 Claims. (Cl. 113—34.)

1. A rolling machine attachment for prick-punching the seam in a tubular sheet metal frame member being rolled in an associated machine, comprising a plug adapted to be positioned within the frame member against the inner side of the seam, a circular die adapted to be positioned outside of the frame member in tangential relation to the outer side of the seam at a point opposite the plug, and a plurality of radially projecting studs positioned in sockets in the periphery of the die at intervals circumferentially thereof for prick-punching the seam against the plug upon rotation of the die, said die being laterally separable in the plane of the sockets to permit replacement of the studs.

1,905,840. SYSTEM FOR STARTING AND OPERATING GASEOUS ELECTRIC DISCHARGE DEVICES. JOHN D. FORNEY, Chatham, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 29, 1929. Serial No. 410,488. 10 Claims. (Cl. 176—124.)

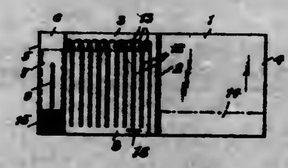


1. In combination, an electric gaseous discharge device having a cathode adapted to emit electrons when heated, means comprising an electric heater to heat said cathode, and means to vary the energy supplied to said cathode heating means.

1,905,841. ELECTRIC DISCHARGE DEVICE AND OPERATING CIRCUITS THEREFOR. JOHN D. FORNEY, Chatham, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a Corporation of New Jersey. Filed Mar. 4, 1930. Serial No. 433,655. 20 Claims. (Cl. 176—124.)

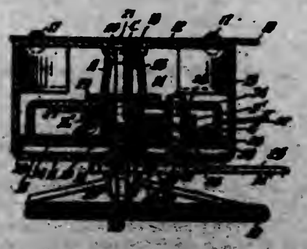
1. In combination, an electric discharge device having a thermionic cathode and an anode, a discharge maintaining circuit for said device comprising leads from a suitable source of direct current to a point on said cathode and to said anode, an inductance in the lead to said anode, means to pass a heating current through said cathode before a discharge is initiated in said device comprising a connection from another point on said cathode to said anode lead at a point between said inductance and said source, means to open said connection, and means to initiate a discharge in said device.

1,905,842. DOUBLE DECK PASSENGER VEHICLE. MICHAEL J. FORRESTER, Astoria, N. Y., assignor to Fifth Avenue Coach Company, a Corporation of New York. Filed Apr. 14, 1932. Serial No. 605,180. 2 Claims. Cl. 296—28.)



1. A passenger vehicle having a deck arranged at a common level, a second deck arranged at a different level from the first deck and itself constructed in two different levels disposed respectively on opposite sides of a line extending longitudinally of the same, and adapted to accommodate passengers' seats on both levels, said second deck having a longitudinally extending aisle at the junction of its two levels and disposed in the plane of the lower level, and a stairway positioned within the vehicle and leading from said aisle to the other deck.

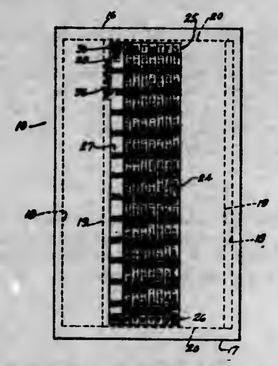
1,905,843. BASE AND SOCKET FOR ELECTRIC LAMPS. THEODORE H. FOULKE, Nutley, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 21, 1931. Serial No. 576,589. 5 Claims. (Cl. 176—32.)



1. In combination, a tubular lamp base member of insulating material, an electric lamp bulb mounted therein, and spaced contact strips extending longitudinally along the outer surface of said base member and permanently attached thereto, the leads of said lamp bulb being connected to said contact strips, said strips having an outwardly extending bulge therein.

1,905,844. MATCH PACKAGE. BENJAMIN H. FREEDMAN, New York, N. Y., assignor to Hudson Holding Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 9, 1930. Serial No. 442,753. 5 Claims. (Cl. 206—29.)

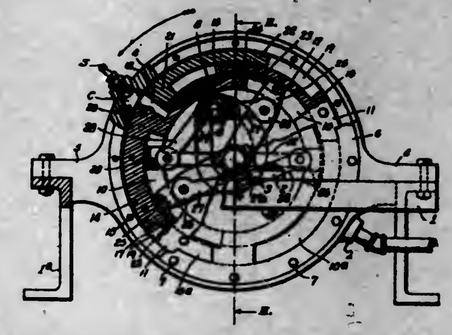
1. A match package having a cover strip, a match strip held cross-wise on said cover strip and having portions of said cover strip folded over it, said match strip having a continuous base portion extending along the ends of the matches in said strip, means for attaching said base portion to the cover strip, said match strip being provided with a flap extending along the sides of the matches in said strip, and means for attaching said flap to the cover strip.



1,905,845. HAND BRAKE. HENRY FUCHS, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 1, 1930. Serial No. 472,227. 3 Claims. (Cl. 74—112.)

1. In a hand brake mechanism, the combination with a chain winding drum; of a hand wheel; power-multiplying gear means operatively connecting the hand wheel and chain winding drum, said gear means including a pair

of gear members rigidly connected to each other and mounted for planetary movement; means for normally locking said members against planetary movement but permitting axial rotation thereof, whereby the power is transmitted through said gear means to the drum to wind the chain and tighten the brakes, said locking means being releasable to permit planetary movement of said members, thereby allowing free running of the chain winding drum with respect to the hand wheel to release the brakes; and a locking dog for positively holding said hand wheel against rotation in an unwinding direction.

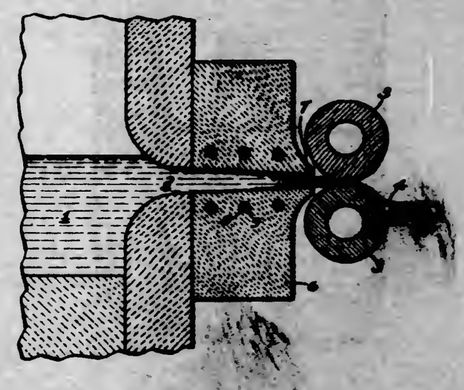


1,905,846. PERPETUAL CALENDAR. STEPHEN FURRDI, New York, N. Y. Filed July 28, 1932. Serial No. 625,266. 6 Claims. (Cl. 40—109.)

1. A perpetual calendar including a plurality of interrelatively movable members, one of said members having on one side thereof a table of numbers in rows and columns for the months of different years, so that any portion of said table including seven of said numbers in a row shall afford the numbers for the months of a desired year, said member having indicia on its reverse side, and the second member having indicia which can be coordinated with said indicia on the first member by movement of the members relative to each other, so that a desired year can be obtained by alinement of the indicia on the different members, certain of said indicia on the second member being differentiated from others thereof for indicating whether the year obtained is a leap year, the second member having window means for defining a portion of the table on the first member to obtain a calendar corresponding to the year to which the members have been set according to said indicia, and the second member having other indicia coordinated with the columns of said tables to indicate the names of the days for common and leap years corresponding to the numbers of said table, certain of the last mentioned indicia being adapted for use with January and February of a leap year and with all months of a common year, and others of the last mentioned indicia being adapted for use with the last ten months of a leap year.

1,905,847. ROTARY ENGINE. ELMER B. GALYEAN, Topeka, Kans. Filed Aug. 24, 1931. Serial No. 558,863. 2 Claims. (Cl. 123—11.)

1. A rotary engine, comprising a stationary casing providing a circular chamber and having gas-intake and exhaust ports and continuous cam grooves in the inner faces of the side walls, a shaft journaled in the side walls coaxially thereof and eccentrically of said grooves, a rotor of cylinder shape and open at its sides, mounted on the shaft within the said chamber and engaging the circumferential and side walls thereof and having opposite external peripheral chambers providing piston faces at their front ends, the bottoms of said peripheral chambers being of step form to divide the chambers into front and rear portions of different depth, the front portions being deeper than the rear portions and constituting follower chambers, the risers of the said stepped portions having passages opening from the front parts of said rotor chambers into the casing chamber, independent arms pivotally mounted at their inner ends on the shaft, followers snugly engaging the front parts of the rotor chambers and



provided with tail pieces extending into the shallow rear chambers, rods projecting rearwardly from the followers and through the said passages and secured to said arms, toggle connections between said arms respectively and the rotor, and rollers on and at opposite sides of the jointed parts of the toggles and engaging the said cam grooves.

1,905,848. ZIRCONIUM CITRATE HEXAMETHYLENETETRAMINE. ARNOLD J. GELARIE, New York, N. Y. Filed July 30, 1928. Serial No. 296,428. 2 Claims. (Cl. 260—11.)

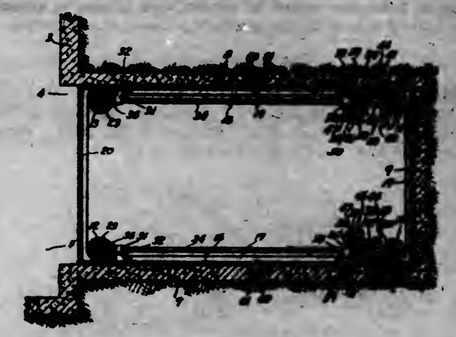
1. Zirconium-citrate-hexamethylenetetramine.

1,905,849. METHOD OF MAKING SHEET GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 17, 1931. Serial No. 581,586. 2 Claims. (Cl. 49—87.)

1. A method of making sheet glass which comprises melting and maintaining in a tank furnace a reservoir of molten glass, supplying the glass by the head pressure of the tank through a slot in the wall of the tank and between the pass of a pair of cooled rolls which constitutes a continuation of said slot and driving the rolls at a peripheral speed at least equal to the natural rate of flow of the glass to the roll incident to said head pressure, so that the glass flows through the slot without retardation by the rolls.

1,905,850. SYNTHETIC LUBRICANT AND METHOD OF MAKING SAME. JOHN J. GRABEN and SELVIA M. SWENSEN, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Apr. 25, 1930. Serial No. 447,408. 9 Claims. (Cl. 87—9.)

1. The method of making oleaginous products which comprises heating diphenyl oxide at a temperature between 400° C. and the decomposition point thereof and separating from the reaction product the fraction distilling between approximately 200° and 350° C. at an absolute pressure of 5 to 10 millimeters.

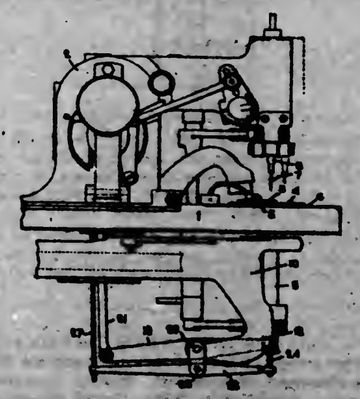


1,905,851. SURGICAL INSTRUMENT. LOUIS D. GREEN, San Francisco, Calif. Filed Apr. 30, 1930. Serial No. 448,607. 3 Claims. (Cl. 128—305.)

1. In a surgical instrument for performing operations on the human eye, a rotatable tool having an annular cutting edge, a shoulder on said tool for indicating the depth at which the tool is operating, a helical spring for storing energy to rotate said tool, a gear train interconnecting said spring and said tool, said tool being driven by an intermediate gear in said gear train, a rotatable shaft driven by said gear train at a higher rate of speed than said tool, a fan on said shaft for retarding the rate of rotation of said tool, a fly-wheel on said shaft for maintaining the rate of rotation relatively constant, an elongated casing having the general form of a pencil for supporting said tool, said gear train and said spring in general alignment and with said tool extending from one end of the casing, a cap on the opposite end of said casing for winding said spring, a finger button projecting through said casing for controlling the rotation of said tool, said finger button being disposed at a position which is adjacent the forefinger when the instrument is held between the thumb and forefinger in the manner by which a pencil is held, and a set screw for securing said casing in proper position about the gear train and spring, all of the operating parts of the device including the spring being removable through one end of the casing for inspection upon removal of said set screw.

1,905,852. GARAGE. PALATINE GRIMM, Higginsville, Mo. Filed Oct. 6, 1930. Serial No. 486,654. 2 Claims. (Cl. 187—25.)

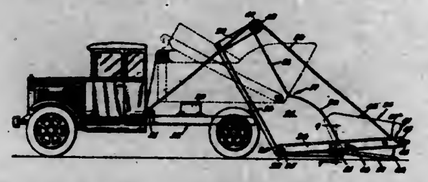
1. A garage including a rectangular platform, vertical threaded posts extending through said platform adjacent its corners, gears rotatively mounted on the platform and threaded on the posts, means for operably connecting the gears at each side edge of the platform including spaced aligning shafts, pinions fixed on the shafts and meshing with said gears, spaced aligning counter shafts on the platform and having driving connection with said spaced



aligning shafts, and common means operable by an automobile mounted on the platform for operating counter shafts to move the platform vertically on the posts.

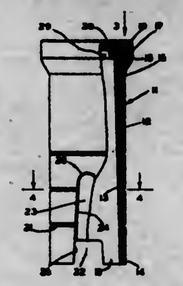
1,905,853. HEAT INSULATING PANEL MEMBER. RICHARD T. GRIFFITHS, Akron, Ohio, assignor, by mesne assignments, to Miller Rubber Company Inc., Wilmington, Del., a Corporation of Delaware. Filed Dec. 20, 1929. Serial No. 415,541. 9 Claims. (Cl. 20—35.)

1. An insulating panel of the character described comprising a front member of hard rubber having a facing plate of metal homogeneously united thereto, and a self-supporting imperforate back member of hard rubber spaced therefrom and having a continuous non-conducting flanged margin homogeneously united to the rubber of the front member.



1,905,854. BUTTONHOLE SEWING MACHINE. CARL A. O. GRIP, Newtonville, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed May 24, 1932. Serial No. 613,217. 9 Claims. (Cl. 112—242.)

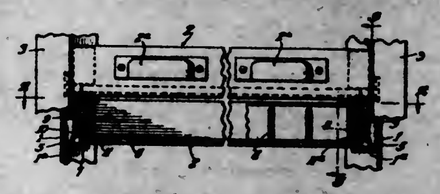
1. In a buttonhole sewing machine, the combination with a stitch frame, of a thread rotatively mounted thereon, stitch-forming mechanism including loopers pivotally



mounted on the turret to oscillate about a common axis, a thread pull-off arm pivoted co-axially with the loopers and adapted to engage the under thread to pull a length thereof from the source of supply, and means to actuate the pull-off arm after the sewing operation is completed.

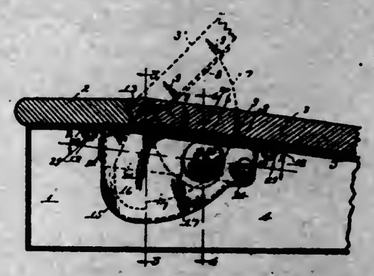
1,905,855. LOADING AND DUMPING TRUCK. WILLIAM M. GROSS, Las Vegas, Nev., assignor of one-half to Will Beckley, Las Vegas, Nev. Filed Apr. 28, 1932. Serial No. 608,019. 18 Claims. (Cl. 37—4.)

1. In a dump truck having a body with a floor, side walls, and a rear end, the body being tiltably mounted on the truck, said body being adapted to tilt rearwardly to bring the floor into an inclined position and the rear end contiguous to the ground, means for attaching a draft connection to the rear portion of the truck body to move said body and the truck rearwardly and force a load of loose material into the rear portion of the truck body, and means to tilt the truck body to bring the floor into horizontal position for transportation of the load, an excavating bucket operatively connected to the truck body to engage the material for the load and to support and guide the load while being forced into the truck body, and means to lift the bucket relative to the body to deposit part of the load in the body.



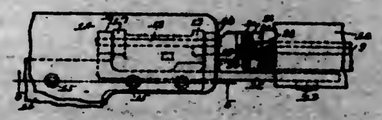
1,905,856. CURB VALVE BOX. LEO G. HAASE, Long Beach, and FRANK M. BROOKS, Pasadena, Calif., assignors to Art Concrete Works, Inc., Pasadena, Calif., a Corporation of California. Filed June 30, 1930. Serial No. 464,888. 2 Claims. (Cl. 137—13.)

1. A curb valve box comprising a tubular concrete structure open at the bottom, said structure having annular grooves thereon adjacent the bottom providing weakened places for breaking sections from the box to reduce its height, said box having upwardly extending areas of reduced thickness, which areas extend across the grooves and which may be broken out when a section or sections are removed to provide notches in the bottom of the shortened box for the reception of inlet and outlet pipes.



1,905,857. DRAWER STRUCTURE. EDWARD P. HAMILTON, Two Rivers, Wis., assignor to Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Oct. 2, 1930. Serial No. 485,953. 8 Claims. (Cl. 45—77.)

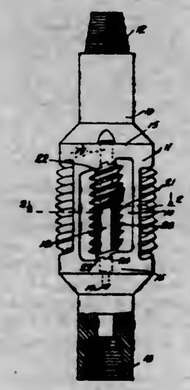
1. A metal shoe for type cases comprising a channel-shaped runner portion having a bottom wall arcuate in cross section, and lateral extensions of the side walls thereof, the lateral extension of one of said walls being turned outwardly of the runner portion to provide an attaching portion for said shoe and having holes therein



for the passage of fasteners therethrough, the lateral extension of the other wall being turned inwardly of said runner portion to provide a smooth external edge for said shoe.

1,905,858. HINGE HAVING FRICTION BEARINGS. GEORGE H. HAMILTON, East Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Feb. 14, 1931. Serial No. 515,899. 1 Claim. (Cl. 16—140.)

In a structure of the character described comprising a pair of parts having a swinging interrelative movement, one of said parts being a box having a side wall with an inwardly extending flange, and the other one of said parts being a flat closure for the box having a recess adjacent its inner edge; a hinge connecting said parts comprising a member forming an extension of said wall and a member forming a friction plate carried by the other one of said parts at right angles to the axis of said swinging movement and extending through said flange, said members being detachably connected pivotally inside said recess; a casing detachably connected to said flange on its under side; a pair of friction plates in the casing extending parallelly with, and frictionally bearing on, the opposite sides of the first-mentioned friction plate, the casing when detached and said pair of friction plates being removable from said flange in a direction parallel with all of said friction plates; threaded means for detachably connecting the casing with said flange.

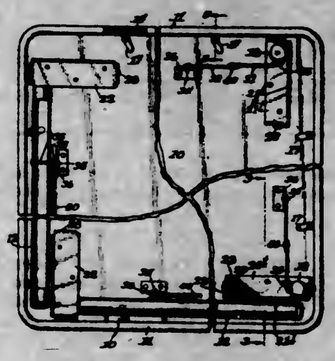


1,905,859. CHAIR WITH SWINGABLE TABLE LEAVES. GEORGE H. HAMILTON, East Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Apr. 6, 1931. Serial No. 527,975. 4 Claims. (Cl. 155—126.)

4. In combination with a chair having a side standard with a hooper socket extending inwardly from its side: a bracket arm mounted on the standard swingably about

a horizontal axis; a member, having a table leaf, mounted on the free end of the arm turnably about an axis transverse to the first-mentioned axis and having a head movable by the turning movement of said member, in the arm's raised position, into the socket to locking engagement with the standard for releasably holding the table leaf in horizontal position of use, said member having a leg portion resting on the arm in said position of use.

1,905,860. WELL REAMER. OTTO HAMMER, Whittier, Calif., assignor to Security Engineering Company, Reno, Nev., a Corporation of Nevada. Filed Apr. 22, 1931. Serial No. 531,986. 4 Claims. (Cl. 255—73.)



1. A well reamer comprising a body, a cutter pin mounted upon the body remote from the vertical central axis of the body, a plurality of bushings mounted upon the cutter pin, the planes of the bushings being inclined at other than a right angle to the cutter pin, and disc like cutters rotatable upon the bushings.

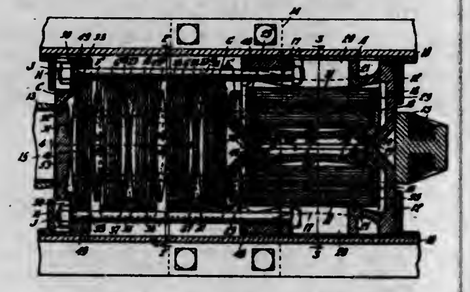
1,905,861. WASHING DEVICE. MICHAEL A. HAMMES, Racine, Wis. Filed Sept. 22, 1931. Serial No. 564,259. 5 Claims. (Cl. 15—128.)

1. In a device of the character described, a hollow body having a plurality of discharge orifices, means to connect the hollow body with a source of fluid supply, said hollow body being shaped to provide a handle and to cause the streams of fluid issuing from its discharge orifices to diverge outwardly, a cleaning brush, and means to mount the cleaning brush from the hollow body with the brush disposed in the space defined by the diverging streams of fluid and with the sides of the brush spaced from said streams of fluid.

1,905,862. FOLDING CARD OR LIKE TABLE. FRANK B. HARMAN, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed July 19, 1929. Serial No. 379,337. 5 Claims. (Cl. 45—11.)

1. In a folding table of the class described, the combination of a table top, legs for supporting said top, said legs being pivotally secured to said top so as to be foldable from extended position to folded position substantially flatwise adjacent the under side of the top, and means for so mounting each of said legs comprising a pair of substantially like brackets, one secured to said top and the other to said leg, said bracket being substantially U-shaped and having transverse ear portions projecting from their ends, the ear portions of the respective brackets being pivoted together.

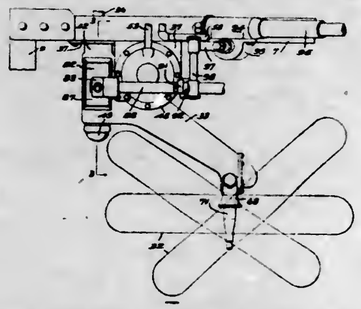
1,905,863. BLASTING CARTRIDGE. ALLYN HARRIS, Wheaton, Ill., assignor to Safety Mining Company, a Corporation of Illinois. Filed Oct. 11, 1930. Serial No. 488,143. 7 Claims. (Cl. 102—7.)



1. A blasting cartridge comprising a metallic body having a gas chamber therein, an electrode subject to the gas pressure within said chamber and insulated with respect to said body and accessible to the interior thereof for cooperation with a heater circuit and to the exterior thereof for cooperation with a source of electricity, said electrode being constructed and arranged so that the forces acting thereon resulting from the gas pressure are substantially balanced.

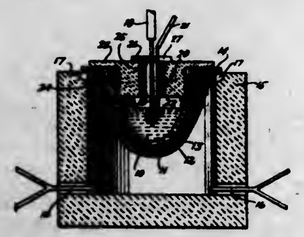
1,905,864. SHOCK ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 10, 1928. Serial No. 311,690. 7 Claims. (Cl. 213—30.)

1. In a shock absorbing mechanism, the combination with a plurality of sets of laminated spring plates; of follower elements at opposite ends thereof; spacer elements between said sets; and cooperating means on the follower elements and spacer elements for maintaining the same in alignment while permitting relative approach



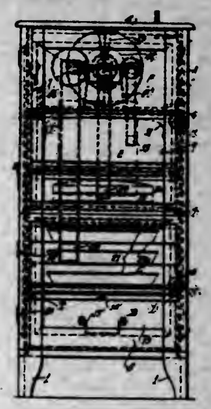
CARNEGIE LIBRARY OF ATLANTA

thereof, said means comprising slidable interfitting means on adjacent elements including a laterally projecting tongue on one of said elements and a cooperating grooved



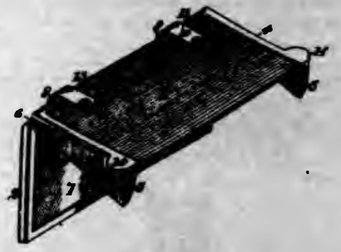
guide on the next adjacent element receiving and closely fitting said tongue throughout its length for sliding movement.

1,905,865. VEHICLE. CHARLES A. HAWKINS and HORACE L. HIRSCHLER, San Francisco, and MARCUS LOTHROP, Berkeley, Calif., assignors, by direct and mesne assignments, to Hawkins Patents, Ltd., Reno, Nev., a Corporation of Nevada. Filed Aug. 2, 1929. Serial No. 382,972. 1 Claim. (Cl. 280—91.)



A vehicle comprising a main frame, a hollow support arm mounted on said frame to rotate in a vertical plane and about a transverse axis, a dirigible wheel pivotally mounted on said arm, steering means movable along said axis, and a link within said support arm connected to said steering means for moving said wheel pivotally.

1,905,866. PROCESS OF PRODUCING YTTRIUM AND METALS OF THE YTTRIUM GROUP. JOHN ALLEN HEANY, New Haven, Conn., assignor to Sirian Lamp Company, Newark, N. J., a Corporation of Delaware. Filed Feb. 8, 1930. Serial No. 426,979. 29 Claims. (Cl. 204—19.)

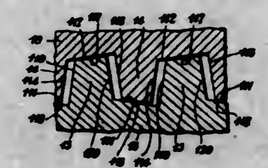


1. A process of preparing yttrium which comprises subjecting a pure yttrium compound to electrolysis in a bath consisting of fused alkali fluoride.

1,905,867. VENTILATED CABINET. HENRY HEUTI, St. Louis, Mo. Filed June 1, 1931. Serial No. 541,294. 4 Claims. (Cl. 98—51.)

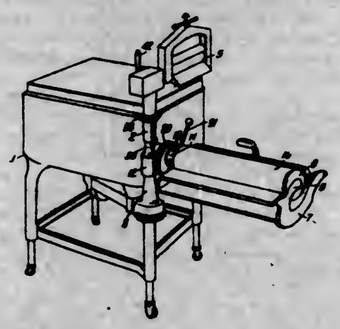
1. A cabinet comprising a shell provided with ducts for communicating one part of the shell with another, drawers shiftable in the shell for communicating registration each with an outlet of a respective duct, one of said drawers including a wall having ports registrable with the respective ducts for communicating all of said ducts with the last named drawer, and means including a fan located within said last-named drawer for circulating a current of air through said ducts and into said drawers.

1,905,868. DRIVING MIRROR. GEORGE N. HEIN, San Francisco, Calif. Filed Oct. 2, 1926, Serial No. 139,061. Renewed Aug. 3, 1928. 11 Claims. (Cl. 88—1.)



1. A mirror device for vehicles comprising a mirror; a semi-reflecting screen normally positioned in front of said mirror at an angle thereto; a hinged connection between the upper edges of said mirror and screen whereby the latter may be swung upwardly away from said normal functional position; and wall members carried by the screen and movable therewith for limiting its movement into normal functional position, and when in said latter position affording a wall connection between the ends of the mirror and screen.

1,905,869. SELF-LOCKING COUPLED SCREW ELEMENT. WILLIAM E. HOKE, Baltimore, Md., assignor to Dardelet Threadlock Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 1, 1927, Serial No. 230,300. Divided and this application filed Feb. 26, 1931. Serial No. 518,425. 7 Claims. (Cl. 151—14.)

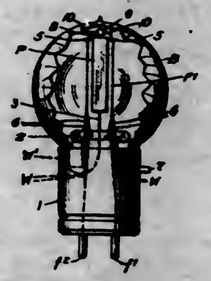


6. In combination, two members provided with coupling screw threads, said threads having space between their convolutions to permit substantial crosswise movement between the threads while coupled, the root surfaces of said threads of the two members being oppositely directed

with respect to the longitudinal axis of the threaded member and the crest surfaces of the threads of the two members being formed to jam on the said root surfaces, to form profiles adapted to freely screw together only while the threads are out of side contact and to wedge the crest of

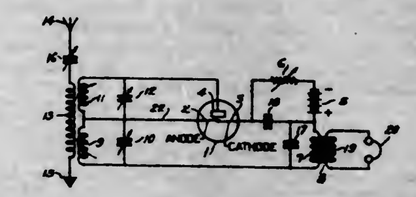
one thread on the root of its co-acting thread when the threads are displaced crosswisely in one direction, and to wedge the crest of the other thread on the root of its co-acting thread when the threads are displaced crosswisely in the opposite direction.

1,905,870. IRONER ATTACHMENT FOR WASHERS. SIDNEY S. HOLLAND, Kansas City, Mo., assignor of one-half to Oscar Rieger, Kansas City, Mo. Filed Sept. 28, 1929. Serial No. 395,905. 4 Claims. (Cl. 68—9.)



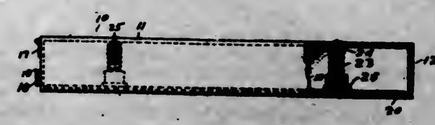
1. In an apparatus of the character described, a support, vertically spaced sleeves on the support, and an operating shaft rotatable in the sleeves, a housing-like bracket supported by and between said sleeves, a worm fixed to the operating shaft and located within said bracket and a worm gear rotatably mounted within said bracket and meshed with said worm, an ironer mounted on the bracket, and means for transmitting motion of said worm gear to the ironer.

1,905,871. WRINGER ROLL. SIDNEY S. HOLLAND, Kansas City, Mo., assignor of one-half to Oscar Rieger, Kansas City, Mo. Filed May 29, 1930. Serial No. 456,928. 5 Claims. (Cl. 68—33.)



1. A wringer roll including a yielding cylindrical core, a facing for the core having a greater degree of resiliency than the core, and a plurality of layers of fabric embedded in and covering the facing at one end of the roll, and having a greater coefficient of friction than the exposed surface of the facing.

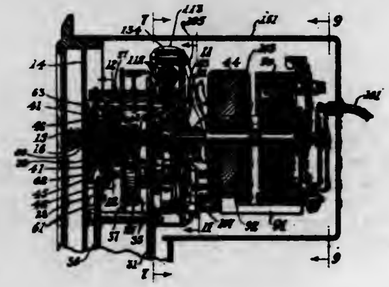
1,905,872. THERMIONIC VALVE. HARRY W. HOUCK, East Orange, N. J., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed July 18, 1924. Serial No. 726,841. 6 Claims. (Cl. 250—27.5.)



2. A thermionic valve having a common anode in the form of a hollow body with wide exterior faces, a plurality of cathodes positioned adjacent to and extending parallel with said faces, the anode being positioned intermediate said cathodes and extending in overlapping relation thereto to shield the cathodes from each other, and means supporting said cathodes extending through said hollow anode.

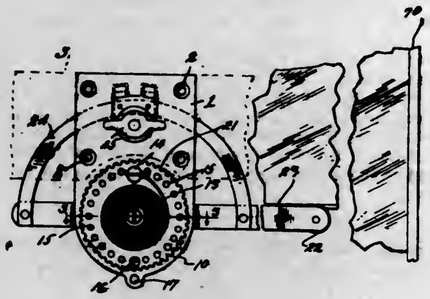
1,905,873. DETECTOR CIRCUIT FOR THREE-ELEMENT GASEOUS DISCHARGE TUBES. AUGUST HUND, West Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1931. Serial No. 571,989. 9 Claims. (Cl. 250—27.)

1. A radio frequency detector comprising a gaseous discharge device having an anode, a cold cathode and a control electrode, a tuning device connected to said gaseous discharge device having a high frequency primary inductance and two secondary inductances, said secondary inductances forming respectively branches of two independent resonant circuits, one of which includes the control electrode and one of the other electrodes of said gaseous discharge device and the other of said resonant circuits being in circuit with the anode and cathode of said gaseous discharge device, and means to demodulate signaling energy through the effect of ionization in said device.



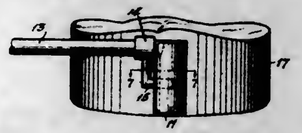
1,905,874. SELF-HOLDING AUTO LICENSE FRAME. PATRICK HUDSON, New York, N. Y. Filed Jan. 19, 1932. Serial No. 587,576. 4 Claims. (Cl. 40—125.)

1. A license plate holder comprising a box, the front of said box being recessed to form a frame, a closure member in one edge of said box to admit of a license plate



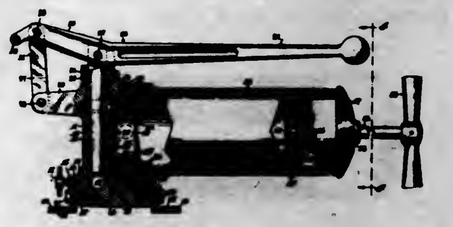
being inserted therethrough, spring means secured in said box, said spring means cooperating to hold the license plate against said frame, said spring means comprising a plurality of compression springs, one end of said spring being secured against the back of said box member and a rubber finger secured about the other end of said spring, said rubber finger being adapted to be pressed against the back of said license plate by said spring and hold said license plate against said frame.

1,905,875. PARKING CLOCK. BENJAMIN F. HUTCHES, Jr., Allendale, N. J. Filed Nov. 8, 1926. Serial No. 146,968. 39 Claims. (Cl. 161—15.)



39. An elapsed time indicator comprising a composite shaft having two shaft sections, potential power means connected to a first shaft section to rotate the section in one direction, electro-magnetic means connected to the second shaft section to rotate the section, clutch means connecting the second shaft section to the first shaft section for rotation of the latter in a direction opposite to the direction of rotation caused by the potential power means, elapsed time indicating means connected with the first shaft section, and trembler switch means to actuate the electro-magnet means upon vibration thereof.

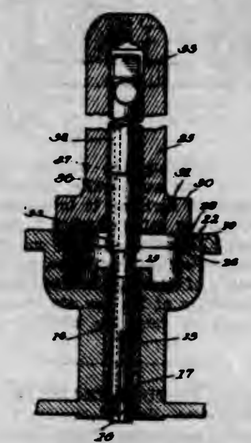
1,905,876. AUTOMATIC WINDOW REGULATOR. EDWARD L. ACKERMAN, Detroit, Mich., assignor to Ackerman-Blaesser-Fenzey, Incorporated, Detroit, Mich., a Corporation of Michigan. Filed Sept. 25, 1929. Serial No. 394,947. 3 Claims. (Cl. 16—200.)



1. In sash operating mechanism, a pivoted arm in operative engagement with the sash, a spring having a tension sufficient to automatically turn the arm to raise the sash, an arcuate strip attached to the arm, a base plate on which the arm is pivoted, a friction device including a friction plate on the base plate the face of which is practically in registration with the face of the strip, a second friction plate movable into or out of frictional engagement with the arcuate strip to hold the arm from movement by the spring or release it to movement thereby, yieldable means tending to separate the friction plates, and manually operable means for moving said second friction plate into contact with the arm.

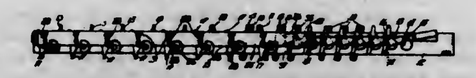
1,905,877. ORTHODONTIC APPLIANCE. JULIUS ADERER, New York, N. Y. Filed Sept. 3, 1931. Serial No. 560,909. 1 Claim. (Cl. 32—19.)

An orthodontic appliance comprising longitudinally separable members, one of said members consisting of a tubular socket provided on one side thereof with an aperture penetrating its wall and on its top with a channelled seat for an alignment wire, the other of said members consisting of a plug having its outer peripheral surface conforming with the inner peripheral surface of said socket and adapted to fit into said socket in surface engagement therewith, said plug having an aperture adapted to register with the aperture in said socket only when said plug is fully seated in said socket and the alignment wire rests on the seat of the socket, an alignment wire attached to the upper end of said plug in parallelism with the aperture of the plug and at a distance from said aperture corresponding to the distance between the wire seat and aperture of the socket member, a collar slidable on the wire toward and from said plug, and a lock pin rigidly supported on said collar and comprising a horizontal portion aligned with the plug aperture and a vertical portion rigidly connecting said horizontal portion with the collar and maintaining the horizontal portion permanently in such a position that its upper surface is constantly the same distance from the longitudinal center line of the wire in the region of the plug as is the upper surface of the plug aperture, whereby the horizontal portion of the pin is positioned and movable for entry without distortion into and for withdrawal without distortion from the apertures of the plug and socket when the apertures are in registry with each other and whereby at the same time the parts when inter-engaged will, due to the inter-communicating strains, maintain themselves in the locked position until separated by movement of the collar on the wire in a direction longitudinal of the wire.



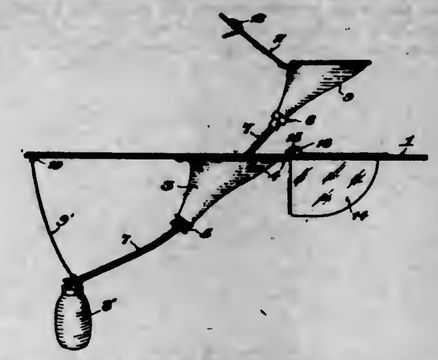
1,905,878. LUBRICATING APPARATUS. HERMAN ALBERTINE, East Rutherford, N. J., assignor to Rogers Products Company, Inc., a Corporation of New Jersey. Filed May 16, 1928. Serial No. 278,289. 5 Claims. (Cl. 221—471.)

1. The combination with a support having a pump cylinder therein and a socket communicating at its bottom with said cylinder to supply lubricant thereto, said socket including a cylindrical internally threaded outer portion and an inner portion with an undercut groove at the



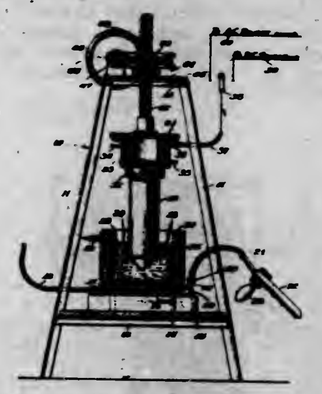
periphery of its bottom, a strainer extending across said bottom and seated at its periphery in said groove, a cylindrical lubricant reservoir having one end detachably secured in the outer portion of said socket, and means including a follower piston to urge lubricant in said reservoir toward said outlet.

1,905,879. VALVE SEAT RING DRIVER. FRANK O. ALBERTSON, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a Corporation of Iowa. Original application filed Feb. 18, 1929, Serial No. 340,770. Divided and this application filed Dec. 7, 1931. Serial No. 579,633. 3 Claims. (Cl. 29—88.2.)



1. A valve seat ring driver comprising a metal member having an impact surface at one end and having a driving surface at the opposite end for engaging a valve seat ring, said member having an intermediate handle portion for engagement with the hand of the operator in driving the ring, said ring driver having a cylindrical bore extending into the same and a valve stem pilot having a complementary cylindrical surface for slidably supporting said ring driver during the driving of a valve seat ring.

1,905,880. COMBINATION ORGAN STOP ACTION. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed May 20, 1932. Serial No. 612,501. 13 Claims. (Cl. 84—345.)

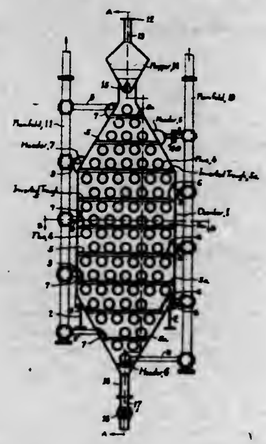


2. In a musical instrument, a set of stop action operating devices, a second set of stop action operating devices, a longitudinally movable trace, actuators on said trace respectively associated with the devices of the first set and settable into two positions and in each of which said actuators are effective at all times, a second set of actuators on said trace respectively associated with the stop action operating devices of the second set, each of the last mentioned actuators being normally ineffective to operate the associated devices when the trace is moved, and means for rendering said actuators effective, each of said second mentioned actuators being settable into two positions when said means is in effective position.

1,905,881. AUTOMOBILE COMMODE. JOSEPH T. AVILA, Providence, R. I. Filed July 20, 1932. Serial No. 623,911. 4 Claims. (Cl. 4—114.)

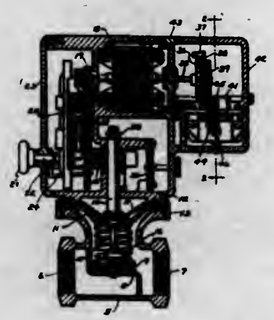
1. In combination with an automobile floor board having openings, an open ended housing in register with one of the openings secured to the floor board and depending therefrom, a removable closure for the top of the housing, a receiver having a removable cover movable into and out of the housing, a flexible pipe connected at its upper end to the receiver and extending through the housing, a container connected to the lower end of the pipe, a flexible connection secured to the floor board and to the container to support the latter, and a flushing water container hinged to the floor board and movable into and out of the other opening in the floor board and having an outlet which when the water container is swung upwardly discharges water into the receiver to flush same.

1,905,882. METALLIC COLUMBIUM AND PROCESS FOR MAKING THE SAME. CLARENCE W. BALKE, Highland Park, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Jan. 20, 1928. Serial No. 248,047. 8 Claims. (Cl. 204—19.)



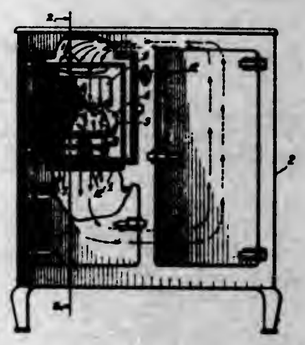
1. The process for producing metallic columbium which comprises electrolytically reducing a double potassium fluoride of columbium.

1,905,883. APPARATUS FOR CONTACTING SOLID AND GASEOUS MATERIALS. EDWIN O. BARSTOW and SHERROW B. HEARN, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Feb. 13, 1930. Serial No. 428,006. 8 Claims. (Cl. 34—34.)



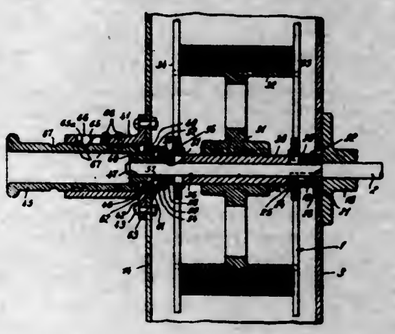
1. In apparatus of the character described, the combination of a closed rectangular chamber provided with

a closable top charging inlet and bottom discharge outlet, a plurality of horizontal flues in uniformly spaced relation extending lengthwise of said chamber and being secured in the end walls thereof, means for supplying a gaseous temperature regulating medium to said flues, a plurality of horizontal inverted troughs disposed transversely of said chamber and being secured to the lateral walls there-



of in banks between alternate rows of said flues, headers joining one end of said inverted troughs in each alternate bank thereof and communicating with an inlet manifold, similar headers joining the opposite ends of the inverted troughs in the remaining banks thereof and communicating with an outlet manifold and means for supplying a gas to said inlet manifold and for withdrawing a gas from said outlet manifold.

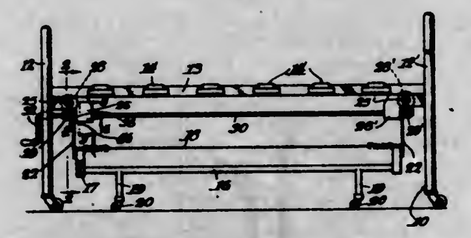
1,905,884. MOTOR OPERATED VALVE. VILYNN O. BEAM, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed Dec. 13, 1930. Serial No. 502,141. 7 Claims. (Cl. 137—139.)



1. The combination with a valve and a prime mover for opening the valve, of a second prime mover and self-locking gear mechanism coupling the two prime movers in such a manner that unless the second prime mover is actuated the valve-opening prime mover will be incapable of opening the valve, and means embodied as part of said mechanism permitting said valve to close when power is cut off from the valve-opening prime mover.

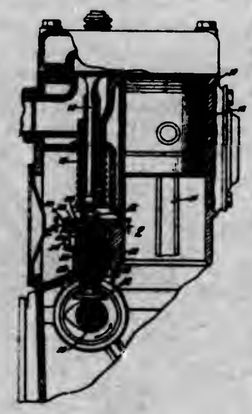
1,905,885. DRY ICE CONVERSION UNIT. EDWIN O. BENNETT, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed Oct. 31, 1931. Serial No. 572,245. 4 Claims. (Cl. 62—91.5.)

3. An ice box including the combination of a container having heat insulated walls, a perforated partition in said container dividing it into upper and lower chambers, said partition being adapted to support a piece of dry ice, a tray adapted to contain water to be frozen slidably positioned below said partition within said lower chamber, a plurality of openings in said container adapted to permit a circulation of ice box air through said container, and means to vary the effective area of said openings.



1,905,886. MOTION PICTURE PROJECTING MACHINE. MICHAEL BERKOWITZ, New York, N. Y., assignor to United Research Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Aug. 5, 1930. Serial No. 473,176. 4 Claims. (Cl. 242—55.)

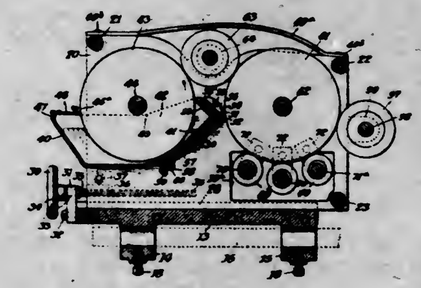
1. In a projecting machine having an upper film magazine, a lower film magazine and a film feeding mechanism intermediate the upper and lower magazines, a stud shaft in one of the magazines, a fixed abutment thereon located at a substantial distance inwardly from the free end of the stud shaft, a reel supported by the stud shaft, and means for supporting the free end of the stud staft comprising a socket carried by the magazine, a sleeve extending thru the socket and a freely rotatable member carried by the end of the sleeve for supporting the free end of the stud shaft.



1,905,887. ORTHOPEDIC BED. JOHN V. BERNS, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1930. Serial No. 446,752. 7 Claims. (Cl. 5—65.)

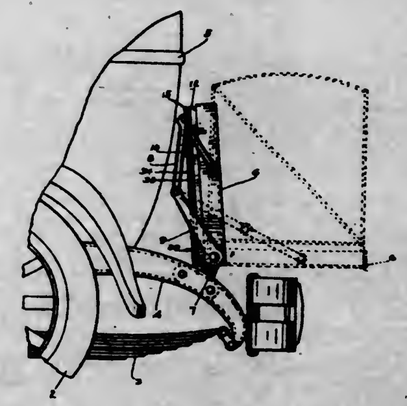
1. In combination with a bed frame having a vertically adjustable bottom, means for adjusting the elevation of said bottom, means mounted on said bed frame and rendered operative by engagement with said bottom for stopping the latter at a predetermined elevation, and

means carried by said adjusting means and operated by a reverse movement of said adjusting means for rendering said stopping means inoperative.



1,905,888. SCREW TYPE MECHANICAL LASH ADJUSTER FOR VALVES. GEORGE P. BERRY, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 27, 1931. Serial No. 540,299. 10 Claims. (Cl. 123—90.)

1. Operating mechanism for valves and the like adapted to have cyclical movement, including a slack takeup device comprising interfitting parts capable of relative rotation, yielding means tending to produce relative rotation of said parts to increase their overall length and take up slack in the system, a stationary part, and pin and slot means carried by one of said interfitting parts and said stationary part for oscillating said interfitting part upon operation of said valve gear to produce slack in the system.



1,905,889. APPARATUS FOR COLORING PAPER. HERMAN BLACK, WILLIAM HOLMES, and MAURICE ALBERT HEGEN, Chicago, Ill., assignors to Evening American Publishing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1929. Serial No. 412,782. 22 Claims. (Cl. 92—40.)

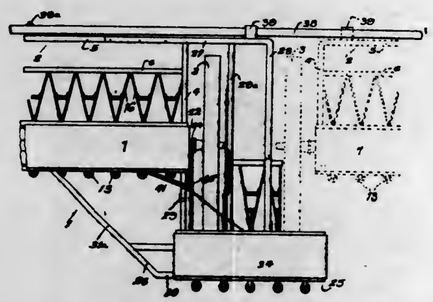
1. In a device of the character described, in combination, means for conducting a web or film of material to be fed at a uniform rate of speed, a container for coloring fluid, and means operating synchronously with said con-

ducting means for applying a coloring material from said container to a portion of said web or film.

1,905,890. COLLAPSIBLE LUGGAGE CARRIER. SIDNEY B. BLAKELY, Minneapolis, Minn., assignor to Mitchell Battery Company, a Corporation of Minnesota. Filed Dec. 23, 1929. Serial No. 415,993. 4 Claims. (Cl. 224—29.)

1. A collapsible luggage carrier including a bottom member and a plurality of walls, hinges connecting said walls to the bottom member, said hinges being situated at different elevations whereby the walls may be folded inwardly, one over another in parallel relation, three of said walls each comprising a plurality of hinged-together sections whereby said sectional walls may fold upon themselves, when the carrier is collapsed, and means slidably and pivotally connecting together the walls at the corners of the carrier whereby said walls may slide relatively to each other at the corners of the carrier, when said walls are folded and unfolded.

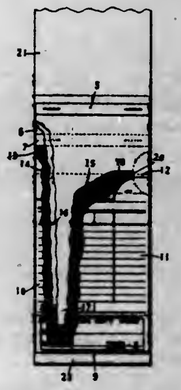
1,905,891. AERONAUTICAL PROPELLER. WERNER J. BLANCHARD, Hempstead, N. Y., assignor to Curtiss Aeroplane & Motor Company, Inc., a Corporation of New York. Filed July 14, 1930. Serial No. 467,782. 5 Claims. (Cl. 170—167.)



1. A one piece forged metal aeronautical propeller comprising thin solid blades and integral therewith and on opposite faces thereof opposed hub forming enlargements,

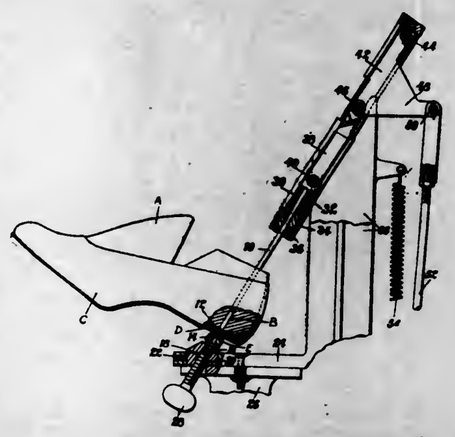
said enlargements, in each instance, being of circular section and of substantially uniform diameter, the diameter, in each case, being substantially less than the width of

the propeller at the line of juncture of the propeller blades, and the length, in each case, being substantially greater than the blade depth.



1,905,892. SEEDING IMPLEMENT. ALBERT E. BOTSFORD, Walla Walla, Wash. Filed Mar. 11, 1930. Serial No. 434,955. 8 Claims. (Cl. 111—52.)

8. A seeding implement, said seeding implement comprising a drill consisting of a parent drill and an auxiliary drill formed integral therewith, and provided with a pair of driving wheels adapted to support and operate said implement, and arranged with one of said wheels inset from the end of said implement and disposed to provide an overhanging and outwardly unsupported seed depositing extension.



1,905,893. MANIFOLDING BOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Sept. 30, 1927. Serial No. 223,080. 4 Claims. (Cl. 282—24.)

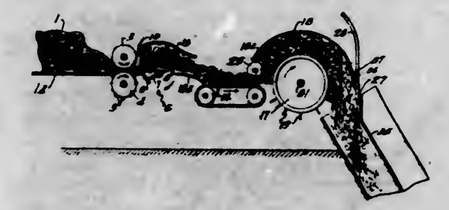
1. A manifolding book comprising a main and a supplemental pad, said main pad having relatively superposed sets of folded record leaves, means supporting said pads in relation for placing the leaves of the supplemental pad into and out of position between the leaves of the uppermost set of the main pad, and a transfer sheet mounted for interposition between the leaves of succeeding sets of the main pad folded to provide upper and lower transfer sheets, the upper and lower faces of the bottom transfer leaf having carbon thereon, and the lower face of the upper transfer leaf having carbon thereon, said supplemental pad having a set of two relatively superposed leaves for each set of folded sheets of the main pad, the bottom leaf of each set of the supplemental pad being translucent, the free end of the upper transfer leaf having clean upper and lower faces, the lower transfer leaf having, on its

upper face a clean area positioned adjacent said free clean end of the upper transfer leaf and having a portion extending beyond said free end when the book is set for inscription.

1,905,894. METHOD AND MEANS FOR USE IN LOCATING SHANK PIECES. FRANCIS L. BRANDT, Wakefield, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 23, 1932. Serial No. 612,963. 15 Claims. (Cl. 12—142.)

2. That improvement in the art of making shoes which comprises forming an integral locating projection on a shoe sole, locating an apertured reinforcing member relatively to the sole by positioning the reinforcing member with the projection on the sole extending into the aperture in the reinforcing member, securing the reinforcing member to the sole, and making a hole in the sole in line with the aperture in the reinforcing member thereby removing said locating projection and preparing the sole for the reception of a fastener which is to extend also through the aperture in the reinforcing member.

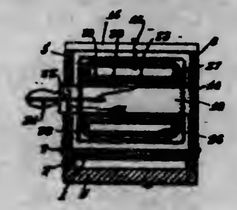
14. A machine for forming a locating projection on a sole mounted on a last having a hole extending through its heel portion from the top of the cone to the bottom of the heel seat face comprising a spindle adapted to extend through the hole in the last and having a projection-forming extremity, a member having a molding cavity



disposed in the path of said spindle for cooperating with said extremity of the spindle to form a projection on the insole, and means for relatively moving the spindle and said member to and from co-operative projection-forming relation.

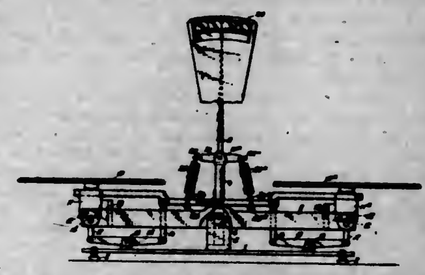
1,905,895. RUNNING BOARD. BURR BRONSON, Cleveland, Ohio, assignor to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 26, 1930. Serial No. 438,967. 4 Claims. (Cl. 280—163.)

1. A running board comprising a metal body having alternate elevated and depressed portions, and a covering of rubber vulcanized and attached to said body so as to follow the contour of said elevated and depressed portions, said covering having thickened portions extending above the elevated portions of the body, and spaced rubber rivets formed integral with said thickened portions and extending through openings in said elevated portions.



1,905,896. STRAND TREATING APPARATUS AND METHOD. HORATIO W. BROWN, Concord, Mass., assignor to Bemis Industries, Incorporated, Boston, Mass., a Corporation of Delaware. Original application filed Mar. 7, 1929, Serial No. 345,977. Divided and this application filed Sept. 4, 1930. Serial No. 479,650. 4 Claims. (Cl. 19—144.)

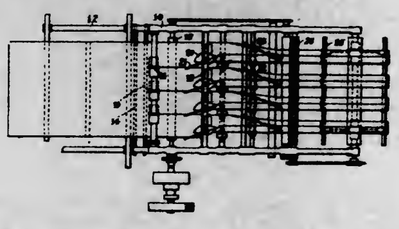
1. Apparatus of the class described, comprising an elongate strand receiving duct, means to deliver strands to an open end of the duct, and an air nozzle independent of said delivery means, said nozzle being movable across the open end of the duct and arranged to emit a high velocity concentrated air jet into the open end of the duct, at an angle to the plane of travel of said strand material through said duct, and driving means to move the air nozzle to and fro transversely of the duct.



1,905,897. MOLD. CHARLES T. CAHILL, Boston, Mass. Filed July 25, 1930. Serial No. 470,598. 3 Claims. (Cl. 25—121.)

1. A mold of the kind described, comprising a bottom, sides and ends hinged to said bottom, means to hold said sides and ends in closed position, one of said sides having a plurality of apertures therethrough, the other of said sides, on its inner surface, being provided with recesses aligned with said apertures, removable cores adapted to be inserted through said apertures and to be supported in said recesses and said apertures, a handle on each of said cores externally of said mold, a latch pivoted in each of said cores adapted to form lifting recesses in a block during

the formation of said block in said mold, and means located in said handle to release said latches to permit withdrawal of said cores.



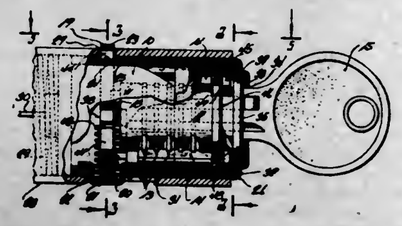
1,905,898. LOW TYPE EVEN BALANCE COUNTER SCALE. HUGH M. CAMMON, Woodhaven, N. Y., assignor, by mesne assignments, to Seederer-Kohlbusch, Inc., Jersey City, N. J., a Corporation of New Jersey. Filed June 11, 1929. Serial No. 370,099. 6 Claims. (Cl. 265—59.)

1. In an even balance counter scale, a pivoted main lever, a platform support pivoted thereon and transversely thereto, a platform mounted on said support, an auxiliary even lever pivoted intermediate the platform support and the opposite end of the main lever, the axis of the pivot of the auxiliary lever being parallel to and fixed with relation to the axis of the pivot of the main lever, rigid means pivotally connected to the platform support and to the adjacent end of the auxiliary lever to prevent approach or separation thereof and rigid means pivotally connected to the other end of the auxiliary lever and to the main lever to prevent approach or separation thereof, said last means being connected to the main lever at a point on the main lever on the opposite side of the pivot of the main lever from the platform support but at the same distance as said platform support from the pivot of the main lever.

4. An even balance scale comprising a pivoted main lever, a pair of platform supports pivoted thereon, one at each end of said main lever, each support having a horizontal arm extending toward the opposite end of the main lever, platforms mounted on said supports, a pair of auxiliary even levers pivotally mounted on the base of the scale each having one end adjacent the end of the arm of one platform support and the other end adjacent the opposite end of the main lever, the axes of the pivots of the platform supports, main lever, and auxiliary levers being parallel, means pivotally connecting the end of the arm of each platform support to the adjacent end of the adjacent auxiliary lever, a member pivoted to the other end of each auxiliary lever, and adjustable means connecting each member to the adjacent end of the main lever to vary the distance at which force is applied to the main lever from the pivot thereof.

1,905,899. METHOD OF PAPER FOLDING, WINDING AND CUTTING, AND MECHANISM THEREFOR. SAMUEL J. CAMPBELL, Green Bay, Wis., assignor of one-half to Hudson-Sharp Machine Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Nov. 7, 1930. Serial No. 493,990. 8 Claims. (Cl. 270—94.)

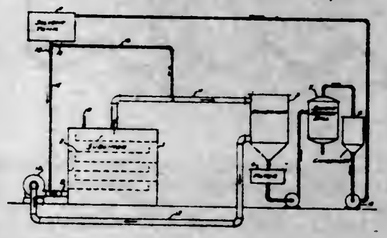
1. The method of handling paper or the like which consists in feeding forwardly, and folding a strip of paper and winding the folded strip to afford a plurality of superposed folded turns in the winding, and in cross-cutting through the superposed windings to sever the folded strip into lengths.



1,905,900. PROCESS FOR VAPOR RECOVERY. PAUL JOHNSON CARLISLE and RALEIGH P. WARD, Niagara Falls, N. Y., assignors to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1931. Serial No. 531,847. 10 Claims. (Cl. 252—4.)

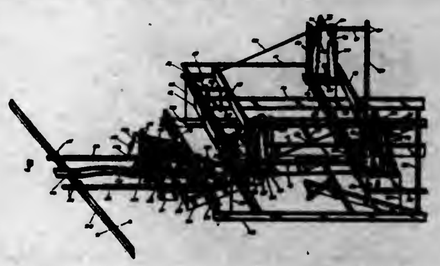
4. A process for recovering trichlorethylene from a mixture of its vapor with air comprising contacting said mixture with dehydrated alumina gel at 10–40° C., subsequently contacting said gel with air at 90–150° C. to substantially completely remove trichlorethylene and restore said gel to its original state of activity and cooling the off-gases to condensation of the trichlorethylene.

1,905,901. COLLECTION OF SULPHUR FROM GASES OR VAPORS. ARTHUR MAURICE CLARK, Norton-on-Tees, England, assignor to Imperial Chemical Industries, Limited, London, England, a British Company. Filed May 14, 1931, Serial No. 537,499, and in Great Britain May 31, 1930. 5 Claims. (Cl. 23—225.)



1. In a process of recovering elemental sulphur from a hot gaseous fluid containing suspended non-gaseous particles and gaseous sulphur at such a low concentration that on rapid cooling of said fluid no substantial deposit of sulphur takes place on impingement on a cold surface, the step of regulating the cooling of said fluid in such a manner that it will take at least 5 seconds to cool said fluid from the dew point of the sulphur in said fluid to about 100° C.

1,905,902. LOCK. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 9, 1931. Serial No. 528,824. 17 Claims. (Cl. 70—46.)



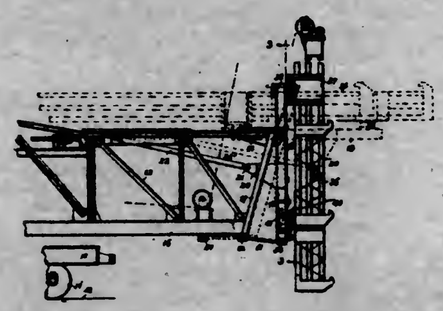
1. In a lock structure, including a mounting head and a lock cylinder mounted therein, a protecting element engaged over the exposed end portions of the lock cylinder and mounting head to removably secure the lock cylinder in the mounting head, and means operable by actuation of the lock cylinder for normally holding the protecting element assembled with the mounting head, said last mentioned means being movable to a position releasing the protecting element for detachment from the mounting head upon movement of the lock cylinder beyond one of its normal limits of movement.

1,905,903. PURIFICATION OF CRUDE AROMATIC COMPOUNDS. ALPHONS O. JAEGER, Mount Lebanon, and LLOYD C. DANIELS, Crafton, Pa., assignors to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 22, 1930. Serial No. 438,284. 18 Claims. (Cl. 202—46.)

1. A method of purifying solid impure aromatic hydrocarbons from the distillation of coal tar which comprises subjecting them in liquid condition to sublimation by contact with a subliming medium containing at least one gaseous medium which at ordinary temperatures is not a solvent for the hydrocarbon to be purified and condensing the vapor stream in the presence of at least one solvent for at least one impurity, which solvent is present in the vapor stream prior to condensation.

1,905,904. TRUCK MAINTAINER. CARL O. JOHNSON, Lincoln, Nebr. Filed June 3, 1932. Serial No. 615,151. 14 Claims. (Cl. 37—153.)

1. A highway maintainer adapted to be supported on a truck frame, said maintainer including a supporting frame to rest on the truck frame and having means for releasable attachment thereto, a scraper frame suspended from and beneath said supporting frame with the center line of draft of said scraper frame in substantial alignment with the center line of draft of the truck frame, means for bodily raising or lowering said scraper frame, and means for adjustably altering the inclination of said scraper frame relative to the truck frame.

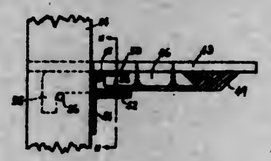


1,905,905. CLAMP FOR PLATE GLASS RACKS. JOHN F. JOHNSON, Bellevue, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 26, 1930. Serial No. 447,752. 2 Claims. (Cl. 217—36.)

1. The combination with a rack for carrying plate glass sheets having one side inclined to the vertical, of a clamp or holder for glass sheets carried by the rack and resting against said side, comprising a bracket secured to one end of the rack, a block pivoted on the bracket for movement about a horizontal axis, an arm mounted on the block for adjustment about a vertical axis, said arm comprising a part extending substantially at right angles to

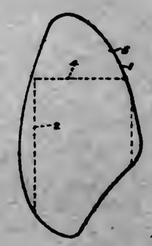
said vertical axis and a second part extending at substantially right angles to the first part, a plate for engaging the glass mounted for rocking movement on the end of said second part, and means for releasably holding the arm in its various positions of adjustment about said vertical axis.

1,905,906. PILE DRIVER. ROBERT W. KALTENBACH, Cleveland Heights, and ANTHONY FRONEK, Cleveland, Ohio; said Fronek assignor to said Kaltenbach. Filed Aug. 28, 1930. Serial No. 478,434. 5 Claims. (Cl. 61—74.)



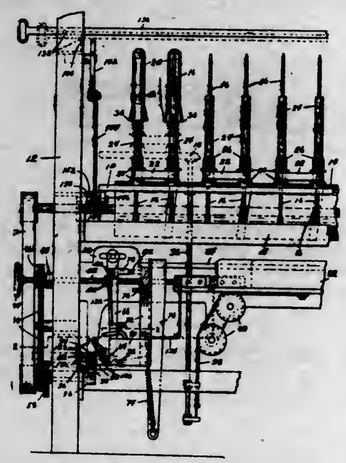
1. In a railroad pile driver, a truss adapted to overhang its mounting, a horizontal pivot carried by the free end of said truss, a batter frame mounted upon said pivot at a point intermediate the ends of the frame, and leads pivotally carried by said frame, the outer end of said truss below the level of said pivot being formed to provide a space into which the batter frame may be tilted inwardly.

1,905,907. WORKHOLDER FOR SEWING MACHINE DARNING OPERATIONS. JOHN D. KARLE, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 26, 1931. Serial No. 559,296. 8 Claims. (Cl. 112—121.)



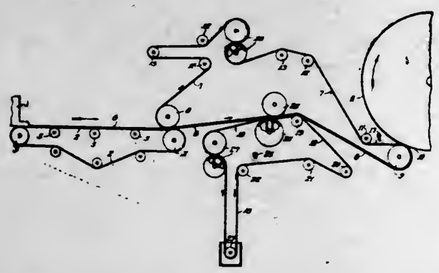
2. A stocking darning work-holder comprising a ring-shaped member having a gap for the clearance of a sewing machine needle, a needle-guard at said gap, and means below said guard for holding a portion of a stocking stretched over said ring-shaped member.

1,905,908. DISPLAY STAND. ORIN E. KARNES, Caldwell, Tex. Filed June 25, 1931. Serial No. 546,696. 4 Claims. (Cl. 211—147.)



1. A display stand having a post; a pin on said post; a shelf having a tongue; and a shelf bracket comprising a transverse bar having a hook to releasably engage said pin and a socket to receive said tongue, and a locking member movable on said bracket to releasably engage said tongue to hold said tongue in said socket, said locking member being held in its active position by said post when said hook is in engagement with said pin.

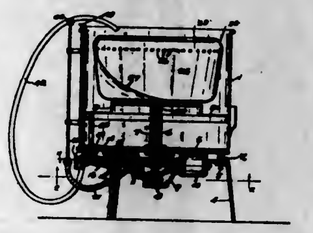
1,905,909. PROCESS OF MANUFACTURING RUBBER SOLES. CHARLES R. KNIGHT, Dayton, Ohio, assignor to The Serton Rubber Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 25, 1931. Serial No. 532,817. 9 Claims. (Cl. 12—146.)



6. In the process of forming rubber soles, forming blanks from which either a right or a left sole may be formed, placing one blank upon another with a strip of paper between them so that each blank overlies the other, shaping the assembled blanks into the form of soles, and forming the outer surfaces of the assembly to provide bearing surfaces for the soles.

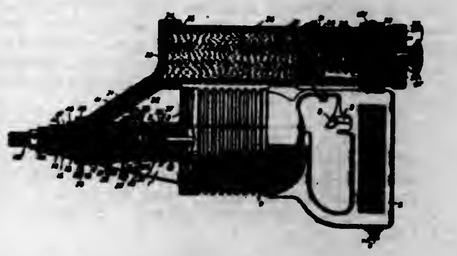
1,905,910. BOBBIN WINDING AND BUNCH FORMING MECHANISM AND METHOD. IRVING KELLETT and NED ARMITAGE, Lawrence, and WALTER J. WOOD, Methuen, Mass. Filed May 23, 1929. Serial No. 365,450. 18 Claims. (Cl. 242—43.3.)

1. Bobbin winding mechanism including bobbin rotating means, means to advance the bobbin in a progressive manner lengthwise, means to reciprocate said bobbin during such lengthwise movement, said reciprocating means having separate means providing separately short and long amplitudes of reciprocatory movement of the bobbin and a common device for reciprocating both of said separate means, means to condition said reciprocating means to reciprocate said bobbin throughout the short amplitude for winding the bunch on the bobbin and thereafter to condition said reciprocating means to reciprocate said bobbin throughout the long amplitude for filling the remainder of the bobbin.



1,905,911. PAPER MAKING APPARATUS. WILLIAM R. KELLETT, Menasha, Wis., assignor to Paper Patents Company, Neenah, Wis., a Corporation of Wisconsin. Filed May 11, 1932. Serial No. 610,545. 4 Claims. (Cl. 92—49.)

1. In a paper-making machine, web forming means, web drying means, a felt engaging the web between the forming means and the drying means, a felt washer, and a pair of suction pressure rolls engaged with said felt after the latter leaves said washer and before it makes contact with the web.

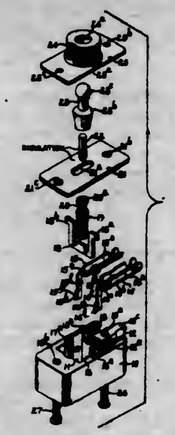


1,905,912. WASHING MACHINE. JAMES B. KIRBY, West Richfield, Ohio. Filed Mar. 21, 1927, Serial No. 176,909. Renewed July 3, 1930. 10 Claims. (Cl. 68—18.)

1. In a combined washing machine and extractor, a casing, a vertical shaft therein, a container carried by said shaft and having an imperforate bottom and a side wall also imperforate below a given level, said container being supported at a substantially fixed elevation sufficiently above the bottom of the casing to accommodate the entire liquid contents of said container therebeneath, a fixed annular shelf carried by the casing and projecting part way beneath the bottom of said container, and means for selectively washing clothing inside said container and for rotating said container at high speed.

7. In a combined clothes washer and extractor, a single tub mounted on a vertical axis, said tub having a slanting wall and its lower part being imperforate, driving mechanism for selectively oscillating said tub to agitate its contents or to spin the same about its axis and a vane mounted inside said tub to oscillate and rotate therewith, the tub-interior, being unimpeded except by said vane.

1,905,913. GREASE GUN. PHILIP E. KOPP, Kansas City, Mo. Filed Apr. 23, 1930. Serial No. 446,524. 12 Claims. (Cl. 221—47.3.)

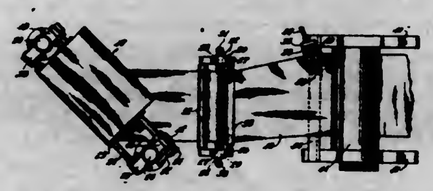


1. A grease gun including a plunger support having a plurality of grease compression chambers, means for supplying grease to said chambers, a grease delivery member communicating with said compression chambers, back pressure valves controlling communication between the compression chambers and the delivery member, plungers operable in said compression chambers, a rotatable shaft associated with the plunger support, a plunger actuating member on the shaft and adapted for rotation therewith, a floating wabble plate in disconnected relation with and positioned between said plungers and the actuating member to effect reciprocation of the plungers upon rotation of the actuating member, and means for holding the plungers and actuating member in operative engagement with said plate.

1,905,914. ELECTRIC SNAP SWITCH. ALVIN W. KRIEGER, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed May 5, 1932. Serial No. 609,442. 14 Claims. (Cl. 200—67.)

14. As an article of manufacture, a one-piece combined contact and wiring terminal member for electric snap switches, said member having a wiring terminal portion of substantially U-shape in cross section, the side walls of said terminal portion being notched to provide lugs bendable into clamping engagement with a circuit wire, whereby soldering of the wire to said terminal portion is facilitated, said terminal portion also having an opening formed in the bottom wall thereof, the walls of said open-

ing being adapted for engagement with shoulders formed on a suitable support, whereby endwise movement of said terminal portion is prevented upon clamping thereof in assembled position, and a resilient contact portion formed integrally with one side wall of said terminal portion and projecting downwardly at substantially right angles to the latter, said contact portion being offset inwardly

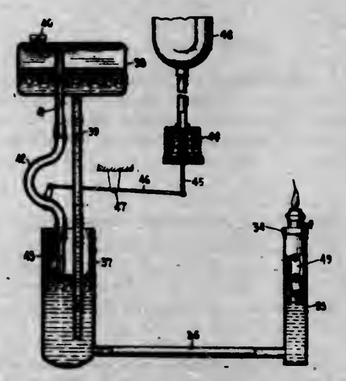


from said side wall to extend in a plane intersecting the center of the bottom wall of said terminal portion, said contact portion having forward extensions arranged in stepped relation at the lower end thereof, and said end being bent in the line of the forward edge of said contact portion to facilitate engagement therewith of a movable contactor of suitable form.

1,905,915. CONDENSATION PRODUCT OF CINCHONA BARK ALKALOIDS WITH THIURAM SULPHIDES AS INHIBITORS. RALPH B. LAWRENCE, Wickliffe, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 19, 1931. Serial No. 582,186. 4 Claims. (Cl. 148—8.)

1. A cleaning and pickling bath for metals comprising a dilute non-oxidizing acid containing a small amount of a condensation product of a cinchona bark alkaloid and a thiuram sulphide.

1,905,916. METHOD AND APPARATUS FOR TREATING TEXTILE MATERIAL. CHARLES W. LEGUILLON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1930. Serial No. 419,895. 14 Claims. (Cl. 91—68.)

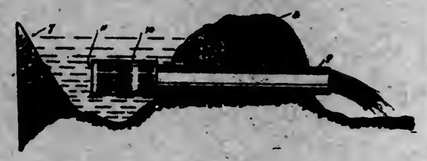


7. In apparatus for treating textile material, the combination of a support for a roll of said material, a calender disposed in nonaligned relation to said roll and adapted to withdraw a sheet of material therefrom and apply a plastic coating thereto, means intermediate said support and said calender for diverting the course of the sheet in a manner to skew the weave thereof after it is withdrawn from its roll, and means engaging the skewed sheet before it passes through the calender for tentering the sheet.

1,905,917. SEPARABLE FASTENER. CHARLES W. LEGUILLON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 9, 1932. Serial No. 621,664. 6 Claims. (Cl. 24—201.)

1. A separable fastener comprising a catch plate adapted to be attached to one of the members to be fastened and formed with a T-shaped opening, and a bifurcated spring latch adapted to be flexibly attached to the other member to be fastened, said bifurcations being of such size and shape relative to the T-shaped opening as to interlock with the catch plate only by successive entrance of said bifurcations through said opening.

1,905,918. CONTROL FOR WICK TYPE LIQUID FUEL BURNERS. GÖSTA GREGORIUS LENNMOR, Stockholm, Sweden, assignor, by mesne assignments, to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 14, 1931, Serial No. 557,079, and in Germany Sept. 27, 1930. 8 Claims. (Cl. 236—1.)



1. A wick type liquid fuel burner and means for controlling the supply of fuel to said burner comprising an open top container, a substantially horizontal conduit between the lower part of said container and the lower part of the fuel chamber of said burner, a fluid tight fuel reservoir above said container, a fuel supply line from the lower part of said reservoir to the lower part of said container, a pipe having a flexible portion, one end of said pipe communicating with the upper part of said reservoir and the other end opening within said container, a thermostat, and means operated by said thermostat for controlling the height of said pipe opening within said container.

1,905,919. IRRIGATION PIPE SCREEN. W KENT LEWIS, Selma, Calif. Filed Mar. 12, 1923. Serial No. 626,477. 2 Claims. (Cl. 210—170.)

1. In combination with an irrigation pipe of a screen adapted to cover the intake end of the pipe consisting of

a cup-shaped member having perforations through the side walls, said perforations consisting of pressed in portions

of the wall which have been cut on three sides thereof, said pressed in portions being adapted to hold the irrigation pipe a spaced distance from the inside wall of the cup.

1,905,920. MECHANICAL PENCIL. WILLIAM H. LINDSMON, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a Corporation of Delaware. Filed Feb. 24, 1931. Serial No. 517,899. 5 Claims. (Cl. 120—18.)

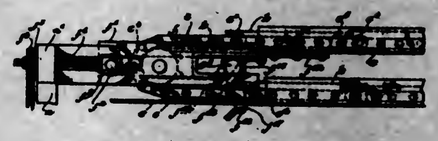
1. A mechanical pencil comprising a substantially tubular barrel, a metallic tip comprising a shell having an apertured bushing secured therein for one end of said barrel through which the pencil lead is propelled, and a lead operating mechanism, one element of which is secured in said barrel and another element of which has a split tubular extension for forced engagement in the aperture of said bushing.

1,905,921. CASEMENT LOCKING MECHANISM. ISAAC W. LITCHFIELD, Boston, Mass., assignor to Bemis Industries, Incorporated, Boston, Mass., a Corporation of Delaware. Filed Nov. 21, 1930. Serial No. 497,187. 7 Claims. (Cl. 268—117.)

1. A device for retaining a window frame member and a sash member therefor in position, which comprises a lever slidably engageable with one member and pivotally engageable with the other, a slot in said lever at its pivotal engagement to permit limited longitudinal movement thereof, means to prevent said longitudinal movement except when said sash is in closed position, and means to lock said sash in closed position operable by said longitudinal movement of the lever, said locking means comprising a locking element adapted to be mounted on one of the members and engageable with a portion of the lever.

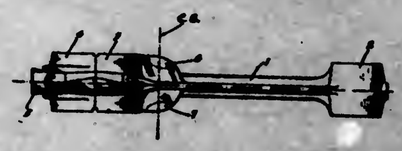
1,905,922. FIREARM. CRAWFORD C. LOOMIS, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed May 10, 1930. Serial No. 451,242. 9 Claims. (Cl. 42—17.)

2. In a firearm comprising a firing chamber, a magazine, a receiver, a reciprocating breech block in said receiver, and a cartridge transferring and shell ejecting device in said receiver adapted to be moved from a position below said magazine to an intermediate position adjacent said chamber and subsequently moved to a position above said chamber; means associated with said breech block for preventing movement of said device to its uppermost position during the forward movement of said breech block.



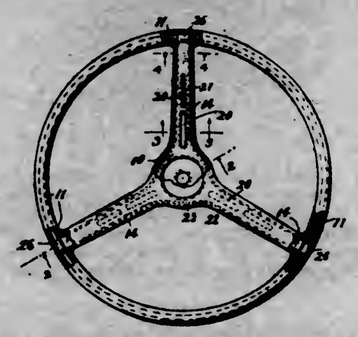
9. In a firearm comprising a magazine, a receiver having a lateral port, and a firing chamber; a cartridge transferring and shell ejecting device in said receiver, means for moving said device to eject a shell extracted from said chamber downwardly, and means for moving and maintaining said device in position to support a cartridge inserted through said lateral port in alignment with said chamber.

1,905,923. WAX COMPOSITION. FREDERICK H. MACLAREN, Hammond, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Mar. 13, 1929. Serial No. 346,807. 3 Claims. (Cl. 87—19.)



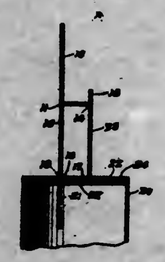
3. A normally tacky, high melt-point wax mixture consisting principally of hydrocarbon waxes, said mixture comprising 20% of 130° F. melt-point petrolatum, 78% of 163–165° F. melt-point petrolatum wax and 2% resin.

1,905,924. CONVEYER. JAMES H. MACLAUCHLAN, New York, N. Y. Filed Dec. 20, 1928. Serial No. 327,258. 1 Claim. (Cl. 198—159.)



A process conveyer having conveyer chains, guide wheels for the chains, carriers, and in which tracks are provided at each side of the conveyer forming a plurality of courses in different vertical planes, and each carrier is pivoted to the conveyer chains at one end only, and has at that end rollers supported upon certain of the courses and at its other end is free from the chains and has rollers supported upon other of the courses in different vertical planes, and in which the courses upon which the carriers are supported at their free ends are interrupted, and in which pivoted guiding devices are provided on the inner courses to facilitate the guiding of the free ends of the carriers as the chains supporting the other ends pass about the guide wheels.

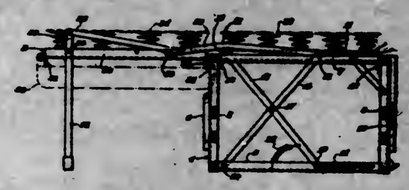
1,905,925. METHOD OF MAKING CONNECTING RODS. WILLIAM H. MANNING, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 16, 1931. Serial No. 530,501. 8 Claims. (Cl. 29—1565.)



1. The method of making a connecting rod to certain given standards which includes the formation of a rod with excess material at one end thereof and at a predetermined intermediate portion respectively, the removal of material from adjacent said end of the rod to shift the center of gravity longitudinally of the rod to a given location adjacent the excess material at said intermediate portion and then the additional removal of material from said intermediate portion to bring the total weight of the rod within given limits.

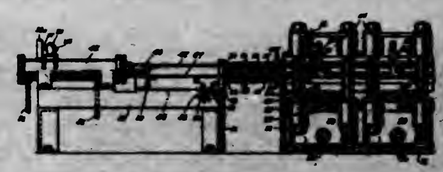
1,905,926. METHOD OF MAKING STEERING WHEELS. EDWARD R. MARRACH and GERALD F. CAVANAGH, Cleveland, Ohio, assignors to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 5, 1930. Serial No. 479,901. 8 Claims. (Cl. 29—159.)

5. The method of forming a spider for a steering wheel, which comprises, cupping the central portion of a polygonal sheet metal blank, drawing the corners of said blank upward to form wedge shaped extensions of the wall of the cup, and bending said extensions downwardly and outwardly.



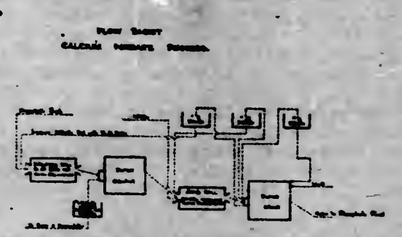
1,905,927. PLACARD. HARRY V. MARSH, Chicago, Ill. Filed Mar. 21, 1929. Serial No. 348,773. 8 Claims. (Cl. 40—7.)

1. A placard for use upon a can top comprising a main body having scores and slits therein whereby to provide a second body from the material of said main body and adapted to be displaced therefrom into parallelism therewith, there being a tongue depending from said second body, and extensions on said main body, said first and second bodies being above said can top, and said tongue and said extensions cooperating for locking the placard upon a can.



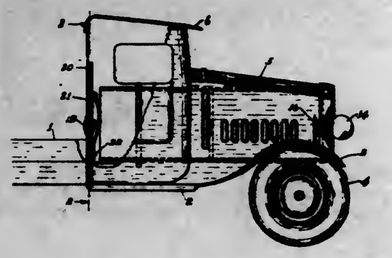
1,905,928. DAY-BED. JOSEPH MARTIN, New York, N. Y., assignor to United States Cabinet Bed Co., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 26, 1930. Serial No. 431,954. 2 Claims. (Cl. 5—81.)

1. The combination with a main frame, of an extensible bed section pivotally connected to said main frame, a main bed section, crossed levers pivotally connected to one another and operatively connecting said main bed section with said main frame, control links pivotally connecting said crossed levers with said extensible bed section whereby said crossed links will be operated to raise said main bed section when said extensible bed section is swung outwardly, legs pivotally connected to said extensible



bed section, and links operatively connecting said legs with said control links so that said legs will be swung into supporting position when said extensible bed section is swung outwardly.

1,905,929. VULCANIZING APPARATUS. GILBERT L. MATTHIAS, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1928. Serial No. 301,797. 2 Claims. (Cl. 18—4.)



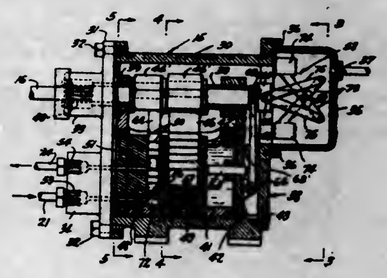
1. Apparatus for moving a mold between the platens of a vulcanizer from a point remote therefrom, the said apparatus comprising a support for a mold adjacent the platens of a vulcanizer of the platen type, mechanism for presenting a mold on the said support, and means operative in timed relationship with the said mold-presenting mechanism for feeding the mold between the platens of a vulcanizer.

1,905,930. METHOD OF PREPARING CALCIUM NITRATE FROM PHOSPHATE ROCK. ARTHUR LIONEL MCCALLUM, BRIAN PORTER SUTHERLAND, and JOSHUA BEAUMONT THOMPSON, Trail, British Columbia, Canada, assignors to The Consolidated Mining and Smelting Company of Canada, Limited, Montreal, Canada, a Corporation of Canada. Filed July 30, 1931. Serial No. 553,924. 8 Claims. (Cl. 23—102.)

5. A method of preparing calcium nitrate, substantially free from impurities, in the beneficiation of phosphate rock containing impure calcareous material which comprises the step of treating the calcareous material with an excess of nitric acid, and precipitating the impurities contained in the acid solution by neutralising it with an excess of fresh phosphate rock.

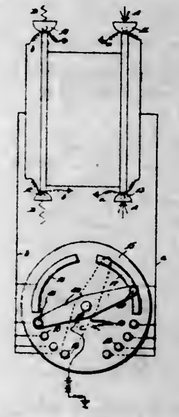
1,905,931. HEADLIGHT FOR TOY VEHICLES. GEORGE E. HARCOURT, St. Louis, Mo., assignor to Metalcraft Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 16, 1933. Serial No. 651,879. 9 Claims. (Cl. 46—48.)

1. In a headlight device for toy vehicles, a radiator simulation, a cross bar mounted on the radiator simulation, means for insulating said cross bar from said radiator simulation and openings in each end of said cross bar to receive the screw threaded base of an incandescent bulb.



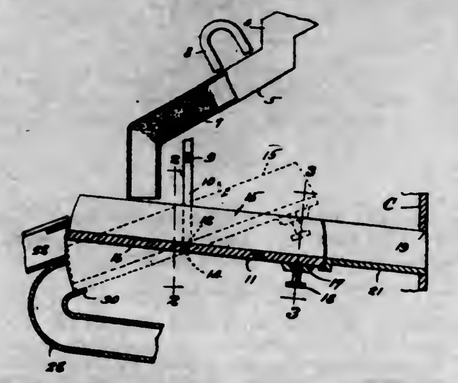
8. In a toy vehicle, a chassis having a substantially horizontal floor member, an inverted U-shaped member mounted on said floor member, a battery confined between said inverted U-shaped member and the floor member, a detachable radiator simulation for said toy vehicle mounted forwardly of said battery, said battery being made accessible for replacing by detachment of said radiator simulation member.

1,905,932. PROJECTOR. JOHN E. FOSTER, San Bernardino, Calif. Filed May 13, 1932. Serial No. 611,214. 3 Claims. (Cl. 273—107.)



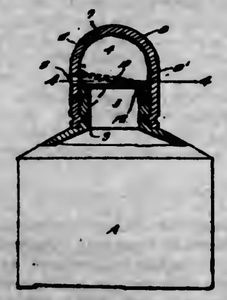
1. A game device including a rod, a grip on one end thereof, a ball slidably mounted on the opposite end thereof, a shoulder on the rod limiting sliding movement of the ball in one direction, a spring catch at the tip of the rod limiting movement of the ball on the rod in the opposite direction, a trigger carried by the grip, and a cord connected to the spring catch and to the trigger for withdrawing the catch from the path of the ball when the trigger is pulled.

1,905,933. HIGH SPEED COMPRESSOR. WILFRED FOURNESS, Oakland, Calif., assignor to Fourness Development Corporation Ltd., New York, N. Y., a Corporation of New York. Filed May 12, 1930. Serial No. 451,824. 32 Claims. (Cl. 230—29.)



1. In a compressor, a plurality of oscillating cylinders having a passageway therebetween for the flow of a fluid, one of said cylinders containing a piston and the other a sliding valve, and means for keeping said passageway continuously open and to obviate escape of fluid from the passageway directly to the exterior of the cylinders.

1,905,934. APPARATUS FOR SIGNALING. ALFRED F. W. HANUSSLER, San Juan, Puerto Rico. Filed Apr. 18, 1929. Serial No. 356,216. 1 Claim. (Cl. 177—337.)

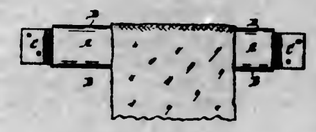


A signaling system for motor vehicles comprising electric lamps at the front and rear of each side of the vehicle directing the lights to the front and to the rear thereof, a source of electric current, and a switch consisting of a centrally pivoted lever, arcuate contact plates extending from the ends of the lever towards each other at one side of the lever in the normal position of said lever, and contact points spaced from the ends of the contact plates on a line concentric therewith at the other side of the lever in its normal position, said contact plates and companion contact points being electrically connected respectively to the lamps at opposite sides of the vehicle and a circuit connecting the source of current with the aforesaid lever, whereby when the switch lever is thrown in either direction one end thereof will travel over one of the contact plates to furnish a steady light to the lamps at one side of the vehicle and the other end of said lever traveling over the contact points associated with the other contact plate will flash the lamps at the other side of the vehicle and movement of the lever back and forth over the opposite contact plates and points will alternately light and flash the lamps at both sides of the vehicle.

1,905,935. FRAUD PREVENTIVE DEVICE. HOBART J. HALSTED and NORMAN ROBERT BRIGGS, Buffalo, N. Y. Original application filed July 24, 1930, Serial No. 470,517. Divided and this application filed Nov. 2, 1931. Serial No. 572,649. 1 Claim. (Cl. 194—103.)

The combination with a casing, of an inclined coin guide tube having an outlet end extending downwardly at an obtuse angle thereto, an inclined stationary delivery trough opening through a wall of the casing, scales tiltably mounted and aligning normally at one end with said trough, the other end being extended under the outlet end of the coin tube, parallel upstanding strips on the scales for guiding a rolling coin to the trough from the outlet of the coin tube, a weight on the scales and adjustable along the bottom thereof, a coin receiving channel, a coin returning channel, said channels having superposed coin receiving ends normally positioned below the adjacent coin receiving end of the scales and cooperating to define an arc close to and parallel with the path of movement of said end of the scales, said scales when subjected to the correct weight of a coin being tiltable to deliver said coin into the receiving channel and, when subjected to overweight, being adapted to deliver the coin into the return channel, and a stop on said channel for the scales.

1,905,936. AUTOMATIC PRESSURE VALVE SEAL CAP FOR COLLAPSIBLE TUBES. JAMES JEFFERSON HEARD, Phoenix, Ariz. Filed June 29, 1932. Serial No. 620,028. 2 Claims. (Cl. 221—60.)



1. In combination with a collapsible tube having a neck, a substantially dome-shaped cap permanently attached to the neck, said cap having a chamber therein in communication with the tube and having a discharge opening passing through one side of the cap and communicating with the lower part of the chamber, a valve member of spring material including an arcuate-shaped part contacting a portion of the internal curved wall of the chamber, a straight portion extending over the neck and a vertical portion closing the discharge opening, the latter two portions moving upwardly when pressure is exerted upon the contents of the tube to permit some of the contents to pass from the neck through the discharge opening, said portions moving back to closing position when the pressure ceases.

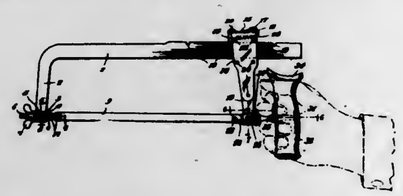
1,905,937. DOOR CALL. EUGENE A. HOAG, Pacific Grove, Calif. Filed Nov. 20, 1931. Serial No. 576,405. 2 Claims. (Cl. 116—157.)

1. In a device of the character described, a pair of shell-like body members having overlapping meeting edges forming an inclosure, a frame supported within the inclosure, and carrying a springless gear train including an escapement lever, a member associated with the escapement lever and movable therewith, and a shaft extending through the overlapped edges at one side of the inclosure to retain the body members in assembled relation and providing a rotatable support for the drive gear of the train.

1,905,938. TOWEL RAIL. LOUIS JENKINSON, Auckland, New Zealand. Filed Mar. 17, 1931, Serial No. 523,260, and in New Zealand Jan. 26, 1931. 2 Claims. (Cl. 211—123.)

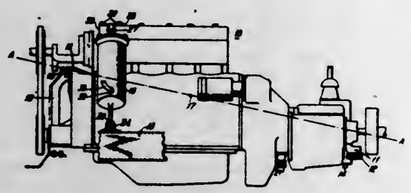
1. A towel holder, comprising a rail made from a length of flat sheet metal shaped to curve rearwardly along its two edges, the edges being spaced from both the curved portions and the straight portion in order to provide a resilient support for a towel or similar article, and supporting wall brackets for each end of the rail, said wall brackets being of goose-neck form to provide a fascia member adapted to be fastened to a wall, a carrying member shaped to fit within the rail between the edges and the flat portion, and a forwardly flared double spring member connecting the fascia member and the carrying member, said double spring member serving to limit the degree of insertion of the carrying member into the space between the edges and flat portion of the rail.

1,905,939. SUSPENDER SLIDE WITH BARS FLATTENED AND EMBOSSED ACROSS WELD. LEMUEL W. JOYCE, Greensboro, N. C., assignor to Joyce-Venning Manufacturing Co., Inc., Greensboro, N. C., a Corporation of Delaware. Filed Apr. 14, 1931. Serial No. 530,113. 2 Claims. (Cl. 29—148.)



1. Method for manufacturing an endless suspender slide frame of the type having a weld adjacent the middle

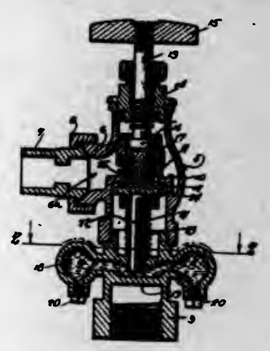
of one of the cross bars, comprising flattening said bar throughout an extent which includes the region of weld,



by a pressing tool having a flat face that can be easily ground, and subsequently embossing the flattened portion by a suitably configured die.

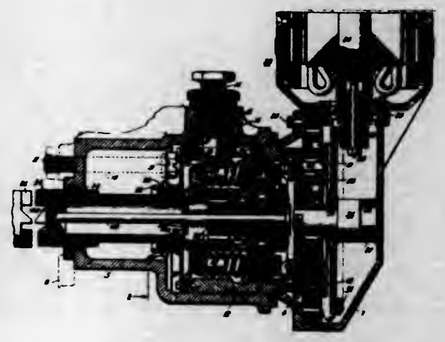
1,905,940. HACK SAW. HENRY C. LAMBERT, Anthon, Iowa. Filed June 15, 1931. Serial No. 544,530. 2 Claims. (Cl. 145—84.)

1. A saw comprising a frame having a main bar and front and rear arms, blade engaging elements carried by said arms, the rear arm having forks extending across opposite side faces of the main bar and projecting beyond the outer edge face thereof, the outer edge face of the bar being provided with seats, a latch between the extended portions of said forks extending longitudinally of said bar and pivotally mounted adjacent its rear end, the front end of said latch having a bill to engage in a selected seat and retain the rear arm in a set position, and a strip disposed between the extended portions of said forks longitudinally of said bar and firmly secured to the forks in engagement with the outer edge face of said bar, said strip being split from its rear end to form a spring engaging the rear end of said latch and yieldably holding the latch in an operative position.



1,905,941. FLUID PUMP. RAYMOND P. LANSING, Montclair, N. J., assignor to Bendix Aviation Corporation, South Bend, Ind., a Corporation of Delaware. Filed Sept. 30, 1931. Serial No. 566,126. 14 Claims. (Cl. 180—54.)

1. In an automotive vehicle, a substantially rigid frame, a relatively movable power plant mounted longitudinally thereon, and a pump having relatively movable operating members connected respectively to the power plant and the frame.



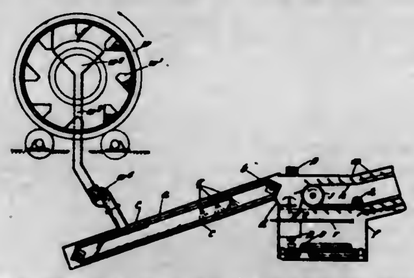
1,905,942. AUTOMATIC THERMOSTATIC RADIATOR VALVE. JAMES J. LAWLER, Mount Vernon, N. Y. Filed Sept. 21, 1931. Serial No. 564,121. 3 Claims. (Cl. 236—42.)

1. In an automatic thermostatic radiator valve, valve casing, a double valve seat therein, and manual and thermostatically operated valves respectively engageable with the valve seats, the thermostatic valve comprising an expansible tube and an annulus in communication with the tube, and surrounding the valve casing and containing

an expansible fluid, and a tubular web extending between sides of the annulus and transversing the valve casing in the path of flow of the heating medium.

1,905,943. ENGINE STARTING APPARATUS. RAYMOND P. LANSING, Montclair, N. J., assignor to Bendix Aviation Corporation, South Bend, Ind., a Corporation of Delaware. Filed Jan. 30, 1932. Serial No. 589,961. 14 Claims. (Cl. 74—7.)

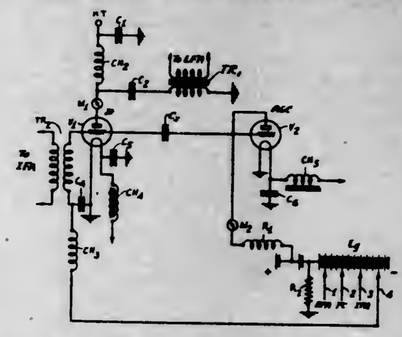
1. In an engine starter of the type having a driven member adapted to engage and crank an element drivably connected to the power producing parts of the engine, the combination with said driven member and element of a bridging member having means at one end thereof for supporting said driven member for movement therewithin, means near the other end of said bridging member for supporting the other elements of the starter, said last named means comprising a portion of the starter housing adapted to register with and extend along the inner surface of said bridging member to be supported thereby, and bearing means enclosed within said starter housing for supporting the non-engaging end of said driven member.



1,905,944. METHOD OF MAKING TUBULAR TURBINE BLADES. CHRISTIAN LORENZEN, Berlin-Treptow, Germany, assignor, by mesne assignments, to Bendix Aviation Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 14, 1929, Serial No. 407,095, and in Germany Nov. 14, 1928. 7 Claims. (Cl. 29—156.8.)

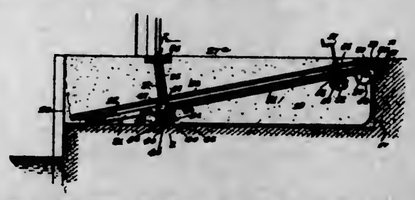
1. The method of making tubular turbine blades, which consists in first giving a tubular blank having a longitudinal passage open at both ends, a shape in which its wall thickness increases toward one end of the blank, and

then giving such tubular blank of tapered thickness the desired crescent shape to form a blade convex on one face and concave on the other.



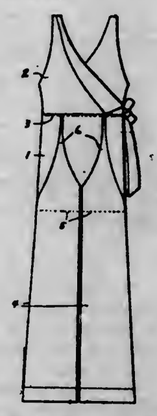
1,905,945. METHOD OF AND APPARATUS FOR SEPARATING SOLID CARBONACEOUS MATERIAL FROM FOREIGN IMPURITIES. CLIFFORD MACHEN, Westminster, England, assignor to British Coal Distillation Limited, London, England, a British Company. Filed Dec. 7, 1932, Serial No. 646,176, and in Great Britain Aug. 7, 1931. 6 Claims. (Cl. 209—173.)

1. The method of separating solid carbonaceous material from foreign impurities such as slate, shale, clay or the like, which comprises subjecting the material to heat treatment so as to drive off at least a portion of the volatile matter contained therein, thus converting the carbonaceous material to a porous condition; moving the hot porous material over a relatively still body of liquid maintained at a substantially constant level; maintaining the surface liquid substantially at the boiling point, whereby gases evolved assist in giving buoyancy to the porous material and prevent said material becoming saturated with liquid; permitting the impurities to sink in said body of liquid while floating said carbonaceous material; and removing the carbonaceous material from the surface of the liquid while in a heated condition.



1,905,946. AUTOMATIC GAIN CONTROL. GASTON ADELIN MATHIEU, London, and GERALD ARTHUR ISTED, Essex, England, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 1, 1932, Serial No. 602,524, and in Great Britain Mar. 28, 1931. 2 Claims. (Cl. 250—20.)

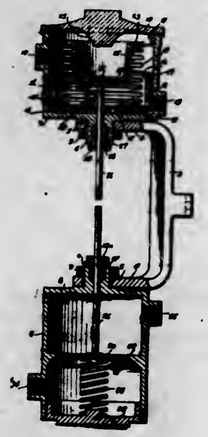
1. An automatic gain control arrangement for a superheterodyne receiver which includes a radio frequency amplifier, first detector, intermediate frequency amplifier and a second detector, said arrangement comprising a diode control tube having a cold electrode connected to an input electrode of said second detector for the impression of signal currents on said diode electrode, a control bias source connected in the circuit of said diode cold electrode, and a plurality of independent direct current connections from a plurality of points of increasing negative potential on said source to the gain control electrodes of said second detector, intermediate frequency amplifier and said radio frequency amplifier respectively, said points



being so chosen that as the received signals vary from weak to strong the biases of said gain control electrodes are successively altered in the aforesaid order.

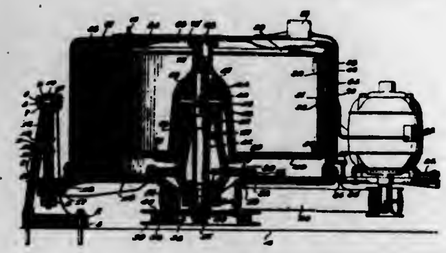
1,905,947. GANGWAY. DAVID H. MORGAN, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 21, 1931. Serial No. 539,069. 11 Claims. (Cl. 14—71.)

1. In a gangway structure, the combination with a floor having a pit and a platform pivotally mounted to have a free end that swings in a substantially vertical direction between a depressed and an elevated position, and mechanism in the pit and beneath the platform and below the floor level for elevating it and effecting its depression for holding it at different elevations.



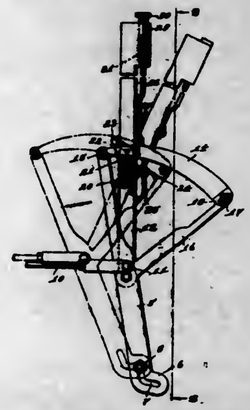
1,905,948. PAJAMAS. WILLIAM A. NOSIK, RUDOLPH J. NOSIK, JOHN S. KROCKA, and WALTER MONCHER, Milwaukee, Wis. Filed Sept. 16, 1932. Serial No. 633,518. 3 Claims. (Cl. 2—83.)

1. A beach pajama comprising a trunk portion of flexible, water-proof material, a bodice portion of flexible material secured to the trunk portion, and trousers members of



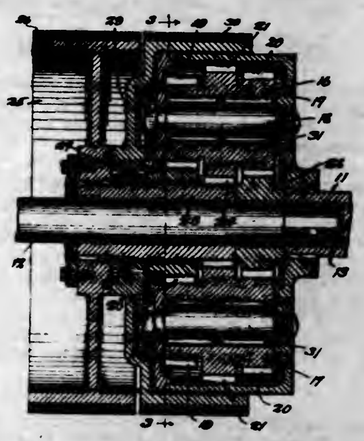
flexible, water repellent material telescopically receiving the legs of the trunk portion and secured to the trunk portion at the ends of the legs and at the waist line of the trunk portion.

1,905,949. AUTOMATIC WATER HEATER CONTROL VALVE. ROBERT ROGERS, Dallas, Tex., assignor to Henry Chilton Rogers, Dallas, Tex. Filed Apr. 24, 1931. Serial No. 532,577. 1 Claim. (Cl. 236—25.)



In a water heater the combination with the water heater control valve casing having inlet and outlet ports, of a cylinder located therein, and spaced from the wall of the casing and of less diameter than the casing, and a detachable soft metal gasket between the inner wall of the casing and the outer wall of the cylinder, the latter being beveled at its upper edge and the gasket correspondingly beveled.

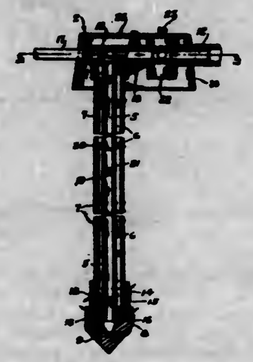
1,905,950. DRIVE RELEASE AND BRAKE FOR EXTRACTORS. FLETCHER SCHAUM, Philadelphia, Pa., assignor to Fletcher Works, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Mar. 29, 1928, Serial No. 265,761. Divided and this application filed Nov. 10, 1928. Serial No. 318,408. 6 Claims. (Cl. 192—2.)



1. A hydro extractor comprising a guard suspended for a slight horizontal movement, a shaft rotatably mounted in said guard, a basket tiltably mounted on the upper end of said shaft, a motor connected with said shaft for driving the same, a brake drum on the lower end of the shaft, a brake including a handle cooperable therewith, electric control means for the motor for starting and stopping the same, and said control means operable by the movement of the brake handle.

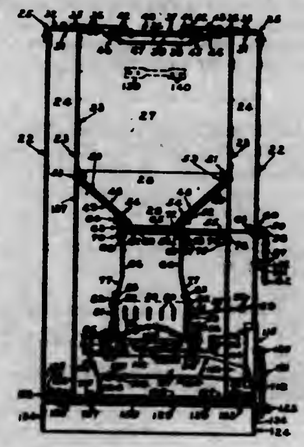
1,905,951. BRAKE. HENRY SCHNAKENBERG, Homestead, Pa. Filed June 28, 1932. Serial No. 618,650. 3 Claims. (Cl. 74—89.)

1. An emergency brake lever comprising a pivoted lever, a quadrant at the upper end of said lever, a hand lever pivoted intermediate its ends and pivotally connected at its lower end to said first mentioned lever, a locking dog pivotally attached to said hand lever having cams engageable with the upper and lower edges of said quadrant, and releasable means for actuating said locking dogs to move the cams into tight frictional engagement with the edges of said quadrant.



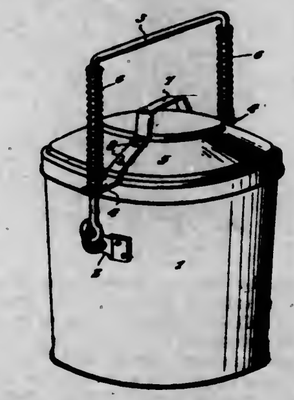
1,905,952. STEERING MECHANISM FOR TRACTORS HAVING ENDLESS TREAD MEMBERS. ROBERT F. SCOTT, Charleston, W. Va. Filed Dec. 26, 1929. Serial No. 416,702. 1 Claim. (Cl. 180—9.2.)

A power operated tractor guiding device comprising driven shafts having bearing openings in the outer ends thereof, wheel supporting driven shafts having the inner ends thereof extended into the bearing openings in the ends of the first mentioned driven shafts, gear housings secured to the outer ends of the first mentioned driven shafts, shafts journaled in the housings, planetary gear members mounted on the last mentioned shafts and including end gears and intermediate gears, said gears being of various sizes, gears secured on the inner ends of the wheel supporting shafts and meshing with certain of the gears of the planetary gearing, sleeves mounted on the wheel supporting shafts and having gears at the inner ends thereof meshing with the intermediate gears



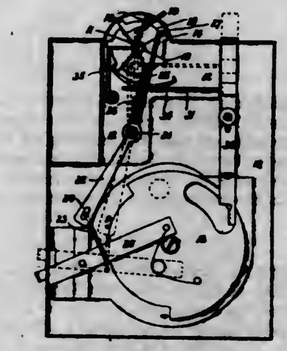
of the planetary gearing, brake drums secured to the outer ends of the sleeves, sleeves mounted on the first mentioned sleeves and having gears at the inner ends thereof meshing with the gears of the planetary gearing, drums secured to the outer ends of the last mentioned sleeves to move therewith, and brake bands cooperating with the drums for locking either of the sleeves or both of the sleeves against movement to vary the speed of rotation of the driven shafts with respect to each other, a driven shaft, and crawlers mounted on the wheels of the wheel supporting shafts to propel or guide the tractor.

1,905,953. APPARATUS FOR PRODUCING SUDS. LEE LEWIS STRASBURGER, Atlanta, Ga. Filed Dec. 28, 1930. Serial No. 504,334. 6 Claims. (Cl. 299—84.)



2. A device for removing a solid or plastic material such as soap from a mass, comprising a tubular member, a spear head of greater diameter than the tubular member on one end thereof with a return conduit in the tubular member and ports affording communication between said return conduit and the exterior of the spear head and ports between the exterior of the tubular member and the bore thereof above the enlarged part of the spear head.

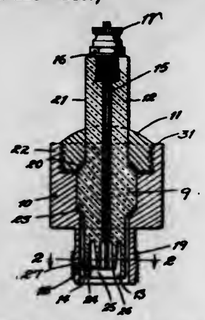
1,905,954. HEATER FOR REFRIGERATOR CARS AND OTHER STRUCTURES. EDWARD A. SWEELEY, Alexandria, Va., and NORMAN T. ANDERSON, Washington, D. C. Filed June 8, 1929. Serial No. 368,184. 6 Claims. (Cl. 126—56.)



1. A heater comprising a casing the upper portion of which constitutes a fuel magazine, a fire-pot within the casing having its upper end in communication with the fuel magazine to receive fuel therefrom, spaced from the walls of the casing, having valve controlled openings in the lower portion of its wall, and provided with an apertured fuel supporting bottom, means for admission of air to the interior of the casing for supply of air to fuel in the fire box, an external casing surrounding the inner casing substantially from top to bottom of the inner casing and spaced from the walls thereof to form a chimney-flue in communication with the space between the fire box and walls of the inner casing for supplementing the valve controlled openings in the walls of the fire box for passing air through the fuel and exhausting the gases generated in the heater, and a valve for controlling the exhaust of gases through the chimney-flue.

1,905,955. RECEPTACLE. PAUL E. WARNER, Brooklyn, N. Y. Filed Oct. 22, 1931. Serial No. 570,697. 1 Claim. (Cl. 220—30.)

The combination of a receptacle, lugs projecting from the sides of the same at diametrically opposite points thereof, a bail pivoted at its ends in said lugs, a cover fitted to the receptacle, lugs projecting from the cover at diametrically opposite points thereof and slidably engaging the sides of the bail, and expansion springs fitted upon the sides of the bail between said lugs and the cross bar of the bail.



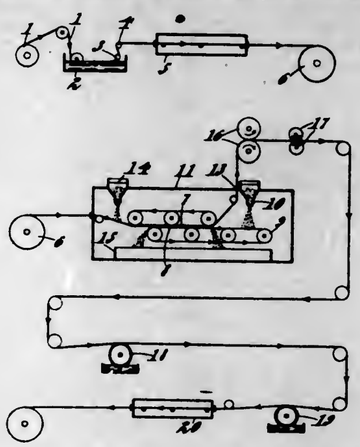
1,905,956. EXPOSURE INDICATOR ATTACHMENT TO PHOTOGRAPHIC CAMERAS. CECIL ALEXANDER BURNS WATSON, Auckland, New Zealand. Filed June 15, 1931, Serial No. 544,509, and in New Zealand Feb. 6, 1931. 4 Claims. (Cl. 95—59.)

1. In cameras, a casing having an extension projecting therefrom formed with a vision aperture in its rear side, a round disc mounted in the casing to rotate upon a central

axis and disposed to extend into the said extension so that a portion of its rear face is positioned against the said vision aperture, which rear face is numbered with characters disposed in a ring coincident with the aperture and spaced at even distances apart, and the front face of which disc is formed with radial teeth corresponding in number and spacing with the spacing of the said characters, shutter actuating means for the camera and means combining therewith and with the said disc, whereby on each complete exposure operation of the shutter, the disc is caused to turn on its axis through a distance corresponding to the spaces between the characters thereon.

1,905,957. SPARK PLUG. AUGUST E. ANDERSON, Montclair, N. J. Filed Nov. 8, 1932. Serial No. 641,765. 5 Claims. (Cl. 123—169.)

1. In a spark plug having the usual electrodes, a metal housing member and an insulator core member firmly seated therein, said core member being provided with a downwardly open chamber, an annular space being formed between the lower ends of said members; the main electrode being mounted axially in said core members and the ground electrode secured in said housing member and extending across said space into said chamber, the spark points being situated within said chamber well beyond the lower edge of the core member; the combination with means forming an obstruction in the spark gap, thereby creating a substantially flat spark between the spark points.

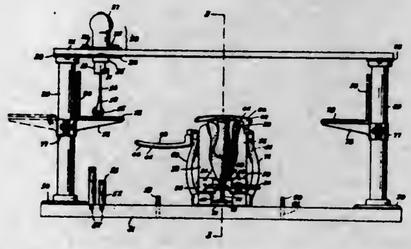


1,905,958. RUBBER CLOTHESPIN. PRESTON PEARCE BOOLEY, Chicago, Ill. Filed Aug. 25, 1932. Serial No. 630,467. 2 Claims. (Cl. 24—137.)

2. A clothespin made of rubber, comprising, an annular head of uniform thickness, a pair of legs extending therefrom, the inner walls of said legs converging toward said head, the outer walls of the legs being substantially parallel, said inner and outer walls merging into said annular head of uniform thickness, and a transverse recess in said annular head.

1,905,959. METAL COATED MATERIAL. LEONARD WALTER CUTLER and CARL ADOLPHE KLEIN, Enfield, England, assignors, by mesne assignments, to Goodlass Wall and Lead Industries Limited, London, England. Filed Dec. 5, 1929, Serial No. 411,955, and in Great Britain Dec. 14, 1928. 2 Claims. (Cl. 91—18.)

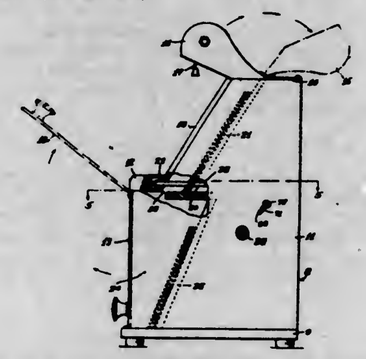
1. Apparatus for distributing finely-divided metal over the surface of both sides simultaneously of a continuous web of sheet-material carrying an adhesive, which comprises a pair of oppositely-travelling endless-belts disposed horizontally face-to-face and in close proximity to one another, means to feed a web of sheet-material carrying adhesive continuously through the space between the belts, means to deliver finely-divided metal on to the moving web of sheet-material before it enters said space, and means to



deliver a similar supply on to the lower belt before the latter reaches the interface between itself and the web of sheet material, said lower belt being extended beyond the upper belt at one end to receive this supply, and travelling towards said interface at this end, the web and the lower belt thus constituting conveyors for the metal to the interface between the belts and the web.

1,905,960. FOUNTAIN BRUSH. JOSEPH DE PHILIPPS, New York, N. Y. Filed Feb. 5, 1932. Serial No. 591,161. 8 Claims. (Cl. 15—137.)

1. In a reservoir applicator, a hollow handle defining a container having an outlet tube protruding from one end, a sleeve having limited sliding movement on said tube and an applicator head having linked connection with said sleeve and movable with and with reference to the sleeve to cover and uncover the outlet tube.



1,905,961. SHOE BOTTOM ORNAMENTING MACHINE. HERBERT E. EDWARDS, Brookline, Mass. Filed Nov. 28, 1931. Serial No. 577,776. 19 Claims. (Cl. 41—1.)

11. In a shoe bottom ornamenting machine, the combination with a frame, a work support having a toe saddle and a heel spindle relatively movable vertically and longitudinally to accommodate different sizes of shoes, and means carried by the frame and movable laterally bodily across the work support for cancellating the bottom of the shoe mounted upon the work support, of a shield movable laterally into and out of a position over the shoe bottom and longitudinally relatively to the toe saddle and heel spindle.

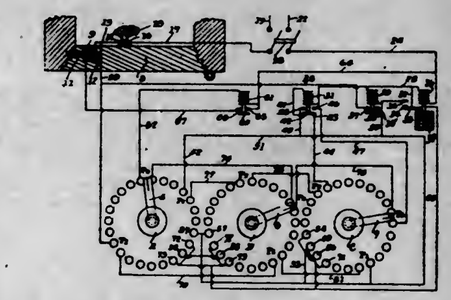
15. In a shoe bottom ornamenting machine, a plurality of marking tools, a head therefor, a stem for each tool longitudinally slidably mounted in the head, means for limiting the movement of the stem in one direction under the influence of gravity and a spring for resisting the movement of the stem in the other direction.

1,905,962. EXHIBITOR. HERBERT E. EDWARDS, Brookline, Mass. Filed Oct. 8, 1932. Serial No. 636,875. 6 Claims. (Cl. 40—36.)

1. In an exhibitor, the combination with means for supporting a plurality of exhibits stacked, upended, in a pile, means for exposing to view the outermost exhibit in the pile, and automatic means for withdrawing bodily the outermost exhibit from the pile, of means for retaining the pile stationary during the withdrawal of the outermost exhibit therefrom.

1,905,963. LEAF TURNER. WALTER FLIETHER, Velbert, Germany. Filed Aug. 3, 1931, Serial No. 554,844, and in France May 26, 1931. 1 Claim. (Cl. 84—498.)

A leaf-turner comprising a casing, a plurality of radial, pivoted, spring-controlled leaf-turning arms projecting from said casing, a spring-controlled slide, a pair of spring-controlled catches bearing against inclined surfaces on said slide and adapted to be operated thereby on the slide being reciprocated, and means for reciprocating the slide, one of said catches adapted normally to retain the arms in tensioned position and to release them on being operated, the other catch adapted, on being operated, to enter between the first pair of unreleased arms and ensure the release of one arm at a time.



1,905,964. SANITARY PAD SUPPORTER BELT. MYRON B. HAMMOND, Bridgeport, Conn., assignor to The Thos. P. Taylor Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 11, 1932. Serial No. 585,848. 5 Claims. (Cl. 128—291.)

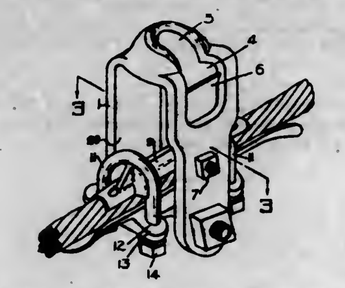
1. In a sanitary pad supporter, front and rear tab portions and belt portions comprising a pair of parallel strips of elastic webbing having parallel inner and outer edges and arranged side by side in the same plane and secured together at each end along their adjacent inner edges in

parallel relation to their outer edges to form said tab portions of single thickness and being unsecured between said tab portions to form belt portions.

1,905,965. ELECTRIC SAFE LOCK. HANS M. LESCHEN and PETER J. ANSELMO, San Francisco, Calif. Filed Mar. 15, 1932. Serial No. 598,938. 5 Claims. (Cl. 70—63.)

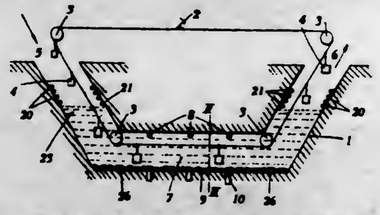
1. In a lock actuating apparatus, the combination with a movable locking member, electrical means for actuating said locking member, a plurality of relays arranged for progressive operation whereby said electrical means is energised to unlock said locking mechanism and a time controlled relay for rendering said first mentioned relays inoperative after a pre-determined interval of time.

1,905,966. EYE AND LOOP FOR ANCHOR RODS. WINFORD GLADSTONE MILNE and WILBERT NELSON ELLIOTT, Hamilton, Ontario, Canada, assignors to N. Slater Company, Hamilton, Ontario, Canada, a Company of Canada. Filed Feb. 24, 1931. Serial No. 517,658. 3 Claims. (Cl. 24—123.)



3. An eye and loop connection of the character described, comprising a wire receiving loop of U shaped cross section adapted to extend through the eye, a pair of shoulders formed substantially centrally of the convex face of the loop and between which the eye is contained, and a projection extending from the head of the eye and against which the loop rests.

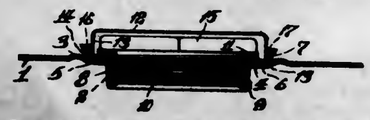
1,905,967. CABLE CLAMP. WINFORD GLADSTONE MILNE, Hamilton, Ontario, Canada, assignor to N. Slater Company Limited, Hamilton, Ontario, Canada, a Corporation of Canada. Filed Apr. 28, 1932. Serial No. 608,071. 4 Claims. (Cl. 248—31.)



1. In a suspension clamp, the combination with an inverted U shaped loop and a cable clamp extending freely

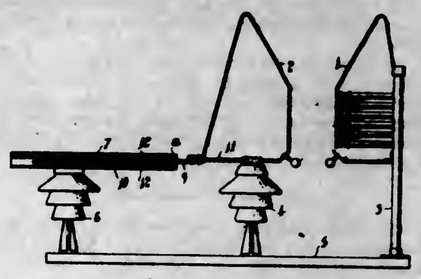
through the loop, of a bolt extending across the open bottom of the loop and over which the cable clamp is positioned and by which it is supported, lugs having orifices

therein extending downwardly from the clamp and through which the bolt extends, and a convex bottom formed upon the clamp and resting upon the bolt.



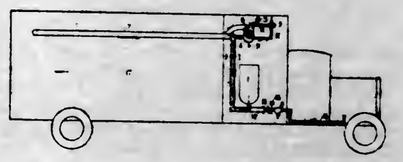
1,905,968. METHOD AND APPARATUS FOR CLEANING ARTICLES, PARTICULARLY METALLIC GOODS. KENNETH JAMES RENNIE ROBERTSON, London, England, assignor to Carrier Engineering Company Limited, London, England. Filed Aug. 25, 1928, Serial No. 302,038, and in Great Britain June 13, 1928. 17 Claims. (Cl. 87—6.)

4. A method of degreasing materials, consisting in collecting a volume of vapor in an open container, immersing material to be degreased within the container, removing condensate from the container, and maintaining substantially a constant level of vapor within the container.



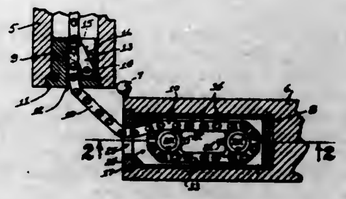
11. A combination of apparatus for cleaning greasy articles comprising a trough having an inlet and an outlet open to the atmosphere, cooling means in combination with the trough adjacent said inlet and outlet, the body of the trough being arranged at a level below said inlet and outlet, an endless conveyor entering the trough from a level above said inlet and adapted to convey articles through the trough, a still for producing solvent vapors, means for feeding vapors from the still within the trough above the line of travel of the conveyor and means for removing grease and dirt from the bottom of the trough, said inlet and outlet being arranged with respect to the body of the trough so that vapor heavier than air will be retained in the body of the trough, wholly covering the portion of the conveyor therewithin, and have its upper level below the inlet and outlet openings.

1,905,969. BUSHING AND SOLDER SEALED CAP THEREFOR FOR METALLIC CONTAINERS. LOUIS B. WACKMAN, St. Louis, Mo. Filed Aug. 11, 1930. Serial No. 474,432. 4 Claims. (Cl. 220—39.)



1. A flanged bushing for a container having an annular upturned lip on the flange thereof, a closure plug for said bushing, and a sealing cap mounted over said plug having its side wall solder sealed to said lip.

1,905,970. LIGHTNING ARRESTER. THOMAS DUDLEY BERRY, Markdale, Ontario, Canada. Filed May 16, 1931. Serial No. 537,901. 11 Claims. (Cl. 175—30.)

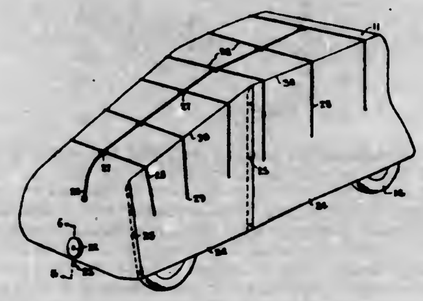


1. In a lightning arrester, the combination of a pair of spaced discharge electrodes, one of which is movable relative to the other; and means for automatically varying the spacing of said electrodes in accordance with the moisture conditions of the atmosphere.

1,905,971. PROCESS AND APPARATUS FOR REFRIGERATION WITH LIQUEFIED FUEL GAS. DELOS W. DAVISSON and FERDINAND G. WELKE, San Francisco, Calif., assignors to Shell Development Company, San Francisco, Calif., a Corporation of Delaware. Filed July 28, 1931. Serial No. 553,524. 12 Claims. (Cl. 62—92.)

2. Process of refrigerating comprising reducing the pressure on a normally gaseous fuel stored under high pressure, vaporizing said fuel under super-atmospheric pressure, reducing the pressure on the gas produced and thereafter combusting all of said gas.

1,905,972. DOOR CLOSER. WALTER F. FOSTER, San Francisco, Calif. Filed June 1, 1932. Serial No. 614,660. 10 Claims. (Cl. 16—63.)



1. A door closer comprising a casing secured to one member of a hinge connected door and door frame assembly; an anchor secured to the other member thereof; a pair of sprockets mounted in said casing; an endless chain surrounding and engaging said sprockets; a second chain having one end connected with said endless chain and the other end secured to said anchor; and resilient means associated with one of said sprockets for rotating it in a direction to close the door.

8. In a door controlling device wherein a spring tensioned flexible member controls the movement of the door:

an anchor member for engaging one end of the flexible member and having an aperture for the insertion of said flexible member therethrough to any desired extent, said anchor member having means for automatically locking said flexible member against withdrawal therefrom, whereby the spring tension of the flexible member may be varied in its control of the door movement.

1,905,973. AUTOMOBILE COVER. LOUIS LEVINE, Cincinnati, Ohio. Filed Aug. 22, 1932. Serial No. 629,770. 9 Claims. (Cl. 135—5.)

1. A cover for an automobile consisting of a top and side flaps, means for folding said side flaps on said top and a roller for receiving said folded cover.

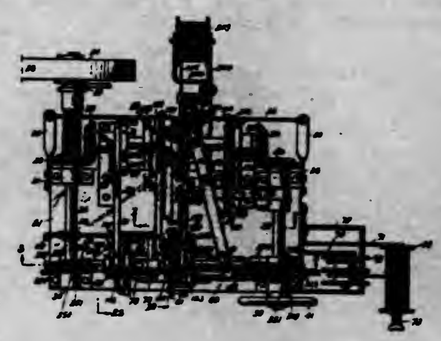
1,905,974. MANUFACTURE OF LIQUID DIALKYL PHTHALATE ESTERS. JOHN W. LIVINGSTON, Kirkwood, Mo., assignor to Monsanto Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 21, 1931. Serial No. 582,507. 12 Claims. (Cl. 260—103.)

1. In the process of manufacturing liquid dialkyl phthalates by the reaction of phthalic anhydride with an alkyl alcohol in the presence of an esterification catalyst, the step of purification of the crude ester which comprises treatment of the same with an aqueous solution of a permanganate.

1,905,975. CONCRETE BLOCK MOLDING MACHINE. CHARLES C. H. THOMAS, Mill Valley, Calif. Filed July 10, 1929. Serial No. 377,140. 23 Claims. (Cl. 25—41.)

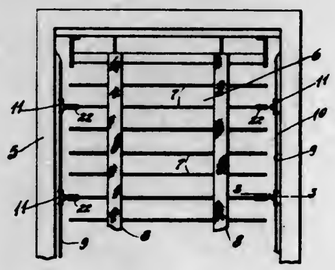
12. A machine for molding plastic substances, comprised of a mold to receive plastic substances; a constant running vibrator independent of the mold; a resilient arm on the vibrator arranged in a position free of engagement with the mold; and means to move said resilient arm into engagement with the mold to transmit vibrations from the vibrator to the mold to vibrate the plastic substances in the mold.

1,905,976. MANICURING DEVICE. MARIE C. WOLF, Cleveland Heights, Ohio. Filed Sept. 18, 1933. Serial No. 689,911. 10 Claims. (Cl. 132—73.)



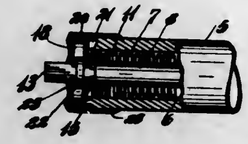
1. The combination with an orange stick of an attachment formed of resilient material removably secured to said orange stick, said attachment having a rounded bifurcated end.

1,905,977. AUTOMATIC FURNACE REGULATOR. ROY S. ADAMS, Saginaw, Mich., assignor of one-half to Joseph Pinto, Saginaw, Mich. Filed Dec. 28, 1930. Serial No. 504,337. 7 Claims. (Cl. 236—10.)



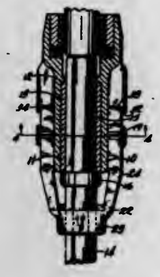
1. The combination with a furnace, of a drum projecting into the warm air jacket thereof, a control tank communicating therewith and formed with spaced apart inner and outer walls adapted to form a liquid chamber into which a liquid is introduced, a piston floating in said liquid and adapted to be raised when the furnace temperature is lowered and lowered when the furnace temperature is raised, and means connecting said piston with the furnace draft damper and smoke pipe damper respectively for simultaneously actuating said dampers as the temperature changes.

1,905,978. TASSELING MACHINE. CLARENCE F. ARNOLD, Drexel Hill, Pa. Filed Oct. 4, 1928. Serial No. 310,226. 66 Claims. (Cl. 28—8.)



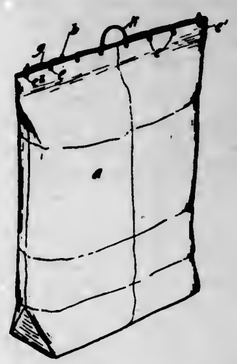
1. A tasseling machine comprising feeding means for heading loops, means for forming a tassel on each loop, means for securing said tassel on said loop, and means extending between the heading and feeding means for removing the tasseled loops from said feeding means.

1,905,979. VENETIAN BLIND. FRED J. BURNS, Saginaw, Mich., assignor to Columbia Mills, Incorporated, Saginaw, Mich., a Corporation of New York. Filed Feb. 11, 1931. Serial No. 514,952. 9 Claims. (Cl. 156—17.)



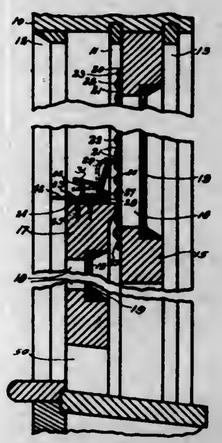
1. In a venetian blind having a plurality of movable slats, a guide rail secured to a window casing, a glider slidably mounted thereon, and disconnectible securing means between said glider and movable slats, and disconnectible in any position of said slats.

1,905,980. SHADE ROLLER. FRED J. BURNS, Saginaw, Mich., assignor to The Columbia Mills, Saginaw, Mich., a Corporation of New York. Filed Aug. 25, 1931. Serial No. 559,227. 14 Claims. (Cl. 156—36.)



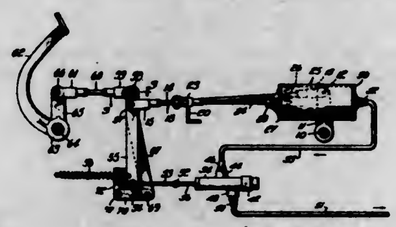
2. A shade roller comprising a body, a spindle extending into said body, a spool rotatably mounted thereon, a spool bearing secured to the spool, a spring mounted on the spindle and anchored to one end thereof, the opposite end being threaded on the spool bearing, and embedded and anchored in the end of the roller body when the roller is assembled.

1,905,981. STEEL RETAINER ATTACHMENT FOR ROCK DRILLS. JOHN C. CURTIS, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 29, 1931. Serial No. 540,858. 9 Claims. (Cl. 121—32.)



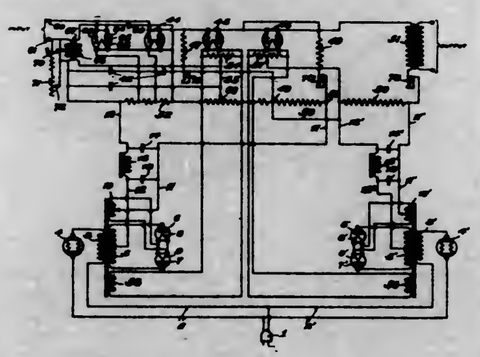
1. A drill retainer comprising in combination a front head, a pin within said front head, having means to prevent its removal therefrom comprising a recess within said pin, a bushing engageable with said head and said recess and capable to slidably receive said drill, and a retainer having arms pivotally engaging said pin.

1,905,982. BAG AND CLOSURE MEANS THEREFOR. JAMES DUVALL, Camas, Wash. Filed Dec. 23, 1930. Serial No. 504,258. 2 Claims. (Cl. 229—63.)



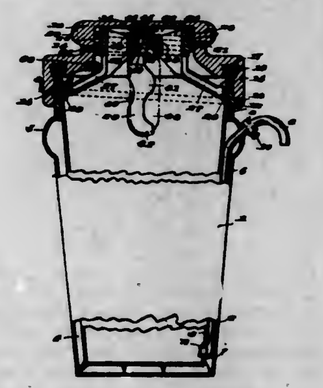
1. A paper bag provided at the top of two opposite sides with flaps of substantial width turned over to form folds with, and cemented to the sides of the body arranged flatwise, a reinforcing band arranged and cemented in the creases of the folds so produced and extending completely around the mouth of the bag, the sides of the bag directly under said reinforcing band being provided with a series of registering spaced holes and a cord laced through said holes over said reinforcing band to close the mouth of the bag, and arranged to form a loop constituting a carrying handle.

1,905,983. DETENT FOR WINDOW SASHES. JOHN F. HARDER, Omaha, Nebr. Filed May 1, 1931. Serial No. 534,393. 1 Claim. (Cl. 292—228.)



A window fastening device comprising, a corrugated strip adapted to be attached vertically upon a window sash, a base plate for attachment to an opposite sash, a detent pivotally mounted on the base plate and having its upper end curved and beveled for engagement with the corrugated strip to interlock the sashes against relative overlapping movement, a spring carried by the base plate and engaging the detent to normally urge the latter against the corrugated strip, said detent having an outstanding finger piece lying normally in spaced relation above the base plate and adapted to be depressed for manually releasing the detent from the strip, and a latterly movable holding lug mounted on the base plate in line with the finger piece and biased into a position in engagement with the finger piece, said lug having an undercut slot in one side for receiving the finger piece by edgewise movement of the lug for holding the finger piece downwardly.

1,905,984. CLUTCH OPERATING DEVICE FOR MOTOR VEHICLES. EDWARD G. HILL, Richmond, Va., assignor to Hill Engineering Corporation, Richmond, Va., a Corporation of Virginia. Filed Oct. 22, 1930. Serial No. 490,507. 8 Claims. (Cl. 121—41.)

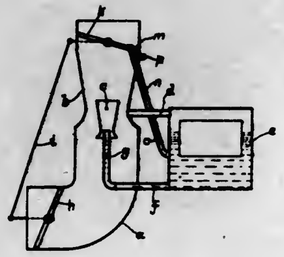


1. The combination with a motor vehicle operating member, of a pedal, a pivot pin connected to said pedal to be moved thereby, a control lever connected at one end to said pivot pin, an actuating lever having a slot in one end receiving said pin to permit initial movement of said pedal without transmitting movement to said actuating lever, a pull rod connected to said operating member and pivotally connected to both of said levers intermediate the ends thereof, means at the other end of said actuating lever to prevent movement thereof longitudinally of said pull rod, a power device for actuating said operating member, and a control device for said power device connected to the other end of said control lever to be actuated thereby and render said power device operative upon initial movement of said pedal.

1,905,985. AMPLIFIER. HERMAN HOLLERITH, Jr., Riverton, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Dec. 17, 1927. Serial No. 240,862. 20 Claims. (Cl. 179—171.)

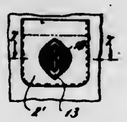
19. The combination with means including a series of cascade connected vacuum tubes for amplifying audio frequency signalling energy and means for supplying audio frequency energy to the input circuit thereof, of means connected with said second named means for receiving therefrom and amplifying particular components of said energy having frequencies within the audible range, and means for impressing said amplified components on the input circuit of said first-named means.

1,905,986. BEVERAGE CARBONATING AND DISPENSING APPARATUS. CHARLES HUNTINGTON JACOBS and EDGAR ROY NASH, San Francisco, Calif., assignors to Syphonator Company, Ltd., a Corporation of Nevada. Filed Sept. 5, 1930. Serial No. 479,966. 15 Claims. (Cl. 225—18.)



1. Apparatus for preparing and dispensing beverages comprising a vessel substantially unobstructed interiorly, with heat insulated walls and a wide, open mouth, a closure member therefor adapted to be sealed against said mouth, interengaging means between the closure member and vessel to effect air-tight sealing engagement thereof, means connected with the closure member for carbonating a liquid contained in the vessel while the closure member is sealed against said mouth, and means for dispensing a beverage from said vessel without removal of the closure member.

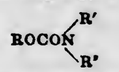
1,905,987. ELECTRICALLY HEATED WAX SPATULA. WILTON V. LANE, Guthrie, Okla., assignor of one-half to Zella M. Lane, Oklahoma City, Okla. Filed Apr. 25, 1931. Serial No. 532,949. 1 Claim. (Cl. 219—21.)



An instrument of the character described, comprising a tubular body having a portion formed of insulation material and divided into an intermediate section and two end sections, one of the said end sections and said intermediate section being threadably connected together, the other end of said intermediate section having a reduced exteriorly threaded terminal portion with which the other end section is threadably engaged, a cylindrical metallic tip threadably connected at one end with the said other end section and having its other end rounded and provided with a centrally threaded passage, said metallic tip being formed of a metal of a character to rapidly absorb heat, an annular member surrounding the reduced threaded portion of the said intermediate insulation section and secured in place by the said other end section, an electric heating element housed within said metallic tip, means for conducting electric current to said heating element through the body of the instrument, and a removable tool element having a threaded shank adapted to engage in the threaded bore to be heated through contact with the adjacent tip-enclosed heating element.

1,905,988. CARBURETOR. MAX LORENZ, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Aug. 11, 1930, Serial No. 474,522, and in Germany Sept. 2, 1929. 3 Claims. (Cl. 261—52.)

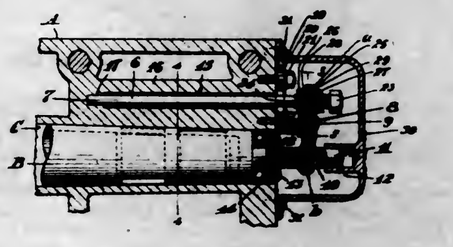
1. A self-feeding carburetor comprising a casing which includes a mixing chamber, at least two choke tubes adapted to produce different degrees of vacuum for any given degree of engine suction, a float chamber the air space of which is connected to the choke tube of lower vacuum and the fuel space to the choke tube of higher vacuum, an air throttle in advance of said choke tubes and a mixture throttle in rear of said choke tubes, the mixture throttle being operatively connected to said air throttle so that when the air throttle is closed, the passage from the mixing chamber to the engine is partly open but is sufficiently closed to prevent the vacuum in the mixing chamber from appreciably exceeding that required to maintain the fuel level in the float chamber.



1,905,989. GARMENT MONOGRAM. LEO C. SAFIR, South Norwalk, Conn., and CHARLES SAFIR, New York, N. Y. Filed Jan. 18, 1933. Serial No. 652,266. 1 Claim. (Cl. 2—278.)

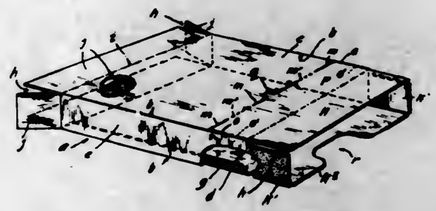
A garment having an ornamental design comprising an embroidered portion, a part of which defines an opening, and another portion including a monogram fitting within said opening, a backing sheet beneath said opening, the portion including the monogram being adhesively attached to said backing sheet, the embroidery defining the opening causing a thickening of the edge thereof which assists in preventing access to the juncture between the edge of the monogram and the backing sheet.

1,905,990. DISUBSTITUTED CARBAMIC ACID ESTERS OF PHENOLS CONTAINING A BASIC CONSTITUENT. JOHN A. ABELIN, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a Corporation of New Jersey. Filed Apr. 8, 1931, Serial No. 528,708, and in Germany Jan. 2, 1931. 2 Claims. (Cl. 260—108.)



1. The disubstituted carbamic acid esters of phenols containing a tertiary amino group, of the general formula,

R representing a phenyl radical with a tertiary amino group selected from the group which consists of a phenyl radical with a dialkyl amino group, a phenyl radical with a dialkyl amino alkyl group and a benzoheterocyclic radical; in which general formula the radicals R' and R'' may be alkyl radicals, or aryl radicals of the benzene series, or the group



may constitute part of a piperidine nucleus; which products can be distilled in vacuo without decomposition, and form stable crystalline quaternary compounds or salts easily soluble in water forming neutral solutions, stable to heat, and having a physostigmine-like action.

1,905,991. EXPANSION COMPENSATOR. IRA H. BEDDOW, Venice, Calif. Filed May 28, 1932. Serial No. 612,981. 10 Claims. (Cl. 123—59.)

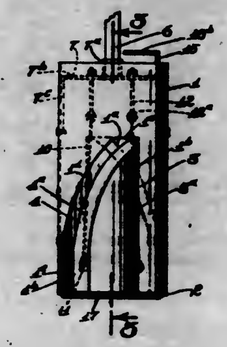
1. In an expansion compensator, the combination with a seated shiftable machine element subject to binding under the action of heat, of an expansion element adapted to be elongated under the action of heat, and a lever interposed between said elements arranged to effect shifting of said machine element on elongation of said expansion element.

1,905,992. CONVERTIBLE PAPER BOX. EDWARD C. BOGREN, Portland, Oreg. Filed Aug. 4, 1930. Serial No. 472,883. 1 Claim. (Cl. 229—17.)

A pasteboard box for holding stacked sheets consisting of a rectangular body comprising a top, a bottom, and sides, the top including at one end a top and end section removable on a line extending entirely across the top near said end and on lines extending from the ends of said line to the end of the box, the top portion of said removable section including a central, integral cut-out tab to facilitate removal and the end portion of said section fitting within the box and free from the sides of the box whereby it may be removed with the top portion of said section, the bottom of the box having an integral end section provided with a central cut-away opening extending down close to the bottom of the box, thereby disclosing and giving access at said end of the box to the stack of sheets contained therein.

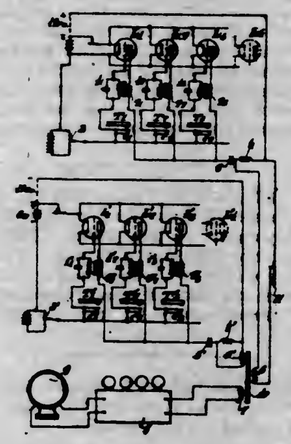
1,905,993. TREATMENT OF GASES. CARL THEODOR BUSS, Berlin-Spandau, Germany, assignor, by mesne assignments, to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 26, 1931, Serial No. 559,453, and in Germany Aug. 29, 1930. 4 Claims. (Cl. 183—7.)

1. A device for the cooling and preliminary cleaning of gases to be cleaned mainly by electrical means, consisting of a cooling vessel, an inlet pipe for gases projecting into and forming an annular space between it and the wall of said vessel, moistening devices in said inlet pipe, said vessel being provided with a discharge outlet for gases leading from the upper end of said annular space, and discharge electrodes in the annular space surrounding said inlet pipe, said discharge electrodes being adapted for connection with a high-voltage source of electricity.



1,905,994. COLLAPSIBLE DISPENSER. JAMES P. BOWER, Wayne, N. J., assignor to Kept-Kapt, Inc., Knoxville, Tenn., a Corporation of Delaware. Filed Dec. 21, 1931. Serial No. 582,366. 5 Claims. (Cl. 221—60.)

2. A closure means including a plurality of coaxial elements movable relatively to each other in the general direction of the axis thereof, one of said elements having an opening, the other element having a tubular closed ended projecting valve portion adapted to seat in said opening, the opening and the valve portion having conical wedge engagement and the valve portion having a thin yielding wall for fitting the said opening.

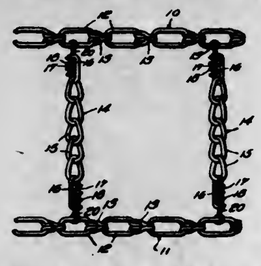


1,905,995. UNDERREAMER. BENJAMIN B. BERTRAN, Los Angeles, Calif., assignor of one-half to Jesie A. Bertran. Filed June 24, 1931. Serial No. 546,467. 9 Claims. (Cl. 255—74.)

5. In an underreamer for underreaming holes for receiving concrete underfootings with bell-shaped bases, a bucket having an opening in the side wall thereof extending from the extreme bottom of said bucket upwardly, the one side being substantially vertical and the other side tapering in curved line from near the lower side upwardly, a cutter pivotally mounted on the wall of the bucket at the

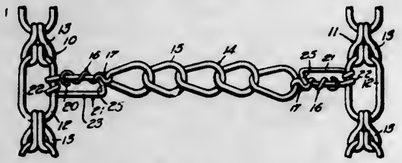
vertical side thereof and shaped to conform to said opening and adapted to form a portion of the side of the bucket when closed.

1,905,996. ELECTRIC ORGAN. EDOUARD ELOI COUPLEUX, Tourcoing, and JOSEPH ARMAND MARIE VINCENT DE PAUL GIVELET, Paris, France. Filed July 19, 1930, Serial No. 469,142, and in France July 26, 1929. 16 Claims. (Cl. 84—1.)



7. In an electric organ, valves having a plurality of electrodes, circuits electrically connected to the electrodes of said valves, keys of a keyboard provided with contacts actuating said circuits, and means producing notes which form harmonics for other notes produced simultaneously, thereby operating to change the timbre.

1,905,997. ANTISKID DEVICE. HORACE F. DRURY, Washington, D. C. Filed Aug. 14, 1930. Serial No. 475,295. 9 Claims. (Cl. 152—14.)

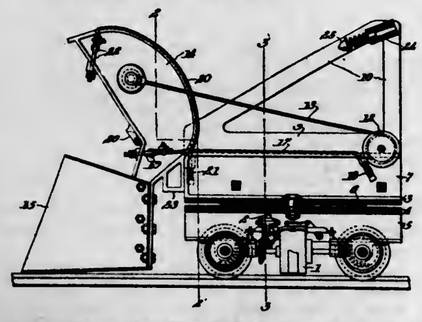


1. An anti-skid device comprising a pair of spaced side members, a transverse member adapted to be connected between said side members an elongated member associated with said transverse member, and high pitch spiral means connected to one of said side members and having operative engagement with said elongated member

to detachably connect said transverse member to said spiral means, the connection being such that upon breakage of said transverse member the portion of the latter

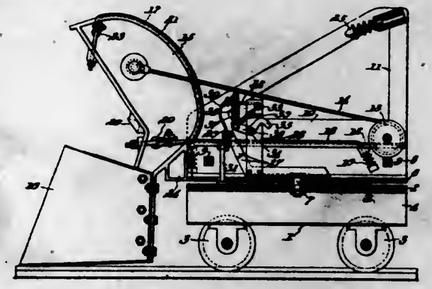
between the breaking point and said last mentioned side member will automatically become unscrewed from the latter.

1,905,998. ANTISKID CHAIN. HORACE B. DRURY, Washington, D. C. Filed Apr. 23, 1931. Serial No. 532,824. 14 Claims. (Cl. 152—14.)



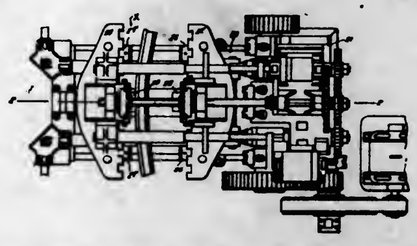
1. In an anti-skid device for a vehicle wheel including side and transverse members, a link carried by one of said side members, a spiral member carried by one of said transverse members and adapted to be spirally mounted upon said link, said spiral member being adapted to be spirally unwound from said link upon breakage of said last named transverse member, and means for preventing total disengagement of said spiral member from said link until said broken transverse member has reached a predetermined point in its revolution with the wheel.

1,905,999. CATALYZED UREA RESIN. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Feb. 10, 1930. Serial No. 427,435. 14 Claims. (Cl. 106—22.)



1. A molding composition comprising a thermo-setting resin of the urea type carried as an impregnum in finely divided cellulose and incorporated with unimpregnated cellulose.

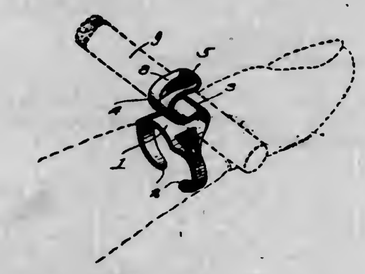
1,906,000. MUCKER. JOHN S. FINLAY and EDWIN B. ROYLE, Eureka, Utah. Filed Dec. 28, 1931. Serial No. 583,546. 6 Claims. (Cl. 214—148.)



1. A mechanical shoveling device having in combination, a rocker structure having a curved portion and a dipper connected to the rocker structure adjacent one end of the curved portion, the radius of curvature of the rocker increasing in the direction away from the dipper, a supporting member on which said rocker rolls, and means to roll said rocker, said means connected to the rocker nearer the end away from the dipper than the end to which the dipper is attached, the curve of the rocker giving an accelerating dumping movement to the dipper.

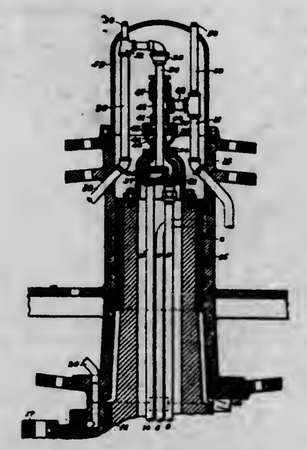
1,906,001. SHOVELING MACHINE. JOHN SPENCE FINLAY and EDWIN BURTON ROYLE, Eureka, Utah. Filed Feb. 23, 1932. Serial No. 594,655. 18 Claims. (Cl. 214—132.)

1. In apparatus of the type described, the combination with a relatively fixed structure, a rotatable structure mounted thereon, a dipper supported by said rotatable structure and rockable thereon, and means for rocking said dipper on said structure to dump said dipper, of means actuated by the dipper during the rocking movement thereof to center said rotatable structure on said fixed structure.



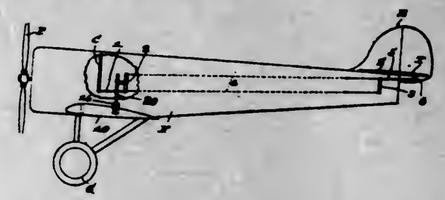
1,906,002. PROCESS AND APPARATUS FOR STRAIGHTENING RAILS. PAUL H. GAST, Buffalo, N. Y. Filed Apr. 28, 1932. Serial No. 608,050. 12 Claims. (Cl. 153—48.)

1. In a rail straightening press, the combination with a reciprocating ram and an adjustable head, each ram and head having a slidable gag and also anvils arranged to cooperate with the opposing gags, one of said gags being adapted to engage the under side of the rail base and the other gage being adapted to engage the head of the rail to turn the rail in either direction when one or the other of said gags is raised, and mechanism for operating the anvils.



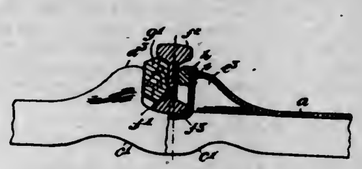
12. The method of straightening rails consisting in supporting a rail on its base, backing up one side of the base of the rail at two points applying pulsating pressures to the opposite side of the base of the rail and intermediate said points to flex the rail at right angles to its vertical axis, turning the rail on its side so that it will rest on the edges of its base and head portions, backing up either the head or the base and head portions of the rail at two points, and applying pulsating pressures opposite said points to either the base or the head of the rail and normal thereto intermediate said points to flex the rail in either direction to its vertical axis, turning the rail back on its base, repeating the pressing operations, moving the rail back and forth through the zone of operation and regulating the intensity of said pressures, all of said pressing operations being applied to broad surfaces of the rail so as not to mar or deform any portion thereof.

1,906,003. CIGARETTE RING. FRANK R. GREEN, Chicago, Ill., assignor to Joseph Peter, Chicago, Ill. Filed Aug. 18, 1930, Serial No. 476,220. Renewed Feb. 25, 1933. 1 Claim. (Cl. 131—51.)



A cigarette holder comprising a ring provided on one edge with an outstanding extension carrying a U-shaped grip which overhangs the ring, the grip terminating in a tongue, the grip opening in a direction parallel to the axis of the ring, the grip extending over the top of the cigarette therein, to retain the cigarette when the finger of the smoker is moved transversely in knocking or shaking off ashes, the end of the tongue projecting, in a direction substantially parallel to the axis of the ring, beyong the cigarette in the grip, and beyond all other portions of the ring and the grip, to serve as a guard for the cigarette, the grip being spaced from the ring, by means of the extension, at a distance less than the diameter of the cigarette, to promote compactness.

1,906,004. LUBRICATING SYSTEM FOR PUMPING POWER. EDGAR E. GREVE, Bellevue, Pa., assignor to Oil Well Supply Company, Oil City, Pa., a Corporation of New Jersey. Filed Apr. 3, 1931. Serial No. 527,489. 9 Claims. (Cl. 184—6.)



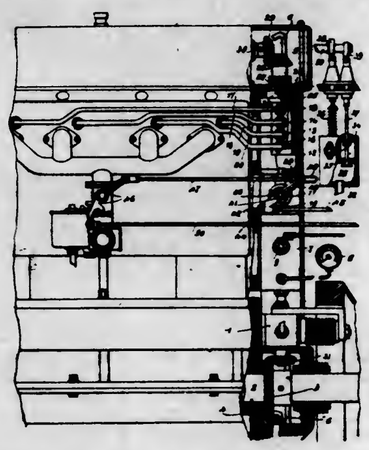
1. In a pumping power, a stationary bearing member, a rotatable member journalled on said bearing member provided with a conduit for supplying lubricant to a bearing surface, said bearing member being provided with a conduit for lubricant, and a universal joint connection between said conduits permitting relative rotation.

1,906,005. AIRPLANE. THEODORE P. HALL, Rochester, N. Y. Filed Aug. 13, 1931. Serial No. 556,901. 19 Claims. (Cl. 244—29.)

2. In an airplane, a wing of the variable lift type including a lift capacity increasing wing flap, said wing mounted for bodily movement to change its angle of incidence and automatically actuated for incidence angle change by air pressures acting thereon established by operation of the wing flap to increase wing lift.

1,906,006. RAILWAY AND LIKE SLEEPER. ARTHUR HOUNSELL HARVEY, Ebbw Vale, England, assignor of one-half to The Ebbw Vale Steel Iron & Coal Company Limited, Ebbw Vale, England, a Company of Great Britain. Filed Oct. 18, 1930, Serial No. 489,649, and in Great Britain Oct. 25, 1929. 9 Claims. (Cl. 238—60.)

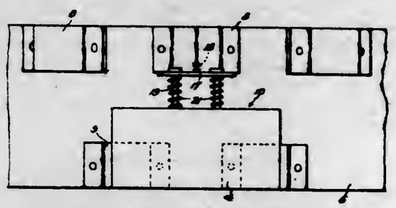
1. In a pressed metal sleeper comprising a body of inverted trough section formed with integral hollowed rail-chair devices pressed upwardly above the top surface of the sleeper and having undulated sides and base edges in the region of such chair devices, the provision of cradles or liner devices inserted in the chair spaces and adapted for receiving and seating the rails and flanges on said cradle or liner devices to engage the sides of the chair devices.



1,906,007. REMOVAL OF VOLATILE CONSTITUENTS FROM FERMENTED LIQUIDS. HERMAN HEUSER and RAYMOND S. HEUSER, Evanston, Ill., assignors, by direct and mesne assignments, to United States Process Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1931. Serial No. 542,198. 7 Claims. (Cl. 202—52.)

1. In the removal of volatile constituents from alcoholic fermented liquids, preliminarily subjecting the liquid to alternate variations of reduced pressure below atmospheric and higher pressure, whereby the liquid is alternately drawn into foam and the foam collapsed, whereby the tendency of the liquid to form a persistent foam is destroyed, and subsequently subjecting the liquid to evaporation under reduced pressure.

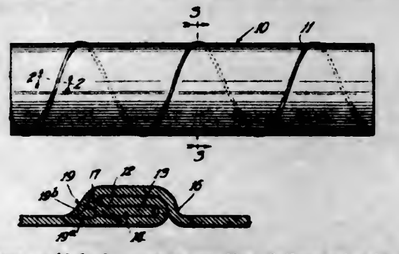
1,906,008. APPARATUS FOR THE DISTRIBUTION AND INJECTION OF COMPRESSED AIR FOR INTERNAL COMBUSTION ENGINES. JEAN KONSTANTINOFF, Meudon, France. Filed May 2, 1928, Serial No. 274,639, and in France May 5, 1927. 2 Claims. (Cl. 123—76.)



2. In combination with an internal combustion engine, an air compressor driven from the crank shaft of said engine, an air reservoir connected to said air compressor, a compressed air distributing valve device operated in

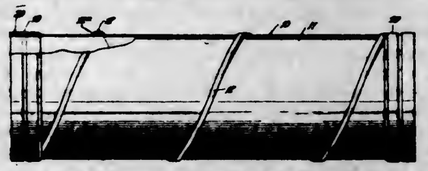
synchronism with the engine valve gear and adapted to control the supply of compressed air to the engine cylinders, ensuring expulsion from the engine cylinders of exhaust products which have not been expelled by the ascending pistons, a regulating device interconnected with the carburetor throttle control mechanism for effecting

regulation of the pressure of the air being distributed, the mechanism for regulating the admission of compressed air to the distributing valve device being operable, after the actuation of the throttle valve, to increase the compressed air supply without causing further actuation of said throttle valve.



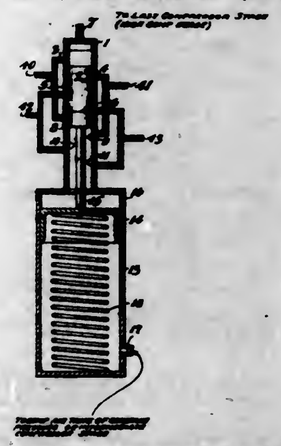
1,906,009. TREAD BLOCK. MELVIN T. LATTA, Hillsboro, N. C. Filed Oct. 11, 1932. Serial No. 637,316. 5 Claims. (Cl. 301—39.)

2. In a traction wheel, in combination, a rim, two series of staggerdly arranged traction lugs on said rim, a circular series of blocks arranged between the lugs of one series, means on each block engageable with said rim for securing the block against radial displacement, and means interposed between said block and an adjacent lug of the other series for normally urging said block axially relative to the wheel and into position between lugs of the first named series, said last named means including a plate adapted to be disposed against one side of said adjacent lug of the second series, bolts extending through said plate and one side of said block, and springs disposed about the bolts and interposed between said plate and one side of said block.



1,906,010. PIPE AND METHOD OF MAKING THE SAME. CARL G. NAYLOR, Chicago, Ill., assignor to Naylor Pipe Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1930. Serial No. 441,884. 5 Claims. (Cl. 113—35.)

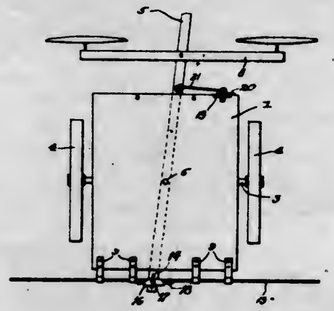
2. A pipe comprising a ribbon of metal providing a plurality of spiral convolutions joined to each other by a spiral lock seam extending substantially the entire length of the pipe and including a spiral outwardly flaring portion of the wall of said pipe, the portion of the lock seam spaced from said outwardly flaring portion being welded to the pipe to form a fluid tight joint along said



lock seam, said lock seam preventing failure of said weld by forces acting longitudinally of said pipe and, also, forces bending said pipe.

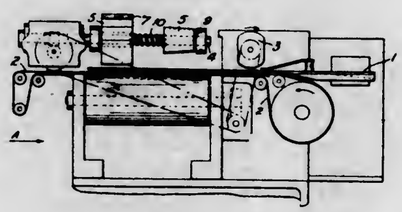
1,906,011. TUBING OR PIPE. CARL G. NAYLOR, Chicago, Ill., assignor to Naylor Pipe Company, Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 9, 1931, Serial No. 507,686. Divided and this application filed Apr. 5, 1930. Serial No. 441,885. 2 Claims. (Cl. 137—75.)

1. A pipe comprising a ribbon of metal providing a plurality of spiral convolutions joined to each other by a spiral lock seam extending substantially the entire length of the pipe and including a spiral outwardly flaring portion of the wall of said pipe, the portion of the lock seam spaced from said outwardly flaring portion being welded to the pipe to form a fluid tight joint along said lock seam, said lock seam preventing failure of said weld by forces acting longitudinally of said pipe and, also, forces bending said pipe, and annular end pieces welded to the ends of the spiral convolutions.



1,906,012. REGULATOR FOR MULTISTAGE COMPRESSOR SYSTEMS. WILHELM OCHEL, Berlin-Tegel, Germany, assignor to A. Borsig, G. m. b. H., Berlin-Tegel, Germany. Filed Dec. 2, 1931, Serial No. 578,579, and in Austria Oct. 1, 1930. 5 Claims. (Cl. 230—21.)

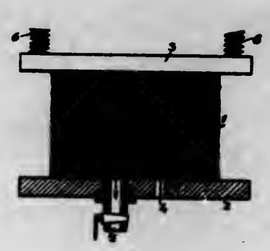
1. A regulator for air compressor systems, comprising a cylinder, a piston therein responsive to variations in the



pressure of the system, means for counterbalancing the normal high pressure of the system, and separate counterbalancing means coacting with the piston for counterbalancing excess pressure in the compressor system.

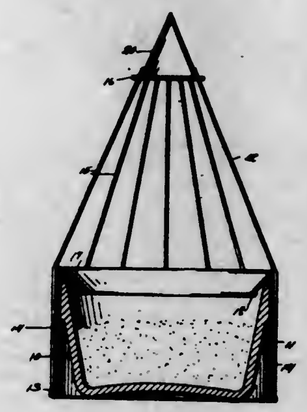
1,906,013. PLANT SPRAYING MACHINE. MAURICE J. PHALEN, Marathon, N. Y. Filed July 23, 1930. Serial No. 470,041. 6 Claims. (Cl. 299—29.)

1. A plant spraying machine comprising a wheeled platform, a draft tongue connected for swinging movement to the platform, a spray nozzle supporting bar mounted for transverse sliding movement on the platform, means operatively connecting the bar to the tongue for actuation by said tongue and means for releasably securing the platform against movement relative to the tongue.



1,906,014. CIGARETTE MAKING MACHINE. FÉLIX FRÉDÉRIC RUAU, Deptford, London, England. Filed Sept. 5, 1931, Serial No. 561,481, and in Great Britain Sept. 12, 1930. 4 Claims. (Cl. 131—39.)

1. In apparatus for feeding cigarettes, the combination with a conveyor operable to receive successive cigarettes in end to end relation as they are severed from the rod and displace the same axially from one another, a pair of rotatable vanes extending substantially parallel to the direction of movement of the cigarettes, said vanes being each adapted to remove alternate cigarettes from said conveyor and move the same in a direction transverse to the axis of the rod and a roughened friction means carried by the vanes adapted to engage with and brake the axial speed of the cigarettes.

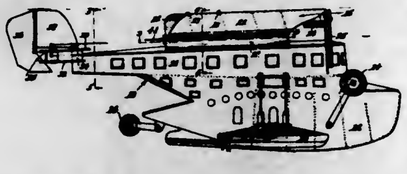


1,906,015. AFTER TREATMENT OF ARTIFICIAL SILK. OTTO SCHWARZKOPF, Linz, Austria. Filed Sept. 25, 1930, Serial No. 484,390, and in Czechoslovakia Aug. 21, 1929. 1 Claim. (Cl. 18—8.)

An apparatus for the after-treatment of artificial silk obtained in the form of a spun cake by the spinning pot process, comprising a plate for each end of the cake, adjustable loading devices for the plates adapted to hold the plates in fluid-tight contact with the ends of the spun

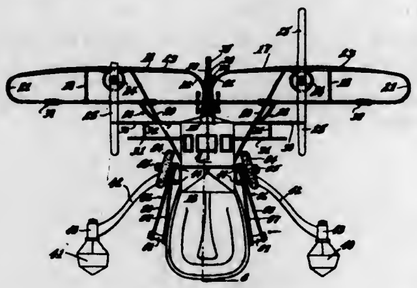
cake, means on the plates for the admission of liquids used in the treatment, an adjustable outlet for the liquids provided in one of the plates.

1,906,016. POULTRY WATER AND FEED PROTECTOR. LEOPOLD STECHER, Wichita, Kans., assignor of one-third to Karl Stecher, Wichita, Kans. Filed Sept. 30, 1930, Serial No. 485,512. Renewed Nov. 15, 1932. 3 Claims. (Cl. 119—61.)



1. A feed protector of the character described to be disposed about an open receptacle comprising a vertically disposed cylindrical base portion having an open bottom, a plurality of upwardly extending and inwardly converging protecting members positioned about the periphery of the base in spaced relation to each other, means for securing the upper ends of said protecting members in spaced relation to each other, an inwardly extending inverted frustoconical shield secured to the upper end of said base and disposed over the open end of the receptacle, and a cone shaped member positioned on the upper surface of said securing means.

1,906,017. AIRPLANE. FRITZ RUBEN SUNDLING, Chicago, Ill., assignor of one-fourth to Albert John Christenson, Chicago, Ill. Filed Mar. 18, 1932. Serial No. 599,636. 11 Claims. (Cl. 244—12.)

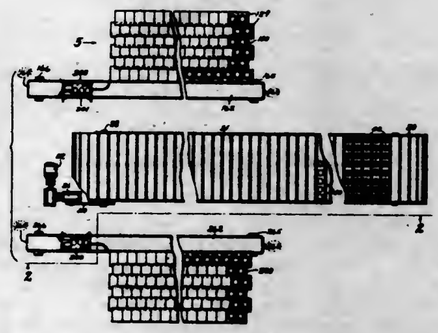


1. The combination in an airplane, of a fuselage, a pair of laterally extending wings of tubular formation providing air passageways extending in a direction longitudi-

nally of the fuselage center line, and a pair of transversely restricted auxiliary tubular air receiving members mounted adjacent the median longitudinal line of the plane and

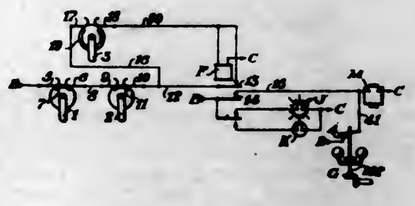
cooperatively beneath said wings, said auxiliary tubular members communicating between their ends laterally with the superposed tubular wing portions.

1,906,018. AIRPLANE. FRITZ RUBEN SUNDLING, Chicago, Ill., assignor of one-fourth to Albert John Christenson, Chicago, Ill. Filed Mar. 18, 1932. Serial No. 599,637. 11 Claims. (Cl. 244—2.)



1. In an aircraft of the character described, in combination with the body or fuselage thereof, landing gear comprising forward ground wheels, said wheels being mounted upon vertically swingable frames or standards, said frames or standards being fixed on transversely disposed inclined shafts extending laterally outward and upward from opposite sides of the body or fuselage and being operably joined for simultaneous rotation, power means for actuating said shafts, at will, to raise and lower said ground wheels, a tail skid pivotally mounted at the rear portion of the body or fuselage, and an operative connection between said tail skid and the actuating means for the forward ground wheels whereby the tail skid is raised and lowered simultaneously with the ground wheels.

1,906,019. NUMBERING MACHINE. VICTOR A. SVENSSON, Montclair, N. J., assignor to The Bates Manufacturing Company, West Orange, N. J., a Corporation of New Jersey. Filed July 9, 1930. Serial No. 466,740. 32 Claims. (Cl. 101—88.)

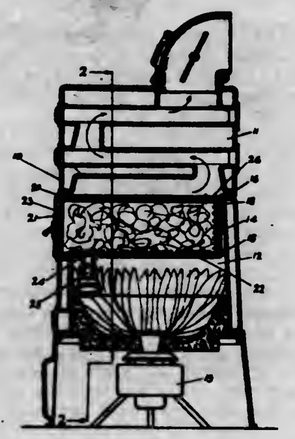


1. In a numbering machine, a main frame, a head carrying the numbering wheels mounted for reciprocatory movement in said frame and having an actuating rod, and means for holding said head in a depressed position in said frame comprising a groove in said rod and a member having a loose connection with said frame, said connection providing for sufficient movement of said member with respect to said frame and in any direction in a plane transverse to the axis of said rod to bring such member into and out of coacting relation with said groove.

1,906,020. COIL TEST APPARATUS. CLARE S. SWAYZE, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Nov. 29, 1929. Serial No. 410,448. 15 Claims. (Cl. 175—183.)

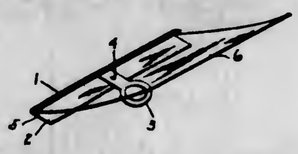
1. The method of testing electrical coils comprising, the acts of heating said coils to a determinable temperature, and maintaining said coils in a preferred temperature condition for a specified time, subjecting the coils under the existing temperature conditions to an endurance test, and finally examining the condition of circuits through the coils while in the specified temperature condition.

1,906,021. RAILWAY TRAFFIC CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 26, 1931. Serial No. 583,372. 21 Claims. (Cl. 246—182.)



1. An automatic control system for railways including, a first stick relay and a second stick relay on the car and both normally energized, a brake controlling magnet controlled jointly by said stick relays; a car carried trip arm and a car carried reset arm to jointly control said stick relays, and arranged to deenergize the first stick relay only when the trip arm only is actuated, to deenergize both stick relays when the trip arm and the reset arm are concurrently actuated, and to reenergize said first stick relay when the reset arm only is actuated, and traffic controlled trackway means to actuate the said car carried trip and reset arms.

1,906,022. PLIABLE CHOCK BLOCK. KENNETH J. TOBIN, Chicago, Ill., assignor to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 11, 1929. Serial No. 346,121. 9 Claims. (Cl. 188—32.)

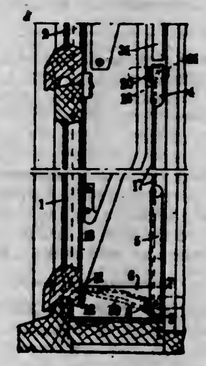


1. In a chock block, a flexible body portion having an arcuate groove, and a mobile material in said body portion and means for securing said body portion to a base.

1,906,023. INCINERATOR APPLIANCE FOR HEATING UNITS. KENNETH J. TOBIN, Chicago, Ill. Filed Mar. 14, 1931. Serial No. [illegible]544. 8 Claims. (Cl. 126—224.)

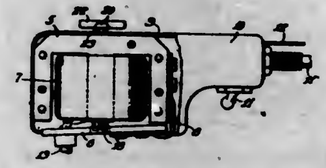
1. The combination with the combustion chamber of an installed heating unit provided with a heat emitting source, a door opening in said chamber and a door for closing said opening, of a receptacle mounted in said chamber above said heat source, said receptacle having an open front end lying in said door opening, said door serving to close said end, whereby a substantially closed receptacle is provided, said receptacle and said heat emitting source constituting an incinerator.

1,906,024. METAL BINDING FOR CALENDARS. FREDERICK CLIFFORD TOSO, Cincinnati, Ohio, assignor to The Stuebing Automatic Machine Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 28, 1930. Serial No. 498,607. 8 Claims. (Cl. 40—107.)



1. As an article of manufacture, a metallic binding for calendars and the like comprising a strip of sheet metal substantially V-shaped in cross-section, and a metal tab, and means for securing said tab to a face of said strip before the article to be bound is inserted.

1,906,025. GAME APPARATUS. THEODORE VAN STEENKISTE, Chicago, Ill. Filed Mar. 9, 1931. Serial No. 521,224. 3 Claims. (Cl. 273—106.)



2. In game apparatus, an alley, an upwardly curved portion at one end of said alley, a plurality of target supporting prongs mounted upon the extremity of said upwardly curved portion, target members dislodgably mounted upon said prongs, and a gaming missile adapted to be used in dislodging said target members from said supporting prongs.

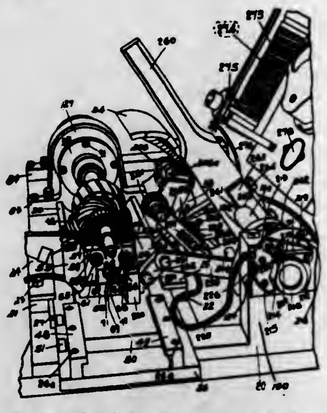
1,906,026. TILTING DEVICE FOR SLIDING WINDOWS. WALDEMAR VON FISCHER, Hamburg, Germany, assignor to Fa. Richard Biel, Hamburg, Germany. Filed Dec. 3, 1931, Serial No. 578,659, and in Germany Feb. 20, 1930. 8 Claims. (Cl. 20—42.)

1. A tilting device, comprising a tiltable window sash, a lever, means pivotally supporting said lever, a cam pin carried by one end of said lever, a rod attached to said cam pin, and a wire cable pivot carried by said sash, said rod being adapted to lock said wire cable pivot in the folded position of said lever.

1,906,027. VIBRATOR CONTROL DEVICE. LEO J. WAHL, Sterling, Ill., assignor to Wahl Clipper Corporation, Sterling, Ill., a Corporation of Illinois. Filed Feb. 1, 1932. Serial No. 590,181. 4 Claims. (Cl. 715—386.)

1. An alternating current vibrator having a body portion which is made up of a core, a coil wound on said core and having means to connect said coil to an alternating current source and a housing for said core and coil, said vibrator having an armature extending across the face of said core and yieldingly mounted on the body portion to vibrate in response to the current flow in said coil, said core having a small core section thereof movable outwardly into the plane of said armature whereby to adjust the power imparted to the armature.

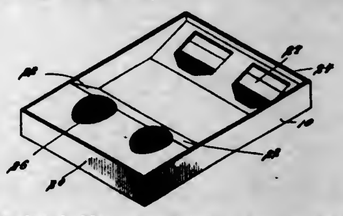
1,906,028. UPHOLSTERY PAD AND METHOD OF MAKING THE SAME. ARTHUR ERNEST WEBER, Forest Hill, London, and JOSEPH ARTHUR HOWARD, Streatham Hill, London, England, assignors to The Hairlock Company Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 17, 1930, Serial No. 482,518, and in Great Britain Sept. 24, 1929. 25 Claims. (Cl. 18—48.)



8. A method of producing an upholstery pad, consisting in confining a mass of intermingled upholstery fibres in a mould in a loosely associated condition, dipping said mould and confined mass in a liquid dispersion of rubber, draining said mould and confined mass, and drying said confined mass in substantially the shape imparted to it by the mould and in an open mesh condition.

14. An upholstery pad comprising a mould-shaped, open mesh mass of intermingled hair in a loosely associated condition and held in association by rubber.

1,906,029. ORE SEPARATION. ARTHUR J. WEINIG and ROBERT E. CUTHBERTSON, Golden, Colo., assignors to The American Metal Company, Limited, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1927. Serial No. 238,717. 10 Claims. (Cl. 209—167.)

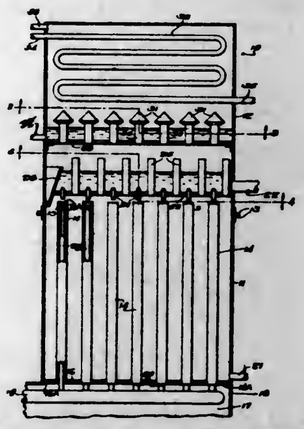


1. Method of separation by flotation of gangue from other minerals, which consists in adding to the ore pulp containing lead, copper and readily floatable gangue, prior to flotation and in addition to suitable flotation agencies a small proportion of the glue sufficient to inhibit the flotation of said copper and said readily floatable gangue.

1,906,030. ARMATURE TEST MACHINE. RUPERT C. WHELCHEL, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed May 6, 1931. Serial No. 535,393. 30 Claims. (Cl. 175—183.)

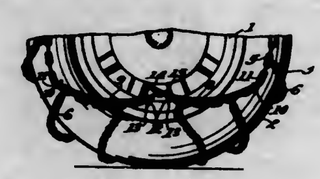
1. An armature testing device comprising, in combination, means for rotatably supporting an armature, a dynamo field frame having separable pole pieces and windings surrounding the pole pieces, commutator brushes movable with the separable pole pieces and normally engaging the commutator of the armature, and means for moving at least one of the pole pieces with a brush away from the other pole piece to permit the placing of the armature upon its supporting means, or for moving the pole piece with a brush toward the armature to provide a generator frame and engage said brush with the commutator of the armature.

1,906,031. ARTICLE HOLDER. LOUIS R. WILMARTH, Attleboro, Mass., assignor to Howard S. Scholes, Edgewood, R. I. Filed Apr. 24, 1930. Serial No. 446,866. 2 Claims. (Cl. 206—44.)



1. A display holder comprising a box having bottom and side walls, an article retaining insert in said box comprising a base lying along said bottom wall and portions at either end thereof raised and spaced from said bottom wall, said raised portions being provided with recesses in their upper surfaces and extending downwardly and terminating short of said base and bottom wall to receive the opposite ends of an article and support the ends above and in spaced relation to said base and bottom wall.

1,906,032. CONTAINER AND METHOD OF FORMING SAME. ALLEN B. WILSON, Chicago, Ill., assignor to Acme Steel Company, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1929. Serial No. 374,780. 13 Claims. (Cl. 217—80.)

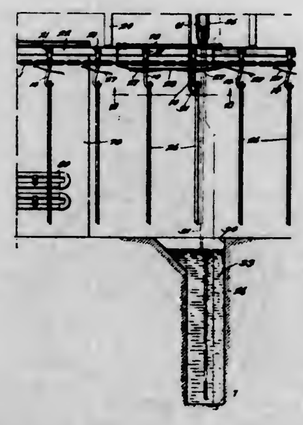


1. A container comprising a vessel, a cover mounted on said vessel and having an outwardly and upwardly extending annular surface and an adjacent outwardly extending annular surface, and a rim attached to said vessel and having a downwardly and inwardly inclined resilient flange engaging said first-named surface.

1,906,033. VACUUM SURFACE DISTILLATION. ROBERT E. WILSON, Chicago, Ill., assignor to Standard Oil Company (Indiana), Chicago, Ill., a Corporation of Indiana. Filed Jan. 2, 1930. Serial No. 417,888. 7 Claims. (Cl. 196—77.)

1. In distillation apparatus, a still, a plurality of tubes in said still, means for heating said tubes, and means for distributing oil in a film on said tubes comprising a plate having distributor nozzles aligned with said tubes, and having vapor discharge conduits between said nozzles for the removal of vapors surrounding said tubes.

1,906,034. TIRE CHAIN. BRUCE D. WOOLLEY, Johnstown, Ohio. Filed Oct. 14, 1932. Serial No. 637,801. 6 Claims. (Cl. 152—14.)

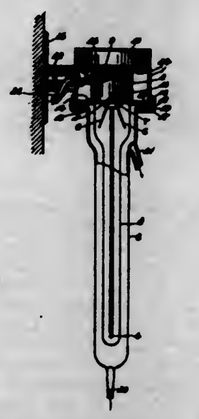


1. In a tire chain, two longitudinally extending side sections of equal length, a rod attached to each of one of said sections, said rods being attached at one of their ends to the chain and lying substantially within the length of the latter, means formed near the other ends of said rods for the attachment to the end of said chain section, and a hook and eye formed with the latter ends of said rods for connection to one another.

1,906,035. METHOD OF CHARGING COMPRESSED GAS CYLINDERS. ROBERT G. WULFF, Los Angeles, Calif. Filed Sept. 22, 1928. Serial No. 307,766. 12 Claims. (Cl. 23—247.)

1. The process which comprises simultaneously curing the solvent and gas deficiency of a compressed gas cylinder which comprises injecting into a cylinder having such deficiency a very concentrated solution of such gas in such solvent, said solution being very cold and being under high pressure.

1,906,036. CONVEYING MECHANISM. WILLIAM E. WUNDERLICH, Muncie, Ind., assignor to The Moore Company, Muncie, Ind., a Corporation of Indiana. Filed May 28, 1930. Serial No. 456,563. 8 Claims. (Cl. 214—17.)

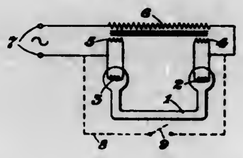


1. The combination with a traveling conveyor; of an object supporting hook caused thereby to travel therewith; a dislodging hook for removing the object from the supporting hook; mechanism in actuating relation to the dislodging hook to lower the dislodging hook and the object, said mechanism including means for thereafter lifting the dislodging hook to position the object to be caught by and redeposited upon the supporting hook; and means for coordinating the movement of said mechanism and said conveyor, whereby the dislodging hook is caused to overtake the supporting hook.

1,906,037. ELECTRODE IN DISCHARGE TUBES. GUSTAV ZECHER and JOHANNES BRUIJNES, Eindhoven, Netherlands, assignors, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Jan. 6, 1926, Serial No. 79,590, and in the Netherlands Mar. 28, 1925. 8 Claims. (Cl. 176—126.)

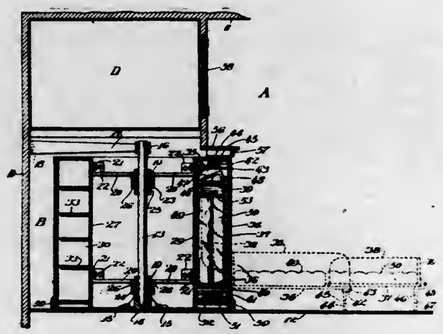
1. A discharge tube with positive column discharge and a leading-in conductor in the neighbourhood of which a portion of the wall of the tube is coated with a conductive layer which is at least partly covered by a magnesium coating, this coating serving as an electrode.

1,906,038. INSTALLATION SUITABLE FOR THE IRRADIATION OF SUBSTANCES WITH ULTRA-VIOLET LIGHT. GUSTAV ZECHER, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, Corporation of New York. Filed July 9, 1929, Serial No. 377,025, and in the Netherlands Sept. 8, 1928. 3 Claims. (Cl. 99—2.)



1. An installation adapted for the irradiation of substances with ultra-violet light, comprising a casing, an electric discharge tube having a gaseous filling mounted thereon, a vessel to contain the substance to be irradiated also mounted on said casing, the said discharge tube being provided with a ring for closing off the top of said vessel, the said vessel having a rim, and means for pressing said rim against said ring.

1,906,039. GASEOUS ELECTRIC DISCHARGE DEVICE. GUSTAV ZECHER, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed July 22, 1932, Serial No. 624,126, and in the Netherlands July 25, 1931. 4 Claims. (Cl. 176—124.)



1. In combination an electric discharge device comprising a container, a gaseous atmosphere therein, electrodes sealed therein, at least one of said electrodes having

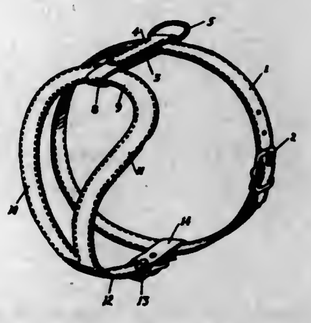
high electron emission characteristics when heated and a circuit for said device comprising a transformer, the primary of said transformer being connected in series with the discharge path in said device and serving as the sta-

bilizing impedance for the discharge in said device, the secondary of said transformer being connected to said thermionic electrode and adapted to supply the heating current for said electrode.

1,906,040. BUILDING STRUCTURE. GUSTAF ALEXANDER, Chicago, Ill. Filed Apr. 3, 1931. Serial No. 527,485. 6 Claims. (Cl. 20—1.11.)

1. In a building structure of the character described, a main compartment, an adjoined auxiliary compartment, the partition wall between said compartments having a communicable opening of given dimensions, and a multiple utility unit rotatable about a vertical axis within said auxiliary compartment, said utility unit comprising a plurality of separate utilitarian compartments each successively brought into cooperate relation to said main compartment through the communicable opening between the latter and said auxiliary compartment, and doors on the partition wall at the sides of said communicable opening cooperating with the positioned utilitarian compartment of said rotatable multiple utility unit for closing said communicable wall opening and releasably holding, said utility unit in its cooperatively set position.

1,906,041. METHOD FOR THE FORMATION OF FILAMENTS AND THE LIKE OF A CELLULOSE ESTER. HENRI LOUIS BARTHELEMY, Milan, Italy, assignor to Ruthaldo Company Inc., New York, N. Y., a Corporation of New York. Filed July 28, 1927, Serial No. 209,160, and in France Dec. 28, 1926. 2 Claims. (Cl. 18—54.)

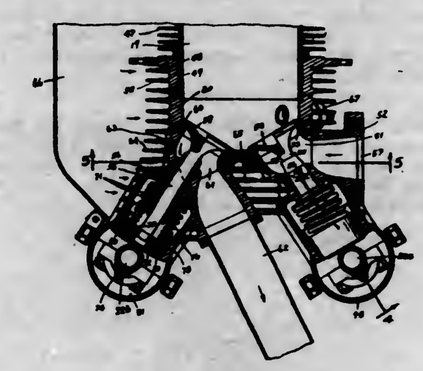


1. A method of manufacturing artificial threads which consists in injecting an acetone solution of cellulose acetate into a mixture of a polyhydric alcohol and a hydrocarbon boiling above 80° C. which mixture will extract acetone from the threads but is not a solvent of cellulose acetate, and thereafter collecting, rinsing and drying the threads thus formed.

1,906,042. SPINNING CELL FOR THE MANUFACTURE OF ARTIFICIAL FILAMENTS WITH AUTO-RECOVERY OF THE VOLATILE SOLVENTS. HENRI LOUIS BARTHELEMY, Rome, Ga. Filed Sept. 14, 1929. Serial No. 392,612. 6 Claims. (Cl. 18—8.)

1. Apparatus for dry spinning filaments of cellulose esters or ethers dissolved in organic volatile solvents and the like, comprising a closed spinning cell containing a confined body of air or gases and having two superposed portions, an inlet for admitting solution to the nozzle in the upper portion and an outlet for the filament in the lower portion, a spinning nozzle in the upper portion of the cell, means for heating the major portion of the cell exterior to the cell, means for cooling the cell adjacent the outlet, means exterior to the cell for preventing passage of air or gases into or out of the cell thermal insulating means between the heated portion and the cooled portion through the filament outlet passage, and means for withdrawing the solvent condensate from the cooled portion of the cell.

1,906,043. DOG HARNESS. MAX BERNSTEIN, Cincinnati, Ohio. Filed Feb. 4, 1931. Serial No. 513,800. 2 Claims. (Cl. 119—96.)

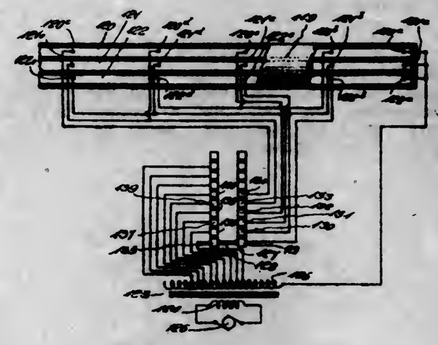


1. A harness of the type described comprising a body strap, a collar, said collar comprising an elongated loop wider at the top and terminating in a unitary strap at the bottom, said collar and strap being formed from a single flat piece of material without seams, means for securing the upper portion of said collar to said body strap, and means for securing the lower strap of said collar to the lower portion of said body strap.

1,906,044. IMPROVING CRACKED PETROLEUM DISTILLATES. ROBERT E. BURK, Cleveland, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 9, 1929. Serial No. 384,798. 5 Claims. (Cl. 44—9.)

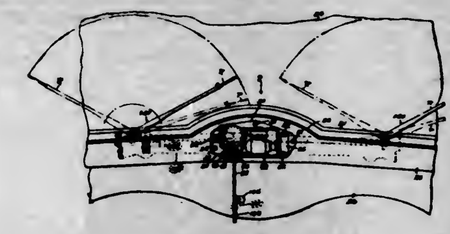
1. A volatile cracked petroleum distillate motor fuel treated with about 0.0004 to 1 per cent of a reagent selected from the group consisting of semicarbaside, derivatives of semicarbaside in which substituent radicles are in the 4 position, and hydrazines containing an aromatic radicle except mono-naphthyl.

3. A volatile cracked petroleum distillate motor fuel treated with about 0.0004 to 1 per cent of a hydrazine containing an aromatic radicle except mono-naphthyl.



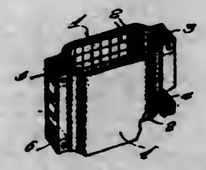
1,906,045. AVIATION ENGINE. LOUIS CHEVROLET, Baltimore, Md., and RUSSELL J. PARRISH, Indianapolis, Ind., assignors, by mesne assignments, to The Glenn L. Martin Co., Baltimore, Md., a Corporation of Maryland. Filed June 24, 1929. Serial No. 373,209. 7 Claims. (Cl. 123—59.)

1. In an internal combustion engine the combination of a plurality of individual cylinders arranged in straight line formation, a crank shaft associated with each cylinder and coincident with said alignment, a cam shaft likewise in alignment therewith and positioned oppositely with respect to the cylinders and at the remote end from said crank shaft, a multiple section gear-chain housing separably attached to said engine and connecting one end of the cam shaft and crank shaft, and resilient means interposed between said sections to compensate for laterally misaligning stresses applied to said sections.



1,906,046. ELECTRICAL CONTROL SYSTEM. BEN J. CHROMY, Hopkins, Minn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Original application filed May 23, 1929, Serial No. 365,534. Divided and this application filed July 12, 1930. Serial No. 467,602. 4 Claims. (Cl. 177—346.)

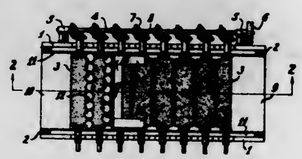
2. In a visual display system, a multiplicity of parallel extending tubes of transparent material, a plurality of glow discharge electrodes positioned at spaced intervals in each of said tubes, gases of different color characteristics saturating said tubes, and means for applying different potentials across separate sets of said electrodes in each of said parallel extending tubes for producing ionizing effects in predetermined order in differing parts of said



tubes for producing a predetermined composite color effect for effecting a visual display according to a particular pattern.

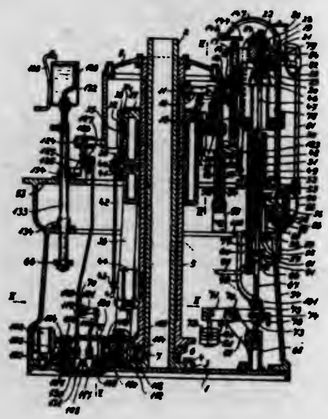
1,906,047. WINDSHIELD CLEANER. ROBERT M. CRITCHFIELD and JOHN W. LAWSON, Anderson, Ind., assignors to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Feb. 20, 1929. Serial No. 341,489. 16 Claims. (Cl. 15—255.)

1. In a windshield cleaner, a wiper shaft, motor driven instrumentalities connected with said wiper shaft, a motor for driving said instrumentalities, said instrumentalities including a rack bar, a bracket supporting said rack bar, contact elements supported on said bracket, and normally in circuit closing relation, means on said rack bar for actuating said contact elements to circuit open and circuit closed relation, upon predetermined movements of said rack bar.



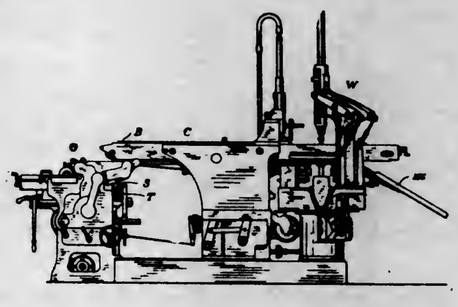
1,906,048. THERMIONIC TUBE. CHESTER L. DAVIS, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 29, 1929. Serial No. 335,860. 3 Claims. (Cl. 250—27.5.)

1. An electron tube comprising an enclosing envelop, a cathode, a control grid and an anode mounted therein, a resistance element carried by said anode and a shield



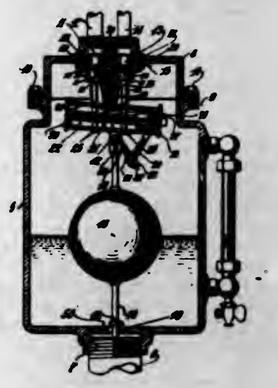
grid supported by said resistance element in spacial relation to said anode and between said anode and said control grid and disposed in an electrical path to receive a predetermined charge from said anode through said resistance element.

1,906,049. CLEAN-OUT MECHANISM. WILLIAM DE BACK, San Jose, Calif., assignor to Food Machinery Corporation, San Jose, Calif., a Corporation of Delaware. Filed Mar. 30, 1931. Serial No. 526,253. 7 Claims. (Cl. 198—127.)



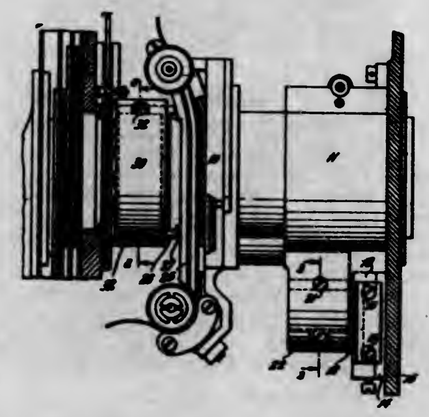
1. In a fruit treating apparatus a plurality of rotatable supporting members forming a fruit supporting runway, means for rotating all of said members in the same direction, a clean out means supported upon said members for advancement thereover by frictional contact therewith.

1,906,050. MACHINE FOR GRINDING AND POLISHING OPTICAL LENSES, SPECTACLE GLASSES, AND THE LIKE. JOSEF DESENBERG, Cologne, Germany. Filed Apr. 15, 1929, Serial No. 355,280, and in Germany Apr. 17, 1928. 17 Claims. (Cl. 51—134.)



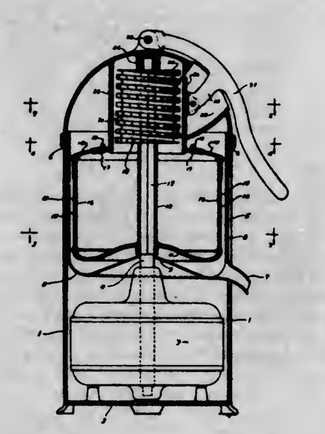
1. A machine for grinding lenses in which the work is subject to coarse grinding, fine grinding and polishing at successive stations arranged in a circular series, the combination of grinding tools rotatably mounted at the respective stations and having the desired surface of curvature, a rotary head, work holders, supports for said work holders, pivotally mounted on said rotary head to permit the oscillation of said work holders about points on the axis of said respective tools at approximately the centers of curvature of the surface to be ground, and means for intermittently rotating said head for moving said work holders from station to station.

1,906,051. CONVEYING SYSTEM. THEODORE A. FEDERWITZ and WALTER T. BAILEY, Philadelphia, Pa., assignors to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1928. Serial No. 321,635. 54 Claims. (Cl. 93—54.)



1. In the art of wrapping boxes, the method which comprises moving boxes and individual wrappers in the same direction toward a wrapping station, during intervals in which the wrappers are stationary, effecting adhesive engagement between wrappers in succession and individual boxes, and continuing moving the boxes and adherent wrappers in said direction as units in succession to the wrapping station.

1,906,052. BOILER RETURN TRAP. VALENTINE FINA, Milwaukee, Wis., assignor to Milwaukee Valve Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 5, 1928. Serial No. 290,550. 7 Claims. (Cl. 137—103.)

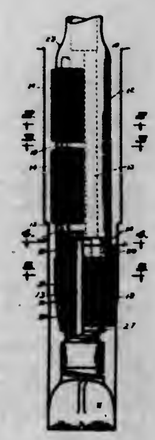


1. In a return trap, a receptacle having ports in one wall, valves for the ports, a member within the receptacle connecting the valves whereby one is open while the other is closed, a guideway carried by the member, a weight movable along the guideway to maintain the valves in either position by gravity, and means including a pivotally connected weight for moving the member to cause the weight to move along the guideway.

1,906,053. FILM GATE SUPPORT FOR MOTION PICTURE PROJECTION MACHINES. LOUIS SIMON FRAPPIER and EWALD BOECKING, Brooklyn, N. Y., assignors to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Original application filed June 26, 1929, Serial No. 374,676. Divided and this application filed July 22, 1930. Serial No. 469,669. 6 Claims. (Cl. 88—17.)

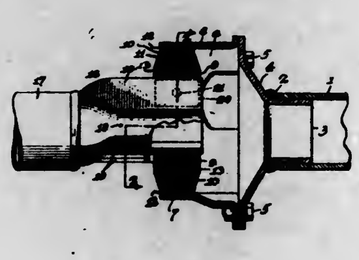
1. In a projection machine, a supporting housing for a film gate, a pin carrying said housing and having a pair of oppositely disposed shoulders and screws threaded in said housing and engaging said shoulders for rotatably adjusting said housing about said pin.

1,906,054. FRUIT JUICE EXTRACTOR. PAUL S. FREESE, Marietta, Ohio, assignor of one-fourth to Ira J. Dodge, Marietta, Ohio. Filed Apr. 22, 1930. Serial No. 446,884. 19 Claims. (Cl. 146—3.)



2. In a fruit juice extractor, a casing having an inlet passageway, a cylindrical grinder in said casing, means in said passageway to force fruit into said casing against the grinder, a centrifugal basket positioned to receive crushed fruit from said casing, and a common means for rotating the grinder and the basket.

1,906,055. RIBBON REEL. BERTRAM J. GOLDSMITH, Allentown, Pa., and JOSEPH W. STARR, New York, N. Y. Filed Apr. 8, 1931. Serial No. 528,572. 8 Claims. (Cl. 242—119.)



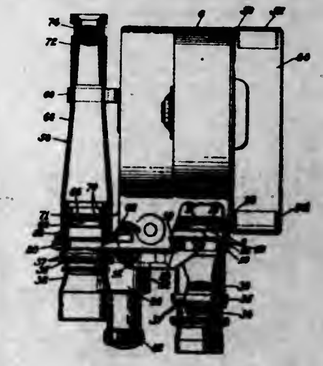
1. A ribbon reel comprising edge sections upon which a length of ribbon is to be wound, and opposed extensions at each end of said edge sections flexed toward each other by said ribbon to form arcuate supports therefor.

1,906,056. UNDERREAMER. FRANK A. GOLISH, South Gate, Calif., assignor of one-half to George E. Fentress, Los Angeles, Calif. Filed Apr. 8, 1929. Serial No. 353,462. 6 Claims. (Cl. 255—74.)

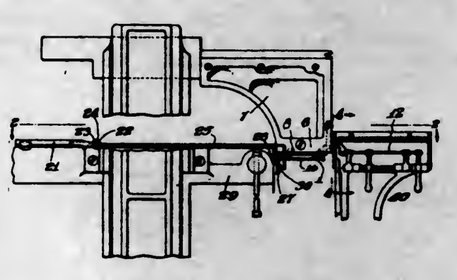
1. In a reamer adapted to function when rotated right-hand, a body, a wall engaging member projected in fixed position from one side of said body; a journal portion formed on said body, longitudinally adjacent said wall engaging member and concentric with the axis of revolution of said body; an eccentric bushing rotatably mounted on said concentric journal; stops on said bushing and said body cooperating to fix limits to the rotation of said journal within said bushing, the limit to said rotation in a left-hand direction being that at which the throw of said eccentric bushing is on the same side of said body as said wall engaging member and the limit to said rotation in a right-hand direction being that at which said throw is on the side of said body opposite said wall engaging member; and a cutter rotatably mounted on said eccentric bushing.

1,906,057. UNIVERSAL JOINT. FREDERICK M. GUY, Detroit, Mich., assignor to Guy-Murton Incorporated, Detroit, Mich., a Corporation of Michigan. Filed Sept. 13, 1929. Serial No. 392,353. 3 Claims. (Cl. 64—96.)

1. In a universal joint, the combination of a casing of internal angular formation in cross-section, a member projecting into said casing, a head on said member within said casing and of exterior angular formation with a continuous space between said head and casing, and a yieldable unit including a rubber band and interior and exterior metal rings with said band vulcanized to said rings, said unit being secured within said space between said casing and head.



1,906,058. GARMENT HANGER. MARTIN V. GRAY, Stockton, Calif. Filed Aug. 18, 1931. Serial No. 557,777. 1 Claim. (Cl. 223—64.)

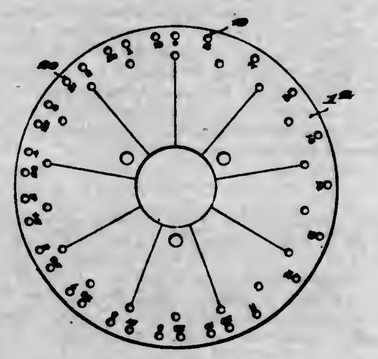


A garment hanger comprising a bar on which to support a garment, a pair of longitudinally spaced clip elements on the top edge of the bar and extending lengthwise thereof, the opposite ends of said elements normally resting on and cooperating with the bar to clamp the adjacent portions of the garment, ears depending from the elements intermediate their ends and straddling the bar, and pivot connections between said ears and the bar; the top edge of the bar, from the ears to the adjacent ends of the elements, being depressed whereby the adjacent portions of the elements may normally lie flush with the bar while permitting them to be depressed to raise the opposite ends of the elements from the bar.

1,906,059. FOCUSING DEVICE FOR CAMERAS. JOHN B. HADAWAY, Swampscott, Mass. Filed Nov. 16, 1929. Serial No. 407,769. 3 Claims. (Cl. 95—44.)

1. A motion-picture camera comprising a housing in the front face of which is located a photographic aperture, a view-finder carried by the housing and located laterally thereof, and a turret rotatably mounted upon the housing and carrying a plurality of photographic lenses, the relative locations of the view-finder, photographic aperture, and turret being such that each of the lenses can be rotated to place the optical axis thereof in alinement with that of the view-finder in focusing the lens, or in alinement with the optical axis of the photographic aperture for locating the lens in picture-taking position.

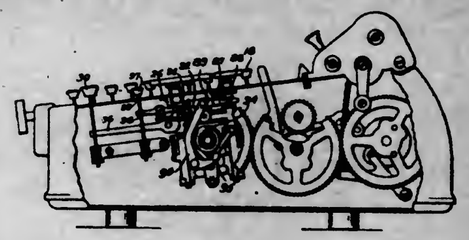
1,906,060. SAFETY ATTACHMENT FOR TYPOGRAPHICAL COMPOSING AND CASTING MACHINES. WARREN G. HAMILTON, Atlantic City, N. J., assignor of one-half to Joseph Ginsburg, Philadelphia, Pa.; Gertrude Hamilton administratrix of said Warren G. Hamilton, deceased. Filed Mar. 12, 1927. Serial No. 174,768. 5 Claims. (Cl. 199—52.)



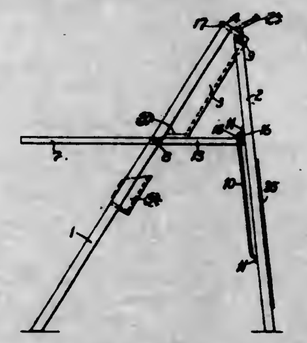
1. In a typographical composing and casting machine of the class including a matrix assembling elevator and a retractible rail for supporting the matrices, capable of being set to cause assembling of matrices at relatively different levels in said assembling elevator, and level regulating means including a manually operable pivot capable of being rotated into two different positions, to present lines of assembled matrices at relatively different levels to the casting mechanism, a safety device governed by the setting of both said retractible rail and said level regulating means, including eccentric means carried by said manually rotatable pivot, and a spring-retracted catch-slide operable by said eccentric against the force of the retracting spring thereof, said catch-slide being in operative alignment with said rail when said rail is in its inner position, and being out of alignment with said rail when the latter is in its retracted position, and being adapted to engage said rail, thereby to lock said matrix assembling elevator against upward movement when advanced towards the rail against the force of the retracting spring thereof, while said rail is in its inner position.

1,906,061. SEAT. WALTER M. HANSON, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Dec. 19, 1930. Serial No. 503,456. 2 Claims. (Cl. 155—85.)

1. In a device of the class described, a pair of seat ends, a seat supporting member secured therebetween and provided with a centrally disposed bore, a dished member secured within said bore, a disc having a peripheral flanged edge secured to said seat supporting member, a member having a dished portion adapted to fit within the peripheral flanged edge of said disc, a clamping plate fitting within said dished portion and a bolt secured to said dished member and said clamping plate for securing said member rotatably with respect to said clamping plate and said disc.



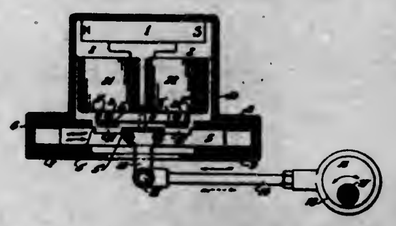
1,906,062. INDEX CENTER. JOHN HARLEY, Glasgow, Scotland, assignor to Brown & Sharpe Mfg. Co., Providence, R. I. Filed Sept. 22, 1931. Serial No. 564,406. 4 Claims. (Cl. 90—57.)



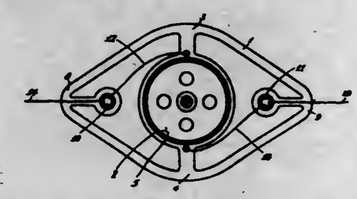
3. An index centering disc, comprising an index plate provided with a standard series of spaced holes, and a second circular series of spaced holes which latter are offset circumferentially from the first named series by an amount which is equivalent to the number of minutes on the work, said last named series of holes extending into the plate a distance less than one-half the thickness of the latter, and said plate having markings on both sides to provide for cranking in a clockwise or counter clockwise direction.

1,906,063. KEYBOARD FOR REGISTERS. STUART HILDER, Glencarlyn, Va., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Oct. 8, 1931. Serial No. 567,635. 6 Claims. (Cl. 235—82.)

3. In a register having keyboard mechanism comprising a plurality of series of keys settable selectively in accordance with an amount to be registered, means for holding said keys in set position, and registering means settable by said keys; spring-actuated releasing means operable to discharge the holding means, a latch adapted to restrain the releasing means, means operable upon setting movement of any one of said keys to release said latch, and means operable by the registering means to retension and latch the releasing means.

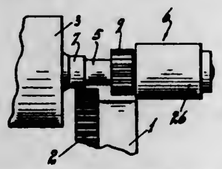


1,906,064. FOLDING DESK. EDWARD S. HODGSON, East St. Louis, Ill. Filed Feb. 25, 1932. Serial No. 594,983. 5 Claims. (Cl. 45—69.)



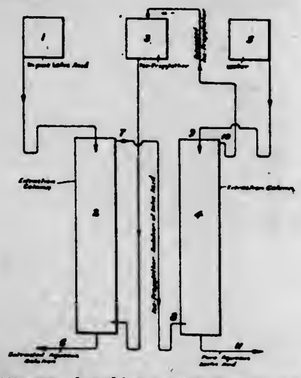
1. A folding desk comprising, in combination, a desk compartment, a pair of front legs secured at their upper portions on opposite sides of said compartment, a pair of rear legs pivotally mounted at their upper ends on opposite sides of said compartment at the upper end thereof, a lid for said compartment pivotally mounted between the front legs, and arms extending rearwardly from each side of said lid and having sliding engagement with said rear legs, whereby the legs may be moved together or spread apart by raising or lowering said lid.

1,906,065. MAGNETO-ELECTRIC MACHINE. EARL E. HOFFMAN, Springfield, Mass. Filed Oct. 2, 1929. Serial No. 396,819. 21 Claims. (Cl. 171—209.)



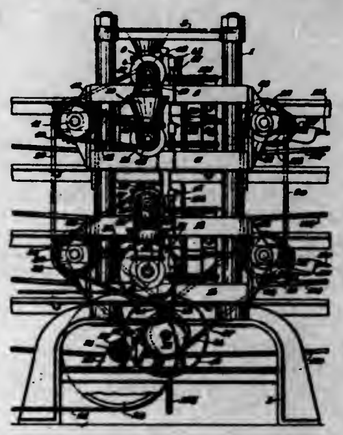
3. A magneto electric machine comprising a core member, current generating coils on said core member, a reciprocable permanent magnet located between the polar projections of the core members for varying the reluctance of the magnetic circuit in the core members.

1,906,066. DIAPHRAGM AND COIL SUPPORT. GILLIS HOLST, RICHARD SHEPHERD, and PIETER HENDRIK ABRAHAM VAN LIS, Eindhoven, Netherlands, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 5, 1930, Serial No. 473,266, and in the Netherlands Sept. 3, 1929. 6 Claims. (Cl. 179—115.5.)



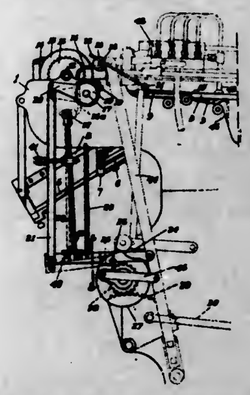
4. A body for centering and supporting the movable part of a device for converting electrical oscillations into acoustical vibrations or inversely, comprising a pressed mass of "Bakelite" whereby a dead beat member is obtained.

1,906,067. STARTER DRIVE. GEORGE H. HOWARD, Alhambra, Calif. Filed Nov. 30, 1931. Serial No. 578,089. 10 Claims. (Cl. 74—7.)



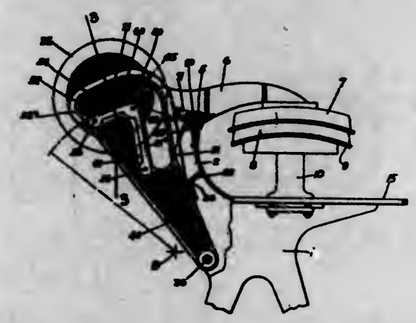
1. In combination with an engine fly-wheel, a gear on the fly-wheel, a starting motor, and an armature shaft on the moor of a starter drive comprising a sleeve shaft secured to the armature shaft a pinion gear slidably mounted on said sleeve shaft, a flange on said pinion gear, a cam sleeve slidably mounted on the sleeve shaft, said cam sleeve having a cam slot formed therein, a key on the sleeve shaft extending into said cam slot, a flange on the cam sleeve, and a spring positioned between said flanges and surrounding the cam sleeve, and means removably securing the ends of said spring to said flanges, and a housing extending over the spring and the flanges, and means securing the housing to the flanges.

1,906,068. LACTIC ACID. JOSEPH ADAM JENEMANN, Philadelphia, Pa., assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Mar. 2, 1931. Serial No. 519,353. 8 Claims. (Cl. 260—122.)



1. The process of making purled lactic acid which comprises the steps of contacting technical aqueous lactic acid with isopropyl ether, separating the isopropyl ether lactic acid solution formed from the aqueous layer, contacting said isopropyl ether lactic acid solution with fresh water and separating the aqueous solution of purified lactic acid from the extracted isopropyl ether.

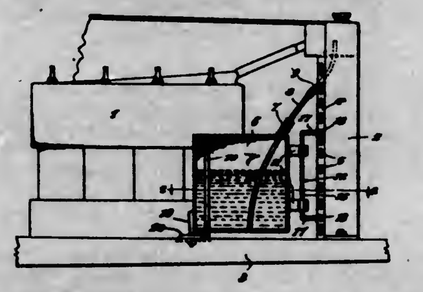
1,906,069. METHOD OF AND MACHINE FOR PRODUCING CANDY UNITS. WILLIAM B. LASKEY, deceased, Brooklyn, N. Y., by Rose Bagnais Laskey, executrix, Brooklyn, N. Y., assignor to Mason, Au & Magenheimer Confectionery Manufacturing Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Mar. 27, 1929. Serial No. 350,179. 12 Claims. (Cl. 107—4.)



1. The method of forming a plurality of candy units from a plastic candy mixture consisting in conveying the mixture along a path of movement that is folded upon itself to form a plurality of parallel paths of movement, exercising pressure on the mass so conveyed, discharging a plurality of rows of streams of mixture by the pressure so created in a lateral direction, and thereupon severing said streams into units.

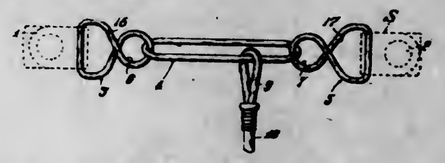
1,906,070. ELEVATOR STRUCTURE AND CONTROL FOR PRINTING PRESSES. CHARLES L. LOW, Benton Harbor, Mich., assignor to Lisenby Manufacturing Company, Fresno, Calif., a Corporation. Original application filed Sept. 10, 1929, Serial No. 391,606. Divided and this application filed Sept. 2, 1930. Serial No. 479,133. 5 Claims. (Cl. 271—62.)

1. In a printing press, a paper elevator including fixed bars having a downward slope toward their rear ends, slides engaging the bars, a substantially horizontal pile supporting table supported by the slides, means operated in conjunction with the operation of the press for moving the slides along the bars and guide bars for the side of the pile fixed in parallel relation with and above said first named bars, and extending through a transverse slot in the table.



1,906,071. GARMENT PRESS. FREDERICK W. LINDEMANN, St. Paul, Minn., assignor to The Unipress Company, Incorporated, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 9, 1928. Serial No. 318,170. 9 Claims. (Cl. 68—9.)

1. A frame, a buck, a rockable presser head arm pivoted to the frame and having a head engageable with the buck, a link swingingly pivoted to the frame, a flywheel rotatable upon the presser head arm, connections between the flywheel and the link to cause the flywheel to rotate and the link to swing when the presser head arm is rocked, the link being weighted and arranged to act by gravity to rotate the wheel and cause a retraction of the presser head.

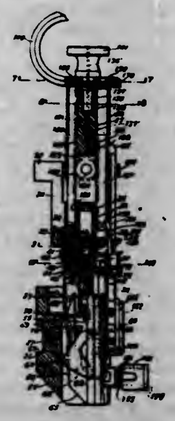


5. A press having a frame having a buck, a pivoted arm having a head engageable with the buck, an element rotatably journaled upon the arm, a link pivoted to the frame and having means guidingly cooperating with the rotatably journaled element, said guide means having a slot eccentric to the link pivot and so related to the arm pivot as to exert a gradually increasing force on the arm during the last part of its motion to final pressing position, and having a slot portion angularly related to the first mentioned slot portion, said means and said guide means positively connecting said arm and said link for movement in unison.

1,906,072. OVERFLOW TRAP FOR AUTOMOBILE RADIATORS. DAVID LUMSDEN, Sikeston, Mo. Filed Dec. 22, 1930. Serial No. 504,123. 10 Claims. (Cl. 123—174.)

1. In combination with a motor vehicle including a chassis, a radiator supported by the chassis, and provided with an overflow pipe, a bracket secured to said radiator at one side thereof and including a vertically disposed rod, a receptacle disposed rearwardly of the radiator at the side thereof carrying said bracket, hinges extending forwardly from said receptacle and engaged about the rod of said bracket to mount the receptacle for swinging movement and means to releasably secure the receptacle in a set position.

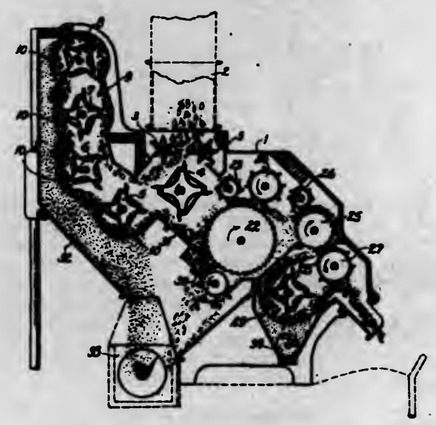
1,906,073. DOG COLLAR. GRACE V. F. MCCARTY, Park Ridge, Ill. Filed Feb. 9, 1931. Serial No. 514,460. 3 Claims. (Cl. 119—106.)



1. In a device of the character described, the combination of a strap portion and a link structure connecting the ends of the strap portion, the link structure consisting of two end links and an intermediate rigid longitudinally extended link, each end link being formed into two loops consisting of intersecting leg portions of the same piece of wire, one loop of each link being interlinked with the intermediate rigid longitudinally extended link and the other loop of each end link being connected with an end of the strap portion.

1,906,074. PROCESS OF THE PRODUCTION OF ZINC SALT SOLUTIONS. ALBERT THOMAS MEETES, Newport, Del., assignor, by mesne assignments, to Krebs Pigment & Color Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 18, 1931. Serial No. 516,839. 3 Claims. (Cl. 23—125.)

1. The process of dissolving the zinc content of an oxydic zinciferous material containing acid soluble silicic acid compounds which comprises adding sulfuric acid to an aqueous suspension of said material and regulating the addition of the acid to maintain the concentration of the acid during the whole time it is in contact with said material at a concentration which does not exceed 2%.

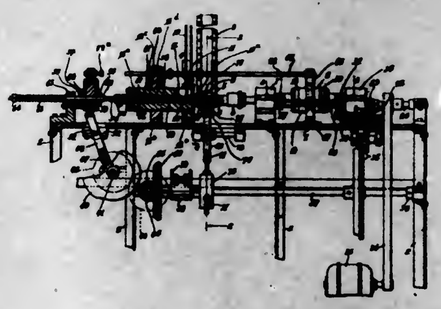


1,906,075. STITCHING MACHINE. IRVING R. METCALF, St. Charles, Ill., assignor to Latham Machinery Company, a Corporation of Illinois. Filed Mar. 25, 1931. Serial No. 525,057. 28 Claims. (Cl. 1—2.)

1. A wire stitching mechanism comprising a staple forming mechanism, a staple driving mechanism, and an

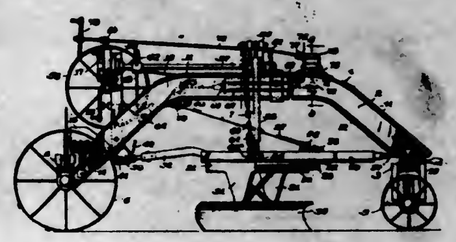
air cushion mechanism associated with said staple forming and staple driving mechanism for permitting a differential motion between said staple forming and driving mechanism.

1,906,076. COTTON CLEANING EQUIPMENT. JOHN E. MITCHELL, Dallas, Tex. Filed Apr. 17, 1931. Serial No. 530,768. 7 Claims. (Cl. 19—36.)



1. Cotton cleaning equipment comprising an upright housing having a series of separated bladed threshing cylinders mounted in superposed co-operative relation therein, means for delivering the cotton to be cleaned into proximity to the lowermost of said threshing cylinders at one side thereof, whereby said cotton will be successively projected, by the blades of the threshing cylinders, from the lowest to the highest cylinder along one side of the series of cylinders, and will then be passed downward from the highest to the lowest cylinder along the other side of the series of cylinders, and means for delivering the cotton from the lowermost of said threshing cylinders.

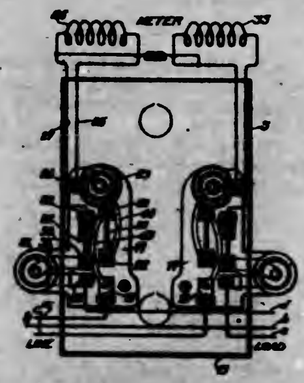
1,906,077. RADIATOR. ARTHUR B. MODINE, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Original application filed Sept. 29, 1925, Serial No. 58,540. Divided and this application filed July 5, 1929. Serial No. 376,100. 4 Claims. (Cl. 257—130.)



1. In a radiator, a plurality of straight tubes elongated in cross section, a member having longitudinally disposed spaced plates extending from one tube to another of a pair of tubes and providing a plurality of air passages which extend from one edge of said tubes to the opposite edge thereof, said member having a portion arranged between each pair of said first mentioned plates and providing a plurality of air passages between pairs of said first mentioned plates, said member having air engaging lips extending into said last mentioned passages and said member having apertures, said apertures being located adjacent said lips, and said lips and apertures respectively providing means for engaging and circulating air from one of said last mentioned passages to the other.

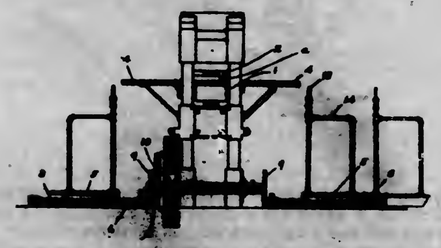
1,906,078. NUTTING MACHINE. ROBERT M. MORGAN, Alhambra, and STEPHEN W. HARDEN, Maywood, Calif., assignors, by mesne assignments, to Pacific Coast Steel Corporation, San Francisco, Calif., a Corporation of Delaware. Filed Apr. 24, 1929. Serial No. 357,659. 10 Claims. (Cl. 10—155.)

2. In a device of the class described, the combination of means for rotating a bolt, means for feeding a nut to the bolt so that the nut is screw-threaded on the bolt, and reversible clutch means operating automatically for reversing the rotation of the bolt to back the nut on the threads of the bolt after the nut has been threaded a predetermined distance on the bolt.



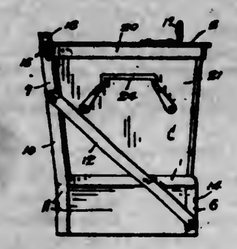
1,906,079. BLADE ADJUSTING MECHANISM FOR ROAD MACHINES. WILLIAM G. MORSE, Flossmoor, and FRED D. WILSON and HERBERT C. WURSTENBERG, Harvey, Ill., assignors to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1932. Serial No. 591,826. 14 Claims. (Cl. 37—156.)

1. In a road machine provided with a road working blade, operating mechanism for adjusting the position of said blade and including a blade lifting shaft at each side of the machine, tension means connected to said shafts and to each other, and means for simultaneously adjusting said tension means.



1,906,080. SWITCH AND FUSE MOUNTING. THOMAS E. MURRAY, Jr., Brooklyn, N. Y., assignor to Metropolitan Device Corporation, a Corporation of New York. Filed Sept. 25, 1925. Serial No. 58,612. 7 Claims. (Cl. 247—2.)

1. The combination with a metal box having a cover, of a plurality of electric circuit connections, a separate support of insulating material for each set of circuit connections adapted to carry switch and fuse devices within said box, each of said supports having a lateral extension

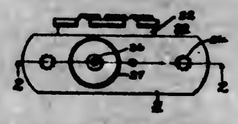


adapted to project through an outer wall of the box and to carry fuse sockets in circuit with the terminals within the box.

1,906,081. SAFETY DEVICE. ANDREW C. NICOLS and MORRIS C. MOORE, Girard, Ohio. Filed May 27, 1932. Serial No. 613,986. 8 Claims. (Cl. 60—1.)

1. In combination with a power press including a movable member, a movable platform adapted to sustain and carry an attendant and standing normally in a position affording access by an attendant so carried to the open press, and means rendered effective by the closing movement of the movable member of the press for moving said platform away from the position defined.

1,906,082. GARBAGE CAN AND HOLDER THEREFOR. PETER C. NIELSEN, Pocatello, Idaho. Filed Mar. 27, 1931. Serial No. 525,008. 1 Claim. (Cl. 248—11.5.)

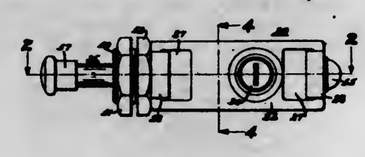


In a base for a garbage receptacle the combination of a base formed of a rectangular piece of angle iron having the corners bent down and having the interior space thus formed filled with concrete; back irons raised into a U-shaped back for said base, said back having slots in the sides thereof near the top; and a lid carried on a horizontal rod, said rod being carried in said slots, the lid being adjustable to fit any size of can set on the base.

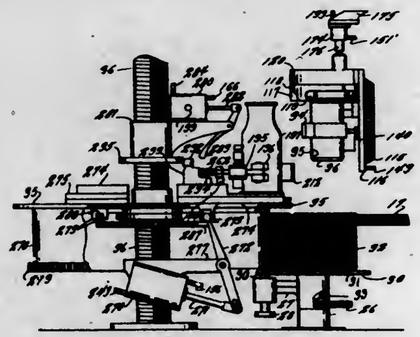
1,906,083. SWITCH. HARRY E. NORVIEL and VANCE SCOTT, Anderson, Ind., assignors to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed May 22, 1931. Serial No. 539,210. 5 Claims. (Cl. 200—11.)

1. An electric switch comprising in combination; a housing having parallel walls, one of which is provided with stationary contacts; a rotatable nonconducting member having a plurality of peripheral arms; a contact plate loosely connected to the arms of the nonconducting member to permit relative axial movement therewith but restraining rotary movement thereof; a shaft for driving the nonconducting member; a resilient means surrounding the driving shaft and interposed between the contact plate and the nonconducting member urging said members apart; and means cooperating with two of said arms to limit the movement of said non-conducting member in either direction of rotation.

1,906,084. SWITCH. HARRY E. NORVIEL, deceased, Anderson, Ind., by Anderson Banking Company, executor, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Apr. 13, 1932. Serial No. 605,091. 11 Claims. (Cl. 200—11.)



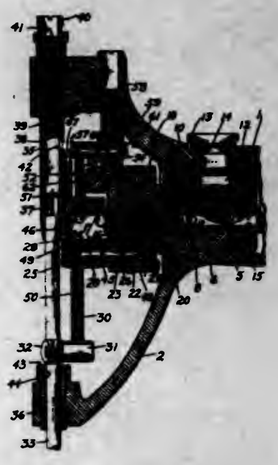
1. An electric switch comprising, in combination, an insulating support; a conducting plate carried by said support; a terminal contact post connected with said plate; stationary terminal contacts carried by said support; a circuit closing means, said means pivoted upon said post and provided with contact bosses and apertures, said apertures provided with ratchet engaging edges and said bosses connecting one of said stationary terminal contacts with said conducting plate; a driving plate having tangs extending from the plane of said driving plate to engage said ratched edges; a U-bracket pivoted upon said post, one arm of said bracket having an opening receiving an ears of said driving plate; manually operated means for moving said bracket in one direction to rotate said driving plate on said circuit closing means in one direction; a spring to turn said bracket and driving plate in the opposite direction; and spring means urging said driving plate and circuit closing means toward said stationary contacts.



1,906,085. ELECTRIC SWITCH. HARRY E. NORVIEL, deceased, Anderson, Ind., by Anderson Banking Company, executor, Anderson, Ind., assignors to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Apr. 13, 1932. Serial No. 605,092. 8 Claims. (Cl. 200—16.)

1. An electric switch comprising in combination; a housing comprising a pair of blocks recessed at their ad-

jacent faces to form a chamber provided with a plurality of internal grooves; terminals insulatingly supported by the blocks and extending into the grooves; end members for securing said blocks together; an actuator slidably supported by one of said end members; a contact member provided with resilient tongues, said contact member being insulatingly carried by said actuator and the tongues extending into and slidable within the grooves; and means for moving the contact member in circuit connection with a terminal.

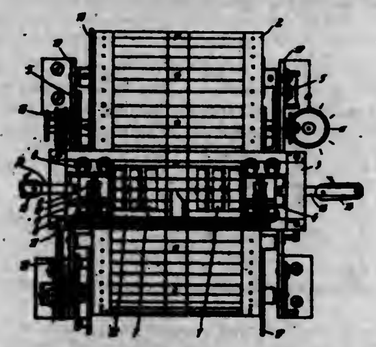


1,906,086. GLASS BLANK TRANSFER. FRANK O'NEILL, Toledo, Ohio. Original application filed Aug. 19, 1918, Serial No. 250,488. Divided and this application filed Sept. 7, 1929. Serial No. 390,956. 18 Claims. (Cl. 49—9.)

17. A glassware fabricating machine comprising a blank mold table, a blank mold thereon, a neck mold associated with the blank mold, means for constantly supporting said molds in position to be closed in axial alignment with each other, a blow mold table, a blow mold thereon, means for rotating said tables, the rotation of said mold tables causing the blank and neck mold and the blow mold simultaneously to approach each other at a transfer zone, and the said parison and neck molds and the blow mold being so positioned on their respective tables that they come into alignment on a line between the centers of the said tables in said transfer zone, means operating in synchronism with the rotation of the mold table for opening the blank mold adjacent the transfer zone to leave a previously formed parison suspended from the neck mold, means for opening the blow mold, means actuated in timed relation to the arrival of the molds at the transfer zone for imparting a lateral component of motion to the open blow mold toward the suspended parison and to cause the blow mold to approach axial alignment with the parison, means for closing the blow mold about the parison, means for then opening the neck mold to release the parison in the blow mold, whereby the parison is transferred to the blow mold, the means for moving the blow mold laterally and for closing the blow mold being so designed and timed with respect to the rotation of the mold tables that the delivery of the parison to the blow mold is effected substantially on the line connecting the centers of the said tables.

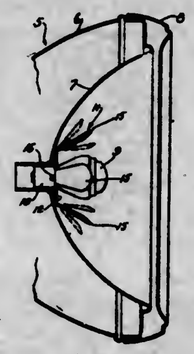
1,906,087. NEEDLE-THREAD TAKE-UP MECHANISM FOR SEWING MACHINES. WILLIAM NELSON PARKES, deceased, Brooklyn, N. Y., by Jeremiah V. B. Parkes, administrator, Newark, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 26, 1932. Serial No. 588,894. 18 Claims. (Cl. 112—241.)

1. In a sewing machine, a rotary shaft, a reciprocatory needle-bar, a needle-bar reciprocating link, a thread take-up member, and a tubular crank-pin carried by said rotary shaft provided exteriorly and interiorly of the crank-pin with bearings for said link and take-up member.



1,906,088. PULP TREATING PROCESS AND THE PRODUCT. MAURAN F. PARSONS, Millinocket, Me. Filed July 5, 1928. Serial No. 290,717. 6 Claims. (Cl. 92—3.)

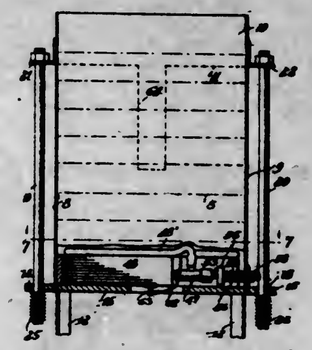
1. A fiber composition board comprising a compressed mass of sized wheat straw fibers and a wood pulp filter, the wheat straw fiber bundles being but slightly disintegrated and of various lengths.



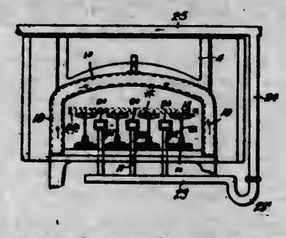
4. The method of obtaining from vegetable fiber a lumber like product having insulation properties which comprises disintegrating wheat straw into suitable lengths, then digesting the same in a low percentage alkali concentration for a period approximating two hours under pressure, then sizing said digested product and macerating the same to partially break down the fiber bundles, and then forming boards with hydrated wood paper making pulp under pressure.

1,906,089. MEASURING INSTRUMENT. PAUL PASCHEN and GEORG MOHR, Nuremberg, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed May 19, 1930, Serial No. 453,561, and in Germany May 28, 1929. 11 Claims. (Cl. 101—1.)

1. In a metering and recording instrument, a printing device, comprising types arranged on the one side of the sheet to be printed upon, a friction body arranged on the other side of said sheet, means suitable for moving the friction body under pressure against the sheet and with a sliding movement along the part of the sheet covering the types to be printed, for producing an imprint thereof on said other side of the sheet by abrasion due to the friction between the sheet surface and the friction body.



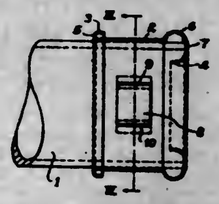
1,906,090. ANTIGLARE DEVICE. JOSEPH PEKAR, Bridgeport, Conn. Filed Aug. 28, 1932. Serial No. 630,035. 2 Claims. (Cl. 240—48.6.)



1. In an anti-glare device for use with a head-light having a reflector and an electric lamp including a stem portion, a body having a central opening for the passage of the stem of the lamp, said body of greater diameter than the bulb of the lamp, four equally spaced panels projecting from the edge of said body, said panels projecting forwardly of said body to be spaced from and disposed at the respective sides of the globe portion of a lamp having its stem extending through the opening in the body, said panels integral with the body but creased sharply at their connections with it and angularly disposed relative to the body, said body and panels of bendable metal, said panels being relatively narrow at their sharply creased juncture with the body and widest at a point spaced from the body whereby said narrowest portion provides a flexing point to permit the panels to be bent relative to the body to dispose the panels closer to or farther from the globe portion of the lamp, and said panels each of a length less than that of the globe of the bulb whereby the panels do not extend beyond the bulb and will not cast shadows on the edge portion of the reflector.

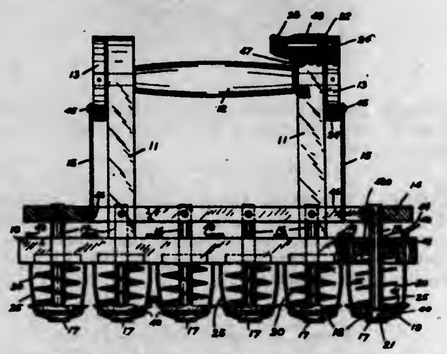
1,906,091. PARACHUTE. JAMES F. PENDERGAST, Leicester, and ERLAND JOHNSON, Geneseo, N. Y. Filed Nov. 22, 1930. Serial No. 497,398. 5 Claims. (Cl. 244—21.)

1. A parachute comprising a dome, a flexible collapsible ring secured to the edge of said dome, a source of fluid pressure, means connecting said source of fluid pressure with said ring for conducting fluid under pressure thereto, a pressure operated valve in said connection, and automatically releasable means for retaining said valve in closed position.



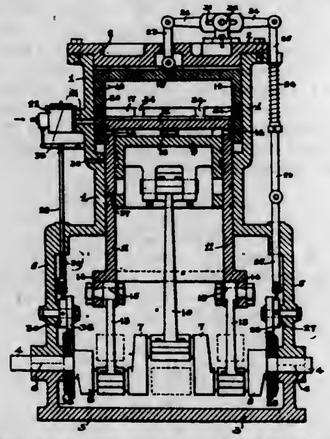
1,906,092. CONVEYER FURNACE. GUY S. PETERSON, East Cleveland, Ohio, assignor to The Strong, Carlisle & Hammond Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 30, 1930. Serial No. 471,865. 5 Claims. (Cl. 263—8.)

1. In a conveyer furnace, in combination, a heating chamber, a cooling chamber, a second cooling chamber, a chain type conveyer comprising a plurality of parallel chains carrying upstanding work supports adapted to run through said chambers in the order named, and channels disposed longitudinally of said conveyer at a level between the top and bottom elements of the chains thereof in said cooling chambers for circulating a cooling medium adjacent the conveyer and beneath the work thereon, said channels extending part of the length of said first cooling chamber and said channels extending the full length of said second cooling chamber.



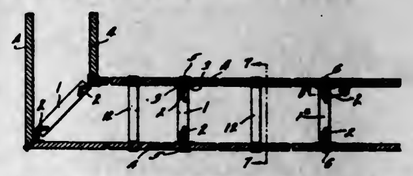
1,906,093. PIPE THREAD PROTECTOR. LUCIEN G. PONCE, Parnassus, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1931. Serial No. 508,849. 2 Claims. (Cl. 137—91.)

2. A pipe thread protector comprising a metal sleeve having its ends crimped to form beads of greater diameter than the outer diameter of said sleeve to constitute the



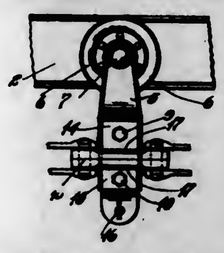
sleeve a structural section, said sleeve having an inner diameter sufficiently greater than the outer diameter of the pipe thread to permit the sleeve to freely slide on said thread, said sleeve being further provided with a pair of parallel slots axially disposed between the beads of said sleeve and a relatively wide clip of soft metal extending between said slots on the outside of the sleeve and having its ends extending in said slots for intimate engagement with a plurality of the threads of the pipe.

1,906,094. EGG MARKING APPARATUS. CHARLES K. POWELL, Dobbs Ferry, N. Y., assignor to Pacific Egg Producers Cooperative, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1929. Serial No. 358,508. 43 Claims. (Cl. 101—379.)



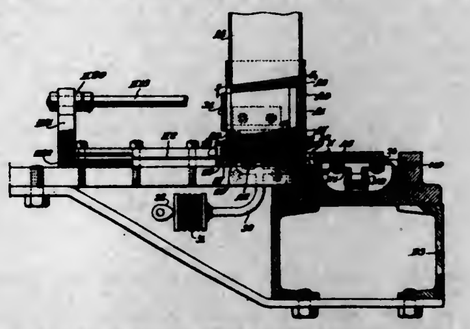
1. Apparatus for marking eggs or the like including, in combination, a plurality of flexible diaphragms forming markers side by side, and means adapted, during the marking operation, to cooperate to flex said markers into marking contours differing from each other as the contours of the eggs to be marked differ from each other.

1,906,095. INTERNAL COMBUSTION ENGINE. ALFRED T. PRENTICE, Valparaiso, Ind. Filed Apr. 21, 1930. Serial No. 445,877. 4 Claims. (Cl. 123—50.)



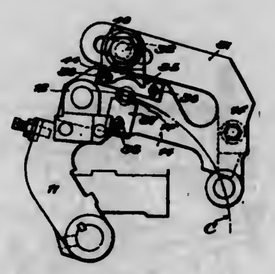
3. A reacting engine, comprising a casing, a shaft in the casing, a plurality of oppositely positioned cranks formed on the shaft, a closed head to the casing, a cylinder having a closed head slidable in the casing with its head in opposition to the head in the casing, a piston slidable within the cylinder, a closed end sleeve between the cylinder and the casing and movable adjacent to and enclosing the cylinder head, connecting means from the cylinder and piston to oppositely positioned cranks of the crank shaft said means comprising a pair of connecting rods for the cylinder and a single connecting rod for the piston, and means for explosively moving the piston and the cylinder head away from each other.

1,906,096. METAL STUDDING. THOMAS D. PRIDDY, Cleveland, Ohio, assignor to The Formed Steel Products Company, Cleveland, Ohio. Filed Mar. 19, 1928. Serial No. 262,894. 12 Claims. (Cl. 72—115.



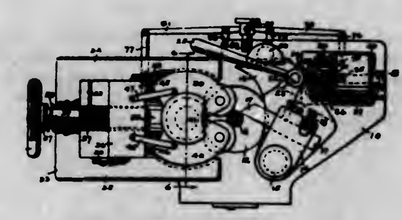
2. Metal studding comprising angle irons of substantially T form, each of said angle irons having a web portion and flanges oppositely extending therefrom, said web portions having irregular conformations, and means extending between and having interlocking engagement with said irregular conformations.

1,906,097. TROLLEY CONSTRUCTION. ALEXIS R. PRIBIL, Saginaw, Mich. Filed Feb. 11, 1931. Serial No. 514,938. 5 Claims. (Cl. 198—189.)



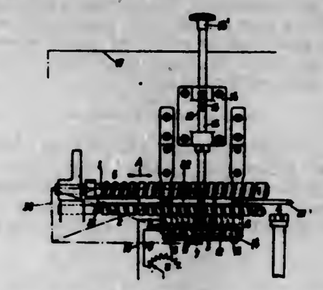
1. A carrier trolley for engaging a conveyor chain, including oppositely disposed pressed steel brackets, the lower ends of which are rigidly secured together in facial contact, and vertically spaced pressed steel clip attachments secured to opposite sides of said brackets for supporting the chain links therebetween.

1,906,098. MATCH PACKAGING MACHINE. RODNEY S. PULLEN, Akron, Ohio, WILLIAM F. CASEY, and GEORGE M. THOMAS, Philadelphia, Pa., assignors, by direct and mesne assignments, to Pullenite Company, a Corporation of Pennsylvania. Filed July 7, 1930. Serial No. 466,185. 5 Claims. (Cl. 226—7.)



1. In a match-packaging machine, a hopper, a plurality of longitudinal passages beneath the hopper of one-match width, means for alining and feeding the matches into the passages, a longitudinal feeding mechanism concurrently engaging the bottom matches in the several passages to feed the matches longitudinally, a conveyor transversely movable with respect to the hopper and having a ribbed section to receive the matches between the ribs and air injecting means for intermittently engaging the bottom matches.

1,906,099. NUT MAKING MACHINE. CHARLES A. RICH, Providence, R. I., assignor to Brown & Sharpe Mfg. Co., Providence, R. I. Filed Oct. 20, 1931. Serial No. 569,924. 7 Claims. (Cl. 29—51.)

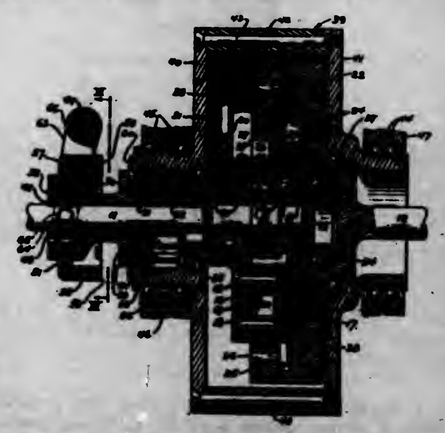


7. In combination with a work transfer arm, a substantially U-shaped member having its arms disposed in spaced parallel vertical planes, one arm of said member being flexible and provided with a work receiving opening, jaws carried by the flexible arm in register with the opening, a depending part carried by the other of said jaws, means to support the U-shaped member with its flexible arm in the path of movement of the transfer arm, said flexible arm having a face to wipingly engage an end face of the work whereby to hold the work on the transfer arm, and means carried by the flexible arm and engageable with the depending part of the other arm for limiting flexing movement of said flexible arm.

1,906,100. ROLLING TURNER. JAMES H. RICHARDSON, Indianapolis, Ind. Filed Jan. 30, 1932. Serial No. 589,795. 10 Claims. (Cl. 82—35.)

1. In a turning device, a plate, a tool holder rockably carried by the plate, a revoluble member carried by the plate, a plurality of posts adjustably carried by the member and selectively limiting the movement of said holder in one direction, a stock rest including a pair of shiftable rollers, a shiftable block controlling the spacing apart of said rollers, a second revoluble member, and a plurality of posts adjustably carried by the second member and adapted to be selectively turned to intercept movement of the block whereby the posts on the two revoluble members may be relatively adjusted to limit the tool holder and arrest the block for the simultaneous cutting of a selected diameter on a piece of stock and the supporting of that stock by the rollers during that cutting.

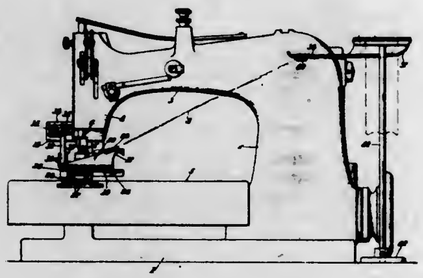
1,906,101. NEEDLE STRAIGHTENING MACHINE AND METHOD. WALTER JOSIAH RICKEY, Helensburgh, and WILLIAM TIVENDALE, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 19, 1930, Serial No. 496,650, and in Great Britain Dec. 30, 1929. 20 Claims. (Cl. 153—39.)



1. The improvement in the art of straightening tempered needles by hammering consisting in conveying the needles to a hammering station, heating the needles to a degree not materially affecting the temper thereof, and hammering them while hot.

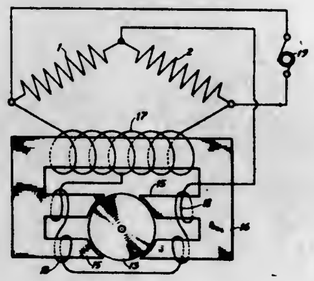
1,906,102. METHOD OF ALKALIZING THE WASTE LIQUORS FROM THE SODA OR SULPHATE PULP MANUFACTURE FOR THE PURPOSE OF MAKING THEM SUITABLE FOR DRY DISTILLATION. ERIK LUDVIG RINMAN, Djursholm, Sweden. Filed June 30, 1930, Serial No. 465,067, and in Sweden May 23, 1930. 4 Claims. (Cl. 202—34.)

1. The method of alkalising waste liquors from the soda pulp manufacture for the purpose of making them suitable for dry distillation, which comprises concentrating the waste liquor to hold about 50 per cent dry substance, and alkalising said concentrated waste liquor while hot by adding to and intimately mixing with the same barium oxide in a pulverised state so as to cause a reaction which generates sufficient heat to drive off the major portion of the water so that a pulverulent mass ready to be dry distilled is obtained.



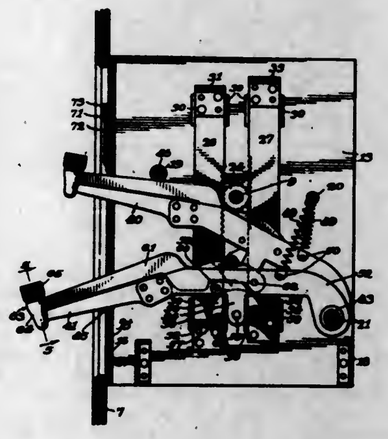
1,906,103. MECHANICAL POWER TRANSMISSION. THOMAS H. RYAN, San Francisco, Calif., assignor of one-sixth to Paul J. Boyens and one-sixth to Charles J. McCarthy, San Francisco, Calif. Filed May 26, 1930. Serial No. 455,746. 10 Claims. (Cl. 74—34.)

1. In a power transmission device, the combination of a driving shaft, a driven shaft, a pinion upon one of



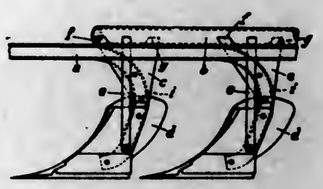
said shafts, in internal ring gear upon the other of said shafts, a rotatable support journaled between said shafts, a planetating gear journaled upon said support and disposed between said pinion and said ring gear, an eccentrically floating collar journaled in said planetating gear, and an inertia body movably mounted upon said support and engaging with said planetating gear adapted to retard rotation thereof as the angular velocities of said pinion and ring gear approach the same value, said inertia body being supported for radial movement upon said support and journaled in the eccentrically floating collar carried by said planetating gear.

1,906,104. STRIP-GUIDING MEANS FOR SEWING MACHINES. RUDOLPH J. SAILER, Townley, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 2, 1930. Serial No. 472,557. 8 Claims. (Cl. 112—152.)



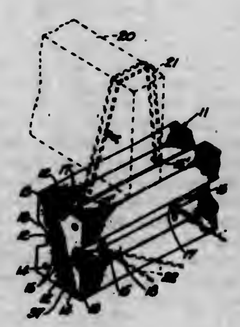
1. Strip guiding means for sewing machines comprising transversely overlying fabric-strip receiving and delivering runs, and guiding means disposed between said runs having strip-inverting guide-walls converging toward a side edge of the strip-delivering run.

1,906,105. ELECTRICAL RECORDING INSTRUMENT OF THE RELAY TYPE. ALEXANDER G. S. SANDISON, Kelda, Balta Sound, Shetland Islands, assignor to Republic Flow Meters Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1929, Serial No. 348,048, and in Great Britain May 3, 1928. 25 Claims. (Cl. 234—5.5.)



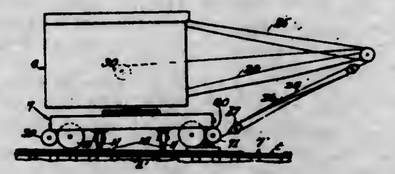
1. A recording instrument of the relay type comprising a primary moving system, a circuit including resistance elements, an electro-motive device in circuit with said resistances and adapted to be operated in one direction by the current through one resistance and in the opposite direction by current through the other resistance, means operable by the primary moving system to vary the resistance of one or the other resistance elements to operate the electro-motive device, a recording element and means whereby said element is operated by said electro-motive device.

1,906,106. KEY-OPERATED DEVICE FOR RADIO SYSTEMS. JOSEPH M. SCHAEFER, Chicago, Ill., assignor to Zenith Radio Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1928. Serial No. 278,542. 30 Claims. (Cl. 250—40.)



1. The combination, with a reversely adjustable controlling device for a radio system of communication, of means free from connection with said device acting upon operation in one direction to move it in either direction of its adjustment to a predetermined position; said means being returnable from each such operating action thereof without disturbing the position to which said device has been adjusted.

1,906,107. AGRICULTURAL IMPLEMENT. WERNER SCHIRMER, Leipzig, Germany, assignor to Rud Sack, Leipzig, Germany. Filed July 15, 1930, Serial No. 468,021, and in Germany Apr. 18, 1929. 2 Claims. (Cl. 97—198.1.)

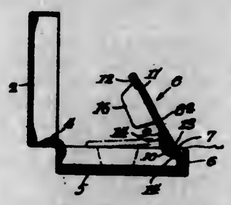


1. In a frame for an agricultural implement, the combination of a plurality of spaced beams, ground-working tools supported by said beams, a transversely positioned torsional member connected to said beams, a gusset plate connected to each beam at one end and having lugs at its other end for engaging opposite sides of said torsional member, and bracing means connecting each of said tools to said torsional member.

1,906,108. CONCRETE STRUCTURAL MEMBER. HENRY W. SCHLUETER, Beverly Hills, Calif. Filed May 26, 1931. Serial No. 540,051. 1 Claim. (Cl. 72—61.)

A concrete structural member of the class described comprising a body of concrete having a plurality of surfaces and a longitudinal channel formed in each of said surfaces, a longitudinal reinforcing means placed in said body adjacent the juncture of adjacent surfaces, and lateral reinforcing bars engaging said longitudinal reinforcing means and extending across said channels.

1,906,109. CRANE. ALBERT G. A. SCHMIDT, Chicago, Ill., assignor to Cullen-Friestedt Company, Chicago, Ill., a Corporation of Illinois. Filed June 10, 1931. Serial No. 543,339. 7 Claims. (Cl. 105—177.)

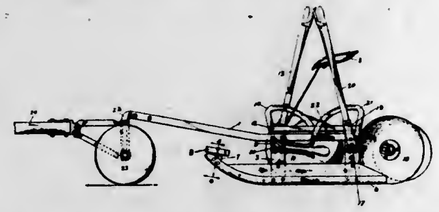


1. In combination, a truck having wheels adapted to travel on a railroad track, a set of set-off wheels mounted on the truck and adapted in conjunction with a pair of set-off rails laid across the track to support the truck in an elevated position with respect to the track and permit it to be shifted laterally, and a jack for tilting one end of the truck upwardly so as to permit one of the set-off rails to be placed beneath the set-off wheels nearest the said one end of the truck secured to the central portion of the frame of the truck and comprising a vertically movable member having a shoe at the lower part thereof for disposition between the rails of the track, and gearing supported on said truck-frame and operative to raise and lower the member.

1,906,110. WEATHER STRIP. HARRY D. SWISON, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1931. Serial No. 516,536. 11 Claims. (Cl. 20—69.)

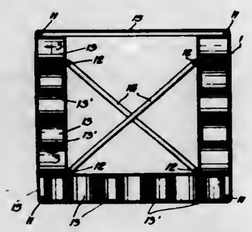
1. A top rail weather strip provided with a vertically shiftable contact portion and means for limiting the shifting movement of said portion in both directions.

1,906,111. BOX FOR DISPLAYING JEWELRY AND THE LIKE. JOHN M. SHIELDS, Chicago, Ill., assignor to F. H. Noble & Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1930. Serial No. 434,183. 3 Claims. (Cl. 206—75.)



1. In a jewelry box, a sheet metal false bottom formed with an upright flange having at its top an inclined portion adjacent the front edge of the box constituting a hinge support, a display pad, and a snap spring hinge pivotally connecting said support and pad, said hinge acting to yieldingly stress said pad alternatively either to a stopped inclined display position or horisontal lowered position.

1,906,112. MANUFACTURE OF MERCAPTOARYLTHIAZOLES. ROBERT L. SIBLEY, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, Corporation of Ohio. Filed June 8, 1931. Serial No. 543,009. 7 Claims. (Cl. 260—44.)

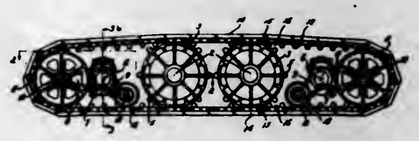


1. The process for the preparation of a mercaptobenzothiazole comprising the reaction under the addition of heat between a diphenylthiourea, carbon bisulfide and a sulfur chloride under super-atmospheric pressure.

1,906,113. RIDGE BURSTER. WALTER H. SILVER, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Jan. 5, 1927. Serial No. 159,045. 1 Claim. (Cl. 97—56.)

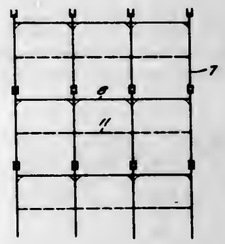
In a ridge burster, the combination of a pair of runners spaced apart and parallel, a front arch and a rear arch rigidly connected to said runners, a frame including side bars secured to said arches and having their forward portions converging forwardly, a laterally steerable truck pivotally mounted on the forward end of said bars and adapted to travel in a furrow between ridges, a shaft rockably journaled on the front arch, a shaft rockably journaled on the rear arch, earth-working devices supported on said shafts, and a forwardly inclined beam extending transversely of said runners between said devices and the truck and rigidly secured on the runners.

1,906,114. AERIAL CRAFT CONSTRUCTION. JOSEPH SILVERMAN, Chicago, Ill. Filed Nov. 29, 1929. Serial No. 410,394. 6 Claims. (Cl. 244—30.)



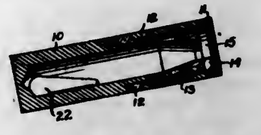
1. A pontoon comprising an outer shell, and an inner hermetically sealed rigid cellular structure comprising a plurality of individual hermetically sealed cells secured together to form an integral structure, the cells being of circular section and arranged with the axes of the cells disposed generally normal to said outer shell.

1,906,115. COMBINED RAIL BOND AND CLAMP. BENJAMIN A. SMITH, Lakewood, Ohio, assignor to The Electric Railway Improvement Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 28, 1926. Serial No. 144,687. 1 Claim. (Cl. 173—278.)



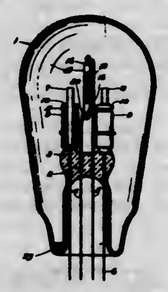
As a new article of manufacture, a rail bond having a flexible body portion and a terminal adapted to be attached to a rail or like object by depositing molten metal under high temperature conditions onto such terminal and the adjacent rail surface, said bond including a metal strap wrapped about said terminal and having a hook-like portion whereby the latter may be temporarily, mechanically secured in place.

1,906,116. TRACTOR. FRANK A. SMYTHE, Lorain, Ohio, assignor to The Thew-Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Aug. 1, 1929. Serial No. 382,682. 3 Claims. (Cl. 305—9.)



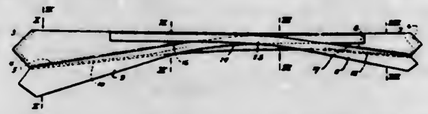
1. Apparatus of the class described comprising a tractor of the roller and tread type embodying a frame, endless treads, a centrally disposed driving and supporting means for said endless treads on both sides of said frame fixed against vertical movement with respect to said frame and forming a fixed base, said endless treads extending beyond said driving and supporting means at both ends and in end loops, and equalizing idler units engaging in the loops of the treads, each unit including a vertically moving tread loop engaging roller and a tread engaging roller, said rollers being mounted together upon a member articulated about a fixed point or axle on the frame member and adapted for equalization of the load about such point upon said rollers and to provide for variance in the ground contacting area without changing the fixed base of the tractor truck.

1,906,117. BUILDING AND METHOD OF CONSTRUCTING THE SAME. CHRISTOPHER H. SNYDER, Berkeley, Calif. Filed Aug. 22, 1930. Serial No. 477,065. 3 Claims. (Cl. 72—1.)



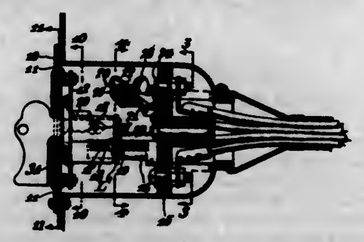
1. A building comprising upright steel columns, a plurality of steel floor beams fixed on said columns and vertically spaced apart, and a reinforced concrete floor fixed on said columns and disposed in the space between said steel floor beams.

1,906,118. MERCURY SWITCH. JOSEPH H. STALEY, Columbus, Ind. Filed Dec. 24, 1932. Serial No. 648,749. 18 Claims. (Cl. 200—152.)



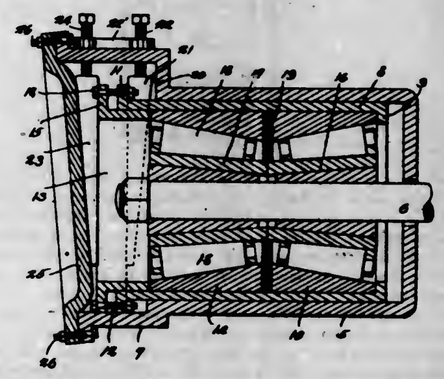
1. In a mercury switch, the combination of a metallic container constituting one electrode of the switch, a second electrode operatively associated therewith, an insulating member characterized by resilience and compressibility separating said container and electrode and forming a seal therewith, a mass of mercury shiftable to make and break the circuit between said container and electrode, and an insert over which the circuit is made and broken carried by said member.

1,906,119. GASEOUS DISCHARGE DEVICE. PERCY L. SPENCER, Medford, Mass., assignor, by mesne assignments, to Old Colony Trust Company, a Corporation of Massachusetts, trustee. Filed Mar. 26, 1929. Serial No. 350,080. 1 Claim. (Cl. 250—27.5.)



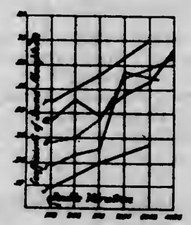
A thermionic gas discharge device comprising, a gas tight vessel having a reentrant glass stem with a press, an equipotential cathode having a heating element in the interior supported on said stem, leads sealed through said press for energising said heating element and providing a connection to said cathode, a plurality of anodes on said stem having leads sealed through said press, said anode leads being joined to the ends of said anodes facing said stem, a gas filling in said vessel at a pressure sufficient to neutralise the space charge during operation of the device, said press having tubular glass extensions surrounding the ends of the anode leads, and insulating members overlapping said extensions and surrounding the lower ends of said anodes to prevent ionisation of the gas in the space where the anode and anode leads emerge from the press.

1,906,120. NECKTIE. SUSIE R. WALTZ, Ross, Calif. Filed Sept. 20, 1932. Serial No. 633,990. 4 Claims. (Cl. 2—146.)



1. A necktie comprising a facing material and two pieces of lining material, one for each end of the tie, and an elongated extension on each lining piece, said extensions overlapping each other and forming an adjustable lining for the neck band portion of the tie.

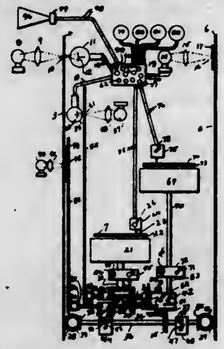
1,906,121. SAFETY MAGNETO SWITCH. MELMORE ZUGERMAYER, Southampton, Pa. Filed Aug. 18, 1931. Serial No. 557,917. 1 Claim. (Cl. 200—7.)



In a switch of the character described, an insulating support, a rotatable member opposing the support, a plurality of posts arising from the support and extending in surrounding relation to the rotatable member, each post having a notch and having mounted thereon spring pressed contact elements to engage a member projecting into the notch and a contact element carried by the rotatable member and including portions to extend into said notches, a normally open switch carried by said base and including an oscillating contact element, at least one of the portions of the contact of the rotatable member having insulated engagement with said oscillating contact to shift the same and thereby close said switch.

1,906,122. BEARING STRUCTURE. GEORGE FRED BLUMB, Philadelphia, Pa. Filed July 3, 1931. Serial No. 548,693. 6 Claims. (Cl. 308—180.)

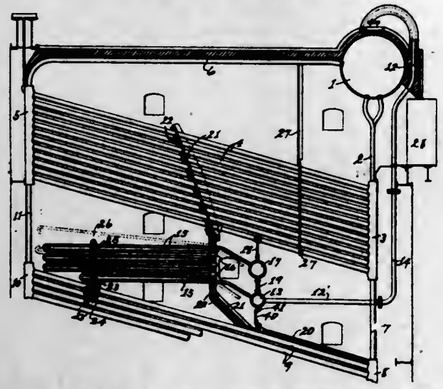
1. In a bearing, the combination of a housing adapted to receive a shaft, roller bearings and roller races interposed between the shaft and housing, a sleeve between the roller races and housing, a flange on one end of the sleeve, a sleeve fitted in one end of the first mentioned sleeve and engaging the opposite ends of the races, and keys cooperating with the sleeves for moving the sleeves to adjust the rollers and races longitudinally of the shaft.



1,906,123. ACOUSTIC PLASTER. LESLIE B. EATON, Los Angeles, Calif., assignor, by mesne assignments, to Kalite Company, Limited, Pasadena, Calif., a Corporation of California. Filed Feb. 20, 1931. Serial No. 517,147. 10 Claims. (Cl. 106—84.)

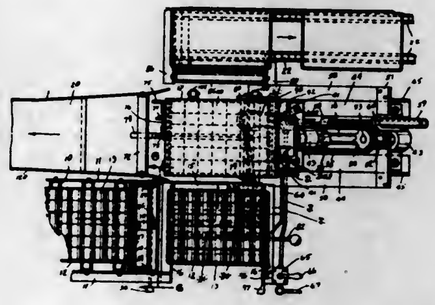
1. An acoustical plaster consisting of a porous aggregate, a gypsum plaster binder, a glutinous air binding material and alum and having interconnected pores throughout, and having a hard washable surface with a porous surface, said plaster in a thickness of ⅝ inch having a coefficient of sound absorption above 35% at 512 double vibrations.

9. An acoustical plaster when gauged with water forming a plastic for application to walls, ceilings and the like, and capable of application by ordinary hawk and trowel methods to form a smooth porous surface, and comprising a porous aggregate and gypsum plaster binder, a glue air binding material to entrap air bubbles, said air bubbles on drying forming interconnected pores throughout the plaster, said plaster having a hard, washable surface, and in the thickness of three quarters of an inch, having a coefficient of sound absorption above 35% at 512 double vibrations.



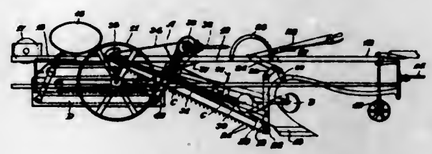
1,906,124. REVOCALIZED PHONOGRAPH RECORD. EDWIN HOPKINS, New York, N. Y. Filed Feb. 26, 1929. Serial No. 342,786. 36 Claims. (Cl. 88—162.)

10. The process of making a modified copy of selected portions of a plurality of original or primary phonographic sound records synchronous with a cinematograph film of subject matter analogous to said selected portions of said primary records but non-synchronous therewith, which consists in deriving variations in effects from selected portions of the sound tracks of the primary records, in producing from said variations in effects a sound track in the copy of effects similar to the portions selected from the plurality of primary records, and in said producing so selected effects from the different originals and so altering the location of selected effects to selected extents along the sound track of the copy that they bear the same proportionate relationship to each other in the length of the said sound track as are borne to each other by the analogous optical effects of the cinematograph film along its length.



29. A modified copy of a primary sound record having a succession of particular acoustical effects, said modified copy comprising selected effects derived from said primary record artificially altered in location along its sound track as compared with the linear location of the effects on the primary record, and additional sound effect portions interlarded or overlaid or substituted for omitted portions of the sound effects of the primary record, said additional effects derived from a source independent of the primary record.

1,906,125. BOILER WITH INTERDECK SUPERHEATER. HOWARD J. KERR, Westfield, N. J., and WILLIAM A. JONES, Westerleigh, N. Y., assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 24, 1928. Serial No. 321,663. 13 Claims. (Cl. 122—478.)



1. In a water tube boiler having superposed banks of inclined tubes spaced apart, an interdeck superheater having inlet and outlet headers in the space between said banks, and a plurality of tubes from the steam space of said boiler entering the inlet header from points beyond the ends of said banks, said tubes having removable portions and straight sections leading from the inlet header to the removable portions exteriorly of the tube bank ends so that the tubes can be expanded in the inlet header by passing an expander through the parts of the tubes which enter the header.

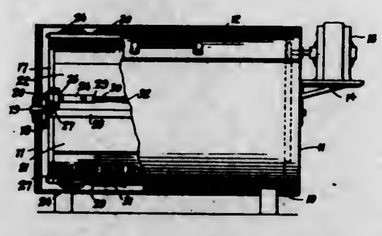
1,906,126. MEANS FOR CONVEYING AND UNPACKING CANS AND THE LIKE. SAMUEL B. MOTT, Noblesville, Ind., assignor to Indiana Condensed Milk Company, Indianapolis, Ind., a Corporation. Filed Aug. 17, 1931. Serial No. 557,458. 17 Claims. (Cl. 214—1.1.)

1. The combination of a filled basket supply conveyer, a receiving conveyer parallel with the supply conveyer, open top baskets and like containers for rows of cylindrical articles, and means at the end of the receiving conveyer for receiving and diagonally turning each basket so that the open top thereof will be at the side of the basket facing the receiving conveyer and the rows of the cylindrical articles changed from vertical to sidewise position for easy discharge of the contents to said receiving conveyer.

1,906,127. WEED AND FOUL SEED DESTROYING MACHINE. SONDRE S. REISHUS, Valley City, N. Dak., assignor of one-half to Harry A. Gilbertson, Valley City, N. Dak. Filed May 9, 1932. Serial No. 610,056. 12 Claims. (Cl. 97—10.)

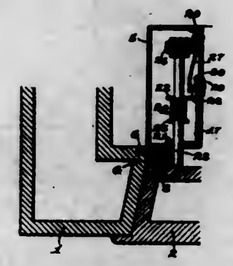
1. A weed and foul seed destroying machine including, a plow, a primary slat conveyor having one end extending in close proximity to said plow, a reel adjacent said plow and the front end of said primary conveyor to push the sod and weeds onto said conveyor, means for simultaneously raising and lowering said plow and the front end of said conveyor into and out of operating position, a series of secondary conveyors including an open rod conveyor, a slatted conveyor below said open rod conveyor, and a final slatted conveyor, and burner means associated with said last named conveyors positioned in a manner to burn and destroy vegetable matter, seeds and roots, said last conveyor of said series discharging the soil and ash in virtually pulverized form back on the ground.

1,906,128. CONNECTER FOR REPAIRING METALLIC MEASURING TAPES. CLINTON B. ALEXANDER, Washington, D. C. Filed Dec. 11, 1931. Serial No. 580,469. 1 Claim. (Cl. 24—21.)



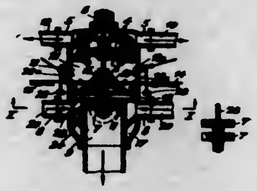
A connecter for repairing metallic measuring tapes comprising a metal blank bent so as to form a flat sleeve adapted to receive the ends of the metal tape, the side portions of said blank being overlapped and provided with openings therethrough adjacent the ends, the opposite wall of the connecter having an opening of larger diameter in alignment with each of the first-named openings, screws passing through the overlapping portions and having a threaded connection with the inner lapping portion only, said screws having heads thereon overlying the outer lapping portion, said screws being dimensioned so as to secure the lapping sections in intimate contact with each other and to engage the metal tape overlying the openings in the opposite wall of the connecter for bending said tape into said openings, and thus firmly joining the ends of the tape.

1,906,129. METHOD AND MEANS OF IDENTIFICATION. LOUIS J. ARPIN, New York, N. Y. Filed Apr. 8, 1932. Serial No. 604,099. 11 Claims. (Cl. 40—2.2.)



8. A seal clasp constructed of a strip of sheet metal of suitable length to provide a loop and opposing ends projecting from said loop, and a member fixed on one of said ends and constituting a stop for the purpose specified.

1,906,130. DRUM FOR DYEING, ETC. SIDNEY BAILEY, Jr., Abington, Pa. Filed Mar. 24, 1930. Serial No. 438,543. 4 Claims. (Cl. 8—18.)

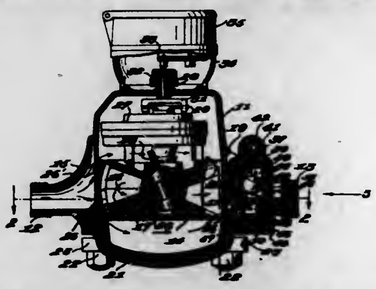


1. In a machine having a container for hot liquor, a rotary drum partially submerged in said hot liquor, said drum having an opening and a circumferentially slidable closure for said opening, the combination of an axially slidable latch on said closure for engaging a fixed catch on said drum, said latch having both ends close to the drum and having a middle portion spaced from the drum to provide a handle, a heat insulating covering for the handle portion extending from end to end of said bowed portion and close to the drum at both ends, said covering being perforated to facilitate radiation of heat from the metal core.

1,906,131. BATTERY LIGHT FOR REFRIGERATORS, ICE BOXES, CLOSETS, AND THE LIKE. GEORGE A. BAYLIS, Huntington, N. Y. Filed July 17, 1931. Serial No. 551,525. 2 Claims. (Cl. 240—4.)

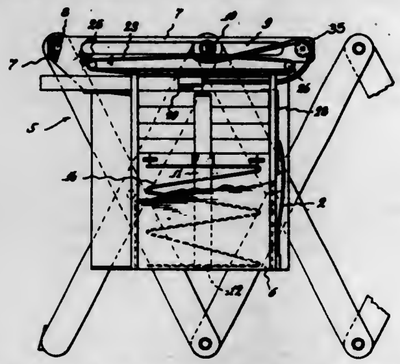
1. A battery light for refrigerators, closets and the like comprising a casing formed with an extension adapted to be connected to an ice box or the like, a pair of batteries arranged in the casing, means for connecting the batteries in series, said casing formed with a depressed portion presenting a lamp socket, a lamp positioned in said socket, means forming a circuit including said batteries and said lamp, said means including a switch and a reciprocating member for closing said switch, a spring acting on said reciprocating member for moving the same to a closed position, said casing holding said reciprocating member positioned to engage the door of the refrigerator, whereby said door is adapted to move the reciprocating member to an open position when the door is closed.

1,906,132. TURBO BLOWER AGGREGATE FOR INTERNAL COMBUSTION ENGINES. ALFRED BUCHI, Winterthur, Switzerland. Filed Feb. 2, 1932, Serial No. 590,483, and in Switzerland Feb. 5, 1931. 8 Claims. (Cl. 230—116.)



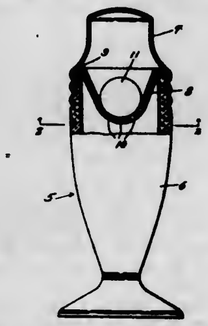
1. In a turbo blower for internal-combustion engines in combination an exhaust-gas turbine, a rotary blower, means to connect said turbine to said blower, an air inlet to said blower, said air inlet being between said turbine and said blower, a silencer for the blower inlet, said silencer being arranged in the space between said turbine and said blower, an outlet from said blower at one end of the turbo aggregate, inlet connections to said turbine, a separate inlet chamber for each inlet connection, said turbine inlets being towards the blower inlet, jackets between the turbine inlet and the blower inlet, means to supply a cooling medium to said jackets, and a common turbine outlet at the other end of the turbine aggregate.

1,906,133. METER BY-PASS CONTROLLING MEANS. HORACE CHEISMAN and HARRY G. WEYMOUTH, Pittsburgh, Pa., assignors to Pittsburgh Equitable Meter Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1929. Serial No. 395,421. 9 Claims. (Cl. 73—98.)



1. A fluid meter comprising a casing provided with a fluid inlet and a fluid outlet, metering mechanism interposed between said inlet and said outlet, a by-pass connecting said inlet and outlet around said metering mecha-

nism, and valve mechanism in said by-pass housed in a member containing a chamber having two spaced valve seats and a valve for cooperation with said seats, said

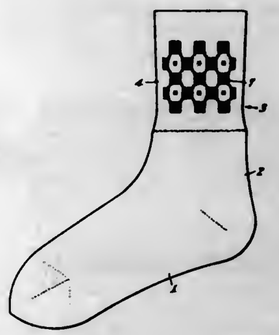


valve so cooperating with the walls defining said chamber to allow maximum flow in the by-pass when the valve is spaced midway between said seats.

1,906,134. CIGARETTE EJECTOR AND LIGHTER. MATTHEW CONFORTI, New York, and ROBERT MALERBA, Brooklyn, N. Y. Filed Mar. 11, 1932. Serial No. 598,280. 1 Claim. (Cl. 312—86.)

In a device of the character described a cigarette container and an electric lighter movable to eject a cigarette from its container and adapted to light the cigarette, in combination with lazy tongs mechanism on which said container is mounted and means operated by the movement of said mechanism for effecting movement of said lighter.

1,906,135. CONDIMENT SHAKER. MELVILLE BOYD CUNNINGHAM, Fort Worth, Tex. Filed Sept. 13, 1932. Serial No. 632,969. 1 Claim. (Cl. 65—57.)

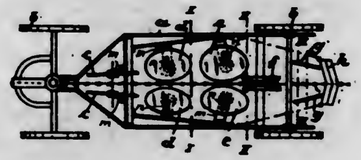


In combination with a condiment shaker including the usual perforated cap threaded on the shaker body; of a funnel member having a body portion extending into the upper end of the shaker body, and a flange on the body portion clamped between the shaker body and the cap, said body portion at the bottom of the funnel being substantially hemispherical and provided with a plurality of perforations, and a ball operating in the space between the body of said funnel member and said cap, and normally snugly seated within the hemispherical bottom portion of the funnel member for closing said perforations.

1,906,136. METHOD OF DRIVING PILE SHELLS. JOHAN ALBERT DAHRÉN, Gottenborg, Sweden. Filed Sept. 11, 1930, Serial No. 481,804, and in Sweden Sept. 11, 1929. 3 Claims. (Cl. 61—74.)

1. A method of driving supporting hollow piles comprising, applying a downward tensile force to the lower end of the pile by subjecting the same to repeated blows, and applying a continuous downward compressive force directly upon the upper end of the pile.

1,906,137. COMBINATION SOCK AND ANKLET. ROBERT E. DAVIS, Fort Payne, Ala. Filed Aug. 9, 1932. Serial No. 628,100. 1 Claim. (Cl. 2—240.)

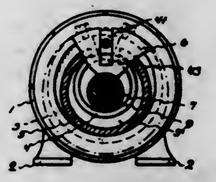


A combined sock and anklet comprising a foot merging into an ankle section, said ankle section being folded upon itself, the folded portion extending interiorly and downwardly toward the foot to present a cuff having a finished surface interiorly and exteriorly, a line of stitching for holding the folded portion in its permanent position, ornamental members arranged exteriorly of said cuff, and ornamental members arranged interiorly of the cuff on the folded part in the space between the top of the cuff and a central line, whereby when the cuff is extended the outside ornamental member will be seen and when the cuff is folded along the central line to present an anklet the inside ornamental member will be seen arranged substantially centrally of the cuff.

1,906,138. ACOUSTIC MATERIAL. JOHN H. DELANEY, Los Angeles, Calif.; Union Bank & Trust Co. of Los Angeles, administrator of said John H. Delaney, deceased, assignor to estate of Ada W. Delaney, deceased. Filed Apr. 9, 1928. Serial No. 268,805. 3 Claims. (Cl. 106—34.)

1. Material adapted to be used for the finish of wall surfaces, comprising not more than three parts by volume of a binder free from water, to two parts by volume of aggregate; and not less than one part by volume of the binder to four parts by volume of the aggregate; and effervescing matter sufficient to impart a spongy texture to the material when wetted.

1,906,139. MACHINE FOR SETTING ROWS OF PLANTS DEEPER. HERMANN DENSTÄDT, FRIEDRICH DENSTÄDT, and MAX WEICHERT, Neubrandenburg, Germany. Filed Mar. 15, 1929, Serial No. 347,376, and in Germany Oct. 9, 1928. Renewed Nov. 19, 1932. 7 Claims. (Cl. 55—18.)

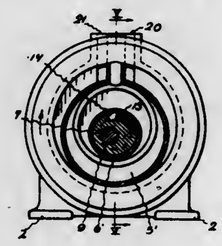


1. A deep-setting plant machine for rows of plants, comprising a frame; wheels for the frame; a plurality of discs mounted on the frame for digging a trench on each side of a row of plants and thereunder; means on the frame for setting the plants into the trenches; and means on the frame for smoothing the soil over the deep-set plants.

1,906,140. SHAVING BRUSH HAVING A RESERVOIR FOR THE SOAP. HENRI DEPASSE, Neuilly-sur-Seine, France. Filed Feb. 19, 1932, Serial No. 594,093, and in France Feb. 24, 1931. 3 Claims. (Cl. 15—137.)

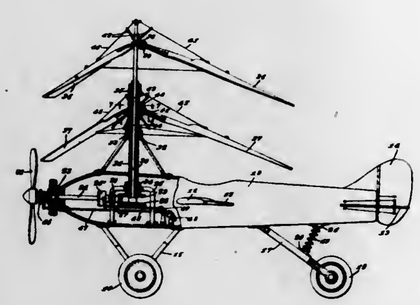
1. A shaving brush of the type described comprising in combination, a tuft of hairs, a handle for said tuft of hairs, a cylindrical reservoir for shaving cream provided in said handle, a removable bottom for said reservoir, an outlet tubular nozzle provided in said reservoir, an India-rubber nipple fitted on said nozzle and extending into said tuft of hairs, the end of said nipple being provided with a slit for allowing the outflow of the shaving cream but preventing the ingress of air from the outside, a cap surrounding the end of said reservoir opposed to said nozzle and adapted to slide thereon, a cylindrical rod secured to the bottom of said cap extending coaxially throughout said reservoir, the length of said rod being such that its end is located at a certain distance from said nozzle when said cap is at its maximum distance from said reservoir and is engaged into said nozzle when said cap is pushed toward said reservoir, said rod comprising a flaring portion of frusto-conical shape provided close to said end thereof, a spring interposed between the bottom of said reservoir and the bottom of said cap, whereby a predetermined quantity of shaving cream is forced out from said nozzle into said tuft of hairs every time the cap is pressed toward the reservoir, and a packing ring slidably mounted on said rod in said reservoir and adapted to be wedged against said frusto-conical portion of the rod so as to guide said rod with respect to said reservoir and to compress the shaving cream into a compact mass when said rod is introduced into said reservoir after filling of the latter, said ring subsequently sliding along said rod when the latter is being sunk into said reservoir so as to ensure a tight joint.

1,906,141. ROTARY PUMP, COMPRESSOR AND THE LIKE. JOHN EKELÖF, Lidingo, Sweden. Filed Dec. 5, 1931, Serial No. 579,244, and in Sweden Oct. 12, 1929. 5 Claims. (Cl. 230—146.)



2. In a rotary pump or compressor, an annular cylinder confined in radial direction by two coaxial cylinder walls and at its one end by a fixed wall, an annular piston member mounted eccentrically movable within said cylinder in contact with its walls, a cover disc connected with said annular piston member and adapted slidingly to contact with and to close the opposite cylinder end, a radial transverse wall mounted in the cylinder, a split portion upon the piston member straddling said wall, a rotatable driving means positioned centrally in relation to the annular cylinder, a crank means connected with said driving means and adapted for driving the piston member by the intermediary of the cover disc, means for mounting the combined piston aggregate freely slidingly in axial direction in relation to the cylinder end, means for mounting of the said aggregate freely slidingly also in radial direction independently of the axial sliding movement, and slot-and-pin guide means provided directly between the transverse wall within the cylinder and the cover disc and adapted to concentrate the guiding forces applied to the piston aggregate substantially in the plane of contact between the cover disc and the cylinder end.

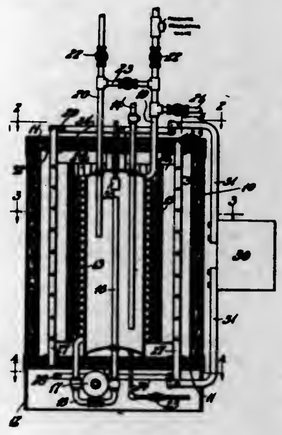
1,906,142. ROTARY PUMP OR COMPRESSOR. JOHN EKELÖF, Lidingo, Sweden. Filed Dec. 5, 1931, Serial No. 579,245, and in Sweden Apr. 2, 1930. 5 Claims. (Cl. 230—146.)



3. In a rotary pump or compressor, an annular cylinder confined in radial direction by two coaxial cylinder walls and at its one end by a fixed wall, an annular piston member mounted eccentrically movable within said cylinder in contact with its walls, a cover disc connected with the annular piston and adapted slidingly to contact with and to close the opposite cylinder end, means for mounting the combined piston aggregate slidingly in axial direction due to difference in pressure acting upon the opposite sides of the cover disc, a radial transverse wall

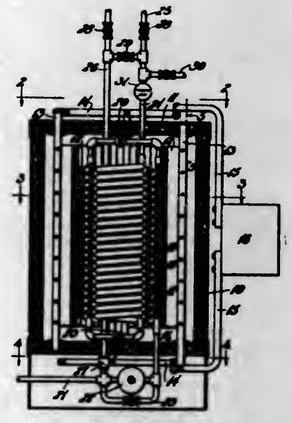
mounted in the cylinder and straddled by a split portion of the piston, inlet and outlet means positioned at opposite sides of said transverse wall, a driving shaft rotatably mounted centrally n relation to the annular cylinder, a cylindrical crank pin connected with said shaft, a cylindrical boss rotatably mounted in an eccentrical position

on said crank pin, such boss and a hub portion of the cover disc rotatably mounted thereon being adapted within certain limits under influence of the centrifugal force only to be freely displaced in radial direction independently of the axial displacement of the same members, and means for limitation of the turning movement of the boss around the crank pin.



1,906,143. HELICOPTER. MERWIN W. EVANS, Holland Patent, N. Y. Filed May 27, 1932. Serial No. 614,007. 1 Claim. (Cl. 244—15.)

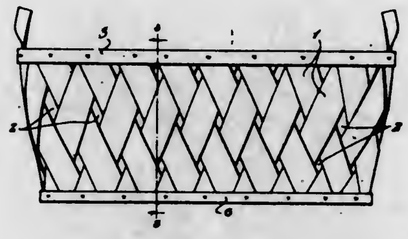
In an aircraft, a fuselage having a plane, ailerons associated with the plane, elevators associated with the fuselage, a rudder at the rear end of the fuselage, a motor driven propeller at the fore end of the fuselage, means for releasing the propeller from the motor, interfitted shafts mounted in the fuselage and rising vertically above the same, gear connections between the motor and said interfitted shafts, means for controlling the connections between the motor and said shafts, tri-wings associated with the said shafts, spider hangers on the shafts, universal joints connecting the tri-wings with said hangers, guy wires having connection between the shafts and said tri-wings, and braces associated with the shafts and said wires.



1,906,144. ELECTRIC FLUID HEATER. WILLIAM L. EVANS, Washington, Ind. Filed Aug. 9, 1930. Serial No. 474,175. 9 Claims. (Cl. 219—39.)

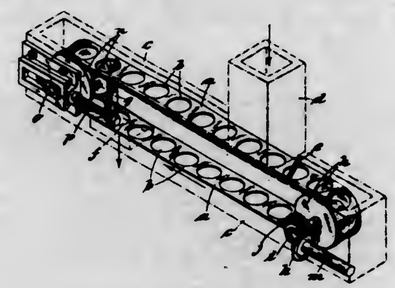
1. A water heater comprising, in combination, a substantially cylindrical casing; a tank within the casing; a tubular coil around the tank; having an inlet pipe extending through the upper end of the tank; a water circulating pump connected to pump water through the coil; a valved by-pass pipe around the pump; a main delivery pipe connected to the coil constituting a trunk line for a heating system; a return pipe for the system discharging into the tank; a valved by-pass connecting

the delivery and return pipes; and valves in both of said pipes so arranged that the heating system may be cut off and the water circulated through the tank and the coil.



1,906,145. ELECTRIC FLUID HEATER. WILLIAM L. EVANS, Washington, Ind. Filed Aug. 9, 1930. Serial No. 474,176. 9 Claims. (Cl. 219—39.)

1. In a water heater installation of the character described, a casing; electrical heating means including a plurality of sheet metal resistance units within the casing adjacent to the inner wall; and a plurality of thin-walled, tubular coils coaxial with each other and connected in series adjacent to and surrounded by said heating means.



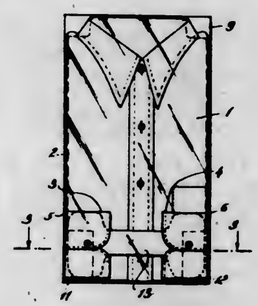
1,906,146. BASKET. EMIL A. FLORANG, Burlington, Iowa. Filed Nov. 5, 1930. Serial No. 493,609. 2 Claims. (Cl. 217—122.)

1. In a basket, having an upper hoop, a bottom, and opposite longitudinally straight side walls including oblique splints connecting said upper hoop and said bottom and continuously interwoven entirely around the basket; said splints having oblique crossing relation to one another and having a substantially solid wall of lapped portions thereof located opposite to and extending above and secured to said bottom entirely around the basket and

adapted to effectually resist the twisting strain of said splints and brace the basket against sidesway in all directions.

1,906,147. BAND CONVEYER. CHARLES WILLIAM GARDINER, High Barnet, England, assignor to Gardiner's Conveyors Limited, London, England, a British Company. Filed Jan. 14, 1932. Serial No. 586,671, and in Great Britain Jan. 15, 1931. 9 Claims. (Cl. 198—193.)

2. In a band conveyer for finely divided materials in bulk, a band casing, smooth wheels mounted in association therewith, a perforated band comprising a strip of inherently flexible material without articulations adapted to travel around said wheels, means for loading the material to be conveyed through the upper part of said casing, a discharge outlet formed in the bottom of said casing and means for driving said band, whereby the perforations in said band are successively brought into register with the said discharge outlet to effect discharge of the conveyed material.



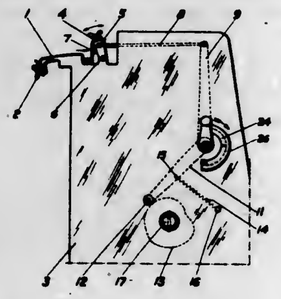
1,906,148. DELUSTERING. HENRY A. GARDNER, Washington, D. C. Filed July 1, 1929. Serial No. 375,846. 17 Claims. (Cl. 18—54.)

1. In the production of artificial silk having an opalescent silky translucence from an artificial silk composition, comprising a cellulose material of the class consisting of cellulose esters and ethers, and an organic liquid component, the steps which comprise adding a hydrolyzable alkylated compound of metal to an organic liquid component of said artificial silk composition in the presence of moisture and thereafter forming filaments of artificial silk from said artificial silk composition containing said liquid organic component.

1,906,149. DELUSTERING. HENRY A. GARDNER, Washington, D. C. Original application filed July 1, 1929, Serial No. 375,846. Divided and this application filed Feb. 1, 1932. Serial No. 590,330. 8 Claims. (Cl. 134—79.)

1. In the delustering and flatting of films, filaments, sheets and layers produced from liquid compositions, the process which comprises adding to the liquid composition a hydrolyzable alcoholate of a metal, said metal being selected from the class consisting of titanium, zirconium, aluminum, magnesium, zinc, cobalt and nickel and effecting hydrolysis of said alcoholate to obtain said delustering and flattening.

1,906,150. SHIRT PACKAGE. THOMAS H. GOLDEN, Pottsville, Pa., assignor to Phillips-Jones Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1932. Serial No. 646,809. 5 Claims. (Cl. 206—46.)



1. In a shirt package in which the shirt is folded flat with the front thereof exposed upwardly and the cuffs are buttoned and laid against the front of the shirt with the portions of the sleeves adjacent the cuffs extending around the side edges of the shirt, said cuffs lying with their open ends spaced and in alignment, the combination of a strip of sheet material having a body portion for receiving a label and end portions on each side thereof, said end portions being respectively inserted in the cuffs and frictionally engaging the same to retain both strip and cuffs in position against the front of the shirt.

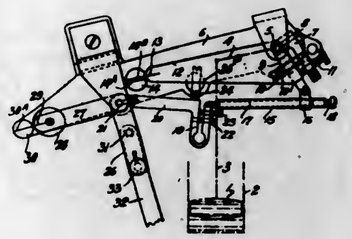
1,906,151. INFLATABLE CONDUIT STOPPER. PATRICK GOODMAN, Brooklyn, N. Y.; Mary Goodman and Elizabeth A. Goodman, administratrices of said Patrick Goodman, deceased, assignors to Francis Greer Goodman and Elizabeth A. Goodman, Brooklyn, N. Y. Filed Feb. 25, 1930. Serial No. 431,218. 8 Claims. (Cl. 137—76.)

2. In a conduit stopper adapted to be introduced through a taphole in the conduit, said stopper including an inflatable elongated body having substantially semi-spherical opposite ends, means located within said body for maintaining the ends in axial alignment while permitting limited free relative movement of the ends of the body toward and away from each other whereby to prevent turning of the leading end backward when deflating the body preparatory to effecting its removal from the conduit.

1,906,152. CIGAR BUNCHING MACHINE. KARL ERIK GRANSTEDT, Stockholm, Sweden, assignor to Aktiebolaget Formator, Stockholm, Sweden, a Joint-Stock Company. Filed June 2, 1932. Serial No. 615,002. 7 Claims. (Cl. 131—42.)

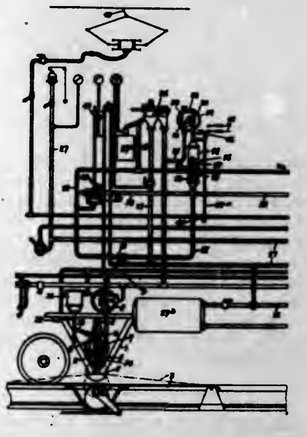
1. In a cigar bunching machine in combination, an apron, a movable member connected with one end of said apron, an eccentric adapted to move said member, and means for adjusting said eccentric from the outside of said machine.

1,906,153. WINDOW LOCK. WILLIAM TULLIS HALL, San Diego, Calif., assignor of one-third to Herbert McCullough, San Diego, Calif. Filed July 28, 1932. Serial No. 625,454. 7 Claims. (Cl. 292—81.)



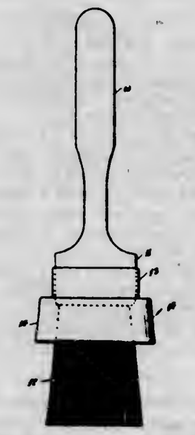
1. A window lock of the character described comprising a spring leg adapted to be fixed to a section of the window, a plate adapted to be mounted upon a second section of the window in closed position, said plate having a slot formed adjacent one end portion thereof for the passage of the leg therethrough to partly open the window, and that end portion of the plate bent at substantially right angles to the body of the latter and disposed for engagement with said leg upon its passage through the plate to lock the window in its partly open position.

1,906,154. PROCESS FOR COATING METAL OBJECTS. BERNARD HEMANN, Ashland, Ky. Filed Nov. 1, 1930. Serial No. 492,876. 3 Claims. (Cl. 91—70.)



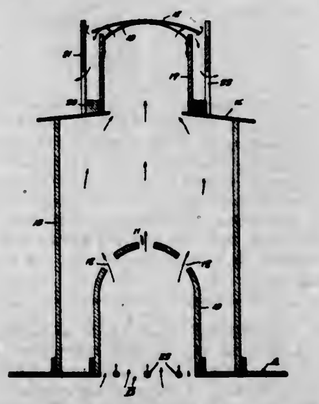
1. A process of protecting a metal object comprising heating the metal object to loosen therefrom foreign matter, drive off impurities, and open the pores thereof, dipping the metal object into a hot bath comprising a liquefied mixture of linseed oil, turpentine, micaceous hematite, asphaltum, and fish oil, removing the dipped metal object from the bath, and drying it in an oven.

1,906,155. INDICATING OR RECORDING MECHANISM. JOHN LAWRENCE HODGSON and FFOLLIOTT GRAY, Luton, England, assignors to George Kent Limited, London, England. Filed Nov. 5, 1931. Serial No. 573,283. 20 Claims. (Cl. 234—34.)



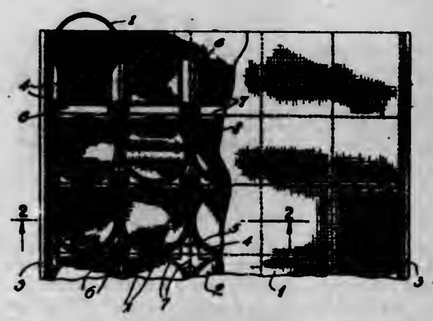
1. In indicating or recording apparatus, the combination of an actuating mechanism, including a crank arm mounted for movements in response to pressure variation, a pen shaft, a pen carrier on the shaft, an arm on the shaft, a link for connecting the crank arm to the arm on the pen shaft, a stop which prevents the axis of connection between the link and the arm on the pen shaft from lying in the plane containing the axis of connection between the link and the crank arm and the axis of the pen shaft, means for effecting disconnection between the actuating mechanism and the pen mechanism to free the former from constraint by the latter when the stop is operative, means for indicating the true free zero position of the actuating mechanism, and means for effecting an adjustment of the free zero position of the actuating mechanism.

1,906,156. COMPRESSED AIR BRAKE WITH STAGE BRAKING. WILHELM HOTZ, Basel, Switzerland. Filed Apr. 8, 1930. Serial No. 442,611. 7 Claims. (Cl. 246—183.)



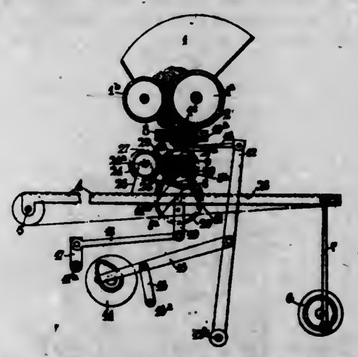
1. In air brake apparatus, a brake pipe, fluid pressure actuated apparatus connected thereto and including a movable element, an engineer's valve, and an emergency valve including a casing connected pneumatically with the engineer's valve for the discharge of air from the latter, and also including an element actuated by the movable element of said fluid pressure apparatus, said emergency valve being constructed and arranged to successively and intermittently discharge compressed air from the brake apparatus through the engineer's valve during a single movement in one direction of the said movable element of the said fluid pressure actuated apparatus, and means, independent of the engineer's valve to establish communication between the said brake pipe and said fluid pressure actuated apparatus, to cause the latter to operate and hence cause the brakes to be applied by the emergency valve in the event of failure of operation of the engineer's valve.

1,906,157. DRIP CATCHER FOR PAINT BRUSHES AND THE LIKE. FRANK JEROUSEK, Baltimore, Md. Filed June 22, 1932. Serial No. 618,754. 3 Claims. (Cl. 15—248.)



1. A drip catcher for paint brushes, comprising a tubular member adapted to surround and closely engage a brush head, said tubular member having an enlarged tubular portion at one end thereof and having oppositely disposed walls offset therefrom, and enlarged portion being adapted to surround brush bristles in said head and adapted to catch drippings from the bristles, and rods secured in opposite walls of said enlarged portion and adapted for location on opposite sides of the bristles to support them when the brush head and bristles are lying on one side and direct drip onto said enlarged portion.

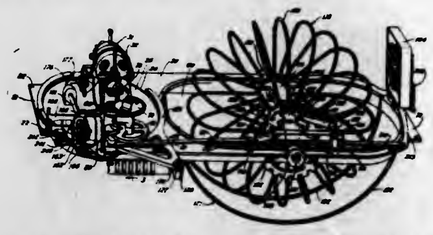
1,906,158. VENTILATOR. ALEX JOHN, Port Huron, Mich. Filed Sept. 19, 1932. Serial No. 633,905. 3 Claims. (Cl. 98—29.)



1. A ventilator of the character described comprising a hood adapted to fit over a roof opening and having intermediate and outer slots, a casing coextensive with said hood and enclosing the same, a cupola rising from the top of the casing and communicative therewith and open at its upper portion, a canopy overhanging the open upper portion of said cupola, means supporting the canopy elevated with relation to said open upper portion of said cupola, and deflectors spaced outwardly beyond each side of said cupola and rising above the canopy thereof.

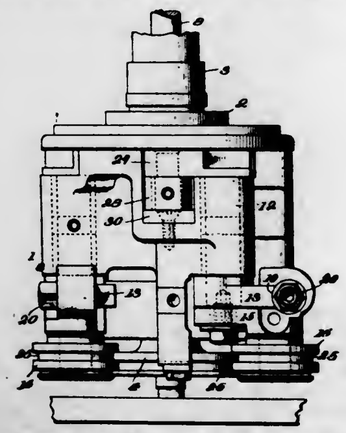
1,906,159. SPRING CUSHION CONSTRUCTION. SAMUEL KRAKAUER and SAMUEL S. MARCUS, New York, N. Y. Filed June 7, 1929. Serial No. 369,200. 1 Claim. (Cl. 5—353.)

In spring cushion construction, a casing comprising top, bottom, end and side walls, said casing being of fabric material and of a size to hold a selected number of coil springs between the top and bottom thereof, strips of fabric material connected to the top and bottom to form with said top and bottom walls of the casing a plurality of compartments, each having one side open, said compartments being similarly arranged and each having opposite walls spaced at a distance less than the greatest diameter of the springs and to be expanded by the springs upon insertion thereof and to embrace the greater portion of the circumference of a spring, each compartment being adapted to receive a single spring.



1,906,160. APPARATUS FOR FORMING MOLDED OR EMBOSSED ARTICLES OF PLASTIC MATERIAL. ARIBERT KREMMLING, Hammersleben, Germany. Filed Dec. 28, 1932, Serial No. 649,221, and in Germany Jan. 12, 1931. 9 Claims. (Cl. 107—8.)

5. A machine for forming moulded or embossed articles of plastic material, such as dough, marsipan or the like, comprising an extrusion apparatus having means for forcing the material through the opening of a die plate, a moulding or embossing element located below the die plate, means for moving said element into register with the die opening to mould the material extruded therethrough and for moving the element away from the die plate to release the element from the extruded

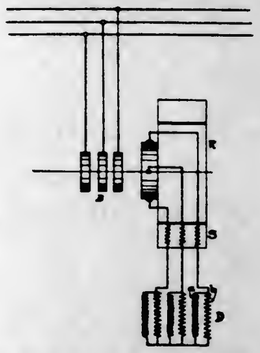


moulded end of the material, means for severing said extruded end whereby it falls onto the moulding element, means for rotating the mould element, a delivery conveyor located adjacent the mould element and having a part extending beneath said element, and means for driving the conveyor in unison with the rotary movements of the mould element, whereby the severed portion is transferred to said conveyor.

1,906,161. POWER OPERATED TALKING MACHINE. JOSEPH KRIZ, Chicago, Ill. Filed May 3, 1930. Serial No. 449,536. 11 Claims. (Cl. 274—10.)

11. A talking machine comprising a rotatable table adapted to receive a record, means for delivering a record to and removing a record from said table, means including a head movable into engagement with the record for retaining the record upon said table and for rotating said record and said table, a reproducer including a pivotally movable arm adapted to engage the record, means for moving the reproducer into and from engagement with the record, means for moving said record and table rotating means from and into engagement with the record, said last named means including an oscillatory disc, a pin on said disc adapted to engage said head, said reproducer removing means including a pivotal bar having a slotted end portion, and a pin carried by the disc and engaging in said slot whereupon upon oscillation of said disc in a direction to move the record and table rotating means for engagement with the record, said bar will be elevated against the arm of the reproducer and elevate said arm and reproducer so that said arm and reproducer will move by gravity away from the central portion of said record.

1,906,162. SEAMING HEAD FOR CLOSING MACHINES. ALFRED L. KRONQUEST, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1931. Serial No. 533,560. 3 Claims. (Cl. 113—24.)

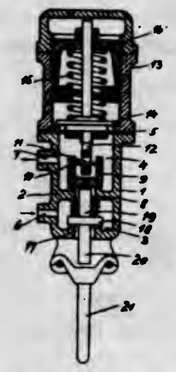


1. A seaming head for can closing machines comprising a rotating head portion, a stationary chuck associated therewith, a plurality of vertically disposed spindles carried by said head portion, an arm attached to the lower end of each spindle, a seaming roll carried thereby, an arm attached to the upper end of said spindle, a cam follower mounted thereon, a reciprocating cam rotating with said head and operating on said cam followers, said seaming rolls being held on the supporting arms therefor by interengagement with the chuck, and means whereby the cam follower may be moved to inoperative position to permit the spindle to be shifted so as to disengage the seaming roll from the chuck, whereby the seaming roll may be detached from its supporting arm.

1,906,163. PROCESS OF MAKING BASE EXCHANGE MATERIALS FOR WATER SOFTENING. PERCY LASSELLE, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 10, 1927. Serial No. 174,429. 14 Claims. (Cl. 23—113.)

1. The method of preparing base exchange materials which comprises mixing a solution of an alkali metal silicate with a solution of a non-alkaline compound of aluminum hydroxide and adding to said solution mixture a solution of an alkaline compound of aluminum hydroxide, the proportions and concentrations of said solutions being such as to form a jelly upon standing.

12. A method of increasing the porosity of precipitated base exchange silicates which comprises adding to the reacting mixture an acid and an alkali to provide soluble salts in excess of the amount resulting from the reaction which forms the base exchange silicate.

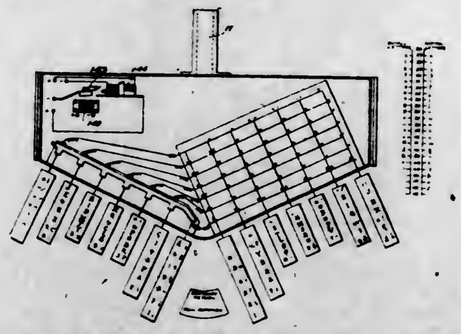


1,906,164. ASYNCHRONOUS ELECTRICAL MACHINE. PIERRE LETRILLIART, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Paris, France, a French Société Anonyme. Filed Nov. 25, 1929, Serial No. 409,643, and in France Nov. 29, 1928. 6 Claims. (Cl. 172—274.)

1. An automatically starting asynchronous electrical machine, comprising a primary winding, a secondary winding, a compensating winding, a commutator connected to said compensating winding, with its brushes connected to said secondary winding, and a starting impedance cooperating with said secondary winding, said starting impedance consisting of polyphase resistance and polyphase inductance, and the starting inductance being rendered negligible in normal running by the effect of said commutator.

1,906,165. PRESSURE RELEASE VALVE. RICHARD LUDWIG LEUCHTER, Weidlingau-Hadersdorf, Austria, assignor to Gebruder Hardy, Maschinenfabrik und Giesserei A. G., Vienna, Austria, a Corporation of Austria. Filed Jan. 21, 1931, Serial No. 510,252, and in Austria Feb. 6, 1930. 4 Claims. (Cl. 303—77.)

1. In a pressure release valve the combination of a cylindrical chamber, a piston operating therein, an auxiliary reservoir permanently connected to the space on one side of the piston of the said chamber, an automatic valve adapted to establish connection between the auxiliary reservoir and the other space of the said cylindrical chamber, and means responsive to the air pressure existing

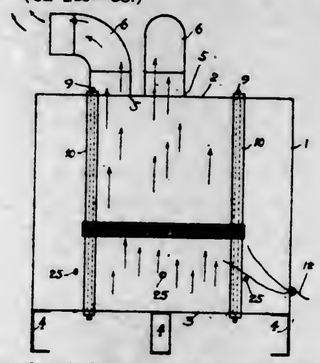


in the said other space of the said cylindrical chamber and to a substantially constant force counteracting the said air pressure, for opening the said automatic valve whenever the air pressure in the said other chamber of the said cylindrical chamber overcomes the said substantially constant force.

1,906,166. RECOVERING BASE EXCHANGE MATERIAL. OTTO LIEBKNECHT, Neubabelsberg, Germany, assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 12, 1931, Serial No. 508,379, and in Germany Jan. 25, 1930. 6 Claims. (Cl. 23—112.)

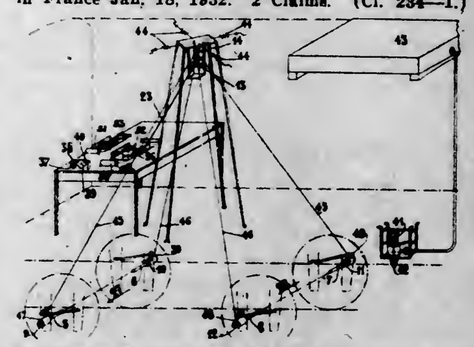
3. In making base exchange silicate gels, the process which comprises incorporating in a wet gel gelatinized fine particles of a previously formed and dried gel and then drying and granulating the gel mixture.

1,906,167. ELECTRICALLY OPERATED TYPEWRITER. AURELIO LINHARES, Rio de Janeiro, Brazil. Filed Sept. 7, 1928, Serial No. 304,533, and in Brazil Mar. 15, 1928. 3 Claims. (Cl. 197—11.)



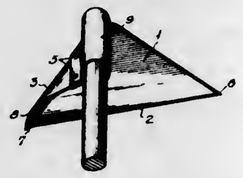
1. In an electrically operated typewriter, a keyboard for controlling the carriage and types, said keyboard comprising two sets of keys, each key of each set having a conductor attached thereto, the conductors of one set of keys crossing those of the other set at an angle, whereby a definite contact will be established whenever two keys, one of which belongs to each set, are actuated simultaneously, said contact being determined by the point of intersection of the two corresponding conductors, and a series of electromagnets controlled by the contacts thus established.

1,906,168. PROCESS OF DECORATING METALS. VEUVE F. MALLEVAL, NÉE BERTHE BURLET, Paris, France. Filed Aug. 24, 1929, Serial No. 388,263, and in France July 24, 1929. 5 Claims. (Cl. 41—18.)



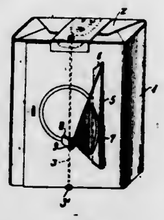
1. A process for decorating metallic surfaces which comprises covering the parts of the object to be treated with a coat of a mixture of mastic resin and petroleum jelly dissolved in a hydrocarbon, pasting metal leaf on the said coat and heat treating to produce cementation of the metals and obtain the decorative effect.

1,906,169. ELECTRIC HEATER. JOE MANZITTO, Omaha, Nebr. Filed May 5, 1932. Serial No. 609,481. 2 Claims. (Cl. 219—38.)



1. In an electric heater, an upstanding metal drum, a horizontal planular fire-bond plate located within said drum intermediately of the height thereof and spaced from the interior drum wall at the top, bottom and sides thereof, means for supporting said plate including upright rods connecting the top and bottom of the drum and carrying tubular insulation elements engaging the top and bottom of the drum and the top and bottom of said plate, electric means for heating said plate, said plate acting as a baffle for rising heated air in the drum, said drum having top openings, and tubular elbows engaging said openings and turned permanently in different directions, said elbows acting as further baffles for heated air and discharging in different directions to further facilitate the heating effect.

1,906,170. DEVICE FOR RECORDING THE WARP OF RAILWAY TRACKS. ANDRÉ ERNEST MAUZIN, Paris, France. Filed Mar. 17, 1932. Serial No. 599,544, and in France Jan. 18, 1932. 2 Claims. (Cl. 234—1.)

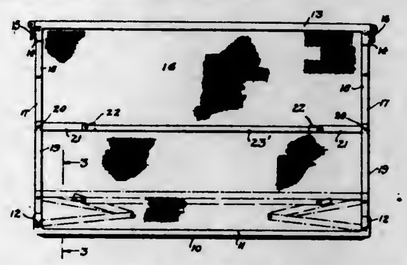


1. A device for recording the warp of railway tracks comprising cables connecting diagonally the wheels of a vehicle bogie, the variation in the vertical distance between these cables giving the warp to be measured.

1,906,171. GARDEN AND FLOWER HOE. ELI H. MCNEAL, Muskegon, Mich., assignor of one-half to Martin Newald, Muskegon, Mich. Filed July 30, 1932. Serial No. 626,587. 5 Claims. (Cl. 97—65.)

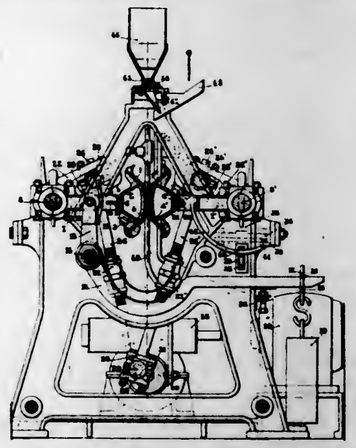
1. A hand implement of the hoe type, comprising a tool head having a blade provided with a lower straight edge, said blade having a lateral edge having an acute angle relation to and intersecting said straight edge to form a cultivator and weeder tooth, said blade having at the end thereof opposite said tooth a rearward bent portion having an upper edge located intermediately of the length of the blade and provided with a handle connection in line therewith.

1,906,172. CIGARETTE PACKAGE. BERENICE WYETH MERCHANT, Kensington, Md. Filed Jan. 14, 1932. Serial No. 586,682. 3 Claims. (Cl. 229—51.)



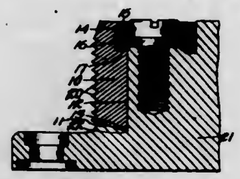
1. As an article of manufacture, a cigarette package comprising a container closed at its ends, means for splitting the container down the side wall thereof, said means comprising a string anchored at one end of the container and extending upwardly on the inside thereof to the adjacent end and projecting to the exterior of the container to provide a free end, a securing flap adapted to normally conceal the free end of the string, a clasp associated with said flap, said clasp being adapted to be secured to the adjacent side of the container after the same has been split whereby to prevent inadvertent separation of the package.

1,906,173. COLLAPSIBLE BASKET. DAVID MILLER, Brooklyn, N. Y. Filed Nov. 14, 1929. Serial No. 407,174. 2 Claims. (Cl. 150—49.)



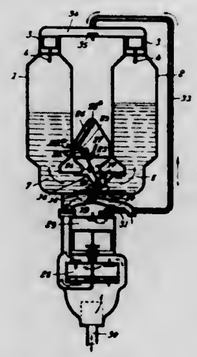
1. A hamper of the character described comprising a rigid base frame, foldable members at the corners of the base frame, a rigid top frame, foldable members at the corners of the top frame, pivots connecting the members together of the respective frame, inwardly curved ends on the members of the top frame, interfitted extensible connections pivoted to said inwardly curved end, and means latching said extensible connections together.

1,906,174. COLLAPSIBLE BASKET. DAVID MILLER, Brooklyn, N. Y. Filed Dec. 15, 1930. Serial No. 502,532. 5 Claims. (Cl. 150—49.)



5. A collapsible crate or basket structure having the combination of a top frame, a bottom, jointed uprights each pivotally connected with said frame and bottom, said uprights being arranged in pairs, and a jointed brace pivotally connected with and arranged between the uprights of each pair.

1,906,175. MACHINE FOR DETERMINING THE RESISTING QUALITIES IN WEAR OF LEATHER FOR SOLES. PAUL MILLET, Nancy, France, assignor of one-half to Societe en nom Collectif dite: Veuve Paul Luc & Cie, Nancy, France, a Corporation of France. Filed Apr. 2, 1927, Serial No. 180,566, and in France Jan. 28, 1927. 7 Claims. (Cl. 73—51.)



4. In a machine for testing the wearing quality of a material intended to be subjected to friction, a pair of oscillatable shafts, a pair of supports, means connecting said supports to said oscillatable shafts and said supports having curved peripheral surfaces facing one another, means for fastening material to be tested to the peripheral surfaces of said supports, a rotatable shaft, means for rotating said shaft, crank-arms rigidly connected to said oscillatable shafts, connecting rods extending from said crank-arms to independent points eccentric to the axis of said rotatable shaft, and means maintaining one end of each of said connecting rods at a fixed distance from the axis of rotation of said rotatable shaft, and means for yieldably forcing said supports towards and into contact with one another.

1,906,176. CHASER. SAMUEL F. NEWMAN and JAMES G. HARPER, Waynesboro, Pa., assignors to Landis Machine Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1931. Serial No. 509,194. 4 Claims. (Cl. 10—104.)

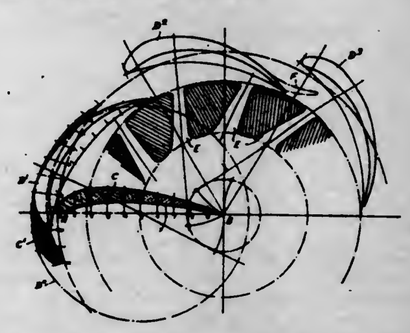
1. A tangential chaser having thread cutting serrations on its face and having a back with a portion of its surface cut away to provide a beveled seat for a holding clamp and an additional portion cut away adjacent the beveled seat to provide a clearance between the clamp and a portion of the chaser, a surface on the first named cut-away portion, said surface seating against said clamp and having a beveled base adjacent the back, substantially as set forth.

1,906,177. AUTOMATIC DEVICE FOR MEASURING AND DELIVERING LIQUIDS. RENÉ PORTE, Levallois-Perret, France, assignor to Societe Hardoll, (Etablissements Hariveau & Dolimier, et René Porte & Cie Reunis), Levallois-Perret, France. Filed Oct. 5, 1926, Serial No. 139,712, and in Belgium May 22, 1926. 3 Claims. (Cl. 73—28.)

1. In an apparatus of the class described, the combination of two measuring chambers of given capacity, means for supplying liquid under pressure to said chambers, a discharge conduit communicating with said chambers, a valve mechanism cooperating with said liquid supply means and said discharge conduit and for controlling the supply to and the discharge from said chambers, means for automatically operating said valve mechanism when a chamber is supplied with a measured quantity of liquid for disconnecting said filling chamber from the supply and connecting the same to the discharge conduit therefor, said last named means including a lever attached to the valve, an auxiliary lever pivoted to the upper end of said first-named lever, a compression spring connected to the outer end of said auxiliary lever and to the casing, stops for limiting the swinging movement of said auxiliary lever and abutments carried by the casing and adapted to engage and swing said auxiliary lever whereby the connection between the compression spring and the auxiliary lever is caused to move across a dead center line during the first part of the movement of the valve, whereby said spring becomes effective to complete the movement of the valve.

1,906,178. PREPARATION AND OPERATION OF PLATINUM PLATING BATHS. ALAN RICHARD POWELL, EMYR CONWY DAVIES, and ARTHUR WILLIAM SCOTT, London, England, assignors to Johnson Matthey & Company Limited, London, England. Filed Jan. 23, 1932, Serial No. 588,492, and in Great Britain Oct. 14, 1931. 14 Claims. (Cl. 204—1.)

1. A process for the manufacture and production of adherent deposits of platinum by electrolysis in which the plating bath comprises an alkaline solution containing a conducting salt, and a readily soluble-crystalline alkali metal platinate prepared by treating the reaction product of an alkali metal hydroxide and a compound of tetravalent platinum in aqueous solution with an organic liquid which reduces the solubility of the alkali platinate.



1,906,179. ALKALI METAL PLATINATES AND THEIR MANUFACTURE. ALAN. RICHARD POWELL, EMYR CONWY DAVIES, and ARTHUR WILLIAM SCOTT, London, England, assignors to Johnson Matthey & Company Limited, London, England. Filed July 27, 1932, Serial No. 625,216, and in Great Britain Oct. 14, 1931. 21 Claims. (Cl. 23—51.)

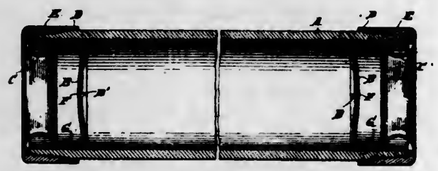
1. A readily water soluble crystalline alkali metal hexahydroxyplatinate having the chemical formula $M_2Pt(OH)_6.xH_2O$, where M is a metal of the alkali group and x is at least 0.5.

7. Potassium hexahydroxyplatinate in the form of fine crystals containing water of crystallization corresponding with the chemical formula $K_2Pt(OH)_6.xH_2O$, where x is 3.

8. The process of manufacturing alkali metal hexahydroxyplatinates which comprises boiling a soluble salt of tetravalent platinum, which is free from cyanide, nitrite, and ammonia groups, with an alkali metal hydroxide solution, cooling, and adding an organic liquid miscible with water but without solvent action on the platinate and selected from the group consisting of aliphatic alcohols, ketones, and glycols.

1,906,180. PROPELLER, PUMP, OR FAN. EDMUND SCOTT GUSTAVE REES, Oaken, England. Filed Oct. 2, 1929, Serial No. 396,844, and in Great Britain Oct. 5, 1928. 3 Claims. (Cl. 103—115.)

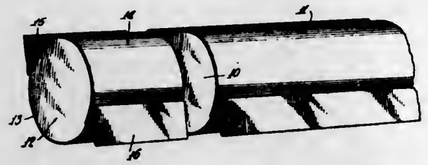
1. In rotary pumps, jet propellers and the like, an impeller having circumferential blades rotating without overlap in undisturbed water, each blade having the character of an aerofoil bent into a curve as by plotting the cross section of an aerofoil, not along a straight chord, but along a curve.



1,906,181. COMPOUND SILICATE GELS AND METHODS OF MAKING THE SAME. RAY RILEY, Paterson, N. J., assignor to American Zeolite Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1930. Serial No. 499,606. 11 Claims. (Cl. 23—113.)

1. As a new composition for water softening and other purposes an alkali alumino-silicate gel compounded from

an alkaline artificial alumino-silicate gel and an artificial alumino-silicate gel non-alkaline at the time of compounding.

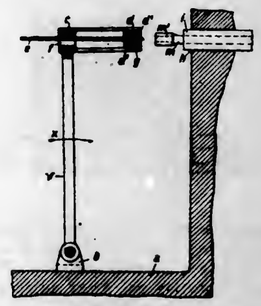


4. A process of making a base exchange silicate gel which comprises gelling a mixture of sodium silicate solution with an alkaline solution of a metal oxid, gelling another solution of sodium silicate with an acidic solution of a metal oxid, the final relative proportion or said acidic solution being sufficient to leave the gel mixture in a non-alkaline condition, washing the two gels with water pulping and intimately mixing the two washed gels and drying and granulating the gel mixture.

1,906,182. PROTECTOR FOR THREADED PIPE ENDS. ARTHUR H. RINEY, Bartlesville, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla., a Corporation of Delaware. Filed May 2, 1930. Serial No. 449,197. 4 Claims. (Cl. 137—91.)

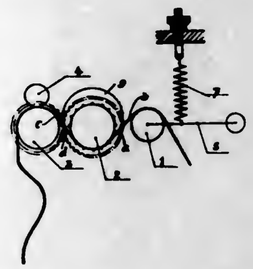
1. The combination with a pipe having external threads, of a protector cap sealing one of the pipe ends against the entrance of water and having a threaded collar engaging the pipe threads, said cap including a cup-shaped handling hook receiving part extending into the pipe end and having a reinforced rigid back.

1,906,183. FROZEN COMESTIBLE PACKAGE. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers, Incorporated, Louisville, Ky., a Corporation of Delaware. Original application filed Jan. 9, 1932, Serial No. 585,745. Divided and this application filed July 28, 1932. Serial No. 625,316. 3 Claims. (Cl. 206—56.)



2. As a new article of manufacture, a packaged frozen comestible, comprising a substantially solid block of ice cream or the like, and a wrapper extending around the block and including two separate portions, each extending around substantially one-half of the periphery, and each terminating in a tab, said tabs being at substantially diametrically opposite points, whereby the block may be readily freed from the wrapper by pulling in opposite directions on said tabs.

1,906,184. METHOD OF REDUCING METAL OXIDES. WILHELM ROHN, Hanau, Germany, assignor to Heraeus-Vacuumschmelze A-G., Hanau-on-the-Main, Germany, a German Company. Filed Jan. 28, 1932, Serial No. 589,526, and in Germany Feb. 27, 1931. 20 Claims. (Cl. 75—45.)

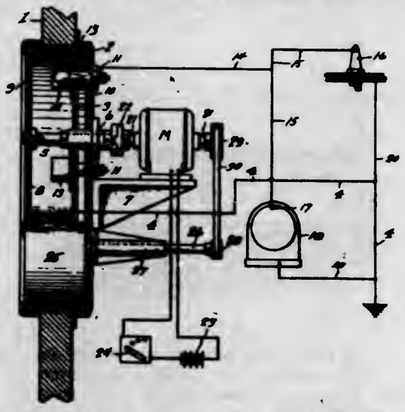


1. The method of reducing metal oxides which comprises placing the metal oxide upon a molten bath of metal adapted at least in part to alloy with the metal constituent of said oxide, and thereafter circulating substantially pure hydrogen over said oxide while maintaining said bath in a molten state.

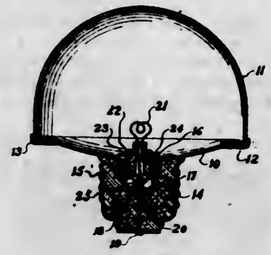
1,906,185. LOOM. RUDOLF ROSSMANN, Munich, Germany, assignor to Tefag Textil Finanz A. G. Zurich, Zurich, Switzerland, a Corporation of Switzerland. Filed June 4, 1930, Serial No. 459,193, and in Germany June 13, 1929. 9 Claims. (Cl. 139—181.)

1. In a loom, the combination with a shuttle, of a carrier for transmitting the end of a thread to the shuttle, a clamping device on said carrier, a clamping device on said shuttle, means for bringing said clamping devices into positions for clamping engagement with the same part of the thread by either of said devices, and means for simultaneously forcing one of said clamping devices into and the other out of clamping engagement with the thread.

1,906,186. FILM-DRAWING DEVICE FOR CINEMATOGRAPHIC APPARATUS. ETIENNE SAINTE CLAIRE DEVILLE, Paris, France, assignor to Societe des Etablissements Gaumont, Paris, France, a Corporation of France. Filed Apr. 19, 1929, Serial No. 356,583, and in France May 21, 1928. 5 Claims. (Cl. 271—2.8.)



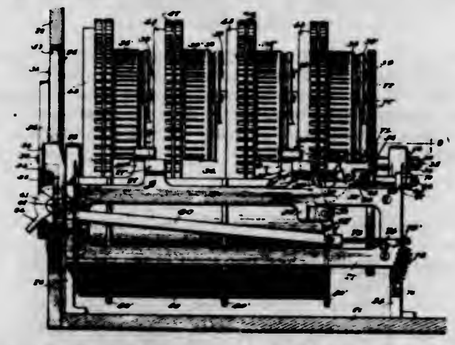
1. A film feeding mechanism for motion picture apparatus comprising a toothed film drawing roller adapted to engage the driving perforations of the film, and a smooth guiding roller of larger diameter than said film drawing roller, adjacent to it, and having a tangent plane which is also tangent to the film drawing roller along the same straight line, whereby the film is so guided as to need but a single row of driving perforations.



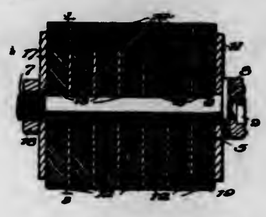
1,906,187. SPEED INDICATING DEVICE. JOHN W. SIMMONS, Cleveland, Ohio, assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 6, 1930. Serial No. 426,815. 5 Claims. (Cl. 88—14.)

1. An indicator for indicating the speed of an internal combustion motor and comprising a dial having an aperture therein, an electric lamp disposed adjacent said dial, so that it may be viewed through the aperture, means for causing a relative movement between said dial and lamp, means connecting said lamp with said combustion motor in such a manner that said lamp will be energized

periodically in accordance with the speed of said motor, and means operatively associated with said dial for indicating the rate of relative movement between said dial and said lamp and from which the speed of the motor is determined.

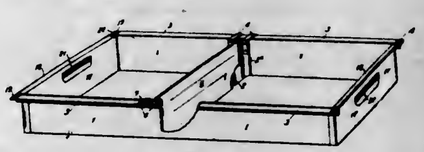


1,906,188. INCANDESCENT LAMP. EMANUEL C. SMALLY, Canton, Ohio. Filed Mar. 11, 1931. Serial No. 521,645. 5 Claims. (Cl. 176—32.)



1. An incandescent lamp of the character described, comprising a base filled with insulation having a socket at its inner end, a reflector fixedly and centrally secured within said insulation provided with a peripheral groove, a glass globe mounted within said groove and adapted to be sealed within the groove to provide an air-tight joint, and a filament detachably disposed within said socket.

1,906,189. RADIO APPARATUS. WILLIAM S. SUTTON, Rockford, Ill. Filed Apr. 28, 1930. Serial No. 446,558. 15 Claims. (Cl. 175—41.5.)



1. A radio frequency selector comprising a condenser element having a plurality of slots, a plurality of condenser plates, one or more of which may be engaged in said slots, a selector dial indicating the relative number of plates engaged, an index plate having slots corresponding to the number of said condenser plates and a pawl engaging the slots of said index plate to insure perfect registration of the condenser plates in the slots of the condenser element, each plate and associated parts representing a calibrated frequency.

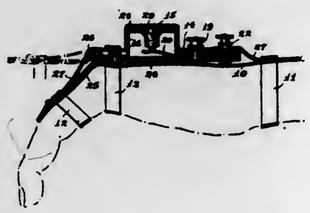
1,906,190. SURFACING TOOL. HERBERT E. TAUTS, Milwaukee, Wis., assignor to Delta Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 16, 1931. Serial No. 575,363. 4 Claims. (Cl. 51—190.)

1. A rotary surfacing tool comprising a spindle, annular core sections of resilient material axially slidable thereon, non-resilient spacer disks slidable on the spindle and between said core sections, and means on said spindle for forcing said core sections into radial expansion to bind and hold a work engageable sleeve thereon when applied thereover.

1,906,191. BOX AND SHELVES AND PARTITIONS THEREFOR. BERTRAM THOMAS and EUSTACE THOMAS, Hulme, Manchester, England. Filed Apr. 25, 1929, Serial No. 358,116. and in Great Britain May 1, 1928. 3 Claims. (Cl. 220—22.)

1. Partition means for open top boxes comprising wing members carried by and movable with respect to opposing walls of the box and a partition slidably cooperating with the wing members, said partition serving to force the wing members into frictional contact with the walls of the box.

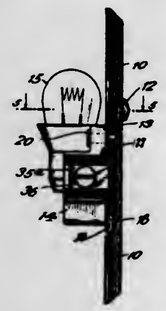
1,906,192. METAL ALLOY. CHARLES VANGREVENYNGH, La Celle-St. Cloud, and HENRY ELION, Paris, France. Filed Aug. 28, 1930, Serial No. 478,560, and in France Jan. 7, 1930. 2 Claims. (Cl. 75—1.)



2. A light aluminium alloy, consisting of aluminium, copper, nickel, magnesium and chromium and containing of:

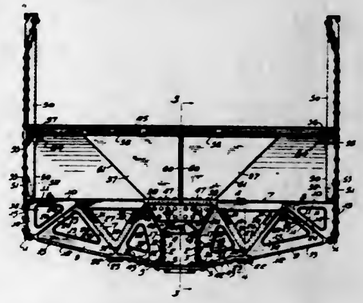
	Percent
Copper	1.50 to 5.00
Nickel	0.25 to 2.50
Chromium	0.25 to 1.50
Magnesium	0.25 to 2.00

1,906,193. SIGNAL DEVICE. VINCENT V. VITALE, Brooklyn, N. Y. Filed Mar. 13, 1930. Serial No. 435,522. 1 Claim. (Cl. 177—329.)



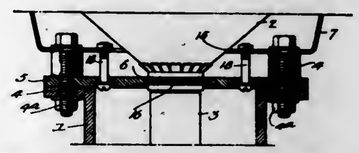
A signal device adapted to be mounted on the back of the hand of a person, said device including a flexible base, means for securing one end of said base to the wrist of a person and the other end to one of the fingers, a

metallic base plate positioned on said flexible base and extending forwardly to a point opposite the knuckle of said finger and rearwardly to a point on the back of the hand near the wrist, a metallic contact member pivoted to the forward end of said metallic base plate and secured for movement with the flexible base and said finger by said first mentioned securing means, a second metal plate of substantially the same dimensions as the base plate having a centrally positioned upstanding housing formed with a top, said top being provided with an integral lamp receiving socket, the forward end of said second plate being provided with an arcuate shaped contact portion partially encircling the pivot point on said base plate,



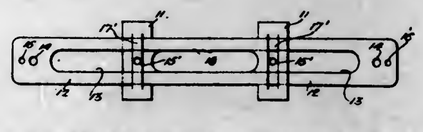
a contact tongue secured between said plates positioned to engage the center terminal of a lamp bulb to be received in said socket, insulating layers between said plates and between said contact tongue and said plates, a flexible cover provided with an opening to allow said housing to project therethrough, and means to secure said flexible base cover plates and tongue in assembled relation including said first mentioned securing means and a pair of insulated terminals, one of said terminals being electrically connected to said base plate and connectible to one side of a source of electrical energy and the other terminal being electrically connected to said contact tongue and connectible to the other side of said source.

1,906,194. ATTACHMENT PLUG WITH PILOT LIGHT. BENJAMIN C. WEBSTER, Southport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 8, 1930. Serial No. 419,337. 5 Claims. (Cl. 177—311.)



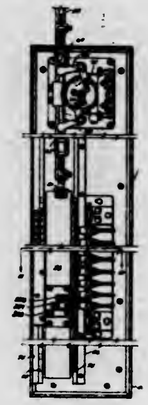
1. In an attachment plug receptacle, a molded face plate having openings for plug contacts and a bead on the back thereof to position a base, in combination with a base having an open face and recesses for contact members, means securing said base in position within the bead on said plate with its open face presented to the back of said plate, and contact members in said recesses engaging the sides thereof and having portions extending sufficiently toward said open face to engage the back of said plate whereby alone they are secured in the base,

1,906,195. RAILWAY CAR. WILLIAM E. WINE, Toledo, Ohio. Filed July 8, 1931. Serial No. 549,501. 24 Claims. (Cl. 105—247.)



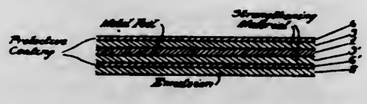
1. A body bolster for railway cars comprising top and bottom chord members and downwardly converging truss members integrally connecting the chord members, said truss members being connected to the lower chord member in substantially vertical alinement with a portion of the bolster which is cooperable with a truck side bearing, each of said truss members having a web disposed in a plane substantially parallel with the transverse axis of the bolster and a plurality of horizontally spaced flanges projecting from one side of said web.

1,906,196. ELECTRODYNAMIC REPRODUCER. ROY S. FISHER, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 3, 1929. Serial No. 375,855. 8 Claims. (Cl. 179—115.5.)



1. In an electrodynamic sound reproducer, the combination with a diaphragm including a voice coil, of a supporting frame for the diaphragm, a member having an aperture, a second member having a core element adapted to enter said aperture to form a gap in which said coil is adapted to operate, bolts for securing said frame and member together and having clearance permitting relative adjustment between the frame and said apertured member for centering the coil in the aperture, and independent means for securing together the frame and said apertured member in the adjusted position.

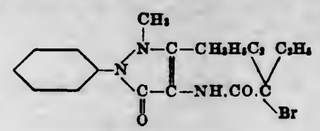
1,906,197. ADJUSTABLE CROSSBAR OR STRAP FOR ELECTRIC FIXTURES. JAMES MANGIN, New Brunswick, N. J., assignor to New Brunswick Electric Supply Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Mar. 6, 1930. Serial No. 438,716. 2 Claims. (Cl. 247—20.)



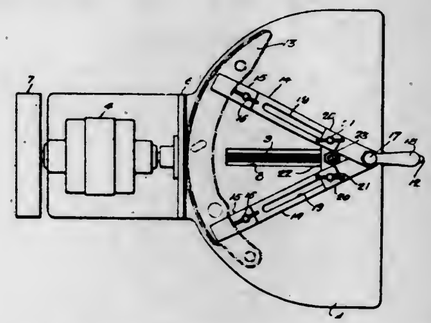
1. An adjustable fixture strap comprising two similar elements, each provided with a yoke and an extension, each of said yokes comprising a struck-out raised strap-like portion forming a slit with the yoke body through which the extension of the other element is adapted to slidably extend, each of said elements having apertures adapted to receive fastening elements for attaching said strap to an outlet box and for attaching a fixture to said strap.

1,906,198. CIRCUIT CONTROLLING MECHANISM. CARROLL E. ORR, Orange, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed June 6, 1928. Serial No. 283,331. 8 Claims. (Cl. 177—336.)

1. A circuit controller comprising a pair of current conducting segments, a series of current conducting brushes, means for rendering said brushes engageable successively with said segments, contact means intermediate said pair of segments for connecting th first or last of said series of brushes at all times to a source of current, means for feeding current through the first brush and one of said segments, from all other brushes, during relative movement of said brushes and said segments in one direction, and means for feeding current through the last brush and the other of said segments, from all other brushes during relative movement in the opposite direction.



1,906,199. METAL FILM. LEOPOLD RADO, Berlin-Halensee, Germany. Filed Feb. 10, 1928, Serial No. 253,515, and in Germany Nov. 14, 1927. 5 Claims. (Cl. 95—8.)



1. A metal film for photographic and kinematographic purposes, comprising in combination a metal foil having a thickness between 0.005 and 0.008 mm., and sensibly roughened at one of its sides, an elastic base of sufficient strength united with the said roughened side of the metal foil.

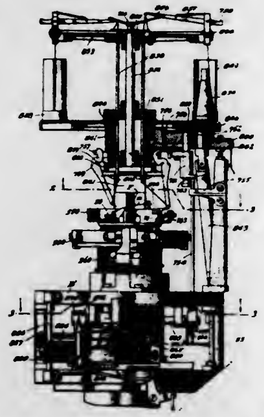
1,906,200. 4-BROM-DIETHYLACETYLAMINO-1-PHENYL-2, 3-DIMETHYL-5-PYRAZOLONE AND THE PROCESS OF PREPARING THE SAME. BAPTIST REUTER, Krailling-Planegg, Germany. Filed Mar. 27, 1931, Serial No. 525,861, and in Germany June 27, 1928. 3 Claims. (Cl. 260—45.)

1. A new chemical product consisting of the 4-bromdiethylacetylamino-1-phenyl-2, 3-dimethyl-5-pyrasolone being a white crystalline product insoluble in water, soluble in alcohol, ether, bensol, etc. with the formula

1,906,201. BURNISHING MACHINE. WILLIAM R. SIMPSON, Creston, N. J., assignor to Thermoid Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 22, 1931. Serial No. 558,819. 7 Claims. (Cl. 29—90.)

1. In a machine for burnishing friction surfaces, a wheel, a shaft, a member mounted thereon and arranged for advancement or retraction with respect to said wheel, a cross piece pivotally mounted on said movable member, arms for supporting the friction elements to be treated, the said arms being pivotally connected at their opposite ends and having a slot therein, means at the ends of the transverse piece engaging the slots and supporting said arms, said means being releasable and slidable in the slot to permit the effective radius of the arms with respect to the pivot point of the cross piece to be varied, and means for pivoting said arms with respect to the wheel.

1,906,202. PROCESS OF MAKING ZEOLITES. WILLIAM MCAFEE BRUCE, New York, N. Y., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1928. Serial No. 308,888. 13 Claims. (Cl. 23—113.)



1. In the manufacture of zeolites having an adjusted silica ratio, the process which comprises adding the desired amount of silica in the form of a solution of silicate of soda to a solution of aluminum sulfate in such concentrations and in such proportions as to produce an ungelled solution mixture, and thereafter adding a further amount of alumina to the mixture in the form of a solution of sodium aluminate; the molar ratio of silica to alumina and to soda in the zeolite product being adjusted between 13 and 1 SiO_2 to one each of Al_2O_3 and Na_2O by inversely varying the relative proportion of the sodium aluminate to the aluminum sulfate put into the reagent mixture, the relative proportions of the three reagents being such as to leave the final mixed liquor slightly alkaline.

1,906,203. MANUFACTURE OF WATER-SOFTENING ZEOLITES. WILLIAM MCAFEE BRUCE, New York, N. Y., assignor to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1930. Serial No. 487,918. 13 Claims. (Cl. 23—113.)

1. In making water-softening zeolite gels from aluminum sulfate, sodium silicate and sodium aluminate solutions, the process which comprises mixing sulfate and sili-

cate solutions of concentrations exceeding 3° Baumé, separately mixing aluminate and silicate solutions of concentrations exceeding 5° Baumé and then mixing these two mixtures of said solutions.

1,906,204. MACHINE FOR MAKING KNITTED FABRIC. ALBERT E. PAGE, Brooklyn, and HARRY SWINGLEHURST, Jr., Floral Park, N. Y., assignors to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Mar. 13, 1931. Serial No. 522,450. 15 Claims. (Cl. 66—135.)

1. A knitting machine having a circle of independent needles, means for selecting needles for wrapping, pattern yarn fingers and finger selecting means adapted to cause a finger to lay a pattern yarn in front of a selected needle or needles in combination with means selecting and holding across the needle circle after said finger selecting means have released same, certain of the fingers chosen by the finger selecting means, for the purpose of varying the length of wrap.

1,906,205. SHIPPING DRUM. EDGAR E. SHANOR, Sharon, Pa., assignor to The Petroleum Iron Works Co. of Ohio, Sharon, Pa., a Corporation of Ohio. Filed Jan. 27, 1932. Serial No. 589,248. 4 Claims. (Cl. 285—50.)

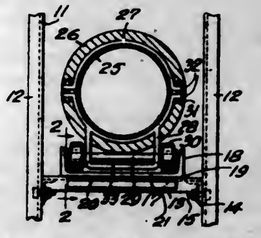
1. The combination with a receptacle wall having an opening whereof the defining wall is directed inside the receptacle, of means for adapting the opening to standard discharge fittings and including a fluidway freely insertible in the opening, and an elliptical locking ring admissible through the opening and adjustable on the fluidway to take a binding fit on the defining wall of the opening.

1,906,206. METHODS FOR WEIGHTING ARTIFICIAL SILK CONSISTING OF CELLULOSE ESTERS. FRIEDRICH WILHELM WEBER, Hackensack, and EUGENE SCHAEFER, Englewood, N. J., assignors to Maywood Chemical Works, Maywood, N. J., a Corporation of New Jersey. Filed July 3, 1931. Serial No. 548,708. 3 Claims. (Cl. 8—13.)

1. The method for weighting artificial silk formed by an ester of cellulose, said method consisting in acting on the artificial silk with a solution containing basic chlorides of tin and zinc, then washing the artificial silk with water, and subjecting the artificial silk thus treated with the solution of a salt capable of forming insoluble salts with tin and zinc.

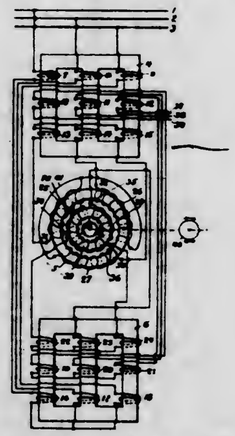
1,906,207. ESTER-ALDEHYDE GUM EMULSION AND PROCESS OF MAKING SAME. KENNETH G. BLAIKIE and GEORGE O. MORRISON, Shawinigan Falls, Quebec, Canada, assignors to Canadian Electro Products Company, Limited, Montreal, Quebec, Canada. Filed Mar. 25, 1929. Serial No. 349,895. 21 Claims. (Cl. 252—6.)

1. A process of making an emulsion of a vinyl ester-aldehyde gum, which comprises heating the gum with a polyhydric alcohol, and cooling the mixture and separating the resulting emulsion from excess of alcohol.



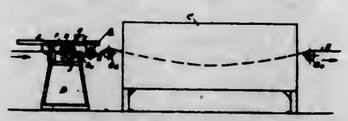
8. A gummy product being an emulsion of a vinyl ester-aldehyde gum and a polyhydric alcohol.

1,906,208. CABINET CONSTRUCTION. MEYER GREENBERG, Lynbrook, N. Y., assignor to Craftsman Radiator Enclosure Company, Inc., Oceanside, Long Island, N. Y., a Corporation of New York. Filed July 16, 1932. Serial No. 622,884. 3 Claims. (Cl. 312—152.)



3. A cabinet adapted to be hinged and latched to a door or other suitable mounting, comprising a sheet metal construction which includes side, back and end walls rigidly secured together, the front edges of the side and end walls being turned in to form a narrow face perimeter for said cabinet parallel to the back wall, shelf supporting means at spaced elevations in said cabinet, removable sheet metal shelves mounted in said cabinet, each shelf including an integral upturned flange for a front edge and an integral downturned flange for a rear edge, hooks mounted on said downturned flange and a tie strip across the mid-front portion of said cabinet and secured to the inside faces to hold said cabinet from spreading.

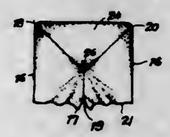
1,906,209. PIPE SUPPORT. CHARLES P. HARDING, Montreal, Quebec, and JOHN A. SHAW, Westmount, Quebec, Canada. Filed Feb. 23, 1929. Serial No. 342,067. 11 Claims. (Cl. 137—75.)



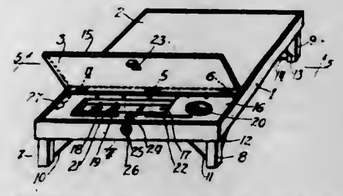
10. A pipe support for use in a conduit comprising a track co-extensive with the pipe to be supported, primary supports, members vertically adjustable upon said supports extending transversely of and supporting the track, the track being laterally adjustable on said members, and a plurality of wheeled carriages adapted to be secured to the pipe and to travel on said track.

1,906,210. METHOD OF AND MEANS FOR ELECTRIC VOLTAGE REGULATION. HERMANN HARZ, Berlin-Siemensstadt, Germany, assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1931, Serial No. 523,675, and in Germany July 23, 1929. 15 Claims. (Cl. 171—119.)

2. In a voltage transformer comprising means forming a plurality of magnetic circuits, primary and secondary windings interlinked with said circuits for producing a corresponding number of magnetic flux components through said magnetic circuits, connections between said primary and said secondary windings whereby the transformer output voltage is determined by the resultant of said flux components, and means for varying the relative time phase position of said flux components.



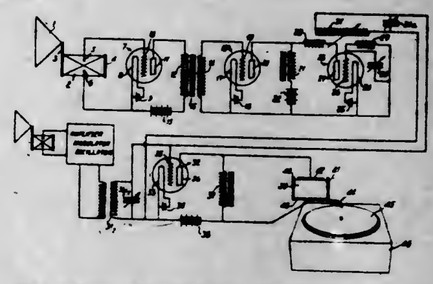
1,906,211. TENSIONING DEVICE FOR MAINTAINING A GIVEN CATENARY CURVE IN METAL STRIPS CONTINUOUSLY PULLED THROUGH AN ANNEALING FURNACE. OTTO JUNKER, Lammersdorf, Germany. Filed May 11, 1932, Serial No. 610,694, and in Germany June 16, 1931. 1 Claim. (Cl. 263—3.)



In a tensioning device for maintaining a constant catenary curve in metal strips continuously pulled through an annealing furnace, a brake located at the entrance side of the furnace with adjustable braking effect working directly upon the passing strip and a feeler for measuring the slackness of the strip, said feeler coacting with the brake in such manner that with increased slackness the brake is loaded and with increased tension the brake is released.

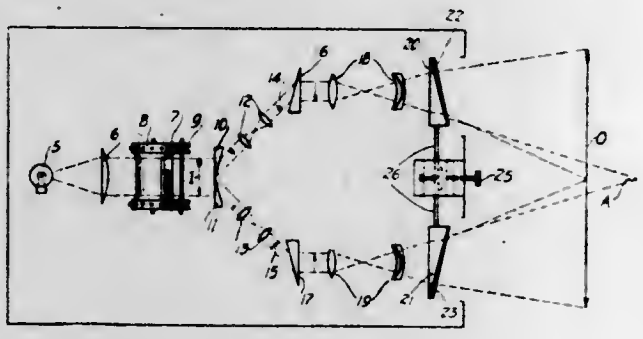
1,906,212. PROCESS FOR MAKING HATS. FELIX A. LACKS, Pelham Manor, N. Y., and EDWARD C. KENNEDY, New Haven, Conn.; said Kennedy assignor to said Lacks. Filed Jan. 21, 1927. Serial No. 162,486. 1 Claim. (Cl. 66—171.)

The method of knitting a hat blank on a machine having a series of needles, comprising knitting reciprocatingly to form a brim portion and a side crown portion, progressively narrowing during such knitting and retaining the terminal loops of discontinued wales on the idled needles, then knitting a top crown portion with progressive resumption of knitting on idled needles to widen the said portion, then narrowing to form another crown portion, and then widening until all the idled needles are restored to action to form a side crown portion and a brim portion corresponding to the portions first formed.



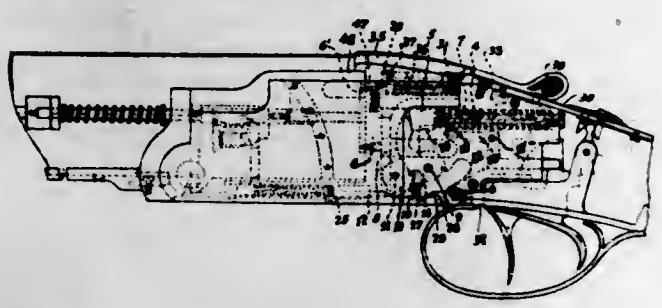
1,906,213. CARD TABLE. ROBERT NEUSCHOTZ and NATHANIEL C. RATNER. New York, N. Y. Filed Mar. 29, 1930, Serial No. 439,912. Renewed July 30, 1932. 8 Claims. (Cl. 45—70.)

3. In combination, in a table of the class described, a frame comprising bars joined end to end and defining a substantially square opening, a shoulder on each of said bars registering with the corresponding shoulders of adjoining bars and forming a continuous internal shoulder in said frame opening, a substantially rectangular top plate disposed within and partially filling said opening, said top plate being positioned with three sides on said continuous shoulder, a shoulder on the free side of said top plate forming a continuous rectangularly extending internal shoulder with the shoulder of the remaining frame opening, an elongated auxiliary plate disposed on said shoulder in said remaining frame opening, means for movably hinging said auxiliary plate to said top plate, means on said frame for locking said auxiliary plate in position forming a continuous surface plate with said top plate, and means projecting thru one of said frame bars for releasing said auxiliary plate to gain access to said opening normally covered thereby.



1,906,214. HIGH FREQUENCY PHONOGRAPH APPARATUS. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Communication Patents, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 19, 1927. Serial No. 176,677. 15 Claims. (Cl. 179—100.4.)

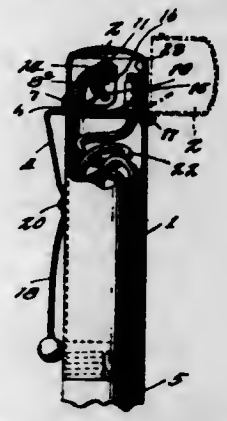
1. The method of reproducing sound from a record engraved with super-audible frequency vibrations modulated



at sound frequencies which comprises producing directly from said record oscillations of superaudible frequency, modulated at sound frequencies, radiating said modulated oscillations, receiving said radiated oscillations, and converting said received oscillations into sound waves.

1,906,215. PROJECTION SYSTEM. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Communication Patents, Inc., New York, N. Y., a Corporation of Delaware. Filed July 10, 1930. Serial No. 466,999. 9 Claims. (Cl. 88—24.)

1. A light projecting system comprising a source of light, means for modulating said light, means for dividing said modulated light into a plurality of portions, means for magnifying each of said portions separately, and means for joining said portions to form the original light modulations.

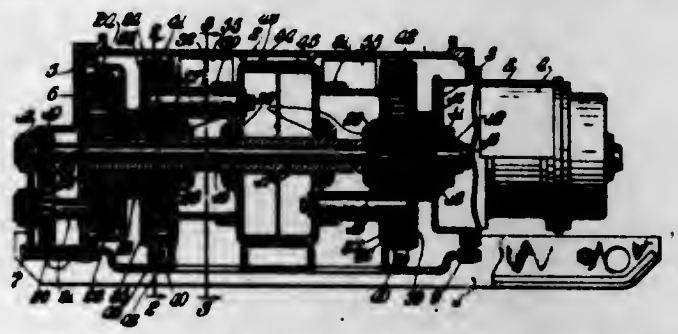


1,906,216. SUPERPOSED BARREL, BREECH-LOADING FIREARM. LÉON RIBE, St.-Etienne, France. Filed Apr. 2, 1931, Serial No. 527,245, and in France Apr. 5, 1930. 7 Claims. (Cl. 42—41.)

1. In a double-barrelled, drop-down, breech-loading firearm, a frame having a vertical median partition in the vertical plane of the barrels, and a percussion device on each side of the partition and symmetrically positioned with respect thereto, each percussion device comprising a rectilinearly movable hammer, a spring bearing on the hammer, striking means acting directly on the primer and rigidly connected to the head of the hammer, and means carried by the frame for retaining and releasing the hammer.

1,906,217. FRICTION LIGHTING DEVICE. JOHN T. SCULLY, New York, N. Y. Filed Apr. 3, 1930. Serial No. 441,335. 5 Claims. (Cl. 67—7.1.)

2. In a friction lighter in combination, a pivotally mounted abrader element, a holder having a bore therein to hold pyrophoric material, said abrader element acting in a plane substantially at right angles to the plane of the bore of said holder for pyrophoric material and having on its side adjacent the orifice of said bore of said holder an abrading surface, a crankshaft connected with said abrader element and having a bent portion disposed between bearings, and means including an elongated aperture engaging the bent portion of said crankshaft to actuate said crankshaft and said abrader element by movement of said means.



1,906,218 JOINT CONSTRUCTION FOR SHOVEL HANDLES AND THE LIKE. CHARLES E. PATCHELL, Portland, Me. Filed May 26, 1931. Serial No. 540,100. 2 Claims. (Cl. 306—18.)

1. A device of the character described comprising in combination two end-abutting, axially aligning handle elements having their ends obliquely cut, and overlapping, a scarf cut in each of said elements, mutually aligning and connected, a link disposed in said scarfs, pins pivotally connecting each of said elements with said link, a key portion on the faces of said link extending outwardly from opposite sides of the periphery of said handle elements, a sleeve disposed on and slidable over said elements, keyways in said sleeve adapted, respectively, to engage the key portions on said link, a spring-stop to prevent receding of said sleeve after completing its full advancing movement, and a fixed stop to limit the backward movement of said sleeve.

1,906,219. HOISTING MECHANISM. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 10, 1931. Serial No. 562,114. 15 Claims. (Cl. 254—185.)

8. In a hoisting mechanism, a base, a cylindrical housing carried by said base, end closure members for said housing, a shaft journaled within said end closure members, relatively rotatable hoisting drums arranged within said housing and rotatably mounted on said shaft, motor operated driving means for said shaft, and frictionally controlled planetary driving connections between said shaft and each of said drums and also arranged within said housing.
